Sheet Zinc.—Under date November 3, Matthiessen & Hegeler Zinc Company, La Salle, Ill., issue a revised price-list and discount sheet of Sheet Zinc, quoting the advanced price of $4.50 per 100 pounds in 600-pound casks of the thicknesses between Nos. 9 and 15, inclusive, and of the widths between 32 and 46 inches and of the lengths between 84 and 90 inches. They also announce the following revised extras in cents per 100 pounds:

Extras in Cents per 100 Pounds.

Nos.	5	6	7	8	9	10	11	12	13	14	15
32 to 40 x 84	75	45	30	10	.....	.....	.....	.....	.....	.....	.....
32 to 46 x 84 to 90	....	....	....	....	none	none	none	none	none	none	none
52 x 84	....	....	225	95	80	65	45	45	45	45	50
50 x 84	...	....	150	75	50	30	20	20	20	25	25
48 x 108	...	....	120	85	75	50	20	20	20	25	25
48 x 96	....	....	100	45	40	20	15	15	15	20	20
48 x 84	255	135	85	25	20	10	10	10	10	10	10
36 x 108	160	140	75	40	35	25	20	20	20	25	25
36 x 96	135	65	40	25	20	10	10	10	10	10	10
30 x 84	110	70	50	25	15	15	10	10	10	10	10
28 x 84	120	80	60	35	25	25	25	25	25	25	25
26 x 84	140	90	70	40	35	25	25	25	25	25	25
24 x 84	150	110	85	20	15	05	05	05	05	05	05

The extra on No. 4 36 x 84 is $1.35 per hundred pounds.

The following are the charges for small lots:

In casks of 100 pounds (all Nos. up to and including No. 12), 30 cents extra per 100 pounds.

In boxes of 100 pounds (not larger than 30 x 40 inches), 30 cents extra per 100 pounds.

In 200 and 300 pound casks (all Nos. up to and including No. 14), 20 cents extra per 100 pounds.

In 200 and 300 pound boxes (not larger than 36 x 50 inches), 20 cents extra per 100 pounds.

The discounts announced are as follows:

Discounts.	First class. 15 600-pound casks and upward.	Second class. 10 to 14 600-pound casks.	Third class. 5 to 9 600-pound casks.	Fourth class. Under 5 600-pound casks.
	Per cent.	Per cent.	Per cent.	Per cent.
Special	0	0	0	0
Cash with order	3	3	3	3
Quantity	3	2	1	0
Total	6	5	4	3

It is stated that all discounts are computed straight when money accompanies the order and the quantity discount is added to the special discount in all cases. The prices thus announced are subject to change without notice.

Brace Bit Gauge.—The Wilks & Whitus Brace Bit Gauge, for which T. G. Ellsworth, 85 Chambers street, New York, is agent, is sold to the trade at $9 per dozen net. An illustrated description of the Gauge appeared in *The Iron Age* September 28, 1893.

Glass.—There has been quite an increase in the number of Window Glass factories that have gone into operation since our last report, although the prices at which Glass is offered would not appear to offer much inducement for commencing work. While no official acceptance of the proposed wage scale has taken place, individual factories are making arrangements with their workmen. Single and Double Strength are offered at the same discounts, a Western jobbing house quoting 80 and 20 per cent. discount for either, in lots of ten boxes, f.o.b. cars. A quotation was made to a Southern point, from another source, at 85 per cent. discount on Single or Double, freight prepaid to destination. Imported Glass is still quoted at 75 and 10 and 5 to 80 and 5 per cent. discount. Plate Glass factories are running just enough to supply the demand, which is light.

John Rothery.

JOHN ROTHERY, senior member of the File manufacturing firm of J. & W. Rothery, Matteawan, N. Y., died after a somewhat extended illness on Monday, October 16. A portrait of Mr. Rothery is given herewith.

John Rothery was of English parentage, but was born in Calais, France, on March 9, 1821. His father was a prominent File maker of Calais. Mr. Rothery's ancestors were a family of File makers, and for over 100 years the family have manufactured Files. Mr. Rothery's father came to America in 1827, and located at Paterson, N. J., where he was employed by Rogers, Grosvenor & Ketchum in recutting Files. In 1828 he removed to Matteawan, N. Y., where he took charge of a File factory. The first shops were erected on the banks of Fishkill Creek in 1835. In 1846 a third shop was built. In these shops Mr. Rothery founded the well-known reputation and character of American made Files, and introduced them to favorable notice in England. A short time after the third shop was built he erected a frame building, in which he prosecuted the manufacture of Files under his own name. This building was abandoned in 1852, and he then located upon the property on which the Rothery File Works now stand. He also ran a shop at Wiccopee in 1851, which was in operation until 1870. He is said to have been the first man to use an emery wheel in this country for polishing machinery and Sad Irons. He is also said to have been the first to use flanges on the mammoth grindstones used in File making. He also gave much attention to astronomy, polished his own lenses and constructed a number of powerful telescopes. He was a man of intelligence and ability and possessed of unusual force of character.

Mr. Rothery's sons were all brought up as File makers, and when he died at Matteawan April 1, 1858, they continued the business. John, the subject of this sketch, who succeeded to the management of the business, inherited the positive traits of his English progenitors. His opinion once formed was very difficult to sway, and his convictions were expressed in a plain, outspoken manner. Of strict integrity and much intrinsic worth, his pledge once given was certain of redemption. Socially he was of a domestic and retiring disposition, and aside from the demands of his business his time was spent at his home. He confined himself almost absolutely to the supervision of File making at the works, the successful marketing of the goods devolving entirely on his agents, Walsh & Coulter, later Walsh, Coulter & Flagler. Mr. Rothery was a man of extreme conservatism, and averse to the adoption of new methods in the manufacture or marketing of his goods, as illustrating which it is narrated that on one occasion when he was urged by his agents to make a trip in the West for the purpose of visiting the leading jobbing houses he peremptorily declined, intimating that if it was necessary for him to cross the Hudson River to sell his goods he preferred that they should remain unsold.

JOHN ROTHERY.

Thoroughly painstaking and honest. Mr. Rothery's ambition was to produce the best File possible. It is said of him by competent veteran Hardwaremen that he made and sustained a reputation for American made Files when they were utterly without standing, producing goods which for quality and workmanship stood the severest tests, and said to be fully equal to the best English makes. In later years he was unwilling even to test the quality of American as against English steel for the purpose of meeting domestic competition, in one case refusing to make up 5000 dozens of Files under a special brand at the expense and risk of those who marketed his entire production.

In 1863 Mr. Rothery was elected supervisor of the town of Fishkill, but resigned before his term expired. He was also a member of the Board of Education of Matteawan eight or ten years ago. Mr. Rothery leaves a widow and five children, two sons and three daughters, William A., Frederick, Mrs. J. E. Selden, Mrs. William Whitham and Mrs. Charles Sperring, all of whom reside in Matteawan with the exception of Mrs. Sperring, who resides in Philadelphia. Two brothers and two sisters also survive him. Mr. Rothery owned a beautiful residence, which he had named "Robin Nest." The grounds are large and spacious and his home afforded him great delight and comfort.

Mr. Rothery's funeral was held on the 18th ult. During the passage of the funeral cortege the stores of Matteawan were closed as a tribute of respect to the memory of the deceased, whose death, as a man of high character and exceptional qualities, was lamented by all who knew him.

Mr. Rothery's place as a maker of Files was unique, inasmuch as he was a pioneer in their manufacture in this country, having done in connection with the house with which he was identified probably more than any one else to give American Files character and standing. His ambition was to make as good a File as possible, estimating quality of far greater importance than quantity, or even the profit derived from the business, and preferring to have a comparatively limited trade on old lines rather than incur the risks of experiment involved in the adoption of new methods. In this ambition he was successful, and took much well-deserved satisfaction in the high reputation in which the Files of his firm have always been held. In the painstaking care in the production of goods which is shown throughout his career there is a lesson for manufacturers in other branches of the trade. A more enterprising and less conservative spirit might have resulted in the doing of a larger business, but it is pleasant to record the success achieved by him on the lines which he so consistently followed, the esteem in which he was held by all who knew him, and the unique and very honorable position which he held as a manufacturer of Files.

JOSEPH A. BOGARDUS, Hardware merchant, 167 Chambers street, New York, was the nominee of the Prohibition party for the office of Secretary of State for New York.

How to Extend One's Business.

BY FERDINAND TUSCH.

TO ADVERTISE, according to Webster, is to "inform or apprise," and among the many and best direct means under the immediate control of the dealer is to secure and preserve the reputation of a cleanly kept and well assorted stock in all salable lines. "All out; can't say just when I'll have more," suggests indifference or intended suspension and invites it. "One of a kind" always in sight, tastefully arranged, attracts and rivets attention, and is frequently alluring to the observer. Goods should be kept in such order that nothing need be looked for; it should always be there. When they are in fair demand, and are bulky or cumbersome, assorted samples should be kept in facile position for daylight inspection, and that all may be preserved in a cleanly condition the sample should be sold whenever possible, replacing such from the main stock. The value of racks for Farm and Garden Tools, Guns, &c., cannot be too strongly recommended, while plush or velvet lined showcases for Table Ware are indispensable for the exhibition of such to the best advantage.

WINDOWS AND STORE FRONTS.

Many Hardwaremen do not fully appreciate the value of their windows and store fronts as indexes of the store contents. "What's the use? every one knows me (or us) and what is kept in Hardware," is a common excuse for ill kept windows. This is a mistake. Windows tastefully arranged and frequently varied diffuse intelligence of many articles of shop or household applicability and may create demand. If there are several or more Hardware stores in town, the one which attracts the most attention, other things being equal, secures the most trade. If there be but one, the display of mechanics' tools, excepting novelties, need not be so prominent, as the purchasers of such have but one resort. The front should then be devoted to household novelties and articles of popular use.

SPECIAL LINES.

All dealers recognize seasons for special lines, and, as such approach, the exhibition of the articles should be slightly in advance of the actual needs, thus serving as a reminder to the consumer of renewals or replacements. When possible, the appliance ready for practical operation should be exhibited. In this class might be mentioned gas and oil Cooking Stoves, Clothes and Mop Wringers, Carpet Sweepers, filled Fruit Jars, &c. Such a method invites confidence and dissipates the uneasiness attending the purchase of "a pig in a bag." To explain the use of an article is a cold method in comparison with the demonstration of its merits, which frequently warms the languid inquirer into actual purchase.

NOVELTIES.

Because an article has never been sold in a town or never asked for is no reason why it should not be. To the drummer's solicitation in this direction should be added unprejudiced judgment, and the results may swell the general profits. Nor need a dealer await demand. He should seek to create it. Each issue of *The Iron Age* contains over 100 pages of advertising matter, and is a veritable compendium of reference, inasmuch as thousands of articles have their uses therein set forth.

IMPRINT OF THE BUSINESS.

If the town is so situated as to be visited by many from adjacent sections, some permanent signs can be erected at its rail and vehicle approaches, and made conspicuous by some symbol of trade, a few words, and prominence of name and locality. Such are impressed upon the minds of periodical visitors by the unvarying recurrence. Unaddressed circulars promiscuously distributed are of little benefit, though cards bearing a simple inscription with a bold and preferably an original design are preserved or circulated. All goods should be wrapped in strong paper bearing the imprint of the business, for such covering frequently circulates among many hands before its usefulness expires.

SIGNS, BULLETINS, ETC.

Signs from curb to store front, bulletins of Skates, Refrigerators, Sleighs, Freezers, Mowers, &c., all in their seasons should be displayed, and if the dealer uses a wagon modesty should not forbid him to paint his name and business in the largest letters. He may be known, but this is not sufficient; he should seek prominence, and employ all methods which do not violate his self respect.

AGREEABLENESS.

As a member of one of the many secret and benevolent organizations, besides deriving the benefit of their intended purposes, he can enlarge his circle of friendships and receive many favors through the peculiar clannishness of the membership. When such organizations, or those of churches, hold fairs, there is an opportunity for both benevolence and profit. Bread thus cast on the water may return in "pudding" later on. One of the best advertisements is agreeableness, if not carried to the extent of long credits on questionable premises. It is cheap, durable and broadening in its effects. The world is discoursive and argumentative, but patience is a good investment, and when there is no moral or financial principle involved, assent to or tolerance of a customer's views strengthens his own favorable impressions of himself and invites the consideration of the good sense of his auditor. Such a man who is "always right," and his name is legion, is of course invariably wrong, and since it does not occupy much time for him to tell all he knows, the dealer can combine amusement with business as the other becomes involved in labyrinthian verbal contortions.

MATTERS OF PRUDENCE.

To win a wager from a customer is often to lose his trade, and is a poor speculation to engage in. To forget the name of a frequent buyer is worse than forgetfulness — it is a crime against one's self.

It is by all means a matter of prudence to cultivate the good graces of the neighboring storekeepers. Aside from the mutual aid of recommendation, the sociability of the intercourse establishes an informal advisory committee against the fraudulent purchaser.

THE LOCAL PRESS.

The observance of some of the foregoing methods are distinctively within the legitimate province of advertising, but the local press should by no means be ignored as an important factor in extending and maintaining trade. The day of dreary announcements of 14 blurred "nonpareil" lines to the inch is past. Study something striking or ingenious in effect, and change the matter frequently. Better use but 2 inches of letterpress in half a column than fill it with commonplace statement. Cuts talk, but not those selected from the stock of a provincial paper, as they are too aged. Clever men prepare original ones, and such should be employed. Cultivate the editor. He is interesting and entertaining. It is his business to be so. Give him cause to remember you. Upon receipt of something new for stock let him see it, or delicately convey one to him, and the occasional reading column mention or recommendation may return its cost manifold.

Lectures on the World's Fair.

ARTHUR B. CLARKE, president of the Old Dominion Iron & Nail Works Company, Richmond, Va., visited the World's Fair some weeks ago, and on his return secured a large hall and delivered to the employees of the company, their families and other invited guests, a lecture on the great fair, which was richly illustrated with large stereopticon views. The instruction and entertainment was so popular that Mr. Clarke has been induced to repeat it several times with admittance charges, the proceeds being devoted to charitable objects of that city. Wherever delivered the houses are crowded, and many who could not visit the fair have had an enjoyable and instructive substitute. The interest thus shown in the pleasure and instruction of employees is worthy of a special commendation and might with advantage be imitated by other manufacturers.

MANY in the trade will be glad to know that Webster R. Walkley of the Peck, Stow & Wilcox Company, 29 Chambers street, New York, was elected on Tuesday alderman of the city of Brooklyn, which is to be congratulated on having a man of his character and caliber in this responsible position.

Trade Items.

NELSON R. WILLIAMS, well known to the Hardware trade of the West and Northwest, through his past extensive operations at Chicago, has permanently retired from business and is now residing temporarily at Colorado Springs, Col., to benefit the health of his wife. Mr. Williams for several years represented a number of large manufacturing establishments and built up for them a heavy trade in the district tributary to Chicago. His retirement will be regretted by his numerous friends and business acquaintances, but they are nevertheless pleased to know that he is so fortunate as to be able to retire from the harassing cares while yet in the prime of life.

THE H. & D. FOLSOM ARMS COMPANY, 15 Murray street, New York, have recently added to their line the Columbian automatic ejecting Revolver. Reference is made to the lightness, strength and accuracy of the arm, which, it is stated, possesses all the desirable features of those which preceded it, as well as some valuable improvements just added. It is made in 32 caliber for central fire cartridges, and has rebounding hammer. It has a steel cylinder, steel frame and rubber stocks. The metal parts are full plated or blued.

THE PARTNERSHIP heretofore existing between Frank F. Osborn and Geo. W. Alexander, under the firm name of Osborn & Alexander, doing a general Hardware business at 401 Market street, San Francisco, has been dissolved by mutual consent. Mr. Alexander will continue the business and collect all debts owing to and settle all indebtedness of the late firm. By the terms of agreement of dissolution Mr. Osborn is free to engage in the same line of business and deal with the customers of the old firm. As yet he has not perfected any plans, but he advises us that he will undoubtedly, in the near future, resume business in the old lines, namely, Hardware, Mechanics' Tools and Bicycles. Mr. Osborn has had 28 years' experience in the Hardware business at San Francisco, seven years as clerk and 21 years as an active partner in the firm of Osborn & Alexander.

HENRY B. ROBINSON, late with the Dana Hardware Company, Boston, and Walter H. Fox, late of Topping & Fox, New York, have formed a copartnership under the firm name of Robinson & Fox, and have opened offices at 35 Warren street, New York, and 186 Franklin street, Boston, where they will conduct the export commission business, making a specialty of supplying goods to the Newfoundland market. They state that they have closely allied themselves with a number of leading manufacturers of the United States, and confidently assure their patrons of the lowest manufacturers' prices. Mr. Robinson's long acquaintance and knowledge of the requirements of the trade is referred to as placing the firm in a position to meet every want. Mr. Fox is also widely and favorably known, and the firm will have the best wishes for their success.

A COPARTNERSHIP has been formed between Joseph P. Reed, for many years connected with the Arnold Print Works, and J. Mortimer Darby, for eight years traveling salesman for Burlingame & Darbys, and they have opened a new Hardware store in North Adams, Mass. The store has been constructed with a special reference to the needs of a modern Hardware establishment, and the new firm have put in a complete stock of Shelf Hardware and builders' and manufacturers' supplies. The firm opened for business November 1. Mr. Reed is referred to as a gentleman of excellent business qualifications, and while the Hardware business itself is entirely new to him, his partner, Mr. Darby, possesses a large experience in that line, and is regarded as well qualified to conduct it successfully.

E. BISSELL, SON & Co., 12 Murray street and 15 Park place, New York, will on November 14 and 15 conduct a large trade sale of Table and Pocket Cutlery, Carvers, Butcher Knives, Shears, &c. By order of the Emery-Waterhouse Company, in liquidation, they will also dispose of 1500 dozen Cast Steel Axes, assorted weights and brands. A large line of Skates and Silverware will also be offered, as appears by the auctioneers' Special Notice on another page. This is referred to as the last Cutlery sale of the season.

THE CLARK MFG. COMPANY, Buffalo, N. Y., have recently added several styles of surface and mortise Hinges for shutters to their line, including Cottage No. 1, Diamond No. 1, Clark's No. 65, Clark's Dixie L and P, and Clark's Buffalo reversible. A circular under date November 1, 1893, illustrates these and other patterns of Blind Hinges. The company also manufacture cast loose pin Butts, Sash Pulleys, Refrigerator trimmings—brass and bronze, all finishes—also special Hardware for insane asylums.

THE TRADE will note with interest the advertisement of the Capewell Horse Nail Company, Hartford, Conn., in which they illustrate their Capewell Horse Nail, emphasizing especially its tensile strength. Their patent Corrugated Horse Nail, which is also shown, will be regarded with interest.

J. W. VOORHIS & Co. is the style of a firm who, at 23 Warren street, New York, are now carrying on a business similar to that until recently conducted by the Butler Hardware Company at the same point, Mr. Voorhis having been connected with the latter firm. They have secured a portion of the stock held by the other concern and with additions will wholesale and retail Builders' Fine Hardware, Hand Elevators and Dumb Waiters, Hoisting Appliances, Contractors', Railroad and Factory Supplies, Mechanics' fine Tools, Refrigerators, Lawn Mowers, Stable Fittings, &c.

Price-Lists, Circulars, &c.

HENRY B. NEWHALL COMPANY, 105 Chambers street, New York: Supplement No. 1 to catalogue of 1892, covering Coburn's Track and Hangers. The supplement illustrates and describes, with prices, Parlor Door, Barn Door, Car Door, Fire Door and Elevator Door Hangers; Store Ladder Service, Overhead Carrying Track and Automatic Fire Shutter system. Store Ladder Service is given special attention, two styles of Ladders being shown. Coburn's patent Ladders or Steps have rollers at top and bottom, with a track at the top only, and stand across the aisle. Ladders facing shelves are shown for use where there is lack of space between the counter and ledge.

WITHINGTON & COOLEY MFG. COMPANY, Jackson, Mich.: Farm and Garden Tools. Their 1894 catalogue is bound in handsomely embossed paper covers, and contains illustrations, descriptions and prices of their line of goods. The company remark that it is their aim to improve the grades of their goods where possible, and that they exercise a constant vigilance over material, workmanship and design, that there may be no deterioration in the quality of their products.

STEWARD & ROMAINE MFG. COMPANY, 123 North Sixth street, Philadelphia, Pa.: Single and double patent parallel Expansion Bolts. Their 1894 illustrated catalogue and price-list show these goods in a variety of forms for different purposes; also Stirrups or Timber Hangers. Expansion Bolts are designed for use by engineers, builders, machinists, plumbers, railing manufacturers, and for all whose business requires the use of fastenings of great strength, security and easy application.

THE COLUMBIA GRAY IRON COMPANY, Columbia, Pa., with New York office 35 Warren street: Hardware, Iron novelties, House Furnishing Specialties and Toys. An illustrated catalogue and price-list calls attention to the increased line of goods the company are now making, also to the fact that in some instances the price-lists of their former line have been lessened. List prices and illustrations are given of Toy, Tack, Riveting and Upholstering Hammers, Toy Garden Tools, Banks, Hatchets, Hammers, Brackets, Can Openers, Clothes Line Hooks, Harness, Coat and Hat and Pivot Hooks, Drawer Pulls, Barrel Bolts, Latches, Match Safes, Flower Pot Brackets, Shutter Hinges, &c.

STRANSKY & Co., 27 Murray street, New York: Stransky Steel Ware. Illustrations show Cameo Ware; Royal Tea Pots finished in Cameo, inlaid and garnet, also All White Ware. Stransky Steel Ware is referred to as durable, pure, quick cooking and easily cleaned, and is made in all American shapes. A large line of the Cameo Ware is shown, including such goods as are usually found in Enameled Ware. Import orders are taken for Blue and White Ware.

THE B. F. CUMMINS COMPANY, 232-234 South Clinton street, Chicago, for whom E. W. McClellan, 83 Nassau street, New York, is agent: Perforating Machines. Illustrations are shown of Check Perforators, Canceling Machines, Mutilating Perforators, Dating and Receipting Perforators, Consecutive Numbering Perforators, &c.

MORGAN & WRIGHT, 331-339 West Lake street, Chicago, Ill.: Pneumatic Tires. Illustrated pamphlets are devoted to descriptions of the valve, inner tube and the various shapes and sizes of Tires required to accommodate the Tires to all ordinary shapes of rims. Repair Outfit, Pumps and methods of repairing Tires are also illustrated, accompanied by directions.

A. TREDWAY & SONS HARDWARE COMPANY, Dubuque, Iowa: Fall circular for 1893. This is a nicely printed, broad paged pamphlet of 40 pages, calling attention to a large line of goods, such as Axes, Saws, Scoops, Measures, Baskets, Corn Huskers, Metals, Stove Boards, Stove Shovels, Coal Hods, Stove Pipe Registers, Elbows, Lanterns, Washing Machines, Wringers, Coffee Mills, Meat Choppers, Revolvers, Shot, Skates, Mechanics' Tools, &c. The company have special brands of hand Tools made for them which are all branded "Wizard," comprising Axes, Buck Saws, Hand Saws, Hatchets, Nail Hammers, Scythes, Razors, Pocket Knives, Shovels, &c. An order blank and an addressed envelope are inclosed with each circular sent out.

THE NEVERSLIP HORSESHOE COMPANY, Boston, Mass.: Neverslip Horseshoes. In an illustrated catalogue Neverslip Shoes are shown in the various sizes, front and back, also worm calks for the shoes. It is remarked that the Neverslip removable, steel centered and self sharpening calks are made with a core of hardened steel within an outside covering of soft metal; and that whenever the calks

Hosted by Google

penetrate the ice or ground, the soft metal tends to wear away faster than the hard core and to leave the center projecting. These Shoes are made for both horses and mules.

It Is Reported—

That D. G. Warfield's Hardware store, at Oakdale, Cal., was destroyed by fire on the 20th ult.

That Wm. H. Lamb recently purchased the Hardware store of E. H. Robinson, at Santa Cruz, Cal. Mr. Lamb originally hailed from Syracuse, N. Y., but for ten years he was engaged in business in South Dakota.

That there is an opening for a Hardware store at Avoca, Mich.

That J. N. Smith has sold out his stock of Hardware at Denmark, Maine, and will retire to his farm.

That H. B. Dowse, West Concord, Vt., has sold out his Tin business to R. S. Brigham.

That O. Bennion of Strykersville, N. Y., has sold his Hardware business to a new firm, under the style of Griggs, Dellinger & Ellis.

That on the 27th ult. the Hardware store and tin shop of W. G. Keith, at Brookfield, Mass., was destroyed by fire. Loss, $12,000; insurance, $6500.

That the Mead Hardware Company's store, at Swanton, Vt., was burglarized on the 21st ult., and $25 worth of goods taken.

That the Elkins Furniture & Hardware Company have been incorporated. The concern are located at Elkins, W. Va., and their stockholders are J. S. Posten, N. G. Keim, W. M. Petingale, W. B. Vana and W. G. Wilson, all of Elkins.

That the Hardware store of M. J. Wilson, Penn Yan, N. Y., was entered by burglars on the 30th ult., and a large amount of Cutlery stolen,

That the new Hardware store of John Nuessle, Hamburg, N. Y., is nearly completed.

That the Hardware store of A. P. Boswell & Co., Coffeyville, Kan., was entered by burglars on the 31st ult., and $163 in cash, negotiable notes to the value of $5000 and certificates of deposit amounting to over $13,000 were secured. Several Revolvers and Razors were added to the booty. Mr. Boswell is the Mayor of Coffeyville.

That F. C. Buell of Earlville, N. Y., and L. W. Farr of Massena, N. Y., have bought out the Hardware business of Tillotson Bros. of Earlville.

That John J. Cardwell, a Hardware merchant of Nebraska City, Neb., was married on the 24th ult. to Miss Bertha McNamar of Hiawatha. The ceremony took place at the latter point.

That the Hardware stores of Charles Halbach & Son and Foxwell & Moyle, Waterford, Wis., were robbed on the 26th ult.

That J. H. Strong has purchased at mortgage sale the Hardware stock of Mr. Woodworth, Onondaga, Mich.

That the W. H. Bartel Hardware business, at South Bend, Wash., has been disposed of to T. R. Brayton of Omaha, Neb., who took possession on October 16.

That E. H. Holmes & Co., Willimantic, Conn., will close out their stock of Stoves, Glassware, Crockery, &c. They will, however, continue the business of plumbing and house heating.

That S. S. Surdam of Oyster Bay, L. I., has removed to Hunt's Corners, Cortland County, N. Y., where he has purchased and will conduct a Hardware store. Mr. Surdam is well known on Long Island, having served two years as school commissioner of the first district, and as such fulfilled his duties to the satisfaction of all.

That Samuel and Edward Junk have bought a two-thirds interest in the Graham Hardware Company, Rio, Ill.

That Robert and Joseph McNutt and William Moore have purchased the Hardware stock of Cooper & Bittle, Maryville, Tenn., and will continue the business at the old stand under the firm name of McNutt Bros. & Moore.

That W. G. Oliver has disposed of his Hardware business at Waupun, Wis., to Lovell & Co.

That the Hardware store of Jones Bros., Little Rock, Ark., was damaged by fire on the 5th inst. to the extent of $48,000.

Paints and Colors.

It should be understood that the prices quoted in this column are strictly those current in the wholesale market, and that higher prices are paid for retail lots. The quality of goods frequently necessitates a considerable range of prices.

There has been very little change in the character of business or in the general condition of the market for leading lines of Paints and Colors. As judged from the reports of distribution by jobbers, the consumption is nearly if not quite up to the average for this season of the year, and grinders have continued to take a very good amount of material used in their line. It is plain, however, that sellers are more anxious than buyers, and prices suffer more or less from this condition of affairs. That is to say, buyers who take round lots of stock on cash terms are shown remarkable favors in the form of special prices or liberal discounts from regular lists. Compared with that of the preceding week, there was room for improvement in the volume of business, although late distribution was generally represented as having been in excess of the movement a month ago.

White Lead.—A somewhat aggresive attitude is continued by corroders not identified with the combine, and, in a few instances, as low as 5¢ net was quoted for Dry White Lead in round lots for future delivery. Manufacturers of "quick process" and Mixed Leads have named prices relatively as low. The "combine" list remains unchanged, but does not appear to be closely adhered to in all quarters. In short, the market is somewhat ragged, with indications that the cheapness of raw material is gradually becoming a more potent factor, tending to bring about lower prices for the pigment. Business has been fair for the season, but spiritless.

Red Lead.—Dealings have been on a moderate scale and the demand at present is slow. Importers name previous prices for round lots, and the old list for domestic brands prevails. Still the market has a rather soft appearance, and small lots may be purchased, from second hands if not elsewhere, at prices somewhat below popular quotations.

Litharge.—Purchases of the low grade article by large consumers have been fairly liberal, chiefly for delivery a month or two ahead. Otherwise business continues to be of commonplace type and is moderate all told. Prices have undergone none but very slight change, but seem to tend a little in buyers' favor.

Orange Mineral.—Business has been of smaller volume and the demand at present is rather slow. Former prices are generally asked, but the market is slightly soft in tone.

Zincs.—Deliveries of domestic Oxide have been fairly large and the indications are that consumption is fully up to the average. New demand is slow, however, and prices barely hold their own. Foreign brands are still more or less unsettled in price and find slow sale in competition with high grade domestic stock.

Colors, &c.—No important changes in prices have taken place during the past week, but the irregularity that has prevailed for some time past continues and it is the exception that lists are not "cut" more or less. Orders have been chiefly for moderate quantities and the demand at present is rather tame.

Oils and Turpentine.

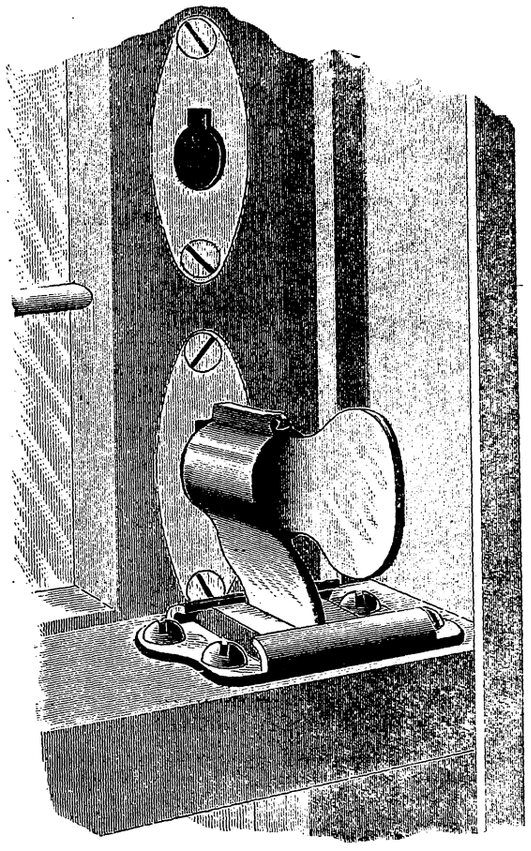
Few new features have developed in the Oil market during the past week. A certain amount of irregularity has prevailed in prices of Cotton Seed and Menhaden products, and Whale Oil has receded in value under the weight of reports of a remarkably good catch this season. Neither strong points nor weak ones have induced dealers or consumers to take hold on a more liberal scale, however, and the market therefore remains in rather uncertain form, with the future dependent in a great measure upon general trade conditions. Speculation is almost at a standstill and without incentive to freer action.

Linseed Oil.—Prices remain precisely as they were a week ago. The tone of the market has not changed. Buyers have taken little or nothing beyond such lines as well defined wants necessitated and crushers have engaged in no new conflicts. Hence a fairly steady, although rather dull, market.

Cotton Seed Oils.—Transactions have been on a smaller scale the past week and demand from all quarters is tame. There is hardly any speculative interest and new export orders seem to be scarce. Fairly liberal quantities of both crude and refined product come upon the market as a matter of course. Prices are kept somewhat irregular thereby, but show no radical change from the figures that ruled a week ago.

Lard Oil.—The higher range of prices established last week has been maintained, since current production of city pressers and receipts from outside sources were closely taken up. Business has been of perfunctory character, however, and the demand at present is very tame.

Fish Oils.—Lower prices have been made on crude Whale Oil, and quotations for the products are lowered proportionately. Thus far the change has not stimulated buying, and the market is dull, as well as weak. The reduction on the manufactured Oils is to the basis of 45¢ for Natural Winter. Sperm Oils have undergone no change in price, but the market is soft and rather dull. Menhaden products have undergone no change in value and find slow sale.



Miscellaneous.—Common Olive Oil in barrels is irregular, with prices ranging from 55¢ @ 57¢ for lots for future shipment up to 60¢ @ 62¢ for spot parcels; the movement is rather slow. Cocoanut Oils are quoted about the same as they were last week, and meet with rather slow sale. Red Oils are unchanged and in moderate demand.

Spirits Turpentine.—Spot supplies have increased somewhat, and there is freer offering also of stock for future shipment. Under the influence of this fact, and merely ordinary demand, prices have receded to 30¢ for regular and 30½¢ for machine barrels.

Bourke's Ventilating Sash Lock and Fastener.

The accompanying illustration shows a ventilating sash lock and fastener offered by the Bourke Mfg. Company, Youngstown, Ohio. It is made of malleable iron or of bronze metal, and is attached to the sash as shown in the

Bourke's Ventilating Sash Lock and Fastener.

cut. The plate is screwed to the top rail of the lower sash, and the two socket plates are attached to the upper sash at desired intervals. The opposite end of the thumb piece from the one shown corresponds in shape to the opening in the plates into which it hooks. Encircling the hole at the back of each plate is a ridge so shaped that a partial revolution of the thumb piece draws the sash close together at the meeting rails. It is remarked that the device allows the window to be open from either top or bottom, or both, giving perfect ventilation and at the same time securely locking the window; also that drawing the upper and lower sash tightly together, it acts as a weather strip, shutting out rain, wind and dust, and prevents the rattling of the window. It is claimed that the lock is strong and simple in construction, and that having no weak points it will last a lifetime.

B. & M. Corn Knives.

Bruce & Marks Mfg. Company, Gas City, Ind., are offering corn knives, of which illustrations are herewith given. The blade of the Clipper corn knife, Fig. 1, is concaved from the back to the center along its entire length, and has a straight taper from the center to the cutting edge. Thus shaped, the metal gives the knife what the makers term a double back, and is referred to as insuring great strength and stiffness of blade. The blade is as thick at the center as on the extreme back, the object being to evenly distribute the weight of the metal. Another advantage claimed for the even distribution of metal is that it keeps the knife balanced and prevents constant tendency to turn in the hand. It is remarked that the shape of the metal enables a blade to be constructed of considerably less width than is usual, thereby greatly reducing the atmospheric resistance when swinging the knife through the air. The knife is made in three sizes, and although designed for corn cutting it can be used for a variety of purposes. The knife shown in Fig. 2 has a hook for picking up corn that has been blown down, the hook being designed to obviate the necessity of stooping over to lift the corn.

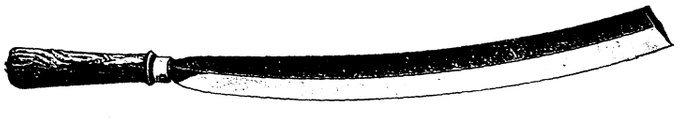

Fig. 1.—The Clipper Corn Knife.

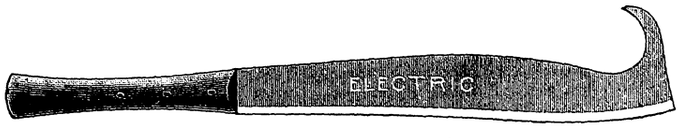

Fig. 2.—The Electric Corn Knife.

Self Piercing Bull Ring.

The self piercing bull ring herewith illustrated is being offered by Peck, Stow & Wilcox Company, Southington, Conn., and 27 Chambers street, New York. The point of the ring, as shown at the top of the cut in Fig. 1, is pointed and has beveled shoulders, the other end of the ring being so cut as to make a perfectly smooth joint when the ends of the ring are joined. The pointed portion of the ring is designed to obviate the necessity of cutting a hole or using an awl previous to inserting the ring in the animal's nose. Fig. 2 represents the flat steel screw driver which accompanies the ring.

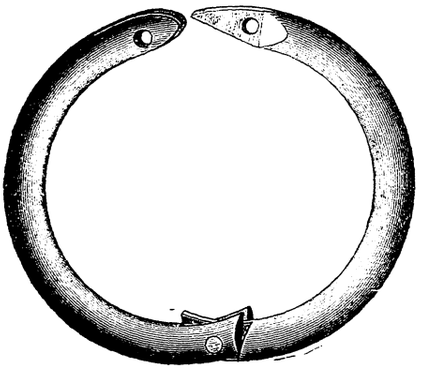

Fig. 1.—Self Piercing Bull Ring.

Fig. 2.—Screw Driver for Self Piercing Bull Ring.

Climax Coal Screens.

The Gilbert & Bennett Mfg. Company, 148 Lake street, Chicago, and 44 Cliff street, New York, have just brought out a coal screen adapted for use either on the side of a car or in a yard. Two illustrations are herewith given, one showing how the Climax screen is secured to a car for screening into a wagon and the other showing how the same screen is adapted for yard use by the addition of a head board and a foot rest. In using it on a car the clamps are secured to the side board and the iron leg adjusts it to the required incline, holding the screen firm and independent of the wagon. If it is wanted to screen from a box car it can be secured to the grain door, or one or two or more planks can be fastened together for the right hight long enough

Hosted by Google

to rest against the inside of the door frame. This will also serve to keep the coal from rolling out on the ground. For yard use the clamps are secured to the foot board, and the head board is fastened in position. The screen can be placed at any required incline and

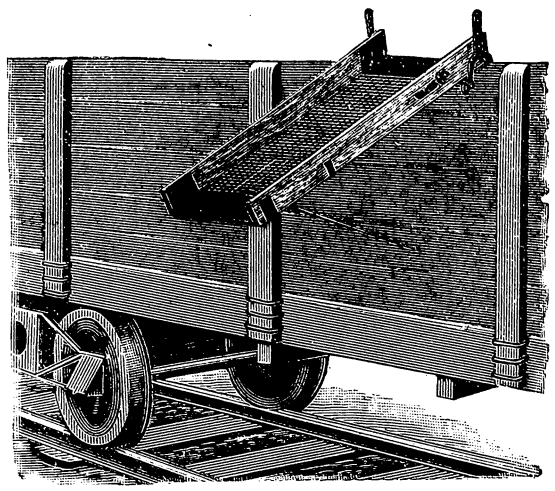

Fig. 1.—Climax Screen on Car.

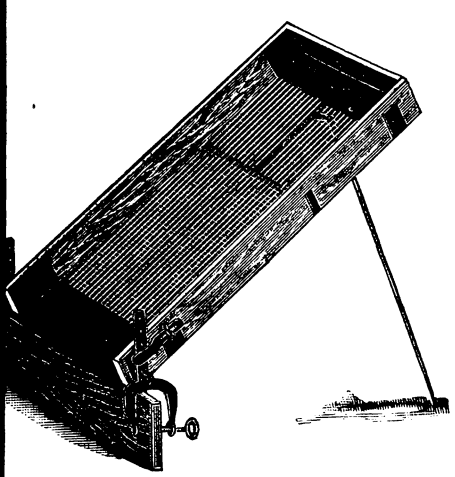
the clamps secured so the foot board is always vertical, rendering the screen firm to shovel against. The screen will also stand solid. The screens are constructed substantially and at the same time with a view to making them just as light as possible. Double crimped steel cloth is used. The frames are hardwood and covered with heavy sheet iron where the coal rolls down. The sides are strengthened by strong iron braces. The legs and clamps are strong and capable of quick adjustment. There are as few parts as possible to



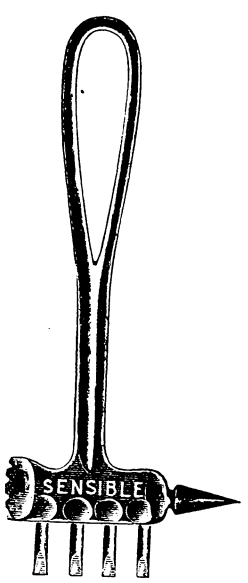


Fig. 2.—Climax Screen for Yard Use.

render the screen complete. All meshes are furnished from $\frac{3}{16}$ inch to 3 inches, but for general use the $\frac{3}{8}$ inch is recommended.

HENRY B. TODD has sold his manufacturing business at Meriden, Conn., to Proudman Bros. of that place, who will in the future supply the trade with the goods formerly made by him, including the Yankee Eave Trough Hangers, Giant Metal Cutter and Meriden Cutting Nippers.

The Sensible Ice Tool.

N. R. Streeter & Co., Groton, N. Y., are offering an ice tool as herewith shown. It is made of cast iron, with sharpened steel points, and measures 9 inches over all. The article is referred to as a combination of an ice pick, chisel, pulverizer and hammer, and as

The Sensible Ice Tool.

being well adapted to use in any of these capacities. The tool is designed to retail for 15 cents.

The Carnegie Steel Company, Limited, have instituted proceedings in the United States Court in Baltimore against the Maryland Steel Company of Sparrow's Point and Frederick W. Wood, their receiver, for alleged infringement of a patent for mixing molten pig metal. The bill of complaint was filed by W. Banewell & Sons and John M. Carter, attorneys, and is signed by H. C. Frick, chairman of the Carnegie Company. It alleges that the patent was obtained by Wm. R. Jones on June 4, 1889, and was afterward assigned to the Carnegie Company.

Current Hardware Prices.

NOVEMBER 8, 1893.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers at the figures named.

The character @ is used to indicate a range of price; thus discount 50&10@50&10&5 % signifies that the goods in question are sold at prices ranging from discount 50 and 10 % to discount 50 and 10 and 5 %.

THE IRON AGE

THURSDAY, NOVEMBER 16, 1893.

Naval Rapid Fire Guns.

Considerable interest attaches to the competitive tests of rapid fire guns for the navy recently concluded at the Indian Head proving grounds, they having been the first ever held in this country under such conditions as to afford the opportunity for rigid comparison As all the guns tested were of home manufacture, the results, as embodied in the report of the Board of Officers, will be of additional interest. Three rapid fire guns were tried—namely, the Hotchkiss, the Driggs-Shroeder and the Sponsel. Of these the first and last are manufactured in New England, while the second is of Philadelphia make. The tests were of an exhaustive nature, special attention being directed to the simplicity and strength of the mechanism and the facility of handling the weapon. As the barrels and ammunition of all three guns are practically identical, the real question to be determined was as to which breech system is best adapted for the naval service.

The board found that although none of the guns withstood all the tests each possessed points of merit peculiar to itself. The Driggs-Shroeder gun, for instance, excelled in rapidity of fire, while the Hotchkiss made the best showing in actual operation—that is, in dismounting and reassembling parts for firing. The Sponsel gun showed the greatest strength in its breech mechanism, but is reported as not attaining to the general merits of the other two. The board found, in short, that there was little to choose between the Hotchkiss and Driggs-Shroeder weapons, although in the opinion of the majority the advantage inclined slightly in favor of the former. Consequently the guns are placed in order of merit in the report, as follows: Hotchkiss, Driggs-Shroeder and Sponsel. While valuable and satisfactory in many ways the tests tend to prove that the ideal naval rapid fire gun has not yet been produced. Meanwhile the results of the competition may serve to stimulate further inventive efforts in this direction.

The death rate of New York City for last week was 17.46 in 1000, the lowest ever recorded in the city.

Four-Valve Tandem Compound Engine.

The four-valve tandem compound steam engine here illustrated is built by Russell & Co. of Massillon, Obio, and is designed to meet the requirements of the highest economy in steam consumption. To this end recourse has been nad to results obtained from a long experience with the two leading types of automatic engines—namely, releasing and positive, so called from the manner in which the cut off valve is operated. The aim in designing this engine has been to blend the best qualities of both these types. The bed, as shown in Figs. 1 and 2, is of the well known Tangye type, which rests on the foundation its entire length, and possesses great strength and rigidity. The arrangement of the cylinders, pistons, valves and valve gear is clearly shown in Figs. 1 to 4.

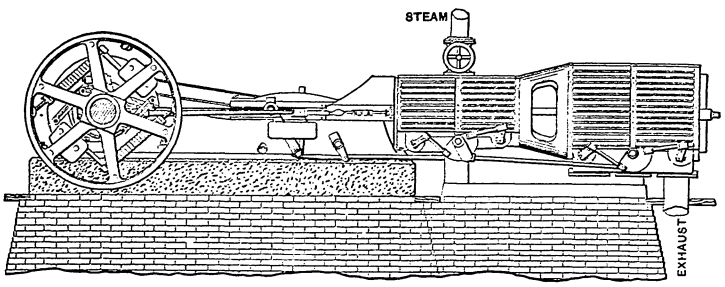

Fig. 1.—Side Elevation.

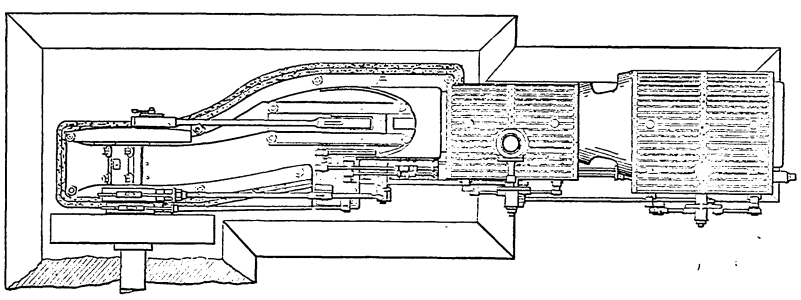

Fig. 2.—Plan.

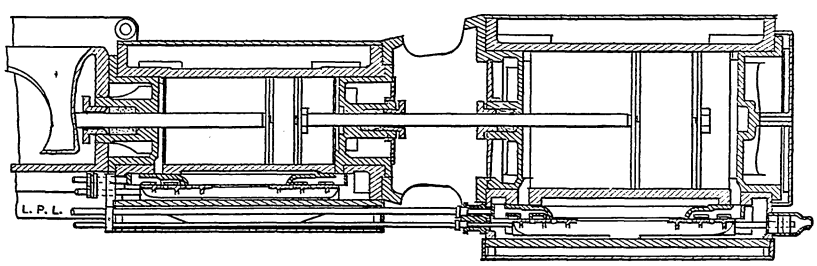

Fig. 3.—Horizontal Section through Cylinders.

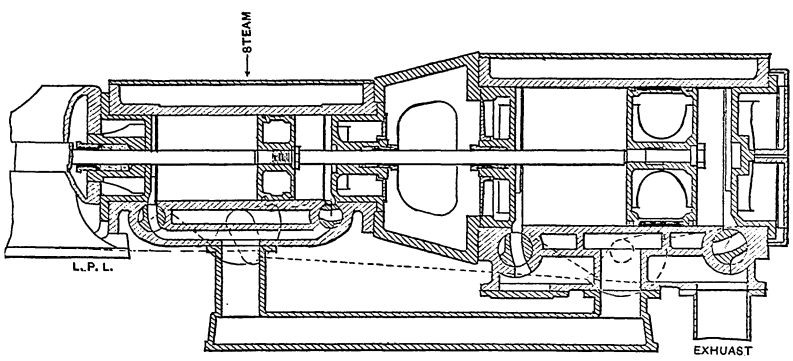

Fig. 4.—Vertical Section through Cylinders.

FOUR-VALVE TANDEM COMPOUND ENGINE.

The piston is in one piece, cast hollow and fitted with two narrow rings sprung into place for packing. Between these two rings is a broad band of anti-friction metal, the composition of which is such as to expand—on being heated—more than iron, and this makes the anti-friction portion of the piston project beyond the cast iron surface, thus throwing all the wear upon this band and preventing cutting or scoring of cylinder.

The wrist of the crosshead is made of steel, lead lapped to size, and inserted into its place, after which the hole through head and wrist is reamed out and a steel bolt, fitting snugly, driven through and secured with a nut as shown; thus it will be seen that should occasion require the wrist can be removed and another one inserted in its place. The sliding sur-

Hosted by Google

faces are lined with the best anti-friction metal, and means for taking up wear in all directions provided. The connecting rod is made of forged steel and its length from center to center of boxes is six cranks. An especial feature of this rod is that the wear in the boxes is taken up in the same direction at both ends, thereby maintaining the length between centers always the same, which in the case of small clearance is very desirable.

The governor shown in Fig. 5 is that employed with the automatic engines built by this company. It controls the speed of the engine through the cut off eccentric, which fits loosely on the engine shaft and is connected with the weight arms in such a manner that the cut off eccentric is moved around the engine shaft, either forward or backward, as the weights change their position, thereby cutting the steam off earlier or later in the stroke as the governor, or more properly the weights, adjust themselves to the load. When the cut off eccentric is rotated forward—that is, around the shaft in the direction the

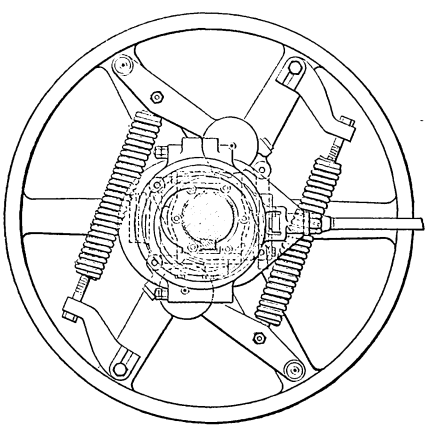

Fig. 5.—Governor.

FOUR-VALVE TANDEM COMPOUND ENGINE.

engine runs—the steam is cut off earlier in the stroke; when the eccentric is rotated backward the steam is cut off later in the stroke. Indicator cards taken from these engines show the governor to be extremely sensitive under widely varying conditions of load.

A. Falkenau of Eleventh street and Ridge avenue, Philadelphia, mechanical engineer, is making a number of dummy projectiles for the Pneumatic Torpedo & Construction Company of New York, which are intended for service on board of the steamship "El Cid," recently purchased by the Brazilian Government. They are 10-inch subcaliber and for 15-inch guns.

The works of Pedrick & Ayer of Philadelphia, manufacturers of machine tools, which firm recently made an assignment for the benefit of their creditors, are now in full operation and running 10¼ hours per day, under the management of the assignee, James M. Hibbs of the firm of Hoopes & Townsend, Philadelphia. A good many orders are in hand, and will be filled as rapidly as possible. A company is in process of formation for the purpose of taking over the business of the late firm, and Mr. Pedrick, one of the partners, will be one of the largest shareholders.

The Rail Combination.

Some facts bearing upon the Steel Rail Association, which is to terminate its existence at the end of this year, are pertinent, because during its history the industry has undergone important changes from a technical and commercial point of view. The character of the agreement under which the mills worked during the earlier part of its life is well shown by the following memorandum, entered into on August 2, 1887:

Memorandum of agreement, entered into August 2, 1887, by and between the North Chicago Rolling Mill Company, the Cambria Iron Company, the Pennsylvania Steel Company, the Union Steel Company, the Lackawanna Iron & Coal Company, the Joliet Steel Company, the Western Steel Company, the Cleveland Rolling Mill Company, Carnegie Brothers & Co., Limited; Carnegie, Phipps & Co., Limited; the Bethlehem Iron Company, the Scranton Steel Company, the Troy Steel & Iron Company, the Worcester Steel Works and the Springfield Iron Company.

We, the before-named companies and corporations, manufacturers of steel rails, hereby mutually agree one with the other, that we will restrict our sales and the product of steel rails of 50 pounds to the yard and upward, applying to orders taken by us and to be delivered by us or from our respective works during the year 1888, as hereinafter allotted and limited; and we respectively bind ourselves not to sell in excess of our current allotments, without first obtaining the consent of the Board of Control thereto—that is to say:

IT IS AGREED, "There shall now be made an allotment of 800,000 tons of rails, which shall be divided and apportioned to and among the several parties hereto to be sold by them during the year 1888, upon the following basis of percentages, to wit: North Chicago Rolling Mill Company, 12½ per cent.; Pennsylvania Steel Company, $9\frac{8}{10}$ per cent.; Bethlehem Iron Company, 9 per cent.; Carnegie Bros. & Co., Limited, and Carnegie, Phipps & Co., Limited, (jointly), $13\frac{5}{10}$ per cent.; Joliet Steel Company, 8 per cent.; Lackawanna Iron & Coal Company, 8 per cent.; Cambria Iron Company, 8 per cent.; Scranton Steel Company, 8 per cent.; The Union Steel Company, 8 per cent.; Cleveland Rolling Mill Company, $4\frac{8}{10}$ per cent.; Troy Steel & Iron Company, $4\frac{5}{10}$ per cent.; Western Steel Company, $4\frac{5}{10}$ per cent.; Worcester Steel Works, $1\frac{4}{10}$ per cent."

And in addition to the said allotment of 800,000 tons of rails above allotted, an additional allotment of 250,000 tons is hereby made and allotted to the Board of Control, to be reallotted and reapportioned by it, as and to whom it may deem equitable, in the adjustment of any differences that may arise. It being also further agreed that all subsequent allotments of rails hereafter made, to be sold under this agreement during the year 1888, shall also be divided and apportioned to the several parties hereto in the same ratio of percentages as said apportionment of 800,000 tons is herein divided and apportioned.

It is further agreed, "That the Board of Control shall, from time to time, make such further allotments as shall be necessary to at all times keep the unsold allotments at least 200,000 tons in excess of the total current sales, as shown by the monthly reports of sales. This is to be in addition to the then unappropriated part of the 250,000 tons hereinbefore allotted to the Board of Control to adjust differences."

It is further agreed, "On the first day of April, July and October, the Board of Control are authorized and directed to cancel such part of the unmade allotments of the respective parties hereto as they the said Board of Control shall determine such party unable to make in due time, and all allotments so canceled the Board of Control shall have the right to reallot to any of the other parties hereto; it being understood that all such cancellations shall apply only to allotments standing to the credit of the respective parties hereto on the dates above named, but no reallotment as aforesaid shall be made by the Board of Control to any of the parties hereto for the purpose of enabling them, or any of them, to make and sell rails from foreign made blooms."

It is further agreed, "That all transfers of parts of allotments from one party to another shall be made by the Board of Control."

It is further agreed, "That there shall be a Board of Control, consisting of three members, namely, Orrin W. Potter, Luther S. Bent and W. W. Thurston, who shall have power to employ a paid secretary and treasurer."

It is further agreed, "That the Board of Control, upon the written consent of 75 per cent. of the percentages as hereinbefore named, shall increase the allotments for the year 1888, and such increase shall be allotted to the parties hereto as hereinbefore provided."

It is further agreed, "That each party whose name is hereunto annexed, shall and will make monthly returns to the Board of Control of all contracts for delivery of rails of 50 pounds to the yard and upward during the year 1888, and also of all shipments of such rails made by them during said year; a copy of such return shall be furnished to each party hereto."

It is further agreed, "That all the parties hereto shall and will, on or before January 15, 1888, make a written return to the Board of Control of all rails of 50 pounds to the yard and upward (designating the weight) which they respectively had on hand January 1, 1888, stating whether the same are sold, and if sold, on what order they apply."

It is further agreed, "That the Board of Control shall have the right whenever they deem it expedient to convene a meeting of the parties hereto, and they shall give at least ten days' previous notice of all meetings, and any business transacted at such meetings, and receiving 75 per cent. of the votes present thereat, either in person or by proxy, shall be binding on all the parties hereto, excepting as to a change in percentages as aforesaid."

The Board of Control shall be required to call a meeting of the parties hereto when requested so to do in writing, signed by any three of the contracting parties, but such request and such notice shall state the object for which such meeting is called.

It shall be the duty of the Board of Control to have a proper record kept of all the returns made to it, with power from time to time to change the form of return as they may deem expedient.

The Board of Control shall have authority to levy an assessment, pro rata to the allotted tonnage, to defray the actual expenses made necessary to carry out this agreement.

It is further agreed, "That we will, respectively, immediately make return

Hosted by Google

to the Board of Control of all rails of 50 pounds to the yard and upward which we are now under contract to deliver during the year 1888, said return to state to whom such rails are sold and when they are to be delivered."

North Chicago Rolling Mill Company, by O. W. Potter, president
Cambria Iron Company, by E. Y. Townsend, president.
Pennsylvania Steel Company, by Luther S. Bent, vice-president.
The Union Steel Company, by H. A. Gray, secretary and treasurer.
Lackawanna Iron & Coal Company, by B. G. Clarke, vice president.
Joliet Steel Company, by W. R. Stirling, treasurer.
Western Steel Company, by A. M. Wilcox, president.
Cleveland Rolling Mill Company, by Wm. Chisholm, president.
Carnegie Bros., Limited, by D. A. Stewart, V. C.
Carnegie, Phipps & Co., Limited, by John Walker, chairman.
The Bethlehem Iron Company, by Wm. W. Thurston, vice-president.
The Scranton Steel Company, by W. W. Scranton, president.
Troy Steel & Iron Company, Selden E. Marvin, secretary.
Worcester Steel Works, by Samuel D. Nye, manager.
The Springfield Iron Company, by Charles Ridgely, president.

It will be observed that the allotment was changed somewhat from that prevailing in 1887, when the figures were:

	1887 Allotment. Tons.	Per cent.	1888 Allotment
Bethlehem	199,130	10.15	9.0
Cambria	158,111	8.07	8.0
Carnegie	249,130	12.70	13.5
Cleveland	96,549	4 92	4.8
Joliet	158,111	8.07	8.0
Lackawanna	158,111	8 07	8.0
Scranton	158.111	8.07	8.0
North Chicago	244,644	12.47	12.5
Pennsylvania	199,130	10.15	9.8
Troy	101,982	5 20	4.5
Union	130 563	6.65	8.0
Worcester	27,247	1.39	1.4
Western	80,340	4.10	4.5
Tota's	1,961,139	100.00	100.0

The actual shipments of rails during the year 1888 on account of the allotments of that year were as follows:

Shipments in 1888.

	Tons.
North Chicago	161,945
Carnegie	138,946
Scranton	136,029
Lackawanna	128,510
Union	126,016
Pennsylvania	121,960
Joliet	114,675
Bethlehem	88,448
Cambria	82,063
Western	39,168
Cleveland	29,940
Troy	25,110
Worcester	6,589
Springfield (extra)	3,705
Total	1,200,184

In March, 1889, the consolidation of the mills in the Illinois district took place, the North Chicago, Joliet and Union companies being merged into the Illinois Steel Company. This left out of the combination only the Duquesne Works, at Pittsburgh, and the Colorado Coal & Iron Company, at Pueblo. The shipments of the different mills in 1889 were:

Shipments in 1889.

	Tons.
Illinois	401,795
Carnegie	267,461
Scranton	155,814
Lackawanna	139,141
Bethlehem	121,262
Pennsylvania	108,931
Cambria	64,947
Cleveland	14,807
Troy	2,280
Total	1,271,438

The next year brought a dropping out of all the smaller mills for good. Only the Cleveland Rolling Mill made an effort later on to remodel its mill, but received inducements to abandon the effort.

The product of the different mills in 1890 is shown in the following table:

Rail Product in 1890.

	Tons.	Allotment. Per cent.
Bethlehem	128,262	8
Cambria	105 552	8
Carnegie	301,659	57
Illinois	413,850	
Lackawanna	138.737	8
Pennsylvania	115,077	9
Scranton	182,049	8
Total	1,388,186	

The active competition in the West of the Duquesne mill, which kept outside of the combination, and the sharp rivalry between the Scranton and Lackawanna works robbed the existing arrangement of much of its power for good. In November, 1890, the Duquesne mill was acquired by the Carnegie interest, and negotiations were opened for a consolidation of the two Eastern mills named. These led to the purchase of the Scranton by the Lackawanna Company early in 1891.

There had been modifications in the percentages, and ultimately the allotment system was modified in one particularly important feature. Monthly reports of shipments were made to the secretary, who distributed the total according to the allotment basis. Those mills which had exceeded their share paid into the treasury a penalty of $1.50 per ton at one period of the life of the association and $2.50 during another time. Thus it might happen, and it did occur, that mills whose customers called for their material early in the year might far exceed their allotment, but latter in the season, having finished their orders, they became receivers from the fund instead of contributors. At no time was the price of steel rails a part of the formal agreement, although understandings among mills concerning work emanating in debatable territory did occur, and in some instances protection was accorded to mills called upon to fight foreign rails in distant markets.

Later on the Pennsylvania Steel Company built the Sparrow's Point mill, and again an element of uncertainty appeared. The deliveries in 1892 were as follows:

Rail Deliveries in 1892.

	Tons.
Bethlehem	115,661
Cambria	86,739
Carnegie	324,713
Illinois	411,4 7
Lackawanna	179,818
Pennsylvania	51,058
Maryland	88,705
Total	1,260,141

The allotment of the Maryland Company was adjusted by giving that mill 8 per cent., making the total 108 per cent., the others retaining the same distribution of the 100 per cent. The shipments of the first half of the current year were as follows:

Rail Shipments, First Half 1893.

	Tons.
Bethlehem	35,189
Cambria	44,336
Carnegie	122,545
Illinois	156,433
Lackawanna	119,849
Maryland	66,023
Pennsylvania	27,509
Total	571,884

Differences arose this year among the Eastern mills as to percentages, but they were finally adjusted among them, and the Eastern works went into the meeting held a month since as a unit so far as that question was concerned, the figures arrived at to be retroactive to April 1. They offered the Western mills the same aggregate percentage, to be distributed among the two, as before, by agreement between them. The Carnegie interest demurred to a further continuance of the association after its expiration by limitation. The same party declined, furthermore, to go into any understanding as to prices, and thus practically disrupted the organization.

In the earlier days of the life of the association prices showed a pretty steady, though slow, decline. The ties which united the different mills were exceedingly loose. Individual mills took as much business as they could capture, and when their allotment had been filled or had been exceeded simply demanded the distribution of additional tonnage and got it. The existence of an understanding among the mills probably did have some effect upon prices at that period, but it was far from exercising a commanding control upon values.

It was only when the second phase in the history of the association was entered into, when the penalty clause for shipments in excess of allotment was introduced, that some resemblance of uniformity and steadiness was given to values. While there were times when an informal agreement as to prices did exist among the makers, that feature was never a part of the formal contract entered into by the mills. It is technically true, therefore, that the combination allowed every mill freedom to produce as much as it desired at any price which it might see fit to name. The penalty feature of the agreement induced the mills to keep cutting within bounds and acted as a check upon a too aggressive campaign of selling.

At one time the producers lowered the price by $1 per ton, but did not follow the market for raw materials down. The result was a constantly widening gap between the price of steel rails and the price of Bessemer pig and soft steel billets, the latter a parallel product. It is conceded by authorities in the rail trade that this refusal to abandon the higher level was a mistake in more than one direction.

With the rapid falling off in the demand, the temptation to capture business became greater and greater. Rather than make open concessions in prices the different companies resorted to other means. Inducements were offered in the way of exceedingly low prices on splice bars and other track material, much to the distress of producers whose sole specialty this class of trade was. Another method was to quote prices delivered to point of consumption at a nominal advance over the mill price. Again, the railroads who agreed to take new rails got a chance to sell their old material at figures considerably above the prices which they could possibly realize in the open market. It goes without saying that all this had a very demoralizing effect on the producers themselves and on the buyers.

The steel rail industry was getting the credit and subjecting itself to the reproach of pursuing a tyrannical course in its relations with the buyers. It was a shining mark for the attacks of free traders, whose long list of trusts and combinations in the iron trade had shrunk to that one organization, all the others having collapsed under the stress of a declining market. It was in this

Hosted by Google

way involving the whole iron trade in difficulties and was putting its members on the defensive.

There were other features which made the steel rail association unpopular in the iron trade. It was supposed to be injurious to other branches, notably to the outside mills who were rolling splice bars. It was urged that some of the works which had other departments than the rail business were sacrificing a part of the profits of that branch in order to operate more vigorously and effectually in their competition against outside rival concerns in their other branches. Thus the lack of full employment for rails was supposed to indicate the danger that the idle plant would be utilized to produce steel billets. There can be no doubt that the decline in billets was aided by the eagerness, at times, of some of the rail mills to keep their Bessemer plants and rolling mills in active operation.

We have frequently protested against the persistent misrepresentation on the part of the enemies of the American iron trade of calling the steel rail combination a trust. If it had been it would not have succumbed to the pressure of hard times. Whether or not the combination has abused its power may be a matter for controversy. From an organization which was essentially weak, it became a power through consolidation and purchase of some of the original members, and through the elimination owing to inherent weakness of the smaller concerns. But at the time when the stronger compact was formed the price which was asked for rails by the mills was decidedly reasonable. It was fair alike to the consumer and to those manufacturers who had managed to survive, and whose aggregate capacity the country needed in order to possess the equipment to meet the extraordinary demands which spurts in railroad building in this country suddenly thrust upon the makers. We hold that it is poor policy on the part of consumers whose requirements are subject to violent fluctuations to starve a large percentage of producers to death during the lean years, because in periods of an extraordinary demand they must submit to tremendous advances and vexatious and costly delays.

The Canton Steel Roofing Company, Canton, Ohio, have reproduced their factory, which was destroyed by fire, and have added many new facilities. The building is lined inside and outside with sheet iron, following the surface, care being taken not to leave any places which would act as fire flues or air conductors. It is said to be the first building of its kind ever constructed. Every part of the wood work is covered completely. The plant will be equipped with new and improved machinery, calculated to produce maximum quality at minimum cost.

On the night of October 31 the plant of the Irondale Steel & Iron Company, at Anderson, Ind., was entirely destroyed by fire, which is supposed to have originated in the oil house. The works, consisting of two sheet mills and a puddle mill, with the necessary bar rolling capacity, were in full operation at the time, but as the buildings were almost entirely constructed of wood, which was very old and dry, the fire was of brief duration. With the exception of some new parts added last spring, the plant consisted of buildings and machinery which had passed through the hands of various owners, having been moved from Aurora, Ind., several years ago. The loss was about $40,000, partly covered by insurance. It is probable that the company will rebuild at a nearby point and take advantage of an abundant supply of natural gas in the territory under consideration. This unfortunate circumstance takes 20 tons of sheets per day out of the market at a time when orders are becoming more plentiful, and throws about 150 men out of employment.

American Versus English Wood Working Machinery.

Frederick Danner, vice-president of the J. A. Fay & Egan Company of Cincinnati, has written a letter to the *American Exporter*, in which he deals with the statement emanating from English manufacturers of wood working machinery, in the columns of the *Ironmonger*, concerning the character of this class of machinery as made in this country and abroad. We take from it the following passages:

M. Glover & Co. attach considerable importance to their having sold one machine to an American house, they having put the same in on its merits, and as it was not returned they take it for granted that its equal is not made in the United States. It is possible that this is correct, because kindling wood choppers are not made, or even thought of, by any reliable wood working machinery manufacturer in this country. Englishmen who have called upon us, and who have lately purchased our wood working machinery, tell us that Messrs. Glover & Co. are manufacturers of kindling wood choppers and emery grinding machines. If so, their ability as expert judges may be questioned by the trade. They claim that they cannot understand why American manufacturers do not pay more attention to the construction of their machines, so as to bring them up to the English standard, and then add that foundry castings, wages and materials are higher in price in America, and so we make up the deficiency by eulogizing our goods and ideas more than English makers find it necessary to do. But, at the same time, they allow that Americans know better than they how to apply machinery to new purposes, and that if we can only get a variety of machines to do the work we are elated, and this they consider a weakness. I consider this ignorance on their part, and hence I will take this matter up in detail.

In the first place, all English manufacturers of wood working machinery acknowledge the superiority of American machinery by copying the same. Some do it openly and admit it; others do it on the sly and disclaim it. Sager of Halifax and Haigh of Oldham acknowledged this to me when I was in England in 1889, by saying: "We take an American machine as a copy, and by putting in a little more metal, and placing the same on the market as an improved English-American machine, we can sell them." These two manufacturers are leading houses in their line in England. A. Ransome & Co., some years ago, thought enough of American ability to hire an American designer of wood working machinery, and a number of machines designed by this American are illustrated in their present catalogue. A short time ago one of the Ransomes came to America for ideas, and, I believe, for the special purpose of copying what he could, for the purpose of rearranging his company's plant upon the American plan upon his return home.

Thomas Robinson & Co. of Rochdale wrote to the Egan Company for plans of their power feed sanding machines, but could not agree upon the price, and they now make a power feed sander which is a direct copy of American machines. Now, this wholesale copying is bound to result as follows: The American manufacturer puts a new machine on the market, which is at once copied by an English or a German manufacturer, but as it takes time and practical experience to develop the weak points in any newly designed machine, it is to be assumed that the copyist does not get the benefit of this practical experience when he copies the original, untried machine. It sometimes takes years to develop all the weaknesses, and the reason why the English manufacturer considers our machinery too light in weight is simply because he has copied discarded machinery. The question arises, are the American machines light in weight? At the present time I say "no." The J. A. Fay & Egan Company make a 24-inch single cylinder thicknessing planer, weight 5000 pounds, and they also make a 30-inch double cylinder machine which weighs 8000 pounds. I doubt very much if any English manufacturer can show as heavy machines as these for the purposes intended.

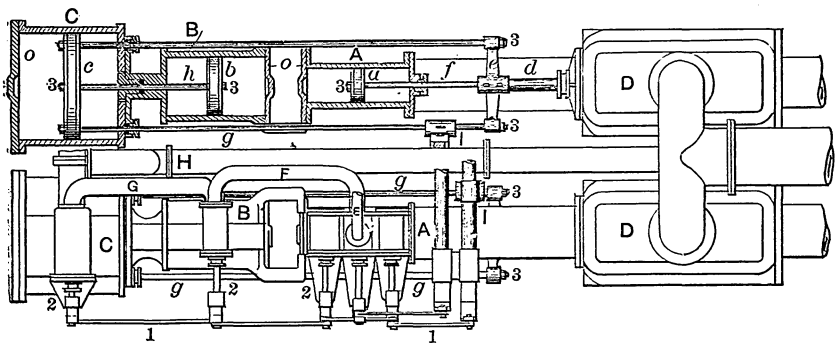
As to the high price of castings and wages: From a conversation I had with several foundrymen from England a short time ago I find that the price of castings there varies from 2 to 8 cents per pound, which is exactly the price in Cincinnati. That wages are higher in this country I admit, but it is a well-known fact that the American mechanic does more work than the English or the German mechanic in the same time. Then, the American iron is far stronger than the English, and consequently it does not require so much of it to obtain the same result.

In regard to separate machines for special work, we only recommend combination machines for small manufacturers, so as to enable them to do a variety of work with as little outlay as possible at the outset for machinery. Where close competition, however, has to be overcome it is necessary to have machines made to do only one class of work, so as to keep them running steadily on one kind of stock, the results of which, while apparent to the American, cannot be appreciated by Englishmen.

In regard to babbitt metal: This our English manufacturers take special pains to condemn, while at the same time they are using it. In 1889 I visited the London & Northwestern repair shops at Rugby, and there saw babbitt metal bushings fitted to the connecting rods of the locomotives. To this fact I called the attention of my friend, who, by the way, was an engineer of 40 years' experience with the same company, and he replied: "This is your Yankee babbitt metal. It wears well, is used to put in the rods, and is liked by all our men." Some of the users of wood working machinery in England are beginning to realize that when babbitt metal is used it costs less for repairs, because they can then do their own repairing.

In conclusion, I ought to say something about balancing. While in Glasgow I visited a large furniture factory, and there saw a nearly new machine, weighing about 6000 pounds, fitted with bronze boxes, and built by a responsible English firm, making moldings 2 inches wide, at the rate of 1500 feet per day of ten hours. The cutter head and countershaft pulleys were all very much out of balance; the boxes were loose in the frame; the cutter head mandrel was running loose in the journal and the machine vibrating badly, while the work turned out was extremely rough. An American machine for this class of work would weigh about 1200 pounds and would turn out about 10,000 feet of molding in the same time. The boxes as we construct them could not get loose in the frame, while less power would be consumed and the work turned out would be smooth. Another instance occurred at Keighly, Yorkshire, where I found a 24 inch planer running with the cutter head out of balance enough to make the machine shake the whole floor on which it stood. The boxes were loose in the frames and the machine was condemned by a wood working machinery manufacturer, although it was not an old machine by any means. The trouble was that the cutter head was out of balance. In the South of England I visited a shop where a large manufacturer of wood working machinery had undertaken to put up some line shafting 3 inches in diameter, with a pulley on same 4 feet in diameter and 20-inch face. When under speed it shook the building, and the proprietor, becoming alarmed, consulted the expert of the firm who did the work. It was decided that the shaft was too light, and a 4-inch shaft was substituted, with the same result. A Yankee mechanic, who was in the mill, remarked that if they would take the pulley off and balance the same they would have no trouble. They finally tried this, and found the pulley several pounds out of balance, and when this was remedied the trouble ceased.

Now, taking the Glasgow machine, which weighed about 6000 pounds; why did not a frame of this size and weight hold the cylinder from jumping about in the boxes? Simply because 6000 pounds did not affect



Hosted by Google

the running of the cylinders in any manner.

The English makers of wood working machinery should not run down American machinery, for their own weaknesses can be shown up at all times to their disadvantage.

Multiple Expansion Engine.

The principal object sought by the inventor of this engine, C. C. Worthington of Irvington, N. Y., was to render the pistons of the respective cylinders more readily accessible and removable than in the usual constructions of this type. The drawing represents the design applied to a duplex horizontal direct acting pumping triple expansion engine of the Worthington type. A, B and C are the high, intermediate and low pressure steam cylinders and *a*, *b* and *c* their respective pistons, D being the water cylinders on each side of the engine. Steam is delivered to the high pressure through the pipe E and exhausted from that cylinder to the intermediate through the pipe F, thence to the low pressure through the pipe G and to the condenser through the exhaust H. The steam valves may be of any suitable construction and operated by any suitable valve movement, but cut off valves on only the high pressure cylinder are preferably used, and rotary valves arranged as shown, these valves being operated by the lever valve motion I, connecting rods 1 and cranks 2 on the valve stems, as usual in this class of engines.

MULTIPLE EXPANSION ENGINE.

Referring to the sectional drawing, *d* is the main piston rod through which the power from the three cylinders is applied. Upon this rod is a cross head, *e*, to which the pistons of the three cylinders are connected. The high pressure piston is connected to the cross head by the rod *f*, which is preferably separate from the main piston rod *d* and secured to the cross head by a separate key, as shown. The cross head is connected to the low pressure piston by the rods *g*, which pass outside the high and intermediate cylinders.

The intermediate pressure piston *b* is connected directly to the low pressure piston *c* by its piston rod *h*, secured at its opposite ends to the pistons *b*, *c*, preferably by nuts 3, as shown. Each of the cylinders, therefore, has one head through which the piston rod does not pass, and these heads *o* are made removable in the usual manner, the two inner cylinders A, B being separated sufficiently to afford space for the removal of the respective heads *o* and pistons *a*, *b*. It will be seen that in this construction each of the three pistons is readily accessible by removing the respective cylinder heads *o*, that each of these heads may be removed readily and without interference with any piston rod or stuffing box, and that, as each of the pistons is carried at the end of its rod, they may all be removed by simply slacking off the respective nuts 3. In this construction, also, the use of keys in the cylinders may be entirely avoided, and the area of the smaller pistons need not be reduced by rods larger than sufficient to carry their respective individual loads. The direct course of steam between the high pressure and intermediate and low pressure cylinders is retained, also, and in case of repairs either the intermediate or the high pressure pistons and valves, or both, could be removed and the engine run with the remaining cylinders or cylinder.

Lake Superior News.

There is no question but iron ore matters look better along all the Lake Superior ranges. Two or three mines on the Marquette and Menominee ranges have decided to start, and, in fact, are starting, while the Norrie, the giant of the Gogebic, will resume next week with a quarter force. *Per contra*, there has been one complete shut down at Ishpeming, the Cliffs shafts. The big Minnesota Iron Company are to begin at once a gradual resumption, mining to start so soon as pumps and bailers can clean out the water. The Minnesota has shipped all the Bessemer stock piles that were on hand when mining ceased in August, but has some 120,000 tons of non-Bessemer on hand. The Chandler, also on the Vermillion, is to resume, and will employ a goodly force. On the Mesaba, the Franklin, which shut down two weeks ago, is to resume with 200 men next week, and will stock pile 100,000 tons during the winter. This mine, which has an enormous ore body and is one of the best underground properties on the new range, will put in hoisting equipment for 8000 tons a day—two 200 horse-power Corliss enginess and two three-skip shafts—and expects to send out next year 500,000 tons. Franklin Rockefeller and G. Corrigan are its owners. The Consolidated Iron Mines are stripping a full 48 acre tract at the Mountain Iron and Rathbun, and talk of 1,000,000 tons from there next season.

Iron ore shipments last week were 52,353 tons from Duluth, 25,349 from Two Harbors, and 22,000 from Ashland. For the season they will probably total 810,000 from the Vermillion range, 550,000 from the Mesaba, and 1,100,000 from Ashland, which latter includes eight-tenths of the Gogebic business.

A vast quantity of unsold ore is doubtless lying on Lake Erie docks, for a great deal of what has gone forward during much of the season, especially when freight rates were lowest, was sent out to gain the advantage of low rates.

Interest on the bonds of the ambitious West Superior Iron & Steel Company, brought into much prominence through the operations of that late Napoleon of Finance, Weeks, is understood to have defaulted November 1, and the plant will fall to the bondholders, who are claimed to be friendly to the new Rockefeller-Merritt combination. It is not at all improbable that the plant may be started up next spring and operated in an all around businesslike way. If so, several departments will necessarily be added.

L. Merritt, president of the Consolidated Mines, talks in a very businesslike way of the work of his company for next year and their standing among the ranges. He expects the company to mine 1,000,000 tons in 1894, and looks for nearly as much more to come off the new range from leased mines that will ship over the Consolidated road. The entire range will likely mine, he thinks, not over a quarter the ore from Lake Superior, so that it could not, if it would, set the price. This he looks to see about $4 for standard Bessemer, with the new mines selling at a little less in order to introduce their untried ores to Eastern furnaces.

The Turner & Seymour Mfg. Company, at Torrington, Conn., have decided to build their new foundry of iron and have placed the contract with the Berlin Iron Bridge Company of East Berlin, Conn. The old foundry burned a short time ago and the company have determined to build the new foundry entirely of iron and brick, the side walls being of brick, the roof of iron. The roof will be furnished by the Berlin Iron Bridge Company of East Berlin, Conn., and will consist of iron trusses and iron purlins covered with the Berlin anti-condensation corrugated iron. When completed, the building will contain no wood work whatever except the window frames and casings, so that it will be absolutely fire proof, and it is the intention of the Turner & Seymour Mfg. Company to carry no insurance on the building, as the Berlin Company guarantee that if all the wooden flasks which the company use at one time were piled in one place in the building and fired the roof would suffer no damage.

J. Sandford, proprietor of the Pioneer Eskbank Iron Works, Lithgow, New South Wales, who is now visiting England, is reported to be negotiating for an extensive steel plant of the most modern description. It is the intention of this Australian capitalist to lay down works in New South Wales for steel manufacture, in order to obviate the necessity of importing English and other foreign material. He has lately embarked in the production of corrugated iron roofing, sheets and other similar building material, the first ever made in Australia.

J. G. Pangborn of Baltimore, who was in charge of the railroad exhibit at Chicago, is preparing an *edition de luxe* on railroads as represented at the World's Fair. We understand that the expenditure involved in completing this volume is nearly $120,000 and that the book will be published by subscription at $25.

Sheet Mill Progress.—II.

BY A. BEARD, CAMBRIDGE, OHIO.

Modern Housings.

Parallel with the increase in weight of sheet mill machinery designs have been improved. The strength has been distributed to parts where it is required, and an effort more pleasing to the eye obtained. Illustrations are given in this article of various makes of housings. These will serve to show the ideas of different makers.

The high shoulders have disappeared and there is more symmetry about the modern housings. Wrought iron screws, which were continually being "jammed" and a source of great trouble and annoyance, have given place to steel screws, and the diameter has been increased from 6 to 8 inches. Dovetailed bed plates, in which housings were fastened by means of wooden blocks and iron wedges, have disappeared and V-shaped bed plates have taken their place. Upon this bed plate housings can be easily moved and made secure in a few minutes; previously it took hours to do this work. Every improvement that can be suggested has been made to prevent breakage and keep things moving.

Herein lies profit for progressive mill owners. Keeping in continuous operation reduces standing charges, such as salaries, taxes, &c., to a small cost per ton of finished product, and success follows.

It is an unexplained truth that while all these changes have been going on in design and construction of machinery, sheet mill men have made but little progress in improving methods of working. Outside influences have done more in this direction than has been done in sheet mills. Steel bars rolled on universal and other specially constructed mills, cleaned from scale in rolling, have to a large extent taken the place of bars made from muck bar piles. Quality has been improved without additional cost, and so many steel sheets of superior finish have found their way into market at the same price as iron sheets that consumers have grown critical, and it is a difficult matter to dispose of large quantities of iron sheets unless corrugators and roofing men are ready to buy.

Reworking Scrap.

Following cheap steel sheet bars several mills have been built without bar mills attached to them, no provision being made for reworking the scrap or trimmings from sides and ends of sheet packs. This has been found to be a source of trouble, as sheet scrap cannot be sold at a figure that will pay for the trouble and expense of handling and transporting it to other mills to be reworked. It is too light and bulky. Sheet mill managers have always found it necessary to devise means of using their scrap in an economical manner. A common method is to bushel the scrap in an ordinary puddling furnace, pass through the squeezer and roll into a bar, which is cut to length and made into a pile, reheated and rolled into sheet bars. To save the expense of one heat, it is now a custom in many mills to fagot scrap.

The method employed is as follows: A bench is constructed upon which a wrought iron box is placed, the ends being open and a door on the front side. In the bottom of this box a muck

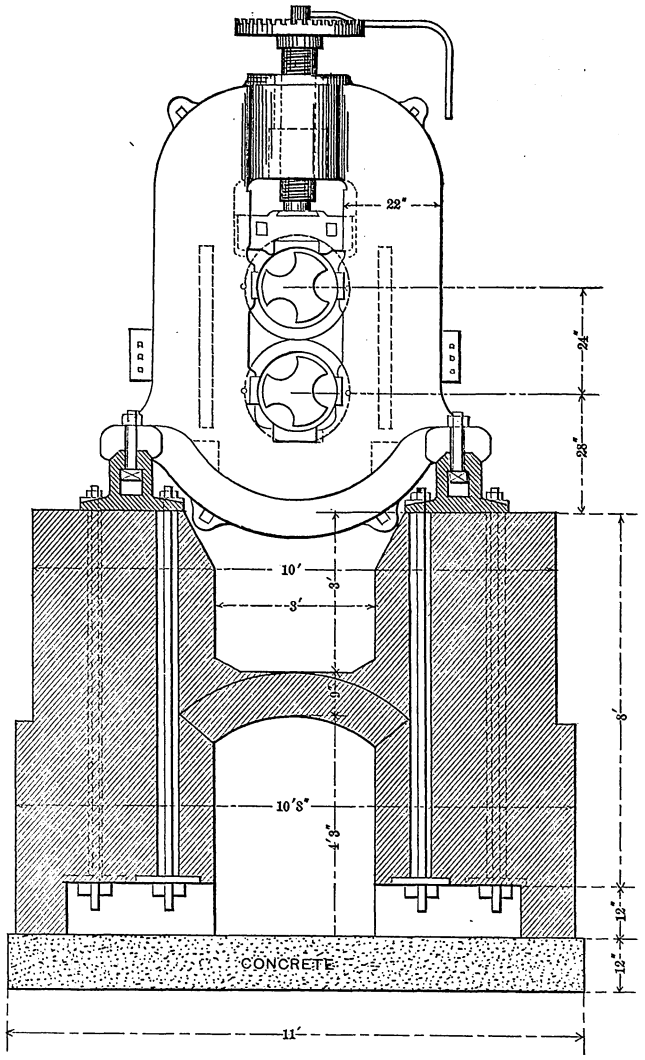

Fig. 6.—Sheet Mill Housing, Booth Design, 1893.—24-Inch Rolls.—Weight, 23,000 Pounds.

SHEET MILL PROGRESS.

bar is placed, and upon this sheet scrap bent to the length of the bar is piled, another muck bar is placed on top of the scrap, then more scrap and a third muck bar on top of the fagot. The whole pile or fagot is then about 12 inches high, it is reduced by means of a screw to a hight of 7 or 8 inches and bound together with round iron ¼ inch diameter. It is necessary that iron be used for binding, if steel is used it will not unite with the muck bar and a seam is left in the bar. In this manner nearly all the scrap can be worked up into such shape that only one heat is required to roll into sheet bars ready for use. Attempts have often been made to work scrap fagots in this manner without using muck bars but without success. The scrap works dry and muck bar is necessary as a flux. The proportion of scrap to muck bar in a well made fagot is about two-thirds. This plan of using scrap is second only in cheapness to the practice of rolling sheets from ends of boiler and ship plate. In Scotland large quantities of sheets are made in this manner, but American shipyards are not so numerous, and only a limited quantity of the material can be obtained.

Having described the general methods of rolling sheets of iron or steel and noted the changes made in machinery during the past 20 years this article would not be complete without reference to the attempts recently made to revolutionize the method of rolling sheets.

Continuous Mills.

Last year a patent was granted to William Garrett, Joliet, Ill., for a progressive process of rolling iron and steel sheets. If the process was ever given a trial the fact has not been made public, but experiments were made in an Indiana mill last year which embodied some important points of Mr. Garrett's plan. In sheet mill practice it has always been a custom to use only one pair of chilled rolls, upon which the work of molding out, running over and finishing is done. The reason given for this being that if sheets molded out through one pair of rolls are taken to another pair of rolls to complete the process of elongation, the fit or concave shape of the two pairs of rolls would not be the same unless they were turned exactly alike and were subjected to precisely the same amount of work and degree of heat. To preserve a uniform shape the rolls must each have the same treatment. If this shape is not equal buckling or dishing will result when a pack of sheets is taken from one stand of rolls to the other. If the finishing rolls are more concave in shape than the other pair the edges of the pack will elongate faster than the sides, and buckling will result, but if the conditions are contrary the middle of the pack will elongate faster than the sides, and the pack will be dished. This is the established theory of sheet iron rollers for years past, and the experiments made in Indiana seem to have proved that it is correct. A plan of the mill in which experiments were made is presented herewith, Fig. 10. The roughing mill was provided with four pair furnaces which were kept full of bars. When taken from the pair furnaces bars were passed through the sand rolls and molded out to about No. 18 gauge on one of the two pairs of chilled rolls; two roughers were employed who took turn about at the sand rolls, also two pair heaters. After being molded out the sheets were matched in threes and taken to the reheating furnaces and when ready were run over through

Hosted by Google

chilled rolls A in the finishing mill. They were then doubled and again heated, after which they were finished on chilled rolls B, and thrown off to squaring shears. The method was tried many times, and sometimes a good heat would be rolled, but the general result was "stickers, "pinched packs," "buckles" and other imperfections, and it was generally conceded that the old established theory regarding the fit of rolls was correct. It was expected that the output of the mills would be more than doubled as compared with old methods, but in this also disappoin'ment was met and the plan was finally abandoned. The mills have since been changed to old style, and old methods continue to hold full sway.

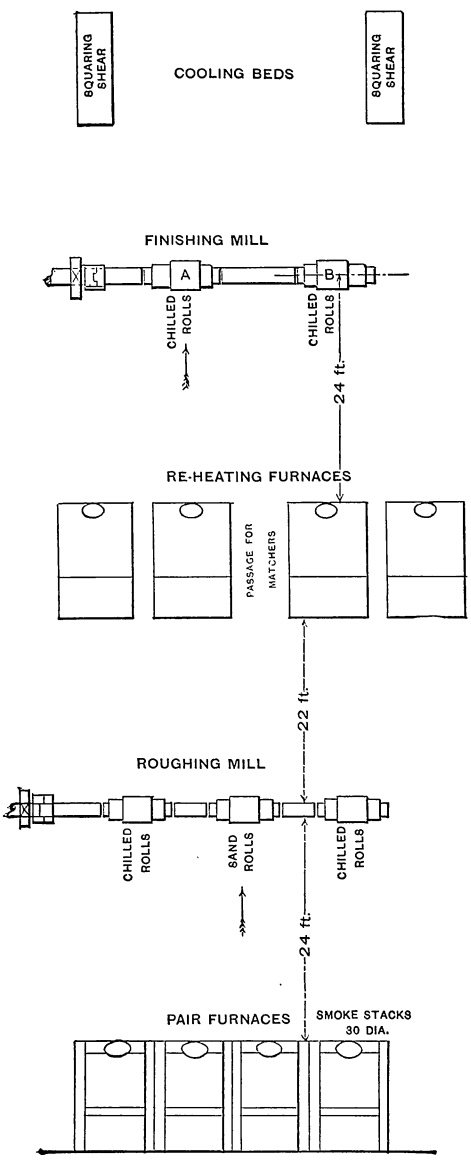

Fig. 10.—Plan of Experimental Continuous Sheet Mill.

If all other conditions and mechanical possibilities had been favorable the test of this plan would have resulted in failure, for the reason that there was a lack of concerted action on the part of the workmen and an evident opposition to the innovation. This indifference on the part of the men was apparent even to an outsider, and was in general line with their attitude toward all improvement that is liable to increase tonnage and reduce the number of men required to do a given quantity of work.

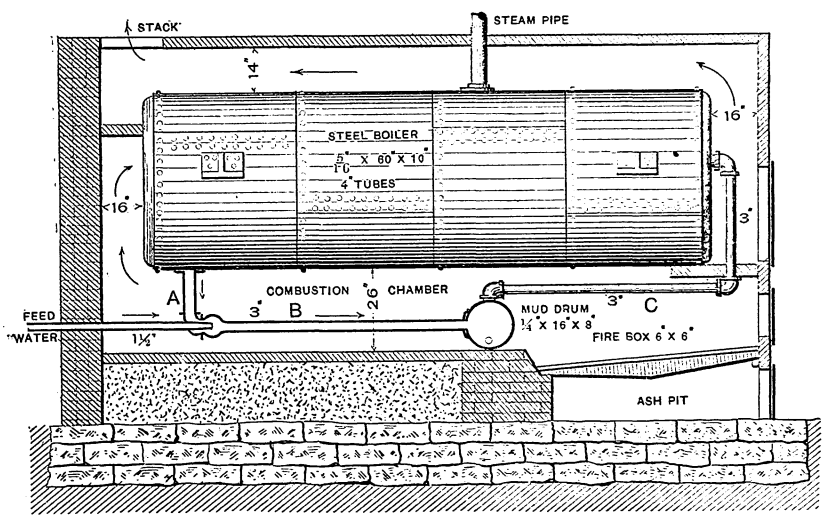
Since this article was written news comes from Bohemia that a method has been introduced by Carl Wittgenstein of Rudolfshutte, near Teplitz, by which means sheets about 150 feet long and No. 20 gauge are produced directly from the ingot with only one intermediate reheating, but so far the output has only reached 30 tons per day. Five stands of rolls are used and they are placed in continuous order. Nearly all the labor is performed automatically and only a few men are employed. Considering the enormous expense of the plant the output ought to be considerably over 30 tons per day to prove a paying investment. It will be noticed that sheets are only reduced to No. 20 gauge by this method. If Americans ever adopt this process they will have to use their wits and devise means for reducing sheets to much lighter gauge, as more sheets are sold lighter than No. 20 than are sold of heavier gauges.

A dozen or more different methods of rolling sheets have been heard of, but the inventors have so far failed to find the man with the money and energy to test their ideas. When that man is found we may hear of important sheet mill progress.

The Mercantile Cruisers of Foreign Powers.

While the vulnerability of modern ocean mail steamers render them unsuitable for fighting purposes, yet their speed, carrying capacity and sea keeping qualities cause them to be generally regarded as an important adjunct to the naval force of a nation, since they are well adapted for special employment in time of war in preying on an enemy's commerce, in transporting men and supplies, in maintaining communication with detached forces, and in various other ways. The maritime powers of Europe make careful provision for the speedy arming and equipping of such vessels for public service in case of need, and most of them, with a view to the prompt utilization of the finest merchant steamers under their respective flags, have entered into formal agreements with steamship companies which are organized under their laws and the development of which has in many cases been fostered by substantial government aid in one form or another.

Although there are nearly 7000 merchant steamers under the British flag yet this enormous fleet can only furnish about 50 vessels each combining a displacement exceeding 2500 tons with an actual sea speed of not less than 16 knots. By a system of Admiralty subventions, the payment of which is in addition to the amounts earned under ocean mail contracts, the right is secured to employ some of the fastest of these steamships in the public service should the necessity arise, upon terms agreed upon beforehand. The guns being kept in readiness and the work necessary to fit the vessels for such service having been already done as far as practicable, Great Britain could within a very short time equip as armed cruisers the "Campania" and "Lucania" of the Cunard Line, the "Majestic" and "Teutonic" of the White Star Line, the "Victoria," "Britannia" and "Oceana" of the Peninsular & Oriental Steam Navigation Company, and the "Empress of India," "Empress of China" and "Empress of Japan" of the Canadian Pacific Railway Company. Besides those named a number of other steamships belonging to the same owners are held at the disposition of the Admiralty upon demand. There are also many large and fine British merchant steamers which, though subject to no special agreement, conform to some of the Admiralty requirements in certain respects, as in their subdivision by water tight bulkheads, and these vessels form a separate list as being available for public employment in one way or another.



In Germany the Government claims the right to avail itself of the services of vessels belonging to private owners upon the outbreak of war. Of about 850 merchant steamers under the German flag there are not less than 15 each of which has a displacement of over 2500 tons and a sea speed of more than 16 knots. Foreign writers assert that provision has been made for supplying with guns and equipments at least seven of these steamers, which are said to be the "Fürst Bismarck," with an ocean speed of 20 knots, the "Normannia" and "Columbia," 19 knots, and the "Augusta Victoria," 18 knots, all belonging to the Hamburg-American Line, besides three of the fastest of the fleet belonging to the North German Lloyd, with sea speeds of 18 and 19 knots. The price to be paid for these ships, as well as for others, should they be pressed into the public service, has been fixed in advance by boards composed of representatives of the Government and of the owners. Officers and men of the reserves are in readiness, and upon the receipt of their war orders those assigned to each vessel would proceed at once to the point where the guns and equipment of their vessel are stored and enter upon the duties assigned them. The battery provided for each of the German merchant cruisers is said to consist of eight 5.9-inch and four 4.9-inch breech loading rifles, four rapid fire guns and 14 revolving cannon of smaller caliber.

In France the names of the merchant steamers which would be employed as armed cruisers are carefully guarded, as are the agreements understood to have been executed regarding them between the Government and their owners. It is known, however, that they belong to the two great subsidized steamship companies, the Compagnie Générale Transatlantique and the Messageries Maritimes. There are about 530 seagoing steamers under the French flag, of which 13, all belonging to the two companies named, have a displacement of at least 2500 tons each and an actual speed of not less than 16 knots. Statements have been published in foreign journals to the effect that batteries have been provided for the "Touraine," which has shown an average speed of fully 19 knots on several transatlantic passages; the "Gascogne," "Burgogne" and "Champagne," all credited with speeds of between 17 and 18 knots; the "Normandie," a somewhat slower vessel, and four new steamers engaged in passenger and mail service between France and the East, these being the "Australien," "Polynésien," "Armand Béhic" and "Ville de la Ciotat," classed as 17-knot ships. The battery assigned them is said to be the same in all cases, seven 5.5-inch guns and about 20 smaller pieces. Careful study has been given to the question of augmenting the force ordinarily on board with officers and men for special naval duties, and each vessel has a rendezvous station to which she would repair promptly to be fitted out if required. All steamers employed under postal contracts are required to have the necessary fittings for receiving a battery and special premiums are given for speed. Under the law of 1881

Hosted by Google

authorizing bounties for French vessels not employed on subsidized routes, an increased navigation bounty was provided for steamers built to meet naval requirements, but the inducement offered was not great enough and the results were meager, only two steamers having been built in accordance with the special requirements. In the new bounty law enacted in January, 1893, the premium offered in the case of steamers built on plans approved by the Minister of Marine was considerably increased.

Russia, with a seagoing steam merchant marine comprising about 250 vessels, has nine steamers each of over 2500 tons displacement and having a greater speed than 16 knots. The list of merchant cruisers designated as available for armed service includes also some smaller and slower vessels, the total number at present being 15, exclusive of vessels not yet completed. All of them belong to the Black Sea Company or to the Volunteer Fleet, both subsidized. The former own the "Alexis" and the "Constantine," both

INTRODUCING FEED WATER INTO BOILERS.

credited with speed of 18 knots. The Volunteer Fleet, originally organized by popular subscriptions with a view to strengthening the resources of the Government, is practically a part of the public armed force, although belonging to private owners and engaged in trade between Odessa and Vladdivostock. Its vessels are used largely to transport men and supplies for the Government, and the officers and crews are drawn from the regular navy. It is indirectly controlled by the Russian Admiralty, and new vessels recently added to it or now building have been designed primarily with a view to their rendering efficient service as armed cruisers, the employment given them in time of peace being regarded as of secondary importance. In this respect the conditions which govern the construction of merchant steamers for service under other flags are exactly reversed in the case of the Russian Volunteer Fleet, and the "Orel" and "Saratov," the former launched in 1889 and the latter in 1891 for service in this fleet of trading vessels, are practically naval cruisers in many respects. The "Orel" has a displacement of 6000 tons and the "Saratov" of 8500 tons. The older one can make 18 knots and the other 19.5 knots. Each of them is fitted to carry one 8-inch and six 6-inch breech loading rifles, besides a secondary battery of smaller guns. Eleven new steamers are building or have been ordered for the Volunteer Fleet. They are to show a trial speed of 20 knots, and will probably be put in complete readiness for mounting batteries similar to those assigned the "Orel" and "Saratov."

While Italy, with about 230 seagoing steamers, has but one which combines a displacement of over 2500 tons with a sea speed of over 16 knots, she has eight merchant steamers borne on her list of mercantile cruisers for the arming of which special provision has been made. They belong to two companies, the Navigazione Generale Italiana, better known as the Florio-Rubatino Line, which is subsidized by the Italian Government, and the Veloce Company. Five of these vessels are classed as available for service as armed cruisers, and the remaining three are regarded as suitable for employment as armed dispatch vessels. The battery assigned to each of the cruisers consists of two 4.7-inch guns and four machine guns. The dispatch vessels would carry a lighter battery. The Italian system of shipping bounties, like the French, makes provision for an increased bounty in the case of vessels built to meet naval requirements.

The American Exhibitors' Agency Company, 218 La Salle street, Chicago, have been appointed commissioners and official representatives for the forthcoming California Midwinter International Exposition, to be held in San Francisco from January 1 to June 30, 1894. They will secure space for exhibitors and take full charge of exhibits for the term of the fair at a fixed schedule of rates based on their weight and bulk. The president of the company is A. C. Oldenburg, commissioner for Canada, and the manager is H. B. Hardt. Exhibitors are charged for space at the rate of $2 per square foot in buildings, and $1 per square foot in the grounds. The minimum space allowed an exhibitor is 10 square feet.

The Executive Committee of the Western Foundrymen's Association have decided not to hold a meeting of the association in November, but to hold the next regular meeting on the third Wednesday evening in December. It is hoped that this action will result in a full attendance at the December meeting, when an interesting paper on "Furnace *vs* Foundry Practice," by E. A. Wheeler of the Wheeler Furnace Company, Sharon, Pa., will be read. The association will then meet as usual in Temple Court Building, Chicago, in the rooms of the Detroit Foundry Equipment Company.

Introducing Feed Water Into Boilers.

BY J. M. SEARLE, GRAND RIVERS, KY.

In *The Iron Age* of October 5, page 608, you produce drawings of two modern methods of introducing feed water into marine boilers.

It may be of interest to some of your readers who are paying extravagant bills for fuel and repairs to learn that extraordinary economy, both in the use of fuel and repairs, has been obtained by the adoption of a feed water device for stationary boilers which is in some respects similar to the one described in *The Iron Age* of the 5th ult.

I herewith inclose a sketch of this device, which was in use at the Dickerson Mine, N. J., in 1886, and until that mine closed down in 1892.

The cold feed water is introduced into pipe B, through a ¾-inch nozzle, so arranged as to induce a current of hot water down from the bottom of the boiler through pipe A, and at the same time force this current forward to the mud drum.

While passing to the mud drum the hot and cold water are thoroughly mixed, and so much lowered in temperature that the sediment is precipitated and allowed to settle in the mud drum, from which it may be blown off at pleasure—say once every 24 hours.

The feed water passes to the boiler through the pipe C, entering the boiler above the upper row of tubes.

To insure the best economy it is necessary to construct the cylinder of the mud drum of one piece of good metal, place the seam opposite the fire and below the inlet pipe B, raise the outlet end C 1 inch higher to insure a full drum of water at all times and always connect the outlet pipe C at the highest point. The first four boilers upon which this device was placed were in constant service for five months, including nights and Sundays, before an examination was made of their interior. Upon opening each of them they were found to be absolutely without internal scale or deposit of any kind.

There was no sign of repairs necessary and they were very economical in the use of fuel. There is a constant circulation of water in the boiler, "even when they are not being fed," owing to the location of pipe C. The device is simple, economical and easily applied to any stationary boiler, and as it is not patented, is, of course, public plunder.

[Mr. Searle placed the following note on the drawing he sent: Four of these boilers easily supplied the steam for a 30 x 48 inch pumping engine, a 22 x 30 inch hoisting engine and a 12 x 18 inch air compressor. Water pumped equaled 125 gallons per minute; ore hoisted equaled 100 to 150 tons per day; ore and water raised 850 feet to top of shaft; 90 tons of pea coal (anthracite) used each month; natural draft.]

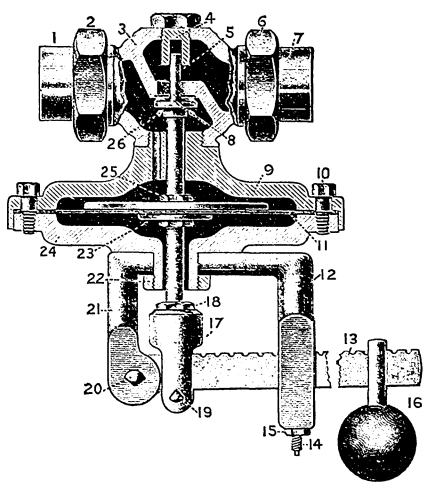
San Francisco News.

Among the events of the past two weeks must undoubtedly be placed first in order the launching of the great battle ship "Oregon." Heretofore we built and launched swift cruisers, coast defense ships, &c., but not till the present year have we done anything like building a great battle ship. The "Oregon," which is as fine a vessel as was ever turned out in any navy yard in the world, and which is a triumph of modern steel shipbuilding, was launched from the Union Iron Works shipbuilding yards, at the Potrero, on Thursday, October 26. There were fully 50,000 people in attendance to witness the event, which reflected so much credit on California shipbuilding. Every steel plate, her guns, &c., have been or are to be forged in the East. They were put together here, but there is a great deal of work in them and it seems to many that there should be, as has been proposed, a gun foundry on this coast and an establishment where those great plates of steel should be forged. This would add immensely to the industrial importance of San Francisco and of the coast. If any reasonable proportion of the work of Government shipbuilding were to be given out here it would pay the Scotts or a corporation to put up a proper establishment in this city. Various proposals have been made to this end and an attempt has been made to establish a corporation to do this, but as yet the endeavor has not met with any marked success. The capital of the proposed establishments would mount up into the neighborhood of $5,000,000 to $6,000,000. Accompanying these have been proposals to establish furnaces for the production of iron and steel from California, Washington and Mexican ores, but as yet nothing has come of them. Doubtless the financial complications of the past few months, which have borne with considerable, if not visible, severity on our capitalists and business men, may be the cause of the quiet that has been maintained with regard to these projects.



And here I may say that the merchants, jobbers and retailers doing business in iron, steel and hardware have borne the pressure remarkably well. Collections have been pretty bad with them, as with all others, but as a class they have made no sign of having been seriously incommoded, except, indeed, where the discharge of employees has told a tale of financial stress. Some other lines of business have not escaped so well, especially the lumber business. The hardware and iron and steel houses are, as a rule, institutions of great capital and have always been very conservative, so that when the day of trouble comes they are not found unprepared. The volume of their sales has shrunk very largely; on the whole, we should say 10 per cent. when compared with former seasons. In particular instances the shrinkage has been much greater. During the past two weeks there has been a fair amount of business, sufficient to give us encouragement of better things to come. We are still selling close to the limit of cost, and, no doubt, will continue to do so for the rest of the present year.

A general depression exists in insurance circles in this country, and many very unsatisfactory statements are looked for in January. Experts assert that the fire underwriting outlook is far from cheerful.

The Mason Vacuum Regulating Valve.

This valve, of which we show a sectional view, is designed to regulate and maintain an even vacuum irrespective of the suction force made by the pump. It is to a vacuum what a reducing valve is to steam. Where a large number of vacuum chambers are attached to one pump one of these valves may be placed on the outlet to each chamber and a separate amount of vacuum be kept on each one by the use of this valve.

The coupling 1 attaches to the pipe leading to the vacuum chamber; the coupling 7 to the pipe leading to the pump. Suppose, for instance, that it is required to keep a vacuum of 20 inches. When it exceeds that amount the suction passing through the small hole from the upper to the lower or diaphragm chamber will exhaust the air in that chamber sufficiently to pull up the diaphragm 23, which is weighted, and in so doing will close the valve 8, communicating with the passage to the steam pump. That vacuum—namely, 20—will be maintained until it drops below that amount, when the weight 16, not having sufficient vacuum in the

The Mason Vacuum Regulating Valve.

chamber 25 to sustain it, will drop, opening the valve 8 and allowing the pump to bring vacuum up to the normal. The weight 16 can be placed at different points along the lever 13 in order to attain any desired amount of vacuum. The yoke 12 can be turned around in whatever direction it may be wished to have the lever 13 point. This valve was manufactured by the Mason Regulator Company of Boston at the request of a large Canadian sugar refinery.

The Iron and Steel Roofing Industry.

In looking backward over the conditions that have existed in the iron and steel trade during the past six months it may be a source of wonder to many that those mills devoted to the manufacture of sheets of the lighter gauges have been running steadily notwithstanding the hue and cry about hard times and the unparalleled, complicated labor troubles which have claimed so much attention locally and generally. In searching for reasons why sheet mill operators should be the favored few the main causes soon become apparent. Building has not been interrupted to any great extent during this year and the demands of iron roofers and cornicemen for black and galvanized sheets have been quite lively compared with activity in other branches of the trade. It is these demands which are the life of the sheet iron trade and their importance is probably only thoroughly understood by those having a direct connection with the business.

Without taking into consideration the quantity of galvanized sheets consumed by manufacturers of cornices, skylights, ornaments, conductor pipe, &c., figures regarding quantities of sheets annually consumed by manufacturers of iron and steel roofing prepared ready to lay will probably surprise the uninitiated.

Twelve years ago the sale of iron and steel roofing and siding, such as corrugated, rolled roofing, standing seam, V-crimp, beaded siding and the innumerable variety represented in the hundreds of patents granted to roofing men, had to be pushed hard, and traveling men were obliged to spend their time telling customers in the best and most effective language they could command the virtues of the new material and instructing how it should be applied. The order of things is now changed. Good advertising does nearly all the work of selling, and as the quality is necessarily nearly uniform, the stock used being standard grade, the seller who names the lowest price and best terms usually gets the orders.

The State of Ohio produces fully one-half of the total quantity of iron and steel roofing sold in the United States. As nearly as can be ascertained, Cincinnati was the first important seat of the industry and it still heads the list as a producing center. The first business of the kind was established about 1868, and up to 1880 there were some few additions made yearly to the number of manufacturers. It was a hard struggle against prejudice, and not more than 15,000 tons of sheets were consumed for the purpose during 1880. After this time, however, the material found favor and a wonderful development commenced. It has increased year by year and there are now about 75 concerns engaged in the business, East and West. A conservative estimate of the annual consumption of iron and steel sheets for these purposes is about 100,000 tons. The surface which this enormous quantity of material would cover may be easily estimated, basing the weight at 1 pound per square foot when laid. To give an idea how the above figures are arrived at, a table is printed below showing the approximate tonnage of 59 manufacturers:

	Number of manufacturers.	Tons.
Ohio	27	55,000
Illinois	8	10,000
Pennsylvania	5	4,000
Missouri	3	8,000
West Virginia	3	8,000
New York	2	2,500
Indiana	2	1,000
Minnesota	2	2,000
Michigan	2	1 000
Tennessee	1	1,250
New Jersey	1	500
Massachusetts	1	500
Alabama	1	7 0
Kentucky	1	2,000
Small manufacturers	..	3,500
Totals	59	100,000

It would be interesting to illustrate how this enormous quantity of material is handled, but as the machinery used for the purpose is mostly built to special designs, and as details of economical and effective manufacture are closely guarded, information on the subject is not considered due to the trade generally. It is sufficient to say that vast improvements have been made, both in the power of producing quantity and good quality, and the low prices at

Hosted by Google

which iron and steel roofing is now sold are due to energy and enterprise spent in this direction. The favor into which this material has grown is illustrated by the figures presented. In Australia and other British colonies the use of iron and steel for roofing purposes has been an established industry for a great many years, but the methods of applying it are not so effective as in the United States. American ingenuity has developed the industry into a distinctive business, and the sales have increased during about 12 years from $1,000,000 to $6,000,000 per annum.

The World's Fair Diploma.

Through the courtesy of the *Inland Printer* of Chicago, we print herewith a *fac-simile* of the diploma granted by the World's Fair, the accepted design being that of Will H. Low, New York. There seems to be considerable misunderstanding concerning the awards made. Announcements that a manufacturer has received the "highest award," the "first prize," &c., are not justified except under special circumstances. Every exhibitor obtaining an award at the World's Fair will receive a medal and a diploma. There is only one medal, bronze. All receive the same. It conveys no statement as to rank or relative quality of the exhibit. The only distinction there is lies in the wording of the award which is engrossed on the diploma. This is the finding of the jury. If the claims for superiority allowed by the jury, as forming the basis upon which the diploma has been granted, are clearly greater than those of any competitor, the manufacturer may be justly entitled to the assertion that he has received the

THE WORLD'S FAIR DIPLOMA.

Hosted by Google

highest award. In view of the large number of awards granted, successful exhibitors will closely study the verdict of the jury in their own case and in that of rivals.

Washington News.

(*From our Special Correspondent.*)

WASHINGTON, D. C., November 14, 1893.

The Committee on Ways and Means, which started out apparently with plain sailing, is beginning to experience some of the symptoms of very serious disagreements in matters of detail.

It is a significant fact that the opposition to the programme of revision on the line of free raw material and a horizontal scaling down of duties comes from an unexpected quarter. For instance, Texas and Ohio are against free wool. Alabama, West Virginia, Maryland, Pennsylvania and New York are against free coal. Alabama, Virginia, Pennsylvania and New York are opposed to free iron ore.

There is a general clashing of productive interests and partisan policy now confronts the committee. The majority is restive, but not diverted under these protests from their home States.

If the conversations of Chaiman Wilson of West Virginia, Turner of Georgia, McMillin of Tennessee, Breckenridge of Arkansas, Montgomery of Kentucky and Bynum of Indiana are put into practice there will be no change of plans, but the policy already foreshadowed in *The Iron Age* will be carried out.

The three conservative members of the majority—Cochran of New York, Whiting of Michigan and Stevens of Massachusetts, will doubtless yield to the work of the majority of their colleagues, although it would be in their power to repeal any unfavorable legislation, according to their ideas, if they should vote with the minority.

This, however, they are not likely to do. Therefore the bill will be reported as the majority frames it. A conflict may spring up in the House, but it is not improbable that in the Senate the House bill will be thoroughly sifted and made to conform to the conservative view of the tariff even for revenue only.

As far as the elections have been considered, Senator McMillin said to the correspondent of *The Iron Age:* "We regard the national election of 1892 as the expression of the will of the people in reference to Tariff matters. The recent elections were on State issues and candidates, and not national. We must carry out the platform on which we were elected. On this line we are willing to take the judgment of the people."

It is evident that the Congressional campaign next year will be fought almost wholly on the tariff, with some local silver interests thrown in.

The line the committee is now operating upon is all the free raw materials reported or passed by the last House in the tentative bills, with pig iron at $5 a ton, steel rails at $8 a ton, tin and terne plate 1 cent a pound and a cut ranging from 25 to 40 per cent. on articles in the metal schedule. An effort is being made to get the bill ready for printing next week.

Commodore Hichborn, Chief Constructor of the Navy, speaking of the sensational allegations about the "New York" and "Montgomery," said today: "There is just enough in these stories to give a color of veracity, but to say that the statements as made are true would be decidedly untrue. There is nothing in the alleged defects in the vessels named or any other vessels of Department designs, if these agitators should see fit to lug them in also, which cannot be remedied by simply going back to the calculations upon which the designs were based. Every vessel of the United States Navy will carry all the weights, armor, armament, supplies, coal and everything else for which she was designed. But a vessel constructed for an armament of 6, 8 and 10 inch guns with the auxiliary batteries, and then to mount her with 8, 10 and 12 inch guns, would simply be like building a house with a foundation for two stories and putting on four. Under ordinary conditions the foundations might hold the weight, but we design ships upon scientific calculations; not to meet smooth water conditions, but the roughest weather and the severest strain of battle. When you increase the hight or weights on top, the center of gravity rises.

"We are now making heavier guns than when some of the earlier ships were built. It would be folly to attempt to mount them with guns of greater power than their class. The nicety of calculation covers weight of hull, machinery, batteries, munitions, fuel and stores. The dimensions of the hull and draft are adapted to these requirements, and they are all correct for the weights originally intended.

"The best evidence," said the Commodore, "of the hollowness of this outcry is the charge that the draft of the 'New York' was miscalculated, and that she cannot enter any of the docks of the Government. The latter part is true, and the first is false. The statement should have read: 'The Government of the United States does not possess a dry dock which can suitably accommodate any of the battle ships or large armored cruisers.' The 'New York' can get into the larger docks now available, by taking out some of her heavy guns. The subject of dry docks is one which must be met in order to keep pace with the great ships we are now building. We were not in position to build such ships when our present dock accommodations were built.

"The only serious thing about this agitation is the danger that it may create an unfavorable impression toward the new navy. There is no danger of the ships being top heavy if mounted as designed. This fact is acknowledged by the naval experts of the world, that the ships of the new navy of the United States are not excelled by any other class anywhere. We will match the 'New York,' 'Columbia,' 'Massachusetts,' 'Indiana,' 'Illinois' or 'Oregon' against any of them. We are not afraid of scrutiny nor of criticism, but we would prefer to have it based upon facts and not inferences upon false premises."

Secretary Herbert has reached that part in the preparation of his annual report in which the important question of additional ships to be asked for from Congress must be decided. The Secretary when chairman of the Committee on Naval Affairs of the House always entertained liberal views on the subject of new ships. He is now in consultation with the bureau chiefs on this subject. His disposition is to recommend two additional battle ships and a liberal number of torpedo boats. The torpedo branch of the navy has made very satisfactory progress. The Secretary accordingly favors the construction of a fleet of these destructive machines according to the latest and most approved designs.

In regard to the battle ships, the Secretary's idea is that we are not sufficiently well equipped for aggressive or defensive naval purposes with actual stand up and fight ships. The fleet of cruisers is sufficient at present for destroying commerce and eluding the enemy's fleet. The disposition among Senators and Representatives is generally favorable to a liberal policy. Their confidence, also, in the judgment of Secretary Herbert will also go a great way toward the carrying out of his recommendations.

Russian Manganese Ore.

Steel manufacturers and others interested in the use of manganese should peruse the Foreign Office Report, No. 307, by P. Stevens of Batoum, on the "Manganese Ore Industry of Sharopan." The annual export of this ore is about 150,000 tons from the district in question, about half of it being sent to Great Britain. Latterly, some has been sent to the United States. The mines extend over an area of some 13½ square miles, and are estimated to contain 66,500,000 tons of the ore, so that at the present rate of export the supply ought to last some 200 years. That period will be shortened, however, if the exports increase, as they seem likely to do, the estimate for this year being 322,000 tons. The mines are situated in a very mountainous district, and the ore had been removed by hand, and carried by carts; but a railway is now in progress, and will be completed before long. Mr. Stevens puts down the cost of the ore delivered at Poti or Batoum at 8¾ pence per pood of 36 pounds, or equal to $10.94 per ton of 50 per cent. metallic contents, equivalent to 20 cents per unit and ton, f.o.b. Poti. The average freight from the Black Sea to the United Kingdom is $3 per ton. The standard quality of the Chiatur ore is 54 to 55 per cent. of metallic contents, or 83 to 87 of peroxide when dried at 212° F., and about 0.16 per cent. of phosphorus, but Mr. Stevens says some of the ore is mixed with inferior ore, and so brought down to 50 per cent. Mr. Stevens recommends that buyers should give the preference to Government samplers and analysts holding official positions rather than to private samplers, who are apt to select the heavier pieces of ore for the use of the analysts.

In a few weeks the Cambridge Corrugating Company, Cambridge, Ohio, will place on the market Stanley's patent felt lined iron and steel roofing. Sheets treated in this manner are said to be impervious to the action of moisture arising from the insides of buildings, and this company claim to be able to manufacture the material at a slight increase over the cost of plain roofing.

The 9585 men who enlisted in the United States army last year represented some 200 different trades or occupations, including lawyers, doctors, chemists, school teachers, civil engineers and others from the educated professions. The large majority, however, were drawn from the laboring and mechanical occupations.

An 1893 Bessemer Steel Works.

[*With Supplement.*]

During the last four years each year has seen the completion and starting of a new Bessemer steel works—*i. e.*, Duquesne Steel Works, 1889; Jones & Laughlins, Limited, 1890; Maryland Steel Company, 1891; Shenango Valley Steel Company, 1892. The close of 1893 witnesses the completion of another works in the plant of the National Tube Works Company, at McKeesport. Each one of the above works is fairly typical of the "state of the art" of the year in which it was built.

An examination of the general plans of the different works shows no radical departure from the accepted lines, with the exception of the plant of the Maryland Steel Company, in which case the method of adapting the converting house to cast upon cars was boldly followed.

Each of the above works, however, shows variations in detail, which, while in themselves not amounting to much, still in the aggregate would show that the works built to-day have many points of difference from the ones built six years ago. The tendency has been toward quicker handling, greater reductions and higher speeds. That corresponding economies have resulted is evidenced by the fact that $6.50 per ton fairly represents the difference between the price of pig and billets to-day.

The new works of the National Tube Works Company are located on the Monongahela River, 12 miles above Pittsburgh. They are connected with three separate lines of railways—*i. e.*, P. R. R., B. & O. and P. & L E —thus having facilities for shipping that are unsurpassed. The works are immediately adjacent to the Monongahela furnaces, which are operated by the same company, and from which hot metal will eventually be taken to the rolling mills of the same company. The products of the steel works will be chiefly slabs for rolling into skelp, the present capacity of the National Tube Works being such that under ordinary conditions the entire product of the works would be consumed.

The works were designed by the Pittsburgh Iron & Steel Engineering Company and were contracted for in their entirety July 11, 1892, and have been carried forward under the personal supervision of General Manager Jno. T. Wilcox and Chief Engineer Saml. Forter. The initial blow will be made in November. The site was an exceptionally difficult one to build upon, the yard level requiring to be filled over 20 feet over the greater part of the 11 acres, and the heaviest machinery is located where a deep swamp or morass existed, requiring many thousand 40 foot piles to be driven to reach gravel. The system of car casting, vertical stripping, soaking pit furnaces and electric traveling charging cranes has been followed. The plant essentially consists of two 8-ton vessels mounted side by side and blowing to the rear. They are placed at an elevation of 14 feet (measured to center of trunnion) above yard level, enabling a *débris* car to be run under the nose of the vessel when tipped. The cupola house is situated on one side of the converting house, the hot metal ladle being moved by stationary engines. Three cupolas are provided, each 10 feet shell and 27 feet from mantel plate to charging floor; the cupolas have three rows of tuyeres and have continuous wind boxes. A feature of the cupolas is that they end with the charging floor; what extends above that point is a hood or spark stack only, leaving a clear opening entirely around the cupola for charging purposes. All arrangements are made to use melted metal direct from the blast furnace in case same is found desirable. The charging floor of the cupola is 51 feet above the general level, the hoist consisting of a pair of 10 x 12 Crane furnace hoisting engines, with two cages, 7 feet 6 inches by 9 feet.

A 35-inch blooming mill is provided, driven by a pair of 36 x 48 engines, all of Mackintosh, Hemphill & Co.'s build. The gearing is respectively 4 feet and 8 feet diameter, 8 inches pitch, 30 inches face, of cast steel. The mill will give a range of sizes from 22-inch slabs down to 4 x 4. The blooming shears are located 100 feet from the mill, and midway between the mill and shears is located an auxiliary hydraulic shear, which is used to cut off crop ends and also cut the billet into two or more pieces, thus enabling the main shears to cut several pieces at once.

The blowing engines consist of a pair of horizontal compound tandem engines, high pressure steam cylinders, 28 inches diameter; low pressure, 50 inches diameter; blowing cylinders, 54 inches diameter; all 60 inches stroke. The steam cylinders are fitted with piston valves having adjustable cut off, and the blowing cylinder has positive inlet valves. The pair of engines are provided with one fly wheel 25 feet diameter and 25 tons weight. An independent Worthington air pump and condenser serves both engines. The ordinary wind pressure is to be 25 pounds. The engines were designed and built by Mackintosh, Hemphill & Co., and are beautiful pieces of massive engineering, the total weight of the pair of engines being about 370 tons. Steam is supplied by 2500 horse power Babcock & Wilcox boilers arranged in five batteries. A steel stack 11 feet by 6 inches in the clear by 180 feet high serves all the boilers. Roney stokers are used, and all the steaming coal is unloaded upon a platform on a level with the charging hopper of the stoker. The boilers are intended to carry regularly 140 pounds of steam. The feed

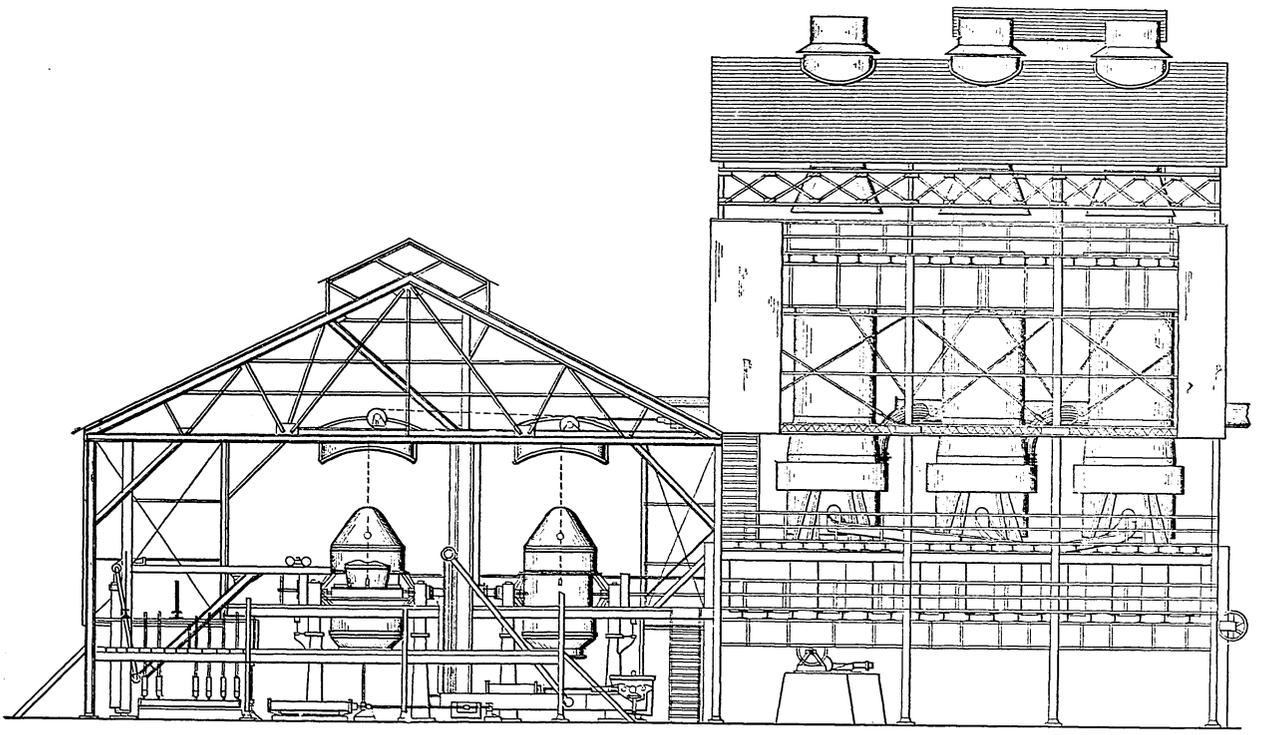

Fig. 1.—Converting and Cupola House.

AN 1893 BESSEMER STEEL WORKS.

Hosted by Google

pumps are controlled by an auxiliary accumulator.

The hydraulic system is supplied by three Wilson-Snyder compound duplex outside packed plunger pumps, 16-inch high pressure cylinders, 28-inch low pressure, 7½ inch water plungers, all 24 inches stroke. The accumulator is 18-inch plunger, 8-foot stroke, and is loaded to 450 pounds. The cupolas are served with three 88-inch Boston pressure blowers, the shells being made of plate steel. The electric power is furnished by two 40 horse-power, 250-volt, Westinghouse generators, the fans and dynamos being driven by a 250 horse-power Ball & Wood compound engine. Three five-hole soaking pit furnaces are provided, each hole being 4 x 4 feet. Owing to occasional high water in the river, it was compulsory to have the top of the heating furnaces 8 feet 6 inches above the mill level. Each hole has a cover moved by a hydraulic cylinder, all of which are operated from one point. The heating furnaces are fitted with disk reversing valves, and each furnace has its own stack 4 feet in the clear by 80 feet high. The furnaces are built entirely of Mt. Savage brick.

The gas plant consists of six circular producers 8 feet 6 inches diameter, 14 feet high. A feature of the producers is the absence of any grate bars, the burning coal resting directly upon an ash bed. The gas mains are all under ground, but are steel tubes, brick lined, the principal main being 6 feet 3 inches shell, lined with 4½ inch brick, and made of ¼-inch steel. The bottom house is provided with four large drying ovens and a stopper oven, the bottoms being handled by a hydraulic crane. The mixing house is equipped with one large Gates crusher and two 7 foot pans (wet and dry), the stock being handled by elevators. The soaking pit furnaces are charged and drawn by two electric traveling cranes, built by the Shaw Electric Crane Company. They are 55 feet span, and are intended to handle 5-ton loads at very quick speeds, hoisting and lowering at 100 feet per minute, and having a travel of 300 feet per minute. They are fitted with an electric tong releasing device. Covering the blooming mill and reversing engines is a 20-ton traveling crane of the Morgan Engineering Company's build, 47 feet span.

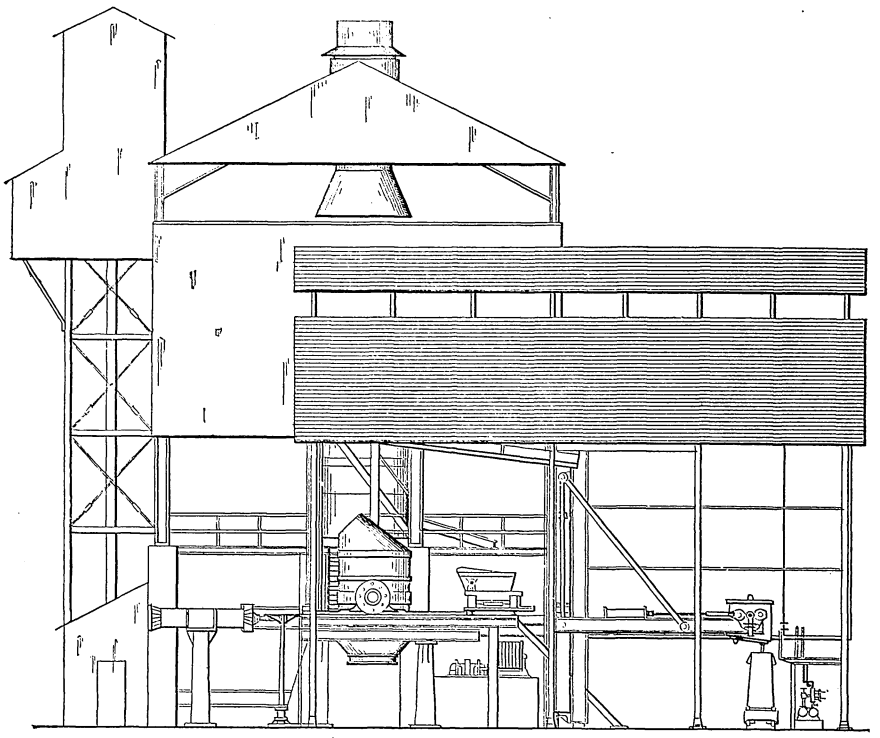

Fig. 2.—Converting House.

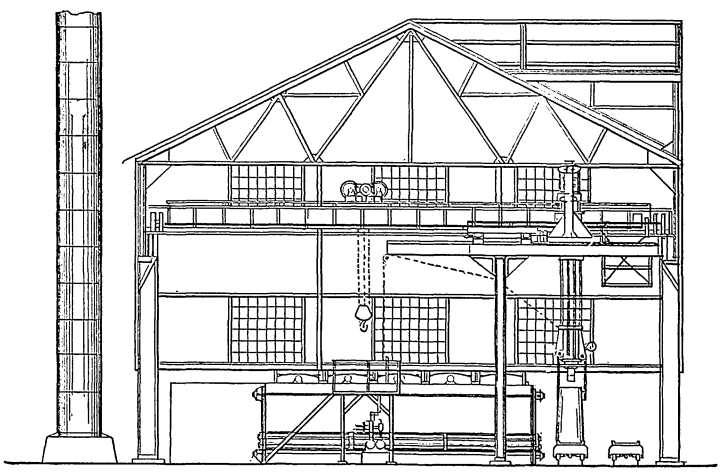

Fig. 3.—Furnace Building.

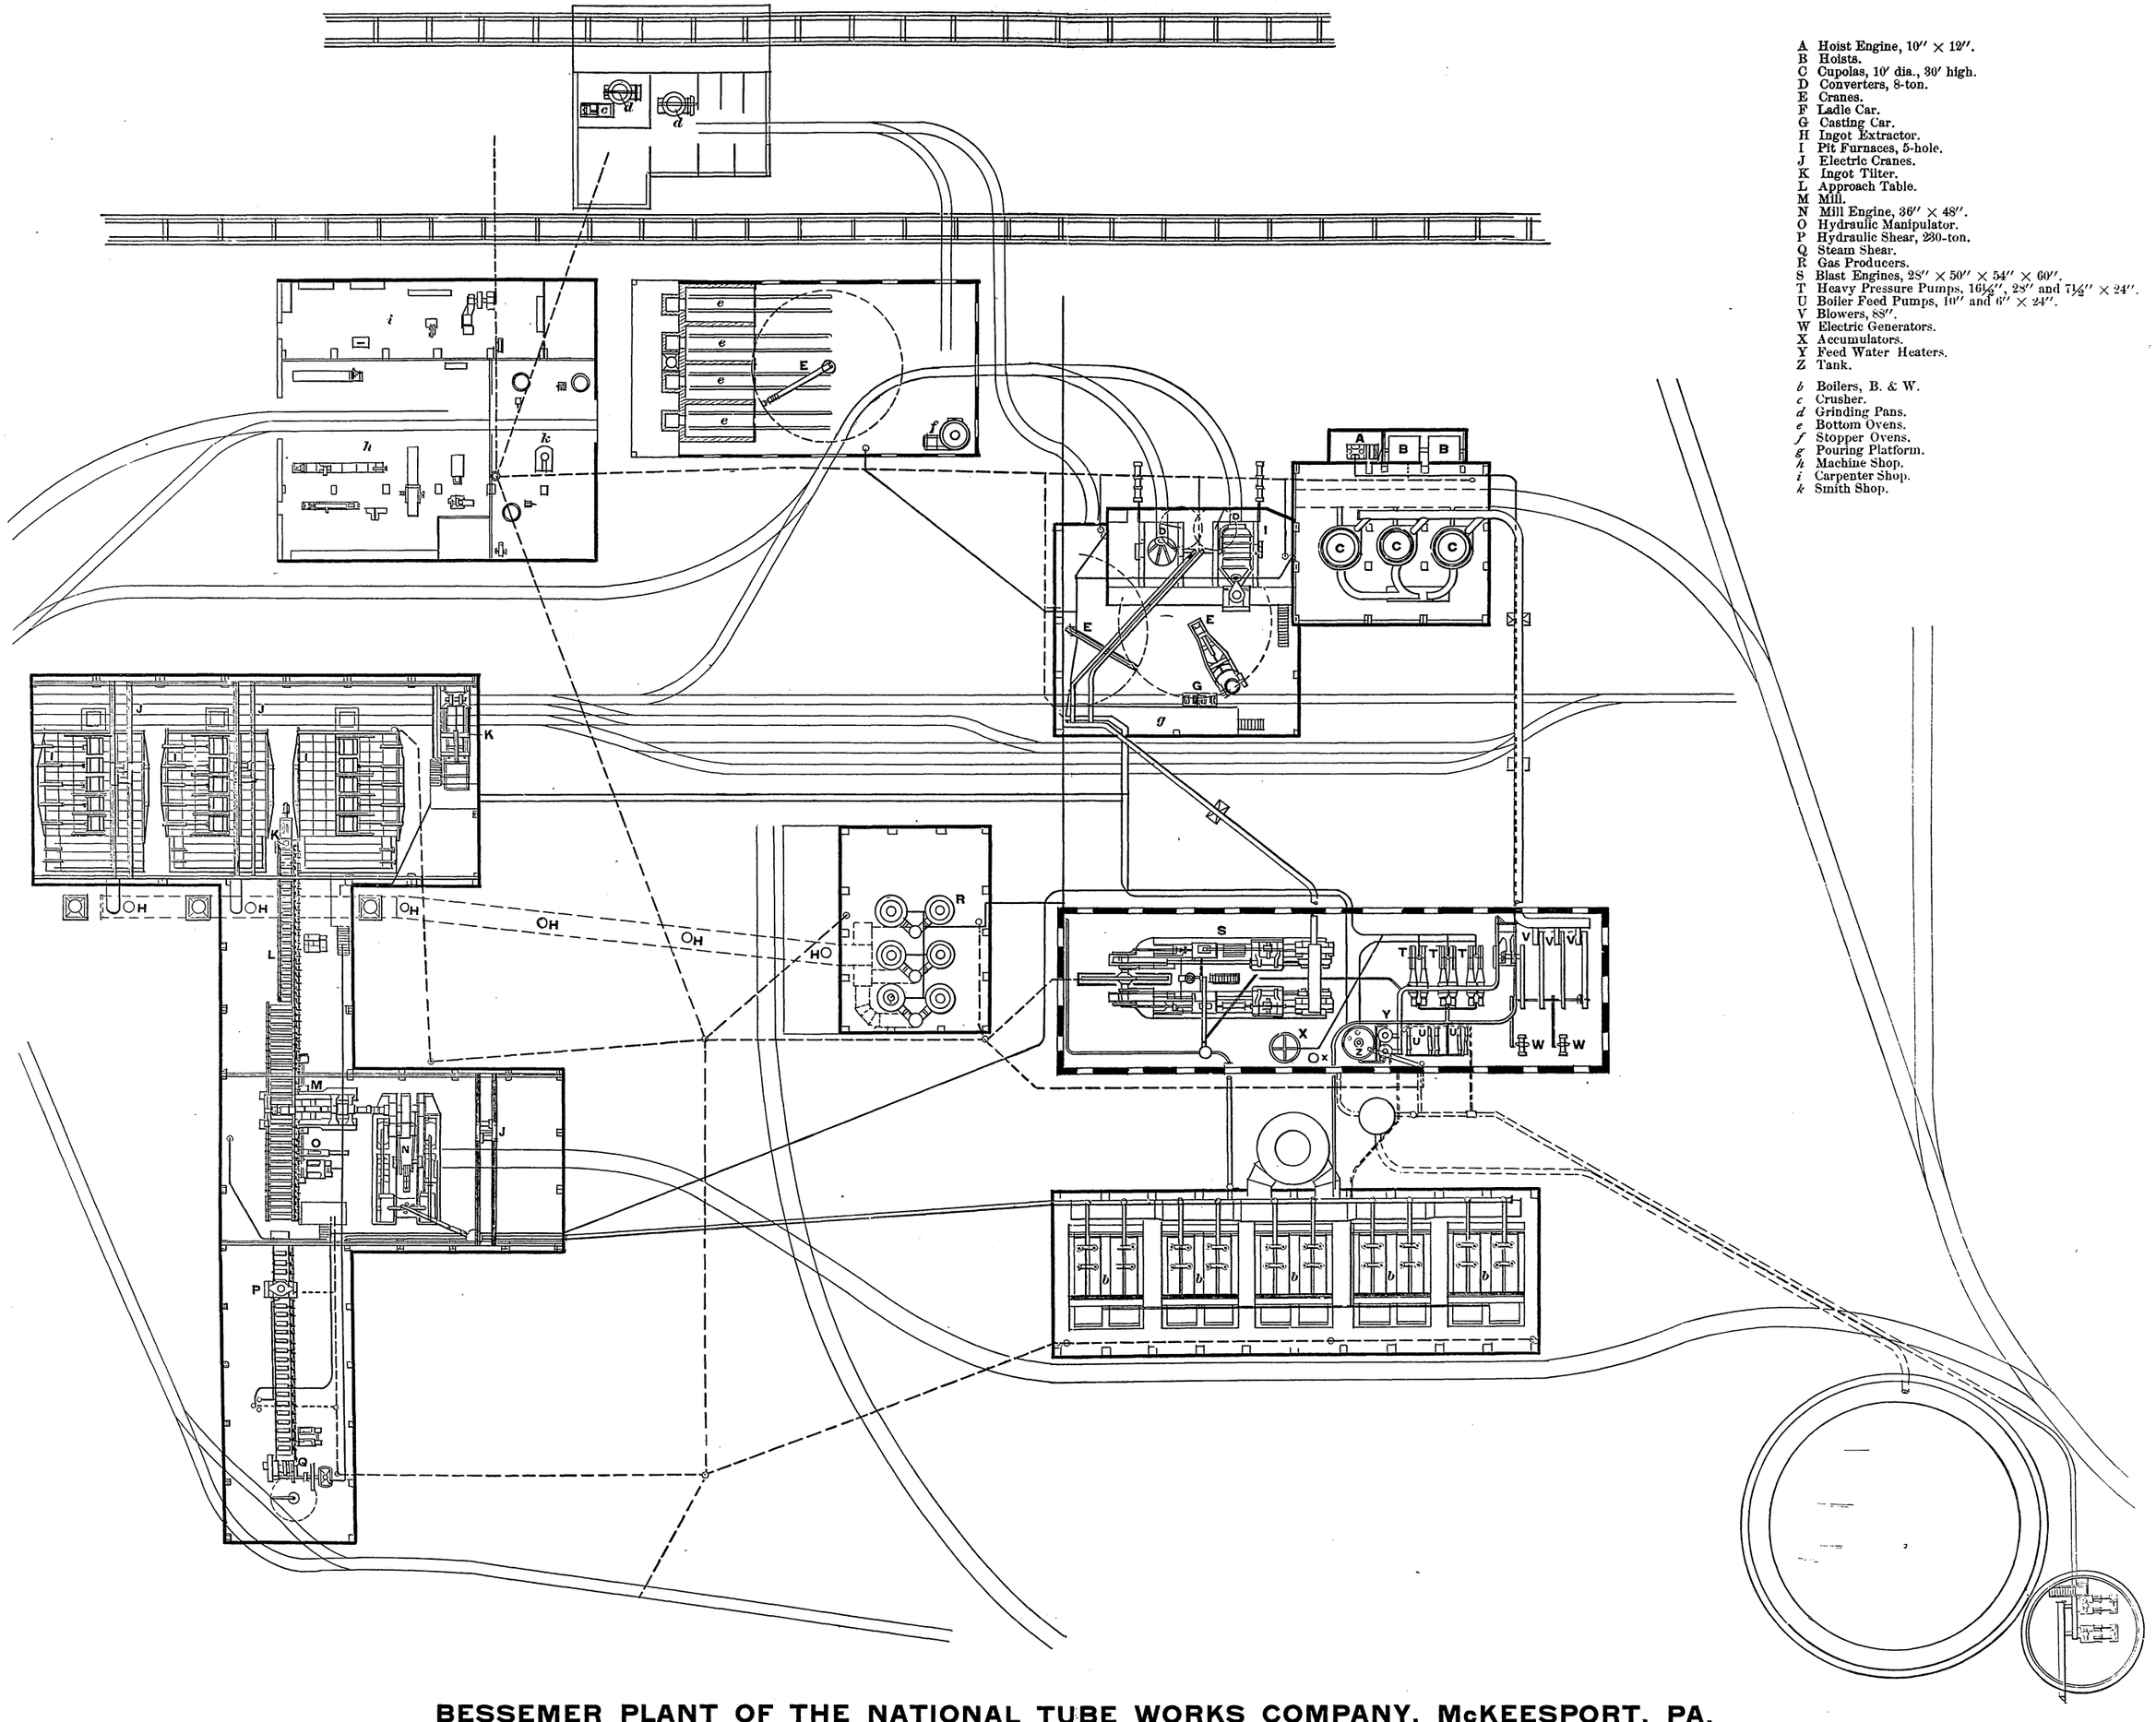
AN 1893 BESSEMER STEEL WORKS.

It will be noted from the plan that the grouping of the buildings is very convenient for handling of steel during its various states of manufacture. The cupola house is convenient to the blast furnaces, and the ingots move in straight lines to the heating furnace building. The shears are on the river side of the works, where there is ample room for any arrangement of shipping tracks that may be desired. The buildings are all of iron except the engine, pump and bottom houses, which are of brick. The various buildings, as well as all structural work, converters, ladles, &c., were furnished by Riter & Conley. The buildings are of the following dimensions: Cupola house, 42 feet 6 inches x 54 feet; converting house, 58 x 68 feet; heating furnace building, 58 x 125 feet; blooming mill, 50 x 95 feet; blooming mill, 45 x 181 feet; engine house, 47 feet 9 inches x 157 feet 9 inches; bottom house, 50 feet 9 inches x 98 feet; mixing shed, 55 x 54 feet; pump house, 36 feet 3 inches diameter.



The works represent the most advanced and progressive views on the subject of Bessemer construction, and no expense has been spared to embrace in them all features that tend to economies. The executive officers of the National Tube Works Company, under whose direct personal supervision the works were constructed, are: Wm. B. Schiller, manager; Taylor Allderdice, superintendent; Mr. Schultz, master mechanic.

The first decision of the State Board of Arbitration of Ohio has been promulgated by Secretary Joseph Bishop in the matter of the difference between the Forsythe Coal Company and the employees thereof. The company appeared by counsel before the board, but denied its jurisdiction. All differences had been settled amicably, except the refusal to employ two miners who were officials of the local union. It appearing that there was no good reason for this, these officials having done nothing outside their duty to their principals, the board recommended their reinstatement. This the company refused, and the board, exercising the functions conferred by sections 5 and 14 of the Arbitration law, publicly declares "that the blame for the continuance of this strike lies at the door of the Forsythe Coal Company."

At Harrisburg, Pa., on the 10th inst., Judge McPherson delivered an opinion in which he holds the Hecla Coke Company of Pittsburgh liable to taxation on their capital stock invested in mining leases and improvements and in dwelling for employees, and exempts their capital stock invested in the manufacture of coke, following a recent decision of the Supreme Court in another case involving a like principle.

Prices of California cereals have of late been the lowest ever known on the Pacific Coast, and over two-thirds of the surplus wheat for export is still being held in the State, on the chance of a rise.

THE WEEK.

The Howell torpedo tests at the Newport trial station have been brought to a close. About 80 tests, of the most severe character, have been made in all, and, so far as is known, to the complete satisfaction of the naval ordnance officers. Considerably more than the contract speed was obtained.

In some districts in England coal is retailing at $15 a ton, in consequence of the miners' strike. Cold weather having set in early, the condition of the poor, who cannot afford to pay so high a price, is considered serious.

October's fire loss of the United States is estimated at $11,014,700, which is over $2,000,000 less than the amount lost in Octobar, 1892. The increase in the total for the first ten months of this year, as compared with the same months of last year, amounts, however, to nearly $25,000,000, a sufficiently startling presentment. The actual figures are: January 1 to October 31, 1893, $132,847,400; same period, 1892, $108,341,550.

A decree has been published by the Italian Government that all customs duties in that country shall hereafter be paid in gold.

The ponderous after barbette of the United States battle ship "Indiana," building at Cramp's yard, was put in place last week. It is composed of the heaviest nickel steel armor ever fitted, and has been in course of construction at Bethlehem for nearly two years, the work of putting it in place occupying two months. The barbette is made in 13 plates, which were forged under the 125-ton hammer. It is 30 feet in diameter, 13 feet high and 17 inches thick, the total weight being 406 tons. The "Indiana" will, it is calculated, be ready for her builders' trial trip by February 1, and the vessel will be delivered to the Government about June 1.

An engineering feat worthy of note was accomplished a few days ago in the completion of the boring of the Busk-Ivanhoe Railway Tunnel under the Rocky Mountains, at Hagerman Pass, Col. The tunnel is close upon 2 miles long, and is bored through solid gray granite. Its accomplishment involved 3 years and 20 days' work, each day being of 20 laboring hours. The tunnel is 10,800 feet above sea level, and is on the line of the Colorado Midland Railway.

The Edison patent on incandescent lamps expired in England on November 10, and from that date their manufacture and sale in that country will be free, with the probability of a considerable reduction in prices.

Depression in the shipping trade is reflected in the returns of Suez Canal receipts for the first nine months of this year. They were $754,000 less than those for the corresponding period of last year. Hitherto each year has shown an advance on the previous one.

At Indianapolis every effort is being made by the Commercial Club, the Board of Trade and the city officials, in combination, to organize relief for the more than 6000 idle workingmen in that city. Citizens have been appealed to to make every improvement of any sort that will give employment, and renters are asked to be lenient.

The work of fitting out a new navy for the Brazilian Government is being urgently pushed at New York, where a number of recently purchased craft are undergoing rapid transformation into war vessels. Most of the ships are expected to be ready for service by the end of this week.

Immigration returns for October show the number of aliens entered during that month to have been less than half the average for the season. Last year 36,798 were landed in October, but this year the number sunk to 15,466. The authorities attribute the falling off to the business depression in this country having prevented people from sending prepaid passage tickets to their friends in Europe.

October's foreign trade returns for the port of New York show a decrease of $16,500,000 from the aggregate of October, 1892; but this falling off is due entirely to the large contraction in imports of foreign goods. Exports, indeed, show a slight increase for the month; and for the ten months of the year the aggregate movement of foreign trade shows $57,150,522 over the corresponding period of last year.

The new steamer "Gloucester," built at Baltimore for the Merchants & Miners' Transportation Company and which made her first trip to Boston a few days ago, is probably one of the finest coasting vessels afloat. The hull is built of steel throughout, and she has four decks as well as a promenade deck. Her length over all is 293 feet; beam, 43 feet; depth, 33½ feet, and tonnage, 2500. Power is furnished by direct tri-compound engines with inverted cylinders, and the four cylindrical and return tubular boilers are capable of developing 3000 horse-power. The arrangement of her water tight compartments renders the vessel practically unsinkable.

The new Pacific built cruiser, "Olympia," underwent a most successful trial off San Francisco last week, proving herself remarkably speedy and an excellent sea boat. Her record showed a maximum speed of 21.26 knots; and her average for 68 hours, with a heavy sea and strong head wind, was just under 21 knots. The builders of the "Olympia" believe she will manage 22 knots on her official trial, and thus carry the palm of the American cruiser fleet.

The Manchester Ship Canal was completed last week and water was admitted to its entire length. It will take two weeks for the canal to receive its full depth of water. The first steamer to traverse the full length of the canal will, it is expected, make the trip on December 1.

It is estimated that damage to the extent of at least $4,000,000 has been caused to the crops in the Northwest during the present year by a weed known as the Russian thistle. The Department of Agriculture is now investigating the pest.

The dry goods trade has figured prominently in recent notices of failures and embarrassments.

Buffalo, N. Y., now enjoys the distinction of possessing the largest grain elevator in the world in the new Eastern Elevator, which was completed and opened for service on Monday. Its capacity is 45,000 bushels an hour.

Washington advices have it that the Secretary of the Navy will recommend a considerable appropriation for the construction of battle ships.

Estimates based on the November crop report of the Department of Agriculture place the corn yield of the United States for this year at 1,648,000,000 bushels. Last year the crop was estimated at 1,628,000,000 bushels and in 1891 at 2,060,000,000 bushels.

The Valley Situation.

Contrary to expectations, the finishing departments of the plants of the Mahoning Valley Iron Company, Union Iron & Steel Company and the Andrews Brothers Company, at Youngstown, Ohio, did not resume operations last week, although the wage scale of the National Union of Iron and Steel Workers had been signed by the above firms. When the officials of the Amalgamated Association learned that a rival labor organization had made terms with a number of the valley mills they at once saw that if the mills resumed operations under such a scale it would work serious harm to their organization. To prevent this if possible, President M. M. Garland, Secretary J. C. Kilgallon and one or two other officials of the Amalgamated Association went to Youngstown and held a conference with a number of the valley mill owners. What transpired at this meeting was not made public, but it is known absolutely that promises were made that if the owners of the valley mills who had signed the scale and others who had not signed it, but were considering it, would agree to remain idle for a week or so, strong efforts would be made to get as favorable terms from the Amalgamated Association as had been secured from the National Union of Iron and Steel Workers. It was also promised that the request of the valley mills for a $4.50 per ton puddling rate would be brought up, and the officials of the Amalgamated Association would use their influence and endeavor to have the members of the valley lodges agree to grant it, or in any event, to compromise and return to work on a scale based on $4.75 for puddling. After consideration this request was granted, the valley mill owners agreeing to keep their plants closed until Monday morning, the 20th inst.

In the meantime a vote is being taken by the lodges of the Amalgamated Association in Western Ohio on the question of holding another conference with the valley mill owners. It is the impression that the result of the vote will be in favor of holding such a conference. It is believed that rather than allow the Youngstown mills to resume operations under the scale of the National Union of Iron and Steel Workers the Amalgamated Association will agree to make such concessions in their scale as were made by the first named organization. At all events, it is reasonably certain that a number of the mills in the Mahoning Valley and other parts of Western Ohio which have been idle since June 30 last will start up on Monday, the 20th inst., though not to full capacity. The fact that two or three concerns in the Mahoning Valley have signed the scale of the National Union of Iron and Steel Workers may complicate matters to some extent, as it is not believed that members of the rival organizations will agree to work side by side. In certain quarters the intimation has been thrown out that if the Amalgamated Association will make a scale suitable to the Mahoning Valley mill owners they, in return, will agree not to treat with the new organization. This report, however, has not been confirmed, and is not believed to any extent.

The Iron Age

New York, Thursday, November 16, 1893.

DAVID WILLIAMS, - - PUBLISHER AND PROPRIETOR.
CHAS. KIRCHHOFF, - - EDITOR.
GEO. W. COPE, - - ASSOCIATE EDITOR, CHICAGO.
RICHARD R. WILLIAMS, - HARDWARE EDITOR.
JOHN S. KING, - - - BUSINESS MANAGER.

The Fall in Scrap Values.

Manufacturers of bar iron have been benefited considerably by the very great depreciation in the price of scrap. Perhaps we might say, they will be benefited when the demand for finished iron enables them to get to running and to running steadily. Early in the present year a comparison was made in these columns of the selling price of bar iron at different producing points and the cost of the scrap purchased by the bar iron manufacturers. It was shown that wrought scrap then commanded from 48 to 52 per cent. of the selling price of bar iron. This was considered wholly disproportionate, and conclusions were drawn that the price of such scrap should be somewhere between 30 and 35 per cent. It was not at that time expected that within a few short months this theory of the relation of these values would be realized. Such is the fact, however, as reports of transactions in old material during the past month show that it is a fortunate dealer who is able to get 35 per cent. of the market price of bar iron for his wrought scrap. From present appearances the value of scrap seems to have been put permanently on that low plane. Accumulations of old material are very large, especially in the West, in sections in which rolling mills have of late been running on short time, if at all. In fact, there are not a few great railroad systems whose stock of scrap has been growing steadily larger all this year in spite of attempts made to move it by sale or in exchange for new material of some description.

Among railroad officials there is a disposition to overvalue this sort of material, although they are persistent bears on the value of whatever they have to buy. Reasoning from past occurrences, they appear to believe that the value of the material they sell will in a reasonable time react from its present depression, and they will then obtain considerably better prices. They overlook two facts, one of which is that owing to the unparalleled depression this year in the iron trade the accumulations of scrap have very far surpassed anything previously experienced, and the other is that steel is more than ever supplanting all forms of rolled iron. The traditions of the old material trade must be completely set aside now, as we are working under a new dispensation. Those who are holding scrap for higher prices will evidently have to hold it a very long time, and pray in the meanwhile for war or some other great disturbance to create a temporary scarcity of iron and steel. This view of the question is taken without regard to possible tariff changes. Even if scrap is not put on the free list, as now seems probable, other adverse influences are sufficiently strong to prevent a return to higher prices.

With the exception of those who may still have stock in their yards which was bought some months since, the dealers in scrap are gratified at the decline in its value. Much less capital is required for the purchase of material, there is consequently a smaller amount at hazard on each time sale, and there is the hope of a much heavier volume of business in the course of time, as the consumption of everything approaches its normal condition. The use of steel has not altogether displaced iron and it probably never will in the bar trade.

Cleaning up Stocks.

It would be extremely interesting if statistics could be obtained of the exact condition of stocks of material held by foundries and other iron consumers. Careful observers believe that at no previous time have such stocks been as light as they now are. It is always a question as to how large this invisible supply may be. The stocks in producers' hands are usually known, probably not accurately, but sufficiently so to form an intelligent idea of the current relation between production and consumption. As to consumers' stocks, however, the situation is altogether different. There is no datum on which reliance can be placed. Iron salesmen making periodical visits to their customers report stocks light or heavy, as the case may be, and this vague statement often finds its way into print. And it is likely that there will never be anything more definite known about such stocks. The vast number of consumers precludes any attempt to make the inquiry by even the most zealous advocate of statistical research.

While nothing of an official or even an authoritative character can be had on this subject, there are nevertheless some points making themselves prominent which throw considerable light on it at this time and which seem to form a substantial basis for the assertion that stocks in consumers' hands are less than were ever before known.

Pig iron salesmen report that for months they have found their customers using up accumulations of scrap in their yards to avoid the incurring of liabilities for new material or the payment of cash, for which they had pressing use in other directions. Running much lighter than usual, they did not need a very large supply and most of that was at hand in their own yards. Not only have old flasks been broken up and melted, but castings which had been thrown aside for slight imperfections that it was expected would some day be overlooked by an emergency buyer have shared the same fate. It has not been unusual for a foundryman consuming generally 2000 or 3000 tons of pig iron per annum to find that he had 300 or 400 tons of such castings in his yard, and under the stress of the financial stringency to decide that it was better for him to break up and remelt them than to lay out cash in buying more iron. Many cases of this character are cited by salesmen, in which foundries have continued in operation to at least half capacity with no pig iron on hand and managers refusing to purchase any, alleging that it was not wanted, which seemed a mystery until the true source of supply of material was explained.

Bar iron salesmen report a somewhat similar experience in their line. Manufacturing consumers will in time accumulate quite a stock of odd sizes and shapes in their warehouses, but continue to buy what they need for work in hand and only occasionally find a place for something out of the old stock. Latterly, however, this has been very carefully overhauled, and in more than one establishment shapes have been made to fit and sizes have been made to suit that would have been rejected without a moment's consideration in easier times. It will probably be found that such warehouses have cleaner racks at this time than they have had for years, if ever before.

This general cleaning up of stocks now seems to be about ended. There may be some consumers here and there who can run on for a little longer time without buying fresh material, but their number must certainly be small. A considerable part of the improvement in the demand for pig iron in some important markets is thus accounted for. The general condition of trade may not have grown much better, but the producers of crude iron are again in the enjoyment of a demand which had for a time been cut off by the economy that consumers were able to practice.

At a recent meeting of the Engineers' Club of Philadelphia Wilfred Lewis exhibited a section of a 7-inch steel stay bolt from a hydraulic riveter, which had broken in the nut about 2¼ inches from the end of the bolt. The static load on the bolt was 450,000 pounds, and at the time the actual load probably did not exceed 600 pounds. It has been found by experiment that when a nut is made to come at the end of a bolt to obtain uniform stress throughout the bolt it is not sufficient to make its thickness equal to half the diameter of the bolt, as is generally supposed. The thickness of the nut should be at least equal to the diameter of the bolt. Mr. Lewis then explained and illustrated a method of calculating the stress in a bolt, showing that it varied with the square of the diameter, and stated that experiments, which he believed verified the equation given, had been made by the Edge Moor Iron Works, but that he was not yet in possession of the figures.

CORRESPONDENCE.

Boiler Awards.

To the Editor: My attention was arrested by the letter in your issue of November 9 coming from the Babcock & Wilcox Company containing an excuse for their non receipt of an award for their boiler exhibit at the World's Columbian Exposition. As the writer's position and intimate relation with the boiler plant at the exposition will vouch for his ability to write on this subject, and knowing that many, if not most, of your readers are more or less interested in boilers, and especially in this, the largest and most interesting boiler plant the world has ever seen, I beg to offer the following that injustice may not be done to the exposition nor to the judges.

Concerning these judges, I would ask are they not men of acknowledged standing, experience and integrity in the engineering world, who sacrificed their regular practice at home and virtually gave their service to the World's Fair? Surely it cannot be denied that they contributed not a little to the success of the department in which they acted, establishing a reliable record of the many engineering exhibits which probably would never have been accurately recorded had it not been for their conscientious efforts to discharge the duty which was intrusted to them.

This letter from the Babcock & Wilcox Company states that "it was the purpose of the jury to make awards on boilers based entirely upon the written statements of the exhibitors of boilers without tests or any personal knowledge in the possession of said jury concerning the comparative construction, operation, economy and durability of said boilers."

It is very true that each one of the manufacturers exhibiting boilers there was asked to make either a written or verbal statement of the points of excellence in his boiler to the judges, but we would ask you and your readers whether these statements were made before a body of laymen entirely ignorant of the subject in question, or were they made before men who were well informed as to the construction and working of all the boilers in operation at the World's Fair? Such men as George H. Barrus of Boston and Prof. James E. Denton of Stevens Institute headed the list of these jurors, men whose position has made it impossible for them to be prejudiced in favor of any one make of boiler over another; men who have made test after test on most of the leading modern makes of boilers.

As I have already stated, it is true that the boiler manufacturers were asked to testify before this competent jury of experts who were well able to "separate the wheat from the chaff" and investigate not new boilers, but old acquaintances, we might say, which were before them at the fair and with their past experience judge the points of superiority which each of these manufacturers stated as being contained in his boiler. Besides these mere "written statements of the exhibitors" for the judges to consider, much valuable information has been collected by the engineering corps of the fair, who had charge of the boiler plant, which in itself brings out some points of comparison quite worthy of consideration.

Why is it that the Babcock & Wilcox Company shrank when they were called upon to appear before such a jury as this? One would think, after reading this letter from the Babcock & Wilcox Company, that they had entered their boilers in the exposition boiler house with eager expectation for a competitive test, but alas, they had been denied the opportunity to show their production superior to all its neighbors.

If this was really what they wished, if they wanted a public record based on the actual performance of their boilers at the World's Fair, why did they not accept the invitation of the exposition officers and participate in a series of boiler tests which would have been conducted with the utmost care and fairness by such able men as we have named above. If they were so sure of the superiority of their boiler, as claimed in this letter, why did they not go on with these tests and challenge all other companies there to compete with them? If they had done this they would most positively have met with a quick response. There was never a better opportunity to prove their boast, and probably it will not occur soon again. On the contrary, when this proposition was made they were, I believe, the very first to "withdraw their boilers from all competition," including such tests.

ALBERT A. CARY.

NEW YORK, November 15, 1893.

"Julian Bessemer," Impostor.

To the Editor: On Wednesday last a smooth faced young man came into my office, and in very friendly terms greeted me, saying he was the grandson of Sir Henry Bessemer, and after humming and hawing a good deal he very coyly stated that he had been in the cattle ranch business in Colorado and had been swindled by his partner, &c., showing numerous bullet wounds, &c., but cautiously avoided asking for help. He was very glib tongued, and is seemingly a very well educated young man. He was invited to view our works, but through all his smartness I seemed somehow or other dubious of his real identity, because the thought passed through my mind that I had read in some paper of some young man having assumed a false name, but at the time could not fully make up my mind where I had seen the notice. One of our officials who took him around the works was also doubtful of his being whom he represented himself to be, and after bringing him back into the office his (the official's) thoughts wandered to *The Iron Age*. I had in the meantime offered him shelter for the night at the club house, and the aforesaid official in a few moments brought me the notice given in your paper showing him to be the identical party who had misrepresented himself in the Mahoning Valley. I immediately caused his arrest, and he completely broke down during an examination and gave me his correct name, and stated that he was trying to make his passage money back to Europe by these means. Not having had any trade or business, he no doubt had found it difficult getting employment in these times. He was locked up for the night and was admonished very severely by the magistrate, and on his promise to leave the district he was told to get out as quickly as possible. We had it published in the Philadelphia papers, and also showed him the copy of the papers, so that his game is ended in that line. He had no idea that he had been published in *The Iron Age*, and was taken back considerably when shown your article.

He gave 22 years as his age, and I firmly believe he is of good people, and I intend finding out if that is so, so I do not think, for his parents' sake, that it would do the public any good to give his true name, and keep them from being heart broken over the affair. We owe thanks to J. G. Butler of Youngstown, who took trouble to write to Sir Henry Bessemer and get his denial of his story, and to you for publishing it in your paper, otherwise he might have gone on the same plan for an indefinite period. Very truly yours,

FRED. HERON,
Gen. Manager Phœnix Iron Works.

PHŒNIXVILLE, PA., November 13.

OBITUARY.

LUTHER DORR EMERSON.

Luther Dorr Emerson, president of the Emerson & Stevens Mfg. Company, Oakland, Maine, died suddenly on the 28th ult. He had been in poor health for some time, but had recently improved in health, and an hour before his death had been sitting up reading the newspapers. Mr. Emerson was born in Arrowsic, now Georgetown, Maine, in 1816. He attended the Bloomfield and Farmington academies, and subsequently taught school, worked in a woolen mill and was clerk in a store in Quincy, Mass. In 1842 he moved to Oakland, then West Waterville, where he entered the employ of Sherman Hale & Co., manufacturers of scythes. In 1844 he went with R. B. Dunn to North Wayne, where he was employed in connection with the North Wayne Tool Company. He remained with Mr. Dunn until 1865, when a new scythe and axe concern was formed under the firm name of Hubbard & Blake Mfg. Company, and Mr. Emerson was made manager of the shop. In 1870, having withdrawn from this firm, he associated himself with J. E. Stevens, W. R. Pinkham and G. W. Stevens and built a shop and continued the manufacture of scythes and axes up to the time of his death. One of Mr. Emerson's most prominent characteristics was his love for old Maine history and antiquarian research, in which respect he was very well informed. He was a member of the Maine Historical Society. Mr. Emerson had a kind, warm heart and his charitable deeds were numerous. He was one of Oakland's most prominent citizens, and was held in very high esteem by all who knew him.

PERSONAL.

J. von Ehrenwerth of Leoben, Austria, has sailed for home.

Eckley B. Coxe of Drifton has been nominated for a second term of the presidency of the American Society of Mechanical Engineers.

Dr. Claus, general manager of the famous old Thale Works, in the Hartz Mountains, manufacturers of sheets and enameled ware, will soon return home, via Gibraltar.

James Jessop, of the firm of Wm. Jessop & Sons, Limited, importers of steel, 91 John Street, New York, has returned from a trip abroad, very much improved in health.

Fr. Lehman of Naylor & Co., New York, sails for Europe next Tuesday.

All work on the old Springfield rifles at the army arsenals has been stopped and every effort is now being made to complete as quickly as possible the new small caliber magazine rifle to replace the old pattern in the army.

Hosted by Google

MANUFACTURING.

Iron and Steel.

The machinery equipment of the Spearman Furnace of the Spearman Iron Company, Sharpsville, Pa., is being put in thorough repair in order that the plant may be in the best possible condition when it has been decided to put the furnace in blast. At present, however, this is very uncertain, as operations will not be resumed before December 1 next, if then.

The Emporium Steel Company of Emporium, Pa., have made application for a charter of incorporation. The officials are as follows: J. Pitt Felt, president; Hon. S. S. Smith, vice president; John D. Logan, treasurer; L. K. Huntington, secretary, and R. L. Watters, superintendent.

In the Supreme Court of Pittsburgh last week the case of Jas. Mathews against Park, Brother & Co., Limited, of that city, appealed from the lower court by the defendants, was heard. Mr. Mathews was a roller in the employ of the firm and was discharged before his contract expired. He then sued for the balance of the wages he claimed was due him under his contract. This is the second time the case has been tried in the Supreme Court. At the last trial the plaintiff was given a verdict for $6052.67.

No. 2 Rolling Mill of the plant of the Cambria Iron Company, at Johnstown, Pa., which has been idle for some time, resumed operations last week. We are advised that the outlook among the larger industrial establishments at Johnstown is much better now than for the past three or four months. At the various mills of the Cambria Iron Company there is more activity, and at the plant of the Johnson Company, manufacturers of steel rails, nearly every department is in operation to full capactity, with good prospects of continuing in this way for some time to come.

Rosena Furnace, at New Castle, Pa., owned by the Oliver Iron & Steel Company, Pittsburgh, has again resumed operations after an idleness of some months. During the time the stack was idle extensive repairs were made, including the building of new stoves, new draft stack and other improvements. The furnace is now one of the best equipped in every way in the Shenango Valley, and is expected to turn out about 200 tons of iron per day.

The Oil Well Supply Company of Pittsburgh, manufacturers of oil well supplies, are endeavoring to obtain an extension on all accounts of $500 and over. We are advised that the prospects are encouraging.

The capacity of the Solar Iron Works of Wm. Clark's Son & Co., Pittsburgh, is being increased by the erection of three iron buildings, 100 x 100, 50 x 218 and 56 x 260 feet, respectively.

The Anderson Steel Casting Company, at Anderson, Ind., have resumed operations.

The furnace of the Temple Iron Company, at Temple, Pa., is being blown out.

The Philadelphia *Enquirer* is authority for the statement that experts working on the books of the Cambria Iron Company of Johnstown, Pa., have discovered irregularities which indicate that a deep plot was laid to defraud and rob the company.

The Columbia Rolling Mill Company, Columbia, Pa., have resumed.

An explosion occurred last week at furnace H of the Edgar Thomson plant, at Bessemer, Pa. Considerable damage was done to the furnace and a number of the employees were seriously injured. The stack will be idle some days while necessary repairs are being made.

The Marlin Iron & Steel Company, Incorporated, of Allegheny, Pa., were granted a charter last week, with a capital stock of $40,000. The new concern propose to engage in the manufacture of iron and steel. The directors are as follows: Harry A. Marlin, Francis D. Marlin, John B. Chapman, Perry O. Laughner of Pittsburgh and Elmer E. Laughner of Coraopolis, Pa.

The puddling and rolling mills of the Harrisburg Rolling Mill Company, at Lochiel, Pa., which shut down August last, have resumed with about one-half the old force of men.

The new additions to the armor plate press department of the Homestead Steel Works, at Homestead, Pa., are being pushed rapidly to completion. The large hydraulic press and other castings lately arrived from England are being put in place.

The Philadelphia Rolling Mill of Hughes & Patterson, Philadelphia, which has been idle since October 18, has resumed, giving employment to over 600 hands, the complete force.

The E. & G. Brooke Iron Company, Birdsboro, Pa., are installing new boilers in their nail works in order that this department may be run independent of the other departments of the works.

Judgments have been taken for $8387.59 in favor of the Ashland Iron & Steel Company of Ashland, Wis., against the West Superior Iron & Steel Company of West Superior, Wis.

The annual meeting of the stockholders of the Reading Rolling Mill Company, Reading, Pa., was held in Philadelphia last week. The following directors were elected: Joseph H. Cofrode, Francis H. Saylor, Josiah F. Bailey, Charles A. Sterling, George W. Bush, Ellis Ames Ballard and Edward J. Kelly, the latter two being additions to the board. A committee consisting of A. M. DeHaven and Siddons Harper were appointed to prepare certificates of the status of the business of the Reading Rolling Mill Company.

In the courts at Pittsburgh last week a verdict for $7890.36 for the plaintiff was given in the case of C. W. Badgley & Co. for use of W. P. White against the Columbia Iron & Steel Company. The suit was for commissions on the sale of iron and steel, and no defence was made. In the United States Circuit Court, in the case brought against the same company by Pennock Brothers, Judge Buffington made an order refusing the motion made by the plaintiffs for the appointment of a receiver for the defendant company. The first mortgage bondholders of the Columbia Iron & Steel Company have foreclosed bonds to the extent of $7000, and it is expected that the property will be forced to a sale at once. The bonds were held by the Dollar Savings Bank of Pittsburgh, and were foreclosed through the agency of Safe Deposit & Trust Company of Pittsburgh.

Hiram H. Peck, a banker of Covington, Ky., and Charles D. McGuffey of Chattanooga, Tenn., have been appointed receivers for the Southern Malleable Iron Company of the latter city. The company owe the Northern Bank of Kentucky $28,026, and joined in the application for a receiver. The bonds of the receivers were fixed at $20,000 each. It is understood that the works will continue to be operated by the receivers.

It is stated that all the departments of the Diamond State Rolling Mill, at Wilmington, Del., except the horseshoe mill, have shut down for an indefinite period.

The Portage Iron Company of Duncansville, Pa., have started all their departments, including the guide, bar and hoop mills.

We are advised that the statement that the Monongahela Iron & Steel Company, manufacturers of muck iron, whose plant is located at Hay's Station, near Pittsburgh, have secured enough orders to run for the entire winter is without foundation. This plant is running on a few light orders, but there is not sufficient work ahead by any means to warrant the statement that the plant will be run right along.

Allegheny Furnace, at Iron Gate, Va., has resumed operations after one month's idleness.

The workingmen of the Belleville Steel Company, Belleville, Ill., have succeeded in raising $14,000 of the $15,000 necessary to start the works of the company. The reorganization will be effected at the end of 30 days, and the mills will then be started.

The Massillon Rolling Mill of Jos. Corns & Son, at Massillon, Ohio, has started up, giving employment to 250 men. The works have been idle since July 1.

The annual meeting of the stockholders of the Norristown Steel Company of Norristown, Pa., was held at the office of the company on the 8th inst., when a reorganization was effected by the election of the following officers: President, H. H. Haines; vice-president, E. M. Daniels; treasurer, C. C. Highley; secretary, Joseph H. Hampton, and general manager for the company and receivers, George J. Humbert. The receivers presented an exhaustive report showing the affairs of the company to be in a prosperous condition.

The difficulty between the firm of Morrison, Colwell & Page, proprietors of the rolling mill at Cohoes, N. Y., and their employees has been settled and an agreement made. Heretofore the prices paid were $3.75 per ton for the best iron and $3.50 for common iron. The men resumed at the rates of $3.25 for the best iron and $3 for the common iron. Mr. Page has promised the employees that as soon as business improves he will restore the old scale of wages.

The merchant train at the Rensselaer Iron Works, Troy, N. Y., has again been started and 200 men are employed. This was done in accordance with an order from the court permitting the Troy Steel & Iron Company to complete certain orders that had been taken before the works closed.

The Etna Furnace, at New Castle, Pa., will blow in as soon as it can be put in working order.

A press dispatch from Wheeling, W. Va., states that the Whitaker Iron Company's Crescent Iron Works have been destroyed by fire. The loss is given as $85,000, and the insurance at $70,000 The works were built in 1855, and embraced 15 double puddling furnaces, three heating furnaces and nine trains of rolls. Their product was sheet iron exclusively, of which they had an annual capacity of 13,000 net tons.

From Reading, Pa., comes the news that the Carpenter Steel Company of that city, who have furnished the Government with $750,000 worth of projectiles, have received another order for projectiles for coast defense purposes which will keep the firm busy for two years.

At the annual meeting of the stockholders of the Eagle Iron & Steel Company, Ironton, Ohio, manufacturers of bars and iron and steel sheets, Wm. Marting, Jr., was elected a director in place of F. C. Tomlinson. Geo. T. Thomas also succeeds F. C. Tomlinson as secretary and treasurer.

Niagara Furnace of the Tonawanda Iron & Steel Company, at Tonawanda, N. Y., which has been banked for 70 days, resumed blast on the 15th, and made a successful start.

The construction department of the Phildelphia Bridge Works, at Pottstown, Pa., has resumed operations on double turn, and the nail mill of the Pottstown Iron Company has started 20 machines.

B. F. Hean, Jacob M. Shenk and John Meiley, Lebanon, Pa., have completed the appraisement of the assigned estate of Robert H. Coleman, the Cornwall iron manufacturer. The real estate is valued at $3,448,948 68 and the personal property at $702,177.90, making the total appraisement $4,141,126.60. It does not include Mr. Coleman's interest in the Jacksonville, Tampa & Key West Railroad.

Machinery.

The Buckeye Engine Company of Salem, Ohio, have recently received an order from the Ohio Steel Company of Youngstown, Ohio, for two 300 horse-power tandem engines, non-condensing, with a fly wheel 13 feet in diameter by 36-inch face.

Arrangements have been about perfected by which the Common Sense Engine Works of Muncie, Ind., will be taken from the receiver's hands and started up at an early date. G. Campbell Janney is to be president, J. C. Johnson vice-president, James R. Sprankle secretary and treasurer and Jeny. F. Howell general manager. A number of orders are now on hand.

The J. I. Case Threshing Machine Company of Racine, Wis., are increasing their capacity by the erection of a new molding shop—two L's, 210 x 80 feet and 84 x 80 feet respectively. It will be of brick, with an iron truss roof having a span of 80 feet. Two cupolas, capable of melting 50 tons a day, will be furnished by the Detroit Foundry Equipment Company.

The Brown & Sharpe Mfg. Company of Providence, R. I., are operating their works nine hours a day, six days in the week, with about three-quarters of their regular force. Their sales for the past two months have been better than they anticipated, in view of the great depression in the machinery and kindred trades.

The Lowville Iron Works Company of Lowville, N. Y., manufacturers of wood pulp and paper mill machinery, have shipped a cargo of wood pulp machinery to the Milton Wood Pulp Company, Milton, Nova Scotia, which is part of the equip-

Hosted by Google

ment of that mill, and will ship two more carloads at an early date.

F. E. Reed & Co., manufacturers of machine tools, at Worcester, Mass., are at present employing about 100 men, or a trifle over half their usual force.

The Woodruff Mfg. Company of Hartford, Conn., makers of key seat milling machines, are operating their factory 50 hours per week with a greatly reduced force. In view of the general depression of business among the manufacturers of machinery, the company do not regard the immediate outlook for business in their particular line as very promising.

The Columbian Regenerative Furnace Company, capital $25,000, and the Columbia Foundry Company, capital $25,000, have been chartered under the laws of Pennsylvania to carry on business at Philadelphia.

The Penberthy Injector Company of Detroit, Mich., are meeting with success in the introduction of their improved automatic injector and other steam specialties. The increase in their business made it necessary for them to enlarge their factory in May last, since which time the works have run without interruption.

The E. Horton & Son Company, Windsor Locks, Conn., manufacturers of the well known Horton lathe chuck, are operating their works on full time but with a reduced force.

The National Pipe Bending Company, makers of the National feed water heater, of New Haven, Conn., contemplated building an addition to their south factory this fall, but the change in the times, the falling off of business and the stringency of the money market compelled them to lay the plans over for another year.

Since their reorganization and incorporation, on May 17 of last year, the Wais & Roos Punch and Shear Company of Cincinnati, Ohio, have largely increased their facilities for manufacturing by installing new tools and an addition increasing their floor space one-third. They have improved their 10½ foot over geared power shear, and perfected a leveling machine used largely by galvanizers, besides adding to their line doublers, branning and cleaning machines used by tin plate manufacturers. The company believe that only for the lack of confidence in the policy of the Government they would be taxed to their full capacity, but at present orders are slow.

N. P. Bowsher, South Bend, Ind., manufacturer of Bowsher's combination feed grinding mills, reports sales fully up to last year's mark, with better prospects for future business than at any time during the last three years. He is operating his works with a full complement of men.

The Fox Machine Company, makers of wood and iron working machinery at Grand Rapids, Mich., have completed a 30-foot extension to their knife department in order to obtain better facilities for handling their increased knife business.

The Chandler & Taylor Company, Indianapolis, Ind., well-known as manufacturers of engines, boilers and saw mills, are operating their plant with from one-quarter to one-third of their regular force.

H. Bickford of Lakeport, N. H., who makes the manufacture of boring and turning mills an exclusive specialty, has continued to operate his works on full time.

The Ingersoll-Sergeant Drill Company of New York are moving their machinery to the new works at Odenweldertown, Pa.

The inventory of the assets of the Eagle Machine Works Company, Indianapolis, Ind., shows bills receivable and accounts, $44,514.97; real estate, $48,500; machinery, tools and fixtures, $13,290.45; stock on hand, $11,954.91, a total of $118,260.33. The liabilities, admitted and contested, aggregate $130,000. It is not thought advisable at this time to put the plant on the market or continue the manufacture of machinery. It will be kept in operation only to the extent of doing such repair work as is incidental to the business.

Notices have been posted in the North Reading Foundry, at Reading, Pa., to the effect that a reduction of 10 per cent. in wages would take effect at once. About 150 men will be effected, but it is hoped to give them work all winter.

The Briggs Mfg. Company of Niagara Falls, with a capital of $1,000,000, have been organized in Wheeling, W. Va., to manufacture the Briggs automatic press feeder, a Niagara Falls invention. The members of the company are chiefly the directors of the Carter-Crume Company of Niagara Falls, who intend, it is understood, to operate a large factory at the Falls for the manufacture of several patents held by Mr. Briggs.

The new plant of Reeves Bros., at Alliance, Ohio, has been put in partial operation, although it is not yet in a completed condition. The old works at Niles have been kept in constant operation, but an excess of orders made it necessary to begin work in the new plant. The latter represents an investment in machinery alone of $60,000, and the facilities are far superior to the Niles works. It had been the intention to proceed with the erection of a second building as large as the main building, but owing to the depressed condition of business the work of erecting the second building will not begin before spring.

The Phœnix Iron Foundry, at Syracuse, N. Y., has shut down, it is stated, on account of dull times.

The works of the Columbian a Pump & Machine Company, at Columbiana, Ohio, have started up after a shut down of four weeks. Forty-five men are at present employed.

Clark Bros. & Co.'s Machine Bolt Works, at Milldale, near Southington, Conn., have been burned to the ground. Loss, $60,000; insurance, $40,000.

The foundry of Daniel T. Kelley & Sons, at Portland, Maine, has been damaged by fire. The loss is about $12,000, chiefly on patterns, caused by the indiscriminate use of water by the Fire Department.

The new machine shop of the Boston Iron & Steel Company, at McKeesport, Pa., has been totally destroyed by fire. The loss is about $5000, covered by insurance.

The Grant Anti-Friction Ball Company of Fitchburg, Mass, have sold their business to the Cleveland Machine Screw Company of Cleveland, Ohio, and the business will be removed to the last named place as soon as suitable buildings can be erected, probably in the spring. The transfer includes the real estate, buildings, machinery and tools.

The business formerly carried on at Toronto, Ontario, under the name of the Doty Engine Works Company and the John Doty Engine Company, Limited, will henceforth be known as the Bertram Engine Works Company. The company operate engine and boiler works and conduct a general shipyard business.

The preparations for the industries at Love's model city, near Buffalo, N. Y., are progressing rapidly. The foundation for the Empire Mfg. Company's new building and machine shop is completed. The cupola and rattling room are well under way. The town company have secured another industry in the shape of the plant of Ezra F. Landis of Lancaster, Pa., who is a manufacturer and dealer in engines, boilers and other machinery. He will erect a substantial plant in the spring. He will remove his machinery to the model city at once, placing it in temporary buildings.

The new factory of the Interchangeable Tool Company, near Utica, N. Y., has been completed and the concern are all ready to commence operations.

Warren Webster & Co. of Camden, N. J., report business good in their line. They have a large number of orders in hand for Webster vacuum feed water heaters and purifiers, among them one from the Chicago Edison Company for a 4000 horse-power heater, which is a second order received from that concern, the first being for a heater of 1700 horse-power, and another from the Carnegie Steel Company for two heaters, each 2750 horse-power capacity, which is also a second order.

The plant formerly operated as the Bogart Gas Engine Company, Covington, Ky., including all the machinery used by that firm, has been leased by C. W. Bogart and H. W. Sumner, who will continue the production of high grade gas and gasoline engines. A new store room will be erected and the new firm anticipate a large demand for the new type of engine they are now producing.

The Loeb Mfg. Company have been recently organized to manufacture and deal in polishing materials and nickel and electro platers' supplies. Charles Loeb is president of the company, the office being at 216 Church street, New York. The works of the new company are in Brooklyn.

Woodward & Rogers, manufacturers of machine tools and special machinery, at Hartford, Conn., report a material increase in business thus far this month over the three preceding months. They are running their plant nine hours a day with a full force of men.

A. T. Shoemaker, Boreel Building, 115 Broadway, New York, is placing on the market a geometric boring and turning tool.

Hardware.

The Syracuse Steel Wire Company, Syracuse, N. Y., have been incorporated for the purpose of manufacturing steel wire. The company have a capital of $20,000, and their directors are Edwin D. Dickinson, Austin R. Dickinson, Charles H. Halcomb and William S. Teal, all of Syracuse.

The works of the Dominion Horse Shoe Nail Company, Montreal, P. Q., were damaged by fire on the 6th inst. to the extent of $5000, a loss which is partially offset by insurance.

The men employed on gun work by Colt's Patent Fire Arms Mfg. Company, Hartford, Conn., have commenced to work ten hours a day. They have been on an eight-hour schedule for several months.

The machinists employed by the Pope Mfg. Company Hartford, Conn., about 35 in number, will hereafter work 14 hours per day on account of the approaching busy season on bicycles.

The Upson & Hart Company, Unionville, Conn., are now running but eight hours a day.

The Hatch Cutlery Company, Milwaukee, Wis., have amended their articles of incorporation, by which the capital stock is increased from $100,000 to $200,000.

Sargent & Co., New Haven, Conn., are now reported to be running five days a week, owing to improved business.

Nichols, Shepard & Co., Kansas City, Mo., will erect a new implement warehouse. The building will be 63 by 128 feet, four stories high, and will cost $15,000. It is expected that the new building will be completed by January 1.

The shops of the Weir Plow Works, Monmouth, Ill., which have been idle since June, have started up for the winter. One hundred and fifty men have been given employment. It is thought that the force will soon be doubled.

Clark Bros. & Co., Milldale, Conn., whose works were recently destroyed by fire, will rebuild.

Cordley & Hayes, 172 Duane street, New York, issue a circular under date of November 10, in which they state that their factory at Lockport, N. Y., which was destroyed by fire some time since, will be running again within two weeks, and with this increase of capacity they will be able in future to be more prompt in the filling of orders. It is intimated by the agents that they now have on their books orders for a large quantity of goods, which will be filled as nearly as possible in the order in which they were received.

The factory of the Bridgeport Crucible Company, Bridgeport, Conn., a three-story wooden structure, was totally destroyed by fire on the 9th inst. The loss is estimated at $40,000, the company having had a large stock on hand. The insurance is $37,500, and was only taken out three days prior to the fire E. G. Burnham of the Eaton, Cole & Burnham Company is president of the concern

A can of naphtha caught fire from a gas jet in the factory of the Rush Cutlery Company, Springfield, Mass., on the 9th inst. The building was badly damaged by fire and water, and the machinery is nearly a total loss. A large stock of finished cutlery for Christmas orders is also damaged. The loss is estimated at $8000, partly insured.

The factory of the Grand Rapids Refrigerator Company, Grand Rapids, Mich., manufacturers of the Leonard cleanable refrigerators, is running full time and force The company advise us that they have been awarded three medals and a diploma at the World's Fair on the excellence of their goods. Their new catalogue is now in preparation and will soon be distributed to the trade. It is stated that many new designs and improvements have been added for the coming season.

C. & A. Hoffman of Frankford, Philadelphia, manufacturers of butchers' and table steels, finding their business demanded larger quarters, have established themselves in a two-story brick building recently erected by them on Orchard street. The

Hosted by Google

greater part of the ground floor is used as a forging, grinding, annealing and cutting shop, and the remainder is taken up for engine and boiler room, tempering room and offices. The second floor accommodates the finishing and mounting departments, packing and store rooms. The line of steels made by the firm covers all kinds in general use from the extra long carvers' steels for hotel use to the small table steel. The steels are made entirely by machinery, securing, it is claimed, a keen and uniform cut. The annealing and tempering are done under the personal supervision of the partners. The firm's goods enjoy a high reputation for their quality. The firm report a heavy demand for their butchers' and slaughter house steels and among recent shipments have been some to Asia and Africa. The present equipment of their factory provides for the employment of 12 hands and enables them to turn out about 300 dozens of assorted steels per week.

Dunham Nut Company, formerly Dunham Nut Machine Company, Unionville, Conn., are equipping their new factory with machinery. They are also putting in a 20 horse power engine and 25 horse-power boiler When the factory is in running order the company's specialty will be finished nuts of the various grades, including case hardened, triple and semi-finished. They will also continue to make the cold press machines as heretofore.

Miscellaneous.

The new factory of the Franklin Brass & Bronze Company, at Birmingham, Conn., is about completed, and the machinery is being put in place. The main building is 150 x 40 feet, two stories high, and the foundry is 50 x 25 feet, the total floor space being 13,250 feet. Operations will begin in three weeks.

The Bath Iron Works, Bath, Maine, have secured the contract for furnishing the windlasses and steam capstans for the two vessels which the Cramps are now building for the Inman line, the contract price being about $40,000.

The California Wire Works of San Francisco, Cal., have shipped the first of 14 steel cables they are making for the St. Louis, Mo., cable railways. The cable shipped was 21,500 feet long, 1¼ inches in diameter and weighed 55,000 pounds. The company have secured the exclusive right to manufacture the Hallidie ropeway, and have already erected several at the leading mines on the Pacific Coast, in British Columbia and in Mexico.

The Anniston Pipe Works, which have been in the hands of a receiver for three years, will be sold December 4, at Anniston, Ala.

The annual meeting of the stockholders of Cofrode & Saylor, Incorporated, was held in Philadelphia last week, at which the following directors were re-elected, Jos. H. Cofrode, Francis H. Saylor and Henry R. Leonard.

The Penn Bridge Company of Beaver Falls, Pa., contractors and manufacturers of bridges and structural material in iron and steel, have recently reduced wages of their employees 10 per cent. This action was necessary on the part of this firm in order to meet similar action taken by their competitors in business.

The tin and stamping works of the Thos. McDonald Mfg. Company, at Montreal, P. Q., have been burned. The loss is $50,000, covered by an insurance of $27,000.

About 375 men have gone to work at the Hoosick Falls, N. Y., plant of the Walter A. Wood Mowing & Reaping Machine Company to fill an order from South America for 367 harvesters and binders and an order for 247 mowers.

Levi Case & Co. of Schenectady, N. Y., are building a copper torpedo boat, which is said to be intended for the Brazilian Government.

At Pittsburgh last week a bill in equity was filed by U. S. Byram against the Pennsylvania Fence Company, Limited. The plaintiff holds a judgment against the defendant company, whose only assets consist of a patent for a metallic fence. He wants the concern restrained from disposing of the patent except by order of the court and the first proceeds from its sale to be appropriated to his judgment.

TRADE REPORT

There is little that is new in the Steel Rail trade, although a good deal of eager searching for work is going on. More than ever before, the surrounding circumstances govern the basis on which business is being negotiated. Pittsburgh advices indicate that $20 at that point is spoken of in order to reach distant markets in competition with mills whose natural territory it is.

Thus far the break has brought out but little work. Buyers seem inclined to watch further developments before taking action. In the Iron trade generally the question most eagerly discussed, with apparently little positive evidence available, is the relative cost of Steel Rails and Steel Billets, under the extraordinary circumstances now prevailing. The capacity of the giants in the business to inflict and stand punishment is commented on. The verdict of the knowing ones is that they are more closely matched than some of the contestants themselves may fondly believe.

In Pig Iron there has been a somewhat livelier buying movement, notably in Cincinnati, where Pipe founders have covered the material for sales made. In Philadelphia contracts for about 24,000 tons of Cast Iron Pipe have been taken, a part being captured by a Southern foundry. Another Southern works has secured the contract at Waterbury for about 6700 tons. The Chicago market has been upset by a cut in freight rates on Southern Iron to $3.65 from Birmingham.

In Soft Steel quite a large business has been done in Pittsburgh, and some advices report the market as firmer. It is certain that some of the makers decline to enter new business for early next year at present prices. Rumors of extraordinary figures continue to make the rounds. An investigation through the best sources among both sellers and buyers shows them to be without any justification whatever. $17.25 is a close price now.

The prospect of the early starting of the Valley mills has caused some weakening of Bars in Western markets, and Chicago notes also some very low prices on Beams. What contracts for Structural Material have come up lately in Eastern markets have been taken by Pittsburgh mills.

The sales of Wire Rods at $24.50 in Western markets have ceased and $25 is now bottom. The Western Wire Nail mills report that their tonnage has been very heavy lately, apparently due to the pressure to stock up distant markets before the close of navigation.

In Copper the fact is established that the Calumet & Hecla Company have made a large sale. Details, however, are not available as yet. The market has stiffened up since then.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St., PHILADELPHIA, Pa., November 14, 1893.

Attempts are being made to persuade people that things are improving, but evidences thereof are not very satisfactory. It would not require very much of a demand to start such a movement, however, and the chances in that direction are not unfavorable, but that the turn has actually been made is "not proven." Prices are in no case better than they were a week ago; there has been no general increase in the volume of business, and no tangible evidences that either of these desirable features are on the point of being immediately realized. A more cheerful feeling has been manifested since the elections, however, and there is more inquiry for quotations, indicating that the trade are disposed to anticipate requirements, providing that developments are favorable, but confidence has not been strong enough to induce heavy purchases. It may also be noted that there is less pressure to sell, so that, taking everything into account, even if there has been no other gain, the disposition is to look for better times, rather than the reverse.

Pig Iron.—The market ought to improve, but it has not responded as promptly as could be desired. The decrease in stocks and the extremely small output ought to inspire confidence, considering the low prices now ruling, but in most cases orders can be placed at the same prices as last week, and, so far as we can find, no one has had courage enough to ask an advance. At the same time there is less pressure to sell, and buyers may not be entirely safe in postponing their orders much longer. It would not take much to start the market on an up turn, but it evidently needs something to start it, or the movement would have been well under way by this time. The market is a waiting one, sales in the meanwhile being within the following range for Philadelphia deliveries:

No. 1 Foundry	$13 75 @ $14.25
No. 2 Foundry	13.00 @ 13.25
Standard Gray Forge	12.00 @ 12.50
Ordinary Gray Forge	11.50 @ 11.75

Steel Rails.—It has been evident for some time that prices were crumbling away, so that the recent sharp break was not much of a surprise. It is probable, however, that there is more in it than appears on the surface, and that the break is a kind of preliminary to something which is not yet ready for announcement. Opinions vary as to the effect of the reduction; it would be a good thing to secure work for the men during the winter months, but it is very doubtful if it will increase the demand at all, as the roads are in no condition to anticipate their needs, and as the president of the Pennsylvania Company remarked: "We are not speculating in Rails." Nevertheless, prices were too high, and a reduction to $25 is only in fair proportion with other articles; moreover, it is claimed that no such prices as $22, Pittsburgh, have been named or accepted. It is said that the Carnegie Company offered to deliver 3000 tons to the Boston & Albany Road at $25, but the order went to the Scranton Company at a price a shade under $23.75, f.o.b. Under the circumstances prices are very unsettled and may be anywhere from $22.50 to $24, f.o.b. cars—all depends on quantity, delivery, &c., but in the meanwhile there is no great desire to place orders notwithstanding the lower cost.

Hosted by Google

Steel Billets.—The market is dull and prices not particularly strong. Sellers quote $19.75 @ $20, delivered, but to the right kind of buyer there would be no difficulty in shading the inside figure. Consumption is not large, however, hence there is comparatively little disposition to buy, except in small lots.

Finished Material. — Things are practically in the same condition as noted for some time past. The volume of business does not increase in the aggregate, although some mills are doing very much better than they were two or three months ago, but they are the exception and not the rule. The large mills (with one or two exceptions) are in a most unsatisfactory position. They have plenty of orders on their books, but the buyers are not in a position to take deliveries, so that nothing can be done until they are ready. Those who cater to a smaller class of trade manage to run pretty full, as they are constant buyers week by week, and while orders have not accumulated, they are received often enough to insure steady work at the mills. There is no big work coming out at present, but on the whole business keeps up to the average of the past several weeks. Prices show no improvement, however, and on large lots are made considerably lower than quoted for small lots, which are as follows:

Grooved Skelp, delivered	1.47½¢	@	1.50¢
Best Refined Bars	1.52½¢	@	1.55¢
At interior points	1.40¢	@	1.50¢
Tank Steel	1.55¢	@	1.60¢
Heavy Plates	1.60¢	@	1.65¢
Shell	1.70¢	@	1.80¢
Flange	1.90¢	@	2.00¢
Angles	1.65¢	@	1.70¢
Beams and Channels	1.75¢	@	1.90¢

Old Material.—The demand is somewhat better, but with large supplies it is difficult to secure satisfactory prices. General quotations are about as follows:

No. 1 Wrought Scrap, delivered	$12.00	@	$13.00
Machinery Cast, delivered	10.00	@	11.00
Heavy Steel Scrap, delivered	12.00	@	13.00
Old Iron Rails, delivered	14.00	@	14.50
Old Street Rails, delivered	15.50	@	16.00
Wrought Turnings, delivered	10.00	@	11.00
Cast Borings, delivered	6.00	@	7.00
No. 2 Light Scrap	6.00	@	7.00

Louis R. Baldwin, until recently with the late H. W. Middleton, has established himself in business on his own account at Room 5, 205 Walnut place. Mr. Baldwin has had a considerable experience in the trade, and will make a specialty of Iron, Steel, Nails and General Railroad and Mine Supplies.

St. Louis.

(By Telegraph.)

Office of *The Iron Age*, Bank of Commerce Building, ST. LOUIS, November 15, 1893.

Pig Iron.—A general feeling of improvement is noted and inquiries are more frequent. Prices have been advanced 25¢ ℔ ton on Nos. 1, 2 and 3 Foundry, and nearly all the leading furnaces are holding firm at the advance. Locally the demand is not urgent, but consumers who have Iron due them are taking it more regularly than heretofore. We quote as follows for cash, f.o.b. cars St. Louis:

Southern Coke, No. 1 Foundry	$13.25	@	$13.50
Southern Coke, No. 2 Foundry	11.50	@	11.75
Southern Coke, No. 3 Foundry	10.75	@	11.00
Southern Gray Forge	10.25	@	11.50
Southern Car Wheel	17.25	@	18.25
Lake Superior Car Wheel	16.50	@	17.00
Ohio Softeners	16.00	@	16.50

Bar Iron —The jobbing trade is quite brisk and 1.75¢ from store is well maintained. Mills quote 1.45¢ @ 1.50¢ for carload lots, half extras, f.o.b. cars East St. Louis.

Barb Wire.—The improvement noted last week continues the feature of this department. Mills quote Painted at $2 @ $2.05 and Galvanized at $2.40 @ $2.45. Jobbers ask $2.10 @ $2.15 for Painted, with the usual advance for Galvanized.

Wire Nails.—The Nail market does not appear as weak as last reported and there continues to be a fair amount of business doing. Mills quote $1.40 for carload lots to jobbers. Smaller lots are quoted at $1.45 @ $1.55, according to quantity.

Rails and Track Supplies.—There has been quite an improvement in the demand for Track Supplies, which are firmer in consequence. We quote as follows: Splice Bars, 1.65¢ @ 1.70¢; Spikes, 2¢ @ 2.05¢; Bolts, Square Nuts, 2.50¢; with Hexagon Nuts, 2 60¢. Steel Rails are dull at $24.50 @ $25. Old Iron Rails are nominally $14.

Pig Lead.—Acting under the improved condition of the New York market this metal is higher. Sales of several hundred tons were made at 3.15¢ @ 3.20¢, and 75 tons were placed today at 3.22½¢. At the close to-day 3.22½¢ was bid; sellers are asking 3 25¢.

Spelter. — This metal is a trifle firmer, in sympathy with Lead. Sellers ask 3 40¢, but consumers continue to buy sparingly, and any rapid improvement seems out of the question.

Chicago.

(By Telegraph.)

Office of *The Iron Age*, 59 Dearborn street, CHICAGO, November 15, 1893.

More business is now doing in nearly every line of finished material except for Structural work, in which the demand is light owing to the close of the building season. Orders are improving in a marked degree from the railroads. These orders are small, showing that they are for absolute requirements, but they are numerous and steady, which is in marked contrast with the quietness of this class of business for several months.

Pig Iron.—The most important event of the past week was the decline in Southern freight rates of 20¢ ℔ ton, making the existing rate $3.65 from Birmingham. It only applies to Chicago business and was done by the Ohio River lines and not by the railroads further South. It is expected that this reduction will only be temporary, but it has had the effect of reducing prices all along the line. It has not yet had the result of increasing sales, but it would be natural that buyers should take advantage of it as soon as the fact becomes generally known. The demand for Southern Iron for the past week has only been for small lots, although there are some inquiries for round lots which it is hoped may result in transactions at an early day. Business on local Coke Iron has been fair, but no heavy sales have taken place. The quotations made on this class of Iron are for small lots only. Concessions are given on sales of any size and in direct competition with Southern Iron prices are made to take the business. Sales are reported of several hundred ton lots of Lake Superior Charcoal Iron and one inquiry is in the market for 500 tons. Quotations are now as follows for cash:

Lake Superior Charcoal	$16.00	@	$16.50
Local Coke Foundry, No. 1	13.50	@	14.00
Local Coke Foundry, No. 2	12.75	@	13.00
Local Coke Foundry, No. 3	12.25	@	12.75
Local Scotch	14.00	@	14.50
Ohio Strong Softeners No. 1	15.50	@	16.00
Southern Silvery, No. 1		@	14.25
Southern Silvery, No. 2		@	13.75
Southern Coke, No. 2	11.85	@	12.10
Southern Coke, No. 3	11.10	@	11.35
Southern, No. 1, Soft	11.85	@	12.10
Southern, No. 2, Soft	11.10	@	11.35
Tennessee Charcoal, No. 1	16.00	@	16.50
Southern Gray Forge	10.60	@	10.85
Alabama Car Wheel	18.25	@	18.50
Jackson County Silvery	16.50	@	17.00
Other Ohio Silvery	15.00	@	15.50

Bars.—The volume of business is steadily increasing. Manufacturers' agents who have recently tested the market by circulars report that they have brought in numerous inquiries and some orders. The outlook indicates a continued buying movement in this line, and there are some good sized orders in sight. Prices are hardly as firm as they were a week since on account of the efforts being made by mills which are now starting up to get their order books comfortably filled. Prices on Bar Iron range from 1.37½¢ to 1.45¢, Chicago, according to the location of the mill. The Valley mills are endeavoring to maintain their base price of 1.30¢ at mill. Competition is brisk on Soft Steel and prices range from 1.45¢ to 1.55¢, Chicago, according to the specification. Jobbers report a better business, with an improving demand from the small manufacturers. They quote from stock 1.60¢ @ 1.70¢ on Bar Iron and 1.65¢ @ 1.70¢ on Soft Steel Bars.

Structural Material.—The demand for Beams is light in consequence of the gradual cessation of building operations. Rumors are current of much lower prices than have been hitherto named in this locality. The bridge works are purchasing moderate quantities of Shapes, but the demand in that direction can hardly be called active. Quotations are as follows, Chicago delivery: Beams, 1.65¢ @ 1.75¢; Tees, 1.90¢ @ 2¢; Angles and Universal Plates, 1.60¢ @ 1.65¢. Small lots are sold from stock at an advance of 10¢ @ 15¢ ℔ 100 above those prices.

Plates.—Mill agents report light inquiries, but merchants are experiencing an improvement in business and report much better sales from stock. Boiler makers are doing a little more than they have been, which causes an improved demand for Boiler Plates. Mill shipments, Chicago delivery, are quoted as follows: Tank Steel, 1.62½¢ @ 1 70¢; Shell Steel, 1.82½¢ @ 1.90¢; Flange Steel, 2.2½¢ @ 2.10¢; Fire Box, 2 75¢ @ 5¢. Store prices now prevail as follows: Iron or Steel Sheets, Nos. 10 to 14, 2.25¢ @ 2.40¢; Tank Steel, 2 10¢ @ 2.20¢; Shell Steel, 2.20¢ @ 2.40¢; Flange Steel, 2.50¢ @ 2.65¢; Boiler Tubes, 70 and 5 % off.

Sheets —Not much new business is reported, but the recent ravages of fire among sheet mills have made it necessary for contracts to be replaced, and this has brought up several transactions which otherwise would not have taken place. No. 27 Common Sheet Iron is still quoted at 2.75¢, Chicago, for mill shipment, but this is shaded by some manufacturers. Small lots from stock are selling at 2 90¢ @ 3¢. Galvanized Iron continues in good demand. The mills in operation are now so well sold

Hosted by Google

up that agents believe prices can shortly be advanced. The best brands are selling at about 70 and 10 % off for Juniata, but less known brands may yet be purchased at 70 % off. Small lots from stock are quoted at 70 % @ 70 and 5 % off. Sheet Copper is weaker from stock, small lots being sold at 30 % off, while manufacturers quote 35 % off for large lots.

Merchant Steel.—Cheerful reports continue to be received from representatives of this branch. Contracts are steadily being made for season deliveries and specification are coming in fairly well on old orders and values are well maintained. Mill shipments, Chicago delivery, are quoted as follows: Smooth Finished Machinery, Tire and Open Hearth Spring Steel, 1.90¢ @ 2¢; Ordinary Bessemer Machinery, 1.60¢ @ 1.65¢; Ordinary Bessemer Tire, 1.55¢ @ 1.60¢; Ordinary Tool Steel, 6¢ @ 7¢; Specials, 12¢ and upward.

Steel Billets.—Considerable inquiry is reported for deliveries extending into February. Quotations range from $19.25 to $19.50, Joliet, according to specifications, for 4 x 4 inch. The Joliet mill will resume operations on the 20th.

Rails and Track Supplies.—The drop in the Eastern price of standard Steel Rails is not yet reflected in quotations in this market. The railroads are making inquiries as to how prices here will be affected, but so far they have not asked for quotations on specified quantities and it may be some time before they decide to enter the market as purchasers. There are rumors of a sale of 5000 tons to a Texas road by an Eastern mill at a very low price. Quotations are confined to small quantities, on which the price is made $27 @ $28, according to the customer. Iron and Steel Splice Bars are quoted at 1.50¢ @ 1.55¢; Track Bolts with Hexagon Nuts, 2.55¢ @ 2.60¢; Spikes, 1.90¢ @ 1.95¢, according to quantity.

Old Rails and Car Wheels.—Nothing has been doing lately in Old Iron Rails, but the railroads are offering large quantities, and seem desirous of selling them. They ask $14 75, which buyers refuse to pay. Old Steel Rails have sold recently at $10 50 for long lengths. Short pieces are quoted at $8.50, but holders are trying to get more money. Old Car Wheels are extremely quiet, with large lots probably worth about $11, and single carloads $13 to $14.

Scrap.—Quite a fair demand is noted for various kinds of Old Material; even Malleable Cast is again in demand, after having been neglected for a long time. Steel Scrap is very quiet. Dealers' selling prices, net ton, are as follows: No. 1 Forge, $10; No. 1 Mill, $8; Sheet Iron, $4.50; Pipes and Flues, $8; Axles, $16; Horseshoes, $11; Fish Plates, $12; Spikes and Bolts, $10; Cast Borings, $4.50; Wrought Turnings, $6.50; Axle Turnings, $8; Heavy Cast, $9.50; Stove Plate, $7.75; Malleable Cast, $8; Mixed Steel, $7, gross ton; Leaf Steel, $14 50.

Metals.—A little better business is reported for Lake Copper and prices are firm but unchanged at 10⅜¢ for carloads. Leading casting brands are held at 9¾¢, notwithstanding sales of less known brands at somewhat lower figures. Spelter is firm at 3.50¢. A good business has been done in Pig Lead, sales having been made of about 600 tons within the week. It is quoted at 3 30¢ @ 3.35¢, according to quantity.

Pittsburgh.

(By Mail.)

Office of *The Iron Age*, Hamilton Building, Pittsburgh, November 14, 1893.

The break in the price of Rails has been the main topic of discussion in the Iron and Steel trades here during the past week, and it is the opinion that it will have a good effect on trade in general and the Steel trade in particular. At different times during the past two years the Edgar Thomson Steel Works and several Eastern plants were put on Billets when there were no Rail orders to be had, the inevitable result being a material weakening in the price of Billets, or at best checking any advance in prices that would possibly have taken place. If the lowered price of Rails should serve to keep the mills fairly well employed, the Steel market will undoubtedly be materially benefited. During the week reports of offers to sell Rails on the basis of $20 at mill have been current here. For the first time in its history the Amalgamated Association has issued a call for a second convention in one year and which will be held in this city, commencing on Thursday morning, the 16th inst. At this meeting some important business will be brought up for consideration. The request of the Sheet manufacturers for a reduction of 10 % on the present scale, also the request of the Mahoning Valley mills for a reduction of wages in the finishing departments to correspond with similar reductions made by the National Union of Iron and Steel Workers, and the request of the Valley mills for a $4.50 ₱ ton puddling rate, will be brought up for action. The question of making the Amalgamated Association wage scale a continuous one will also be considered, and, altogether, the session promises to be one of the most important in the history of the Amalgamated Association. The week under review showed no material changes in the condition of the Iron and Steel trades. The demand is undoubtedly much improved, but prices are as low as ever.

Pig Iron.—We can report a perceptible improvement in demand for both Bessemer and Gray Forge Iron. A number of sales have been closed within the past week, and $11.25, Pittsburgh, for Bessemer and $10.50 for Gray Forge are being closely observed, while some of the Valley furnaces are holding Bessemer at $10.75 at furnace, equal to $11.35, Pittsburgh, and are getting it. While stocks of Pig Iron at furnaces are large, the increased demand for Steel and the prospect of some business in Rails is expected to lead to a material lessening of stocks before this year is out. The uncertainty existing as to what price will have to be paid for Coke after December 31 next, on which date a good many contracts expire, is having the effect of making furnace operators unwilling to accept contracts for Iron for delivery very far into next year at present prices. Taking all these facts into consideration, it is not unreasonable to believe that prices of Bessemer and Gray Forge cannot well go much, if any, lower than they are to-day. We repeat quotations of last week, as follows:

Neutral Gray Forge	$10.50	@ $10.75	cash
All-Ore Mill	10.75	@ 11.00	"
Bessemer	11.25	@ 11.50	"
No. 1 Foundry	12.50	@ 13.00	"
No. 2 Foundry	11.50	@ 12.00	"

While our lower quotation on Bessemer has been slightly shaded in several instances, it has been in cases where terms were equivalent to spot cash. We note a sale of 1000 tons of Bessemer for November at $11.25, Pittsburgh, and one of 1500 tons of Gray Forge for November and December at $10.50, Pittsburgh.

Ferromanganese.—We quote domestic at $52.50 @ $53, delivered. The demand is reported as improving, owing to the increased demand for Steel.

Muck Bars.—There is a better demand, owing to the starting up of a number of mills. We are advised of two or three sales involving about 1000 tons for delivery this year at $21, @ $21.15, delivered at buyer's mill. Some off grades of Muck Bar can be had at prices slightly lower than the above.

Billets.—The demand continues fairly active, and it is claimed that enough business has been booked and is in sight to insure fair activity among the mills for the balance of this year. Steel makers are apparently well satisfied over the break in the price of Rails, as it is expected to favorably affect the market by largely removing the chances of the Rail mills making Billets for some little time at least. During the week under review a number of orders calling for from 500 to 1500 tons have been placed, and it is understood that two or three contracts involving some 8000 or 10,000 tons are pending and may be closed this week. We quote the market at $17 25 @ $17.50, with the last named as the ruling price. A good order for Rod Billets with favorable terms of settlement would probably be accepted at our lower quotation.

Steel Rails.—Owing to the many rumors in circulation it is next to impossible to give a quotation on Rails that would be reliable. It is claimed that offers to sell on the basis of $20 at mill have been recently made. Owing to the open hostility now existing between Eastern and Western mills it is not unfair to assume that even this price would be shaded if necessary.

Structural Material.—Pittsburgh is reported to have taken a fairly large order for Beams and Channels to be used in a large office building now under construction in a Western city. There continues to be a fair run of small orders, with several large contracts in sight, which are expected to be closed before the year is out. We repeat quotations of last week, as follows: Beams up to 15 inches, 1.50¢ @ 1.60¢; Angles and Universal Plates, 1.60¢ @ 1.65¢; Tees, 1.75¢. It is expected that the plant of the Columbia Iron & Steel Company will be offered at public sale in a short time. This is claimed to be one of the best equipped mills in the country for the production of Structural Material.

Plates.—The demand has shown slight improvement lately, although prices are as low as ever. Tank Steel is in fairly good demand, some fair sized orders having been placed last week. We quote as follows: Tank, 1.40¢ @ 1.45¢; Shell, 1.60¢ @ 1.75¢; Flange, 1.65¢ @ 1.75¢; Fire Box, medium quality, 2.50¢ @ 3¢, best quality, 3.50¢ @ 4¢. For round lots the above prices continue to be shaded to some extent.

Wire Rods.—Beyond the fact that there are inquiries in the market for several round lots there is nothing of interest to note. However, as the views of makers and buyers on prices on the above are pretty far apart, there is not much prospect of the business being closed at an early date. We quote at

Hosted by Google

$25.50 at maker's mill, and under favorable conditions this price would be shaded.

Bars.—There is a fair amount of business, the heavier demand being for Steel Bars owing to their being obtainable at about the same price as Iron Bars. We quote Steel Bars at 1.30¢ @ 1.40¢, according to order, with Bar Iron extras. In the Valley Bars are quoted at 1.30¢ @ 1.35¢, half extras. The Valley mills have not yet started up, agreeing to remain idle until Monday, the 20th inst., in order to allow the Amalgamated Association to prepare a new wage scale, and also to consider the offer of the manufacturers to pay $4 50 ℔ ton for puddling.

Barb Wire.—The demand continues light, and will not show improvement until buyers commence to place their orders for spring delivery. It should be noted that makers have refused to contract for delivery next year at present ruling prices. We continue to quote Four-Point Galvanized at $2.20 in carload lots at mill, with the usual advances for less quantities. There is a good demand for Plain Wire, which may be quoted at $1.50 @ $1.60 for Nos. 6 to 9, in carload lots.

Wire Nails.—There is nothing new to report. There is a good demand, with prices unchanged. We quote at $1.25 in carload lots at mill. For round lots this price would be slightly shaded. Cut Nails are also in fair demand, with prices ruling at $1 at mill, with the usual averages.

Pipes and Tubes.—The situation is unchanged, the demand being light and none of the mills employed to full capacity. Prices continue low, although makers hope for an improvement before long.

Connellsville Coke. — During the week ending Saturday, November 4, there were 5960 ovens in the Connellsville region in blast, and 11,530 idle, with a total estimated production for the week of 55,280 tons. Compared with the previous week this was a net gain of 228 active ovens and an increase in production of 2965 tons. Prices are unchanged, on the basis of $1.10 for Furnace Coke, in tons of 2000 lb, f.o.b. cars at oven, and $1 50 for Foundry Coke to dealers and $1.65 to consumers. Coke makers confidently expect a better demand for Furnace Coke between now and the first of the year, owing to the starting up of a number of blast furnaces that have been idle for some time, and owing to the better outlook in the Rail trade, which will, of course, lead to increased production of Bessemer Pig Iron.

Cincinnati.

(By Telegraph.)

Office of *The Iron Age*, Fifth and Main Sts., CINCINNATI, November 15, 1893.

That there has been a large increase in the volume of business in Pig Iron during the past week is gratifying, but that there has been no improvement in prices is not what was confidently expected. The sales aggregate upward of 50,000 tons, and were chiefly of No. 2 Soft, No. 3 Foundry and Gray Forge, on the basis of $8 ℔ ton, f.o.b. Birmingham, for No. 2 Foundry; $7.50, and in some instances $7.40, for No. 3 Foundry, and $7 ℔ ton for Gray Forge. The purchases were made by Iron Pipe works in the East, in the West and in the South, and are for deliveries running to next May. It seems that these Pipe works have secured some orders for Iron Pipe at low prices, and held off from buying raw material as long as possible, so that when these trades were closed it was necessary in some instances to telegraph the furnaces to make prompt shipments. That all of these orders came upon the market about the same time may be a coincidence or it may be by design, but the Pipe works have obtained work for the winter by making low prices for Pipe, and the furnaces, while furnishing the raw material at low rates, secured some business on which there cannot be much profit. Other than these orders there has not been much business, but there is about the usual run of orders from the jobbing foundries, but Charcoal Iron is exceptionally dull, and there are free offerings of No. 2 Foundry. There continue to be fair deliveries on old contracts. Collections are all that could be desired. Quotations are as follows:

Foundry.

Southern Coke, No. 1.	$12.75 @ $13.00
Southern Coke, No. 2	10.75 @ 11.00
Southern Coke, No. 3	10.25 @ 10.50
Ohio Soft Stone Coal, No. 1	15.50 @ 16.00
Ohio Soft Stone Coal, No. 2	14.50 @ 14.75
Lake Superior Coke, No. 1	15.00 @ 15.25
Lake Superior Coke, No. 2	14.00 @ 14.25
Hanging Rock Charcoal, No. 1	18.50 @ 19.00
Hanging Rock Charcoal, No. 2	17.50 @ 18.00
Tennessee Charcoal, No. 1	14.00 @ 14.25
Tennessee Charcoal, No. 2	13.00 @ 13.25

Car Wheel and Malleable Irons.

Standard Southern Car Wheel	17.75 @ 18.00
Lake Superior Car Wheel and Malleable	17.00 @ 17.25

Forge.

Gray Forge	9.75 @ 10.00
Mottled Coke	9.50 @ 9.75

Metal Market.

Copper.—Current report has it that the Calumet & Hecla Company have effected a large sale. No particulars were divulged as to the quantity of metal involved, as to the price paid or whether home consumers or exporters, or both, were the buyers. That there has been a deal is the fact, however, since the company referred to have refused subsequent orders for deliveries this year, while other producers have marked their price up to 10¢. Other descriptions are also held higher, or say 9¾¢ for Electrolytic and 9½¢ for ordinary casting stock, but the intimation was given in some quarters that desirable orders for the cheaper varieties would have been taken at some concession from those figures. James Lewis & Sons, in circular of November 1, remark as follows regarding American Copper: "The export to Europe continues on a very large scale, that for the last four months exceeding the total quantity previously allowed for 12 months by about 10 %. Chief part of this enormous export has gone to Germany, where it seems to have been readily absorbed. A further sale of 1500 tons of Lake Copper is reported to have been made for export, while a large quantity of Anaconda Matte has been sold to American smelters on better terms than are obtainable here."

Pig Tin.—The level of prices has been lower and the market characterized by depression during the greater portion of the week. No great amount of Tin came out, but there proved to have been enough to force values down to 20.30¢ @ 20.35¢ for prompt and immediate future delivery. Speculative manipulation, it is alleged, played some part in the turn, but the force of an alleged large "invisible" supply is claimed to have been a factor of some weight, and there is more than a vague possibility that the steady depreciation in London prices has had a certain amount of unfavorable influence. In any event the movement of prices continues very perplexing to the general buyer, as also the fact that the range is lower at the present time than it was a year ago. Toward the close of the week under review bids were raised to 20.40¢ for prompt and 20 50¢ for November delivery. Straits shipments during first half of November, as per Metal Exchange advices, were 1175 tons, including 700 tons to Great Britain and the United States and 475 tons to the Continent. Total shipments during the corresponding period last year were 1475 tons.

Pig Lead —The market is decidedly firmer, but at the higher range of prices there is hardly any buying on the part of home consumers. In other words, it looks very much like a speculative movement with the more aggressive operators well fortified. One strong point is that late low prices have checked production and prevented any serious accumulation of the metal at first hands, while operating to increase the consumption. The export of 90 % of the Lead made from Mexican ores and facilities for livelier work in that direction have a certain amount of influence in quarters where the real situation is understood. There are rumors of falling off in Australian production and certain facts connected therewith suggest that export movement from this country may be heavier later on. Prompt and current month deliveries have been sold at 3.37½¢ @ 3.40¢. Speculative bids were made of as high as 3.42½¢ for December, 3.45¢ for Janary and 3.47½¢ for February delivery.

Spelter.—None but ordinary sales on home account have been made in this quarter the past week, and the demand has continued slow. Such as they were, however, the orders were difficult to execute, since most replies from smelters virtually amounted to a refusal to sell for delivery during the next six weeks. The presumption is that the bulk of stock is in second hands. There were intimations of a "short" interest in the market. The nominal quotation at the close was 3.70¢ @ 3.75¢ for ordinary brands.

Tin Plate.—Orders for futures have dropped off to very moderate proportions, and buyers' views seem to have been moderated also. Spot business has not exceeded ordinary proportions, nor have ordinary out of town inquiries been hardly up to the average. Prices are somewhat uneven, yet show no radical change. Spot quotations are as follows: Coke Tins—Penlan grade, IC, 14 x 20, $5.30; J. B. grade, do., $5.35; Bessemer full weight, $5.35; light weights, $4.95 for 100 lb, $4.85 for 95 lb, $4.70 @ $4.75 for 90 lb. Siemens Steel scarce. Stamping Plates—Bessemer Steel, Coke finish, IC basis, $5.60; Siemens Steel, IC basis, $5.65; IX basis, $6.75 @ $7. Charcoals—Melyn grade, IC, $6.37½ @ $6.50; Crosses, $8; Allaway grade, IC, $5.60; Crosses, $6.75; Grange grade, IC, $5.75; Crosses, $6.85. Charcoal Ternes—Worcester, 14 x 20, scarce; do., 20 x 28, $11.35; M. F., 14 x 20, $7.50; do., 20 x 28, $14.75; Dean grade, 14 x 20, $5.35; do., 20 x 28, $10.50 @ $10.60; D. R. D. grade, 14 x 20, $5.15; do., 20 x 28, $10.10; Alyn, 14 x 20, $5.32½ @ $5.35; do., 20 x 28, $10.40; Wasters —S. T. P. grade, 14 x 20, $4.75;

Hosted by Google

do., 20 x 28, $9; Abercarne grade, 14 x 20, $4.60; do., 20 x 28, $8.87½.

The Metallgesellschaft of Frankfurt, a. M., Germany, whose agents in this country are the American Metal Company, 80 Wall street, have issued a pamphlet bearing on the statistics of Lead, Copper, Zinc and Tin for the years 1890-92. It covers the world's production of these metals and the import and export statistics of the leading industrial nations and is the most complete presentation yet made on the subject.

Financial.

The week has been, on the whole, a tame one in financial circles. No developments of any magnitude have opened out in any one quarter, and our last week's review might, in its general features, be reprinted at this writing, and fairly stand for a presentation of the existing situation. That business is slowly but surely improving all along the line is evident from the marked increase in the volume of bank exchanges and from the increased demand for manufactured products represented by trade reports throughout the country as having taken place within the past week, or since the recent elections. The removal of the silver question as a disturbing factor and the settlement of the currency on a sound basis appear to have induced a distinct improvement in the business feeling of the East and South in particular. Among other interests the dry goods trade is showing a more favorable aspect. Many manufacturing establishments are announced as being busy or expanding and others have recently resumed or are about to resume operations. In nearly every line, in short, some improvement is noted, although, perhaps, not sufficient to satisfy the too sanguine expectations of those who looked for an immediate and universal revival to follow on the passage of the repeal bill. As we have previously pointed out, the reflux of the tide of business activity from the depths of depression which it reached this year must necessarily be a somewhat prolonged operation. Moreover, the anticipation of tariff changes has very probably much to do with the slowness of recovery; and until that question is decided a complete return of confidence and active enterprise cannot, in reason, be expected. It may be said, however, that the recovery which began with the month continues with steadily increasing force, and, in the opinion of competent judges, its ratio is no less than should have been counted on when a reasonable view of all the existing conditions is taken.

Railway earnings, which are so unfailing a gauge of the business condition, are being watched with interest. These showed a decided change for the better in the month of October over the preceding month, and although the cessation of World's Fair traffic during the present month has caused a contraction in the receipts of several roads, the returns of earnings in general make a better showing than was generally expected. Hopeful views are taken of the future in this interest, as the increasing demand for produce and for stocks of goods, which is now developing, will, it is believed, tend largely to increase the demand for freight transportation in the near future. The great curtailment of production during the past few months, coupled with a steady consumption during that time, has necessarily reduced stocks of all kinds in the interior to the lowest ebb. Before long these must be replenished; and the railways will be the gainers.

Money, meanwhile, continues to accumulate rapidly at the chief centers of reserve, and the question is, what will be done with this great amount of funds? The public shows as yet little or no interest in investments on the Stock Exchange, although there has been, it is true, a considerably increased demand of late for the better class of bonds, and it is not likely that much will be done in this way until it becomes clear that trade is once more on a normal basis. When this occurs, however, the abundance of money in reserve will have a decidedly important effect on speculation. Saturday's bank statement showed a further increase in the surplus reserves of nearly $8,000,000, bring the holdings of the banks up to nearly $58,000,000 above legal requirements. The loans, meanwhile, increased only $600,000. This great accumulation of money is evidence that hoarding is over, and that, to that extent at least, confidence has been restored.

The money market shows no material change. Money on call continues in abundant supply at easy rates, the offering being, however, considerably above the demand, although that shows some increase in consequence of the recent expansion of business. Business has been done from 1 % to 2 %, the average being at 1½ %. Time loans are liberally offered by banks and trust companies at easy rates; but, as in the case of call loans, the supply far exceeds the demand. Rates usually quoted are 3 % for 90 days, 3½ % @ 4 % for 6 to 9 months, on dividend paying securities. A good deal of business is reported in commercial paper, which is being bought by both city and country banks at about 4½ % @ 5 % for choice indorsed receivable, 5 % @ 6 % for lesser known names, and 6 % for best single names.

The stock market has had a week of monotony, speculation being at a low ebb. The public has been entirely out of the market for reasons before mentioned, and such business as has passed has been entirely professional and on an exceedingly narrow scale. The tendency of prices, on the whole, has been to decline, but, except in a few cases, the changes of the week have been relatively unimportant, rarely exceeding 1 %. American Sugar Refinery stocks were the object of bear attacks on Monday, which caused a break of nearly 4 points in that stock. As the manipulation of sugar certificates has been one of the inexplicable features of the stock market for months the break was not believed to bear any special significance. The market during the early part of the current week has been languid and irregular, closing on Wednesday with a little firmer tone. The news of the assignment of the Thurber-Whyland Company, a great New York grocery house, on Tuesday, had a depressing effect on some of the industrials. New England was weak and sold down sharply on Saturday on rumors of aggressive action against the McLeod schemes. General Electric was another victim of the "bear" faction. Otherwise no fluctuations of any importance were reported. The following list shows the extreme fluctuations of some of the active stocks during the week, with their closing price on November 15:

	Highest.	Lowest.	Closing. Nov. 15.
Am. Sugar Ref.	102¼	93¼	93⅞
Atchison, T. & S. Fé	20⅞	18⅝	18⅞
Balt. & Ohio	71	70¼	70½
Chicago Gas	63⅜	59⅝	60⅞
Chic., B. & Q.	82⅝	80¼	80⅜
Chic., Mil. & St. Paul	65¼	62½	62½
Chic., Rock Isl. & Pac.	68	65¾	66⅜
Del. & Hudson	133½	130	130
Del., Lack & Western	172½	168	168
Gen. Electric	45½	41⅛	41⅜
Lake Shore	128¼	127	127

Government bonds, which were firm during the early part of the week, declined 1 % for 2s registered on Tuesday, when there was a sale of $20,000 at 25¼. The 4s show a fractional advance. Latest quotations were as follows:

	Bid.	Asked.
2s, 1891, registered	94	.....
4s, registered	112¼	113
4s, coupon	112¼	113

Railway and miscellaneous bonds have been firmer and in fairly large demand.

The market for sterling exchange has been firm, owing to a scarcity of bills early in the week and a slight decline in discount in the London market. Actual business was done at the close on Wednesdav at $4 82 @ $4.82½ for 60 days; $4.84¼ @ $4.84¾ for demand; $4.84¾ @ $4.85 for cables and $4.81 for commercial. Domestic exchange on New York is quoted as follows: New Orleans, commercial 75 discount, bank par; Charleston, buying ⅛ discount, selling par; San Francisco, sight 5, telegraph 10 premium; Savannah, buying par; selling ⅛ premium; Chicago, 75 @ 80 premium; St. Louis, 75 premium.

Bar silver has declined in London to 32 pence, and in New York to 69½¢ ℔ ounce. Some large shipments of the metal have been made during the week.

New York.

Office of *The Iron Age*, 96-102 Reade street, New York, November 15, 1893.

Pig Iron.—A very encouraging feature, so far as the consumption of Pig Iron is concerned, is the appearance of a number of large orders for Cast Iron Pipe. Through Warren, Wood & Co. of this city, the Chattanooga Pipe & Foundry Company secured the order for 6700 tons of Pipe for Waterbury, Conn., at $23.52, delivered, per gross ton. The Howard Harrison Company of Bessemer, Ala., captured about 8000 tons of the 48-inch Pipe for Philadelphia at $24.12 per gross ton, delivered on the streets, the balance of the order, about 16,000 tons, going to Eastern shops. About 1300 tons has been closed for Burlington, Vt., and a good lot is coming up in Northern New York. We quote: Northern brands, $14 @ $15 for No. 1; $13 @ $14.25 for No. 2; $12.25 @ $12.50 for Gray Forge, at tidewater. Southern Iron, same delivery, $13 @ $14 for No. 1; $12 @ $13 for No. 2; $11.50 @ $12.25 for No. 3; $11.75 @ $12.25 for No. 2 Soft, and $12.25 @ $12.50 for No. 1 Soft. Gray Forge is $11.25 @ $12.

Hosted by Google

Spiegeleisen and Ferromanganese.—No business of any consequence is recorded. Inquiries from England indicate that stories are afloat there of shipments of American Ferromanganese to the English market. Since Ferro is selling, f.o.b. Liverpool, at about $46, while domestic is quoted at Pittsburgh at $52.50, the absurdity of reports indicating a chance to do a regular business is evident. We quote: Foreign Spiegeleisen, nominally, for 10 % @ 12 %, $21.50 @ $22, and 20 %, $25.50 @ $26, on cars, Jersey City, and Ferromanganese, $55 @ $55 50.

Billets and Rods.—No sales of any consequence are reported in this market. We quote nominally: Domestic Billets, $20.25 @ $22.50, and foreign Billets, $28 @ $28.50, tidewater; domestic Wire Rods, $28 @ $29, and foreign Rods, $39.50 @ $40, tidewater.

Steel Rails.—A good many contradictory stories are afloat, and little that has appeared in the daily newspapers relating to the situation is correct. The sale of 15,000 tons to an Eastern road credited by Pittsburgh dispatches to the Maryland Steel Company was not made by that mill. Pittsburgh advices indicate that $20 at mill there might be accepted. A good deal of quiet negotiating is going on, but we cannot learn that any business has been transacted. Buyers are not taking hold thus far. We quote $23.50 @ $24 at Eastern mill.

Track Material.—Small lots are selling at the following prices: Spikes, 1.80¢ @ 1.90¢; Fish Plates, 1.40¢ @ 1.60¢; Track Bolts, Square Nuts, 2.25¢ @ 2.40¢, and Hexagon Nuts, 2.40¢ @ 2.50¢, delivered. Concessions would be made for round lots.

Manufactured Iron and Steel.—The contracts for Structural Material for three buildings alluded to recently involving about 5000 tons have been closed, Western mills taking the business. There are only small orders going in Plates. We quote nominally: Beams up to 15 inch, 1.70¢ @ 2¢; 20-inch, 2¢ @ 2.25¢, for round lots; Angles, 1.75¢ @ 1.90¢; Universal Mill Plates, 1.60¢ @ 1.75¢; Tees, 2¢ @ 2.15¢; Channels, 1.70¢ @ 2¢, on dock. Steel Plates are 1.60¢ @ 1.70¢ for Tank; 1.75¢ @ 1.90¢ for Shell; 2¢ @ 2.15¢ for Flange, and 2.50¢ @ 2.80¢ for Fire Box, on dock; Refined Bars are 1.50¢ @ 1.9¢, on dock, and Common, 1.40¢ @ 1.50¢; Soft Steel Bars are 1.50¢ @ 1.70¢; Scrap Axles are quotable at 1.70¢ @ 2¢, delivered; Steel Axles, 1.70¢ @ 1.90¢, and Links and Pins, 1.70¢ @ 1.80¢; Steel Hoops, 1.75¢ @ 1.90¢, delivered; Cotton Ties, 70¢ @ 72½¢ ℔ 45-lb bundle, at mill.

Old Material.—Old Iron Rails are nominally at $13 @ $14; Old Steel Rails, $8 @ $9, and Wrought Scrap, $9 @ $11.

Warren, Wood & Co., Pig Iron merchants, Boreel Building, are introducing the Spathite Pig Iron, with which excellent results have been obtained.

The Frasse Company, 19 Warren street, are putting on the market Poldi Steel. No. 0 is a special for tools used on fast running works, such as screw machinery. They also have a self hardening Steel, Gold Label, No. 00.

The first carload of material, consisting of black sheets, turned out at the new plant of the New Castle Steel & Tin Plate Company, at New Castle, Pa., was shipped to Chicago on Thursday the 2d inst., the statement that this product consisted of tinned plate being incorrect. As yet no product has been tinned by the above concern, but as soon as a sufficient supply of black sheets has been made the tinning department will be put in operation. The firm expect to send out in a short time printed matter giving full information regarding the different brands of tin and terne plate which they propose to manufacture and other information of interest to the trade.

British Iron and Metal Markets.

[*Special Cable Dispatch to The Iron Age.*]

LONDON, WEDNESDAY, November 15, 1893.

In the price of Pig Tin for prompt delivery there has been a decline to £75. 10/, and the market has shown irregular, weak form. Demand early in the week was freely met by large dealers. This with general uncertainty impaired confidence. Later a slight improvement took place on covering of "short" sales, but unfavorable Eastern advices caused a further decline. At the close the market was weak under free selling of futures, with £75. 10/ @ £75. 12/6 quoted for prompts, and £76. 7/6 @ £76. 10/ for futures.

Copper has undergone little change. Early in the week there was a slight advance in prices, due to reports of purchases for American accounts, but liberal offering by importers, and some selling by tired outside holders, caused a reaction. The same conditions prevailed up to the close of the week, with transactions small and outside interest very light. Last quotations were £42. 2/6 for Merchant Bars, prompt, and £42. 12/6 for futures, and £46. 5/ for Best Selected English.

There has been no improvement in the Tin Plate market. From the Continent there is a little more inquiry, but as the expected demand from the United States was not realized buyers became reserved and purchased only as immediate orders required. Black Plate is scarce and £8. 5/ is now quoted at Swansea. The Cynon Works have been closed down. Stocks at Swansea are now about 265,000 boxes. Liverpool quotations were as follows:

IC Charcoal, Alloway grade	12/6 @ 13/
IC Bessemer Steel, Coke finish	11/6 @ 11/9
IC Siemens " " "	11/9 @ 12/
IC Coke, B. V. grade, 14 x 20	11/6 @ 11/9
Charcoal Terne, Dean grade	11/3 @ 11/6

Pig Lead has been quiet, but the market remains quite steady at £9. 15/ for Soft Spanish.

Spelter has undergone no further change, demand being fair while prices are steady at £17 for ordinary Silesian.

Steel, with the exception of Sleepers, is very dull and prices are soft. Work has been stopped at the Barrow establishment. The Iron market is without change and makers' prices stand practically as they have been for some time past. Last dealings in warrants were at 42/5 for Scotch, 34/4½ for Cleveland, and 44/4½ for Hematite.

To Inspect Boiler Plates at the Mills.

In the report of the Supervising Inspector-General of the Steamboat Inspection Service we find that the following amendment to the laws is recommended:

"And the Supervising Inspector-General may, under the direction of the Secretary of the Treasury, detail assistant inspectors from any local inspection district where assistant inspectors are employed to inspect iron or steel boiler plates at the mills where the same are manufactured, and if the plates are found in accordance with the rules of the supervising inspectors the assistant inspector shall stamp the same with the initials of his name, followed by the letters and words 'U. S. Assistant Inspector,' and material so stamped shall be accepted by the local inspectors in the districts where such material is to be manufactured into marine boilers as being in full compliance with the requirements of this section regarding the inspection of boiler plates; it being further provided that any person who affixes any false, forged, fraudulent, spurious or counterfeit of the stamp herein authorized to be put on by an assistant inspector shall be deemed guilty of a felony, and shall be fined not less than $1000 nor more than $5000, and imprisoned not less than two years nor more than five years."

The object of this amendment is to provide for testing plate at the mills where manufactured instead of at the boiler works, and thus save the expense frequently incurred of returning plate that has been rejected to the mill, besides saving valuable time to the boiler manufacturers, whose workmen in many cases are kept idle while waiting for new plates to take the place of rejected ones.

For the first time in its history the Amalgamated Association will hold a second convention in Pittburgh in one year, commencing on Thursday morning, the 16th inst., at 10 a.m. The call for this convention was issued from the headquarters of the organization in Pittsburgh a few days ago, and it was made necessary by the fact that a full expression of opinion is desired among the members on the question of granting the demand made by the Mahoning Valley mill owners for a material reduction in the finishing departments of the scale and also to consider the request that a rate of $4.50 for boiling be allowed. In addition to this there will come up for action the question of allowing the sheet manufacturers a reduction of 10 per cent. over the wage scale agreed upon in Pittsburgh in July last. Altogether this session of the Amalgamated Association, while it will, of course, be a short one, promises to be one of the most important in the history of that organization. Should the requests of the Mahoning Valley mill owners be granted, it is very likely that the idle mills at that place and also other mills in Western Ohio, which have been idle for about four months, will resume operations within a few days. If the 10 per cent. reduction is conceded to the sheet manufacturers it will also lead to renewed activity among the sheet mills.

The United States cruiser "Columbia," in an unofficial trial over the measured course between Cape Ann and Cape Porpoise, a distance of a little less than 44 knots, averaged the remarkable speed of 22.87 knots per hour on November 14.

HARDWARE.

Condition of Trade.

THE TENOR of recent reports from the trade shows something of an improvement in feeling, indicating that a more confident tone is prevailing, with, perhaps, an increase in the volume of business. Orders are referred to as more frequent, but for small quantities, indicating that stocks throughout the country are exceptionally limited and that purchasers are adhering to the conservative policy which has governed them for some time. Collections also are better, and little complaint is now made on this score. Another favorable indication is in the fact that the large trade are placing orders for next season, the size of which suggests the expectation of at least an average trade. Prices are without special change, most lines being held pretty firmly, but with the low prices ruling for the raw material and the low quotations current for some staple goods, the tone of the market is not strong, and it is not unlikely that prices in the future on some lines will be lower. The result is probable if, as seems not unlikely, a reduction in wages is made. Manufacturers are certainly scrutinizing their costs very closely, effecting economies wherever possible, and the question as to wages is receiving consideration. Both manufacturers and merchants are thus pursuing a conservative course, but it is pleasant to note the better feeling in mercantile and manufacturing circles and the continuance of a steady if not a large business.

Chicago.

(*By Telegraph.*)

A better demand has been experienced within the past two or three days for seasonable goods, caused, of course, by the change to colder weather throughout the Northwest. In other respects the trade in Shelf Hardware is about as previously reported, but there is some encouragement in the fact that the trade seems to be going along steadily, and not decreasing in volume. There may be a slight shading on prices here and there by jobbers with large stocks, but the movement is not by any means general, and prices may be said to be well maintained considering the circumstances. Heavy Hardware is doing considerably better this month. Sales so far are about double what they were during the corresponding period of last month. The movement is principally in Iron and Steel, but the demand for season goods is improving, and cold weather will probably make it much more active. Competition on staple goods in Heavy Hardware is getting a little keener and some shading is being done, in which, however, all the jobbing houses are not participating.

St. Louis.

(*By Telegraph.*)

Hardware jobbers report a steady demand for shelf goods, but say that orders do not increase in size. Retailers continue to buy sparingly, and will doubtless do so for the balance of the year. A cold snap has at last made its appearance, and seasonable goods are moving in good quantities. Barb Wire and Wire Nails are good sellers just now and prices are firmer. Money is easier, and credits are not so closely scrutinized. Collections are excellent.

Boston.

BIGELOW & DOWSE.—The past two weeks show a better feeling, and an improvement in the business outlook. A settled financial policy and easy money are working a gradual improvement, as shown by increased orders and a better demand for all kinds of Hardware. There is unmistakable evidence that confidence is returning, and that buyers are beginning to see their way clear to making contracts for their future wants. This change will be gradual, but it is none the less sure to come. It is too late to expect much this fall, but it is pleasant to believe we have seen the worst, and that future changes are to be for the better. Prices are still very low, but it is not to be expected that they will soon, if ever, return to the higher prices that have ruled in the past. The recent depression is to have its effects on the future. Manufacturers have been forced to produce their goods at the smallest possible expense, and by strict economy are able to place their goods on the market at very much lower prices than ever before. Under these circumstances it seems fair to believe that old standards are gone, never to return. A manufacturer lately made the statement that he was able, without protection, to pay his workmen $1.50 per day and compete with foreign markets where the laborer's pay was but 50 cents per day. The American laborer, by his application and intelligence, would produce more than three times as much as the foreigner. This increased production must necessarily make new standards for future prices, and many goods that seem ridiculously low to-day are liable to be a standard for the future. Thus far there have been but few changes in prices, but dealers are all anxious to sell. There is a variety of causes working in New England to the advantage of the retail buyers. Some reforms are being introduced, old fogyism is holding back, and in the struggle profits are being sacrificed and each is trying to demonstrate to the customer that his way is the better.

New Orleans.

A. BALDWIN & CO.—The condition of business in this section is constantly improving from day to day. Money is easier, collections show a very marked improvement and travelers' orders as well as mail orders are arriving very freely, which tends to show that the conditions have almost got back to their normal state. Some of the large buyers are taking advantage of extremely low figures on some of the leading staples and are placing orders more freely, which leads us to believe that they are beginning to get their stocks into shape for a better business in the near future. The large receipts of our staple crops, sugar and cotton, are tending to enliven the situation considerably.

Baltimore.

CARLIN & FULTON.—Now that the Senate has voted and the silver question passed into history and the State elections are over, with their results gratifying or disappointing, according to the several points of view; with the closing of the World's Fair and the consequent cessation of the steady drain it had made upon the spare money of every town and community in this country, business should soon adjust itself to normal conditions. Unfortunately, November in this section has never been classed among the busy months, and aside from the activity incidental to the approaching holiday season little can be expected for the balance of the year.

Orders are probably nearly as numerous as they have ever been, but the aggregate is disappoining, and with the low prices which are ruling for everything and the readiness with which orders can be duplicated and the facilities for transportation, the trade is disposed to limit purchases to almost absolute wants. This has one encouraging feature in the fact that the average dealer owes probably less than ever before, and while sales have been dull mercantile failures are comparatively few.

What the effect of the recent elections will be upon future business is problematic; for while one party claims the victory upon the grounds of a changed feeling in regard to a reform of the tariff, the dominant party argues that the depression of business could not have resulted from changes in the tariff which have never been made, and possibly were the present Administration to demonstrate the wisdom of any proposed change in the duties two years from now, the reaction would again occur, except where such votes were given as a rebuke for maladministration instead of a criticism of principles.

However much the people of this nation may differ in their political theories, they can and should discuss and act intelligently without bitter-

Hosted by Google

ness, feeling that the interests of the whole people are above that of any one party and that no one party can claim a monopoly of all the brains and all the virtue any more than the opposite party can be charged with all the ignorance and all the vice of government.

Louisville.

W. B. BELKNAP & Co.—Business about holds its own. It can hardly be said that there is much increase in volume, though individual days of encouragement come every now and then. If two or three of them come together, and we begin to cherish the hope of permanent increase, it is only to lose the same in a corresponding period of light buying sure to follow. Not much improvement now is looked for until the first of the year, though prices are apparently firm at recently established low levels.

Quite a number of mills which announced their probable starting up a while since must have abandoned that idea, as they still continue to sell from stock lists only.

The season for Light Sheets is pretty well over and no large orders are being placed for them, although a touch of cold, bad weather would bring about a temporary consumers' demand.

The weather of summer and autumn throughout has been exceptionally fine, clear skies and uniform temperatures making all out of door life a luxury.

The financial situation here continues to improve. Banks are running exceptionally strong. We think the last call on the national banks showed them to be carrying a reserve of between 40 and 50 per cent., but all money lenders are still timid and collateral is scanned very closely, and a good deal of it is required before making the loans. Not any enterprises of consequence are under way that we can recall; the contractions and consolidations are still the order of the day. The latest in this way is the absorption—or what amounts to the same thing—of the C. O. & S. W. R. R. from here to Memphis by the L. & N. This takes the competitor out of the way of the latter, but is not altogether relished by the shippers who rely on open and free competition for getting into certain territory. The river, however, will always prevent our being bottled up.

Cleveland.

THE W. BINGHAM COMPANY.—The recent elections have told our legislators in no uncertain tones that they must not meddle too much with the tariff. Whether they obey instructions or not remains to be seen, but in any event, we have no doubt of a good effect upon business, although it is too late to expect very much this fall. We can see a slight improvement in trade since our last, the number of orders being a decided increase, but the size of the orders is not much improved. Prices on staples have weakened some, in sympathy with the low price of Steel Billets and Wire Rods. The demand for season goods has kept up remarkably well. Skates, particularly, have had a ready sale, and there is no doubt but there will be a shortage when the season is fully on. Money is easy and collections are fair.

St. Paul.

FARWELL, OZMUN, KIRK & Co.—The even, continuous run of trade at the pace that has been set for some time past has not been disturbed during this month. Weather has been very favorable for farm work and the farmers have used it to good advantage, and their farm work is up in fine shape, but this condition of things has been obtained at the expense of fall trade. The retail trade is light over the country generally and the orders to the jobbers are correspondingly small.

No changes in prices that deserve mention.

Collections are up to expectations. A less amount than usual will be outstanding at January 1 and stocks will also be low and the wholesale and the retail trade will both go into the new year with reduced and clean stocks.

Philadelphia.

SUPPLEE HARDWARE COMPANY.—We feel that trade has taken another step and ascended one more round on the ladder of prosperity; therefore what little changes have taken place in trade circles during the last two weeks have been on the side of improvement.

Country and interior merchants continue a conservative policy in buying, but as stocks are exceedingly light, it look as if the present demand was for actual and current business.

Salesmen's orders are more frequent, and cover a more extended line of goods.

Besides taking a review of the situation throughout the country, bank clearings in the volume of business show about 75 per cent. of the trade of one year ago. We think as a rule merchants give that as a fair individual estimate, although in very many instances it fell far below that in August and September.

The improved monetary conditions, coupled with improved trade, have had a beneficial effect upon many of the manufacturers located in our State.

The vaults of the banks, which have accumulated a vast amount of money, are now open to manufacturers, although they ask unquestioned security, and the partail resumption of quite a number of manufacturing industries has given employment to many who have suffered from enforced idleness during the last four months, and has had the effect of stimulating trade that has lain dormant for some months past.

There has been a liberal demand for season goods, and a desire to provide for holiday trade is noticeable.

The few changes in value of Hardware show conclusively, as a rule, that low water mark had been reached. The few exceptions of the slight decline of a few cents in Barb Wire and Wire Nails may naturally be looked upon as the result of a reduction made in wages rather than a reduction in the small profit of the manufacturer.

The recent reduction in the price of Steel Rails, which came like a thunder clap, is looked upon as rather suggestive. Some attribute it to a desire to stimulate activity of the various railroads, which have recently been so economically inclined.

Others look upon it as an era of lower wages, which they claim is yet in its infancy.

The reduction in the price of Steel Rails brings them to within 5 per cent. of the price in the English market, where the production is made upon a lower level of wages.

Whatever may be the cause or causes or the result, it is certain the demand had reached the lowest level within the last 20 years, and resumption has started with wages on a lower level than at any time within the last 15 years.

The same causes may perhaps be coupled with the recent increased production of Pig Iron, and while we are glad to see this advance in production we, with others, regret the necessity of reduction in the level of wages.

Collections may be looked upon as nearly normal.

Congress having adjourned, the World's Fair, with all the attractive features surrounding the same, having closed, and the smoke of election having to a great extent disappeared, the feeling of the hour seems to be "now let us get down to business."

Portland, Ore.

CORBETT, FAILING & ROBERTSON.—Trade has dropped into a rut where only a charge of dynamite could lift it. With wheat selling at 30 cents a bushel in Eastern Oregon and Washington, it is hardly to be expected that the demand for goods would be heavy or collections good. The farmers are becoming discouraged, as not only the low price was against them the present season, but the weather also The damage to crops was very heavy in some sections. The demand is now for an extra session of the Legislature in Washington to pass a law to stay execution. This, of course, only puts off the evil day, and debtors meanwhile pay very heavy rates of interest. The fact is pay day has at last come in this Northwest territory. Heretofore credit has been liberal, if not cheap. The question of the hour with many is how not to pay, at least for the present. Prices show no change, as it is more a question of whether the goods will sell at all rather than what to pay for them.

Notes on Prices.

Wire Nails.—The past week has brought but little change in the market for Wire Nails. Prices remain on about the same level as for the past few weeks and are apparently not any firmer, quotations being on a basis of $1.20 to $1.25 for carload lots at mill, and it is intimated that the former figure is given a little more freely than it has been, so that on good orders it about represents the market. While thus in the matter of price there is no improvement, the volume of business has somewhat increased, and a good many houses have been taking advantage of the low prices ruling and have been purchasing more freely than for some time past. As a result the mills are quite well supplied with orders. The desire to have goods shipped before the close of navigation has something to do with purchases, and the improved financial condition is also having a perceptible influence on trade in this line. Small lots from store are quoted in the New York market at $1.60 to $1.65.

Chicago, by Telegraph.—A remarkable change is perceptible in the tone of the Wire Nail trade. Manufacturers' agents report their books well filled with orders and specifications coming in freely. Orders for 1000-keg lots have been decidedly more numerous of late. The condition of this trade is much better now, so far as the volume of business is concerned, than at any time for the

Hosted by Google

past month. Quotations are maintained at $1.30 to $1.32½, Chicago, for factory lots. Jobbers quote $1.45 to $1.55 for small lots from stock.

Cut Nails.—A moderate volume of business is reported by the manufacturers. The trade are not purchashing with much freedom and the market on the whole is sluggish. Prices are represented by the quotation of 95 cents for carload lots at mill. Five cents more is sometimes asked, but, on the other hand, attractive orders can be placed at 90 cents. The New York price for small lots from store is about $1.20.

Chicago, by Telegraph.—Business in Cut Steel Nails keeps up very well also. The trade with Southwestern points continues to be a good feature of current business. Prices are fairly steady at $1.20, Chicago, for factory lots, the only variation from the base price being made in case of particularly good specifications. Small lots are selling from stock at $1.30.

Barb Wire.—Barb Wire continues to move in moderate quantities and at the somewhat irregular prices which have been ruling for the past few weeks. Manufacturers are evidently desirous to secure such orders as are going and the market is decidedly in the buyers' favor. We continue to quote $2.15 for carload lots of Four-Point Galvanized at mill as fairly representing the market, but concessions are made with more or less freedom.

Chicago, by Telegraph.—Trade has improved considerably in Barb Wire. Jobbers in the Northwest are beginning to inquire as to prices and terms on spring shipments, and those who have bought for delivery after January 1 are in some cases ordering shipments to begin now, as they are out of Wire. Prices are not so low here as reported in other sections of the country, carload lots being quoted $2.40 for Galvanized Barb Wire, and small lots from stock at $2.55.

Carriage Bolts.—The manufacturers of Common Carriage Bolts generally report an unusually light business. There being no association to govern prices, the tendency of quotations has been downward, until they have reached a point which is referred to as being nearly as low as the goods have ever touched.

Machine Bolts.—The condition of the market in Machine Bolts is similar to that of Carriage Bolts, as above referred to, except that prices are perhaps a little better sustained. They are, however, low and somewhat uneven and manufacturers are competing actively for business.

Perkins' Snow Shoes.—Rhode Island Perkins Horse Shoe Company, Providence, R. I., for whom J. C. McCarty & Co., 97 Chambers street, New York, are agents, announce that the price of Perkins' Snow Shoes is 4 cents per pound, instead of 4¼ cents, this change dating from November 1.

Axles.—The market for Axles has been fairly regular for some time, with, however, something of a downward tendency, which has resulted in somewhat lower prices. It is now fairly represented by the following quotations, which are subject to a discount of 3 per cent. for cash:

	Cents.
No. 1	3¼ to 4
No. 2	4½ to 5
	Per cent.
Nos. 7 to 14	70
Nos. 15 to 18	47½
Nos. 19 to 22	70
	Cents.
Concord Axles, No. 5, loose collar	4½ to 5
Concord Axles, No. 6, solid collar	5½ to 6

Machine Finished Anvils.—Markt & Co., 87 to 95 North Moore street, New York, have received a shipment of Machine Finished Anvils made by Soeding & Halbach, Hagen, Westphalia, and are about introducing these goods into the American market. A circular is issued giving a few selected cuts of the different patterns, especial attention being called to the American and English patterns. Special emphasis is laid on the fact that instead of grinding the faces and punching the holes, as is usually done, the faces and edges are planed, the round holes are drilled and the square holes mortised, and they are thus made perfectly true and rectangular. The following are the prices for the Anvils, which are subject to a discount of 15 per cent. on five or more, while on import orders of over 50 Anvils, with an average weight of 150 pounds, a discount of 25 per cent. is allowed:

No. 10 American Pattern or No. 9 English Pattern.

Pounds.	Per pound.
44–66	$0.14
66–88	.12½
88–110	.12
110–165	.11¾
165–220	.11½
220–440	.11½
440–880	.12
880–1100	.12½
1100–1320	.14

With stock and bending edge like No. 58, as shown in their circular, the prices are as follows, subject to the discount named above:

Pounds.	
220–440	$0.12½
440–880	.13

Soeding & Halbach are manufacturing over 200 different patterns to meet the requirements of the different markets of the world. A stock of the American pattern is carried as above by Markt & Co. in this city.

Scythe Snaths.—A change has been made in the list prices on Swing Socket and Slide Socket Snaths, which are advanced 50 cents per dozen for the coming season. The corrected list is given as follows by Derby & Ball, Bellows Falls, Vt., for whom John H. Graham & Co., 113 Chambers street, New York, are general selling agents, the list being subject to a discount of 50 per cent., and an additional 2 per cent. for cash in ten days:

Standard Watering Pot. — The Standard Watering Pot, manufactured by Engelhart & Co., Glenville, Ohio, which was described in a recent issue, is sold from the following list, which is subject to a discount of 33⅓ per cent.:

Quarts.....	8	10	12	14	16
Each.....	$1.25	1.35	1.50	1.75	2.00

Bread, Cake and Paring Knives — The Clauss Shear Company, Fremont, Ohio, and 100 Chambers street, New York, issue a revised net price-list of the Clauss Bread, Cake and Paring Knives and Perfect Carver, as follows:

	Per dozen.
Set A, consisting of Bread, Cake and Paring Knives	$6.00
Set B, consisting of Bread and Paring Knives and Perfect Carver	6.00
Bread Knife	3.00
Cake Knife	2.00
Paring Knife	.00
Perfect Carver	3.00

Glass.—Window Glass houses continue to go into operation, one by one, and probably a large proportion of the entire number will be making Glass by the end of this month. It is not anticipated that the amount of Glass manufactured will be allowed to be much in excess of the demand. The Glass business may be said to compare favorably with other lines, although prices are unsettled. There is no basis for official quotations, as each maker or jobber is getting what he can. A Cleveland jobbing house quotes Single and Double Glass, by the box, at 80 and 20 per cent. discount, f.o.b. Cleveland, or in 25-box lots, 80 and 20 per cent. discount, freight allowed. Some of the Plate Glass works are starting up, the open weather having been favorable for building, and the demand, though not large, shows no signs of falling off, nor have prices advanced.

Communication.

NATIONAL RETAIL HARDWARE DEALERS' ASSOCIATION.

SECRETARY'S OFFICE,
9 DOCK SQUARE, BOSTON, MASS.,
November 13, 1893.

To the Editor: The columns of *The Iron Age* are always interesting and instructive, but occasionally an article appears that is of exceptional interest. Such an article is the one entitled "Selling at a Loss," printed in your issue of November 2.

The writer of this article speaks of the practice of some dealers selling goods at little or no profit, simply for the purpose of knocking out their hated rival in business, and then goes on to condemn the practice in unmeasured terms.

In the opinion of the writer, such policy—or perhaps it would be more appropriately named lack of policy—cannot be too strongly condemned, but the fact cannot be denied that there is much of the business of the country at present being conducted in this way, and leads me to ask, in addition to the question of the writer above referred to, "Why goods should be sold at no profit," the more pertinent one of why he should have any hated rival?

And having asked this question, does it not at once occur to any one giving the subject the least thought that it is this kind of rivalry that causes the loss of profit in the trade? Admitting this to be the case, why not try and find a remedy? Why not stop at once and forever this unnatural, unchristian and uncalled for rivalry? But how are we to do this?

I answer, by organization. Form an association of the trade in every State. Ask the members to meet together once a month for social and business purposes, and you will be surprised to find how quickly this feeling of enmity will disappear, and the only rivalry will be to see who can do most for the welfare of all. Possibly some may laugh and say that this is impossible. To such I would say that this is written from experience in the working of our own association here in Boston, and every member will testify to its correctness.

Therefore I say again, organize. Organize in the city, the State and the nation. The city and State organizations should be for the purpose mainly of becoming friends instead of enemies, of doing away with this feeling of rivalry, and of helping one another. The national organization should be broader in its scope and seek by its methods to promote the interests of all throughout this entire land. And such it is intended be be, and as such, we invite the trade to join it.

I am now sending through the mails to every retail dealer in the country (of which there are something over 18,000) copies of the constitution and by-laws of the National Association, a blank application for membership and a letter, of which the following is a copy:

DEAR SIR:

Enclosed please find constitution, by-laws and blank application of the National Retail Hardware Dealers' Association, organized at Chicago September 20. We invite an earnest perusal of these, and would suggest that it is for the interest of every dealer in the country to become a member, and trust that you will promptly fill out the application and return the same, together with the membership fee, to Wm. T. Humes, 50 State street, Chicago, Ill., or to the Secretary, H. G. Janvrin, 9 Dock Square, Boston, Mass. It is not the disposition of this association to use any means to accomplish its objects that will not commend themselves to all fair minded men, and we are led to believe that many of the leading manufacturers and jobbers will co-operate with us.

I trust that whoever receives these will not lay them aside for future consideration, but will act at once and favorably. This is a matter that concerns the welfare of all, and it hardly seems necessary to ask for favorable consideration. It must be pertinent to every thinking man that an organization of this character, comprised, as we believe it will ultimately be, of a majority of the entire trade in the United States, will be a great power for good to all.

In my article of October 12 I solicited correspondence from dealers from any State, and am pleased to say that I have received quite a number of letters expressive of approval of the association and offering assistance.

I now desire to repeat this request, and in addition to ask the assistance of the secretary of each State or city organization. Will these officers please write me? I understand there are quite a number, but am unable to learn their addresses.

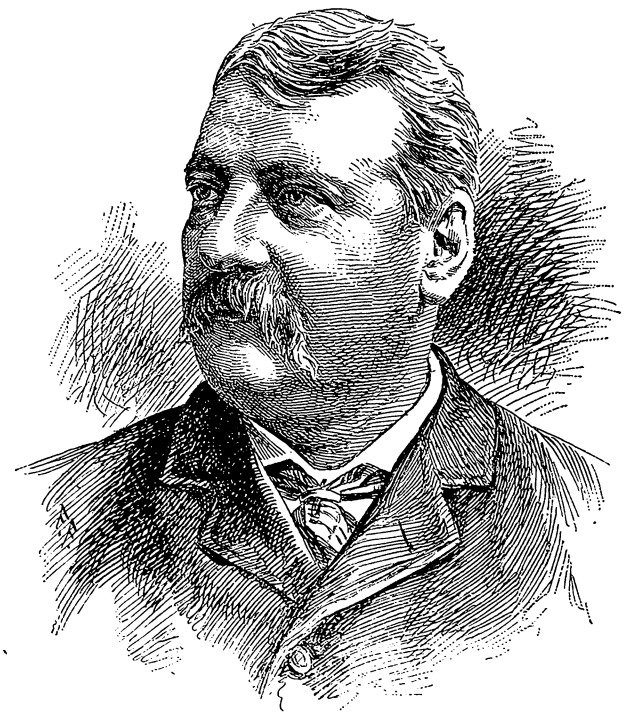
H. G. JANVRIN, Secretary.

Massachusetts Hardware Dealers' Association.

A REGULAR MONTHLY MEETING and dinner of the Massachusetts Hardware Dealers' Association was held at the United States Hotel, Boston, Wednesday evening, November 8. The principal business transacted was the adoption of a resolution to join the Massachusetts State Board of Trade, and the admission of new members. The business meeting was followed by a dinner, at which L. H. Pease of the Stanley Works, New Britain, Conn., a guest of the association, was the principal speaker, in the absence of W. H. Sayward, who had promised to be present, but was detained at Chicago. The next meeting of the association will be held at the same place December 13.

Export Notes.

THE TRADE are familiar with the fact that there is an increasing tendency on the part of English and Continental manufacturers to imitate American goods, notably in the line of specialties. They are thus able to avail themselves of the results of the ingenuity and enterprise of manufacturers in this country and produce goods at lower figures than they can profitably be imported for from here. This practice applies to a wide range of goods, and we are advised that American repeating Rifles recently offered in Belgium on examination proved to have been manufactured in Liege. In view of this tendency it is advisable that our manufacturers should have their names and addresses marked indelibly in the metal wherever possible instead of relying, as they often do, upon adhesive labels. In this way the foreign counterfeits could be readily detected, which would be to the advantage of our manufacturers, as there is a general preference abroad for goods made in this country.



The Governor of British Honduras has, says the *Ironmonger's Chronicle* of London, sent to the London Chamber of Commerce a collection of samples of wood cutting tools, in the hope that the attention of manufacturers might be directed to the competition in such goods which has now sprung up between the United States and Great Britain for the supply of these implements. He suggests that it might be possible for English manufacturers to turn out as serviceable an article as the United States and at the same cost.

Julien P. Cordier.

WE PRESENT HEREWITH an excellent portrait of the late Julien P. Cordier, manager of the Western branch of the Lalance & Grosjean Mfg. Company, 81 Michigan avenue, Chicago, who died somewhat suddenly at his residence, 5943 Wabash avenue, in that city, on the 2d inst. of hemorrhage of the lungs. Mr. Cordier was 51 years of age, and was born in the city of New York, of French parentage. He had been connected with the company since boyhood, having entered their employment at their organization, 35 years ago. The past 11 years of his service were spent in Chicago, where he was manager of that branch since its opening. He had previously traveled over every section of the United States and through the various South American countries in the interests of the concern. He was, perhaps, most intimately known, however, in the Southern States, where he spent much time and possessed a troop of friends. At the time of his death Mr. Cordier was a stockholder and one of the directors of the Lalance & Grosjean Company, of which his brother Augustus is the vice-president. Another brother, Joseph, is connected with the company's factory at Woodhaven, L. I., while a third brother, Charles, is connected with the Bridgeport Brass Company.

Julien Cordier was widely known and highly esteemed by the hardware trade of this country, and his acquaintance was also extensive in other parts of the American continent. He was a man of polished address and many accomplishments, and his genial nature and strict integrity gained for him a host of devoted friends, to whom the tidings of his too early death will bring a feeling of sorrow and loss. He leaves a widow and daughter. The funeral services were held in Chicago, and temporary interment was made there.

JULIEN P. CORDIER.

Branford Lock Works.

UNDER DATE of November 7, on a petition unanimously adopted at a meeting of the stockholders of the BranfordLock Works, Branford, Conn., asking for the appointment of Henry R. Towne, president of the Yale & Towne Mfg. Company, Stamford, Conn., as receiver, the Superior Court of Connecticut made the desired appointment. The necessity for this action is referred to as arising from the fact that the Branford Lock Works lack the capital needed to continue business successfully and to carry out their agreements with the Yale & Towne Mfg. Company.

It will be remembered that on July 1, 1892, a contract took effect between the Yale & Towne Mfg. Company and the Branford Lock Works, whereby the former became the exclusive sales agents of the latter. The contract contemplated that the business at Branford should be confined to manufacturing and should have the benefit of the extensive selling organization of the Yale & Towne Mfg. Company. It was then supposed that the Branford Lock Works, with the financial assistance which it was stipulated should be given to them by the Yale & Towne Mfg. Company, would be able to successfully conduct their business and to produce the character and quantity of goods which would be called for.

As is now known, the Branford Lock Works at that date were endeavoring to do business on a capital so insufficient that they would soon have been compelled to close. The financial assistance given them by the Yale & Towne Mfg. Company, which finally was much more than the contract called for, enabled the works to continue in business until now, instead of closing long ago, as they would otherwise have been forced to do. The facts have been placed before the stockholders, who were urged to provide the new capital needed to continue the business, but who were unable to do so. The latter have in a most cordial and grateful manner expressed their appreciation of the efforts of the Yale & Towne Mfg. Company to assist and continue the business, and when a receivership became inevitable they requested, by a unanimous vote, the appointment of Henry R. Towne, president of the Yale & Towne Mfg. Company, who has for the past year, by request of the stockholders, also acted as president of the Branford Lock Works, as the receiver. The present management has succeeded by new and better methods in placing the business in a much better condition than has obtained for many years, but, of course, cannot continue the business without adequate capital. As yet no plan has been proposed which makes it an object to the Yale & Towne Mfg. Company to make further advances of capital, and as the stockholders are unable to do so themselves it is not yet certain that the business can be permanently continued. These questions are now under consideration, and in the meantime the business is being conducted as usual by the receiver, and orders promptly attended to. As soon as a final decision is reached due notice of it will be given to the trade.

Export Notes.

HEMENWAY & BROWNE, 47 Cedar street, New York, have the steamer "Moldava" for Talcahuano, Valparaiso and Antofagasta, west coast Pacific ports, to sail about December 15. They call the attention of manufacturers and shippers to this opportunity for getting exhibits of mining and metallurgical machinery to Santiago, Chili (via Valparaiso) for the World's Fair to be held there next April. It will be remembered the Chilian Government has appropriated money for such an exhibit for the purpose of advancing and developing the resources of that country, and undertakes to pay actual freight charges both ways by sea and land, as well as the expenses of the workmen sent out to install the exhibits.

M. J. Ulery, formerly in charge of the New York office of the Clauss Shear Company, at 100 Chambers street, has for some months been in London, England, at the Company's headquarters, 55 Holborn Viaduct, supervising the seven or eight salesmen who canvass Europe in the interest of the line of goods made by this company, particularly the series of special Carving, Bread, Cake and Paring Knives with scalloped edges and metal handles.

Trade Items.

WE ARE ADVISED by Joseph Lucas & Son, Birmingham, England, for whom the New Departure Bell Company and John H. Graham & Co., 113 Chambers street, New York, are sole agents in this country, that they are making additions to their line of Bicycle Lamps, including some patterns new in design, and are also making improvements in those with which the trade are familiar. A line of their samples may be seen and a stock is carried at the store of their agents, who with this recent addition to their line of agencies are headquarters on a number of Bicycle specialties. The New Departure Bell Company, for whom they are agents, are also making several new patterns and their assortment will thus be exceptionally large and complete. A variety of Bicycle Locks made by Slaymaker, Barry & Co. are also offered by them, as is also the Acme Luggage Carrier, made by the Hall Mfg. Company.

SHEPARD HARDWARE COMPANY Buffalo, N. Y., issue three circulars, which they are sending out, offering for sale metal patterns of any goods formerly made by them, second hand machinery, also a considerable number of Floor Flasks for foundry use. Included in second hand machinery, fixtures, &c., are Boilers, Steam Pump, Blowers, Riveting Machine, Fire Extinguishers, Ladle Shanks, Japan Ovens, Office Furniture, Fixtures, &c. Metal Paterns include those of Blind and Shut-

Hosted by Google

ter Hinges, Gate Hinges and Latches, Dampers, Presses, Toy Banks, Stove Lid Lifters, Sausage Stuffer, Coffee Pot Stands, Boiler Handles, Iron Toys, &c. Any inquiries regarding these articles will be cheerfully answered by the company.

BRADLEY & HUBBARD MFG. COMPANY, 26-28 Park Place, New York, have rehabilitated their extensive display rooms, renewed their samples and otherwise completely effaced the ruin accomplished by the recent fire. On entering from the street, at the foot of the stairs leading to the main floor, they have a large show window which is kept brilliantly lighted by electricity so as to effectively display the high class goods, consisting of Lamps, Shades, Statuary and other articles contained in it. On the floor above, where their line is really seen, will be found some very recent attractions in the way of Venetian Iron Work in dead black. Many of these goods are not of the customary wrought iron, but have been successfully made of cast iron to resemble the genuine and more expensive goods. These wares are offered at approximately one half the usual cost. Among the kinds of goods treated in this manner may be mentioned Andirons, Fenders, Fire Sets (including Shovel, Tongs and Poker). They have likewise brought out lines of goods of cast iron finished in brass plate, which for delicacy of treatment and excellence of design will readily pass for real cast brass. This class of goods are offered largely to people of refinement with modest incomes at a much reduced price.

THE MANAGERSHIP of the Chicago branch of the Lalance & Grosjean Mfg. Company of New York, rendered vacant by the lamented death of Julien P. Cordier, has been filled by the appointment to that position of Charles W. Hyde. Mr. Hyde, who is widely known and esteemed in Hardware and house furnishing trades, has been connected with Lalance & Grosjean Company for several years, having represented their interests for a considerable period in the Southern States and recently in the territory lying between New York and Chicago.

E. C. STEARNS & Co., Syracuse, N. Y., who have accepted the challenge issued by the St. Louis Refrigerator & Wooden Gutter Company, St. Louis, relative to the strength of the Lu-minum frame used in their Bicycle as compared with any steel tubing frame, have selected for their judges William A. Redding of Redding & Kiddle, attorneys, 38 Park Row, New York, and Charles E. Lipe, M.E., 208 South Geddes street, Syracuse. The St. Louis Refrigerator & Wooden Gutter Company have selected as their judges Edward Flad, C.E., member of the American Society of Civil Engineers and the American Society of Mechanical Engineers, St. Louis, Mo., and Robert Moore, C.E., member of the Institution of Civil Engineers and late chief engineer of the St. Louis Merchants' Bridge Terminal Railway. The amount of forfeiture stipulated in the challenge has been forwarded by the contestants to the Wheelman Company of Boston to be held by them as trustees pending the result of the tests. The four judges, as above, are now conferring together with a view to appointing the fifth judge. As soon as this is done and the details of the tests decided upon arrangements for the completion of the same will be commenced.

HENRY A. ROGERS has been appointed a school commissioner by Mayor Gilroy of New York City. Mr. Rogers is a dealer in Railroad Supplies at 19 John street and has taken great interest in educational matters, for ten years having been a school trustee in the Twenty-second Ward. He was United States Commissioner of Jurors for nine years and is a director in the Seventh National Bank. Mr. Rogers' appointment is regarded as a most excellent one.

SOME TIME SINCE we announced the failure of the Denver Hardware Company of Denver, Col. This concern has been confounded by some persons in the trade with the Denver Hard ware Mfg. Company, who have, we are advised, no connection whatever with the Denver Hardware Company. The former concern are manufacturing a full line of Hardware and advise us that they are taking care of all orders sent to them.

S. A HAINES of Indianapolis has been making a trip East and spending a few days in this city, where he receives a very hearty welcome from his many friends.

WILLIAM R. GRAEF of Graef & Schmidt, 29 Warren street, New York, is now in Chicago supervising the dismantling and shipment to Germany of the extensive Cutlery exhibit made by the old establishment of J. A. Henckels, Solingen, at the World's Columbian Exposition. It was said to have been one of the largest and most attractive exhibits of its kind.

JUDGE SEVERENS of the United States Circuit Court, on the 8th inst. rendered a decision in the case of the Bissell Carpet Sweeper Company *vs.* the Goshen Sweeper Company, both located at Grand Rapids, Mich. Application had been made for an injunction restraining the defendants from using the Plumb patent in the manufacture of the Goshen Sweeper. This injunction was denied by Judge Severens, who is of the opinion that the defendants' machines do not infringe Plumb's patents.

IN THEIR ADVERTISEMENT in this issue the Coburn Trolley Track Mfg. Company of Holyoke, Mass., direct the attention of the trade to their parlor, barn, mill and fire Door Hangers, also to four styles of Rolling Ladders for store use. These are made to reach shelving of any hight.

WE ARE ADVISED that Charles J. Healy, 106 Chambers street, New York, has dispensed with the services of S. R. Droescher, whose connection with him terminated on the 11th inst.

THE TRADE will observe the advertisement of Smith, Lyon & Field, 139 Duane street, New York, in which they announce that they have purchased the Bailey Auger Bit Company's entire stock of Auger Bits, Car Bits and Augers, and offer them at prices which should be an inducement to the trade. They refer also to the special qualities of this Bit and its advantages.

THE AMERICAN CURLING IRON WORKS, 72 to 74 Market street, Chicago, are manufacturing a varied line of Hardware specialties. Among these are Curling Irons of several patterns, such as the Improved American Waving Iron, the Columbian Folding Curling Iron, and the Nellie Bly Hair Curler. In addition, their line comprises the Western double-acting Door Spring, Reiher's Standard Transom Lifters, nickle-plated raised and flat House Numbers, &c. They also manufacture Fisher's patent lever Latch and Handles for all sizes of refrigerators, cooling rooms, closets or other doors which it is desirable to keep tightly closed. Three sizes are made, either right or left handed. They are finished in black japanned malleable iron, brass, nickel plate on brass, silver plate on brass, or solid bronze.

Price-Lists, Circulars, &c.

WM. FRANKFURTH HARDWARE COMPANY, Milwaukee, Wis.: Price current of fall and winter goods. Illustrations and list prices are given of the Winslow and Czar Skates, Table Cutlery, flat Silver Ware, Butcher Knives, Carvers, Scissors, Pocket Cutlery, Razors, &c.

JOSEPH F. MCCOY COMPANY, 26 Warren street, New York: Illustrated circular and price-list of Coates' and French Horse and Hair Clippers, for which they are headquarters. Numbers are given of the most desirable patterns of Clippers for use on horses, especially patterns with anti-friction rollers, and for trimming horses' legs. An assortment to order is suggested as desirable for those who have never handled these Clippers.

THE CLAUSS SHEAR COMPANY, Freemont, Ohio.: Shears, Scissors, Knives, &c. A pamphlet sent out by the company illustrates the Clauss Carver, Bread, Cake and Paring Knives, also Shears, Scissors. Knife Sharpener, Flexible Pot and Kettle Cleaner. The company were awarded three medals and three diplomas at the World's Fair for Shears, Scissors and Knives.

PERKINS & Co., Grand Rapids, Mich.: Shingle Mill Machinery. The Columbia edition of their illustrated descriptive catalogue calls attention to hand feed Shingle Machines, one, two and ten block power feed Shingle Machines, knee and power feed Bolters, pivoted and power feed Cut Off Saw Machines, Drag Saw Machines, Log Jacks, Wheel Jointers, Packers, Saw Grinders, and Saw Gummers, Rat Catchers, &c.

VON LENGERKE & DETMOLD, 8 Murray street, New York: Firearms, Ammunition, Sporting and Athletic Goods. A special illustrated catalogue just issued by them directs attention to the Francotte Shot Guns made in Liege, Belgium, for which they are agents in America. In the higher grades of this hammerless arm have been concentrated a number of improvements, which are referred to by them as follows: The barrels are fitted with a doll's head extension rib, with a cross bolt through the rib, together with Purdey's side extension frame to keep the barrels rigid and prevent lateral motion. There is also a safety block which is designed to prevent the jaw from jarring off. The last page of the pamphlet shows changes which have been made in the list of Hand Loaded Shot Gun Cartridges, which has been made possible. it is stated, through the reduced cost of powders.

BRISTOL BRASS & CLOCK COMPANY, Forestville, Conn., and 32 Warren street, New York: Kerosene Burners, Lamps, Lamp Trimmings, &c. An illustrated catalogue shows Lamp Burners, Collars, Feed Caps and Collars, Reducing Collars, Expanding Screws, Globe Holders, Shade Holders, Brass Trays, Night Lamps, Brass Lanterns, Electric Fount and Lamp, Bristol Central Draft Lamp, Ætna Lamp, Hand Lamps, Hanging Lamps in a variety of styles, Banquet and Table Lamps, &c.

THE IONA MFG. COMPANY, 336 Congress street, Boston, Mass.: Electrical specialties. Their illustrated catalogue and price-list shows Lamp Sockets, Switches of various kinds, Cut Outs, Insulating Joints, the Iona gas lighting Burner, Gongs, Watchmen's Time Registers, &c. All goods are accompanied by descriptions and list prices.

B. F. AVERY & SONS, Louisville, Ky.: Plows and Cultivating Implements. Their sixty-eighth annual catalogue illustrates and describes these

Hosted by Google

goods. As new and seasonable specialties attention is directed to Avery's Simple Sulky Plow, Simple Sulky Stalk Cutter; two, three, four and five furrow Gang Plows, Moon Rolling Colter and Plow Gauge, Granite chilled Plows, new Garden Plow, &c. The manufacturers remark in this connection that their factory has run uninterruptedly throughout the present year, stopping only a few days for necessary repairs and annual stock-taking.

E. C. NEWTON, Batavia, Ill.: Newton's improved Cow Tie. The Tie, as illustrated in the catalogue, is made of wood bent in shape of a bail or three sides of a square, the open ends of which are pivoted by bolts to the front part of the manger. A swivel is fastened to the Tie, in front, at the center, so that one part turns with the rope on the animal's neck, and the other part revolves around the wooden Tie, to make it impossible for the animal to get it twisted. It is claimed that the Tie is more humane than stanchions and that it keeps cows cleaner than other methods of fastening, as it pushes them back when standing and draws them forward when lying down.

It Is Reported—

That burglars recently entered the Hardware store of Teeple & Caldwell, Pinckney, Mich., and stole about $50 worth of Cutlery.

That William Roseberry has opened a new Hardware store at Wharton, Texas.

That the Hardware firm of Atchison & Knowlton, Newton, Kan., has been dissolved. T. B. Atchison will continue the business under his own name. The firm had been in business for 18 years.

That Alexander Warner has sold his Hardware business at Palouse, Wash., to Wheeler Bros.

That J. E. Fawcett is preparing to build a large Hardware store at Platteville, Ill.

That A. O. Wible, formerly with A. J. Turney, has entered the firm of Allshouse, Beck & Co., who have just opened a new Hardware store in Greensburg, Pa.

That C. Wirths, Hardware merchant, 844 West Indiana street, Chicago, shot and seriously wounded a burglar who on the morning of the 6th inst. tried to effect an entrance into his store.

That John P. Barnes, a Hardware dealer, who has been in business in Anderson, Ind., for more than a quarter of a century, is soon to retire. An Indianapolis firm have made a deal with Mr. Barnes and are now practically in possession of the business, as the stock has been invoiced. Mr. Barnes will be retained for the present as business manager, but will probably retire altogether in a few weeks.

That Grossman & Geiseman's Hardware stock, at Shannon, Ill., was destroyed by fire on the 6th inst. Loss, $2000; insurance, $500.

That the Hardware store of Joseph Mohr, Danvers, Ill., was destroyed by fire on the 6th inst.

That James King's Hardware store, at Arena, Wis., was burned out on the 30th ult.

That E. W. Johnson has sold his interest in the Rockford Hardware Company, Rockford, Mich., to H. C. and W. F. Hessler and retired from the business.

That the Hardware store of M. J. Wilson, Rushville, N. Y., was broken into by burglars on the 29th ult., and robbed of 30 dozen Pocket Knives and a quantity of Table Cutlery.

That Turner & Archibald, Hardware merchants, Ridge Farm, Ill., have sold out to W. F. Jenkins & Bro.

That James A. Moren of the Hardware and Stove firm of Draper & Moren, Converse, Ind., has disposed of his interest to A. J. Webb. The business will hereafter be carried on under the style of Draper & Webb.

That the Hardware firm of Wentworth & Brown, Benton Harbor, Mich., are now Wentworth & Baker, Elwood Brown having sold his interest to J. J. Baker.

That Monroe Hoffman has opened a Stove and Tin store at Alliance, Ohio.

That the store of the Shafers Hardware Company, Butler, Ohio, was recently damaged by fire.

That H. D. Newcomb, dealer in Hardware, Stoves and Guns, Ironton, Ohio, has sold out to Goldcamp Bros. & Co.

That C. N. Hopkins is out of the Hardware business at Union City, Ind. Hatch & Hopkins will continue.

That Geo. W. Harris, Petaluma, Cal., has disposed of his Stove business to Hurd & Dies.

That E. H. Robinson has sold out his Hardware business at Santa Cruz, Cal.

That H. Edwards' Hardware store, at King City, Mo., was recently visited by fire.

That David S. Donovan has entered the Stove and Tin business at Plainfield, N. J.

That the Hardware firm of Worstencroft & Son, Payson, Utah, have been dissolved.

That J. F. Long's Hardware store, at Alvord, Texas, was robbed on the 3d inst.

That in a fire on the 11th inst., the store of Thompson & Hoague, Hardware merchants, Concord, N. H., was destroyed.

That the Hardware store of H. Hatch, Fort Pierre, S. D., was burglarized on the 3d inst. About $70 worth of Revolvers, Rifles, Cartridges and Pocket Cutlery was taken.

Paints and Colors.

It should be understood that the prices quoted in this column are strictly those current in the wholesale market, and that higher prices are paid for retail lots. The quality of goods frequently necessitates a considerable range of prices.

Business in all branches of the market is low. This is no uncommon experience at the middle of November, but that the dullness should be so pronounced in the face of the quiet business experienced last month is somewhat surprising. The explanation is that the markets are not in shape to encourage free buying; that the surroundings justify the idea that there is everything to gain and nothing to lose by going slow. The productive capacity in all departments is heavy. The outlook for average consumption during the balance of the year is poor. Stocks of everything in the shape of base material are quite large. Competition between manufacturers is keen.

White Lead.—The market is unsettled and weak. The "combine" list prices and terms as per last circular are the exception rather than the rule where business of a wholesale character is involved. Outside competition is keen in various quarters, and is being met. Jobbers undersell the list to the small trade. Dry Lead in kegs has been sold in 5-ton lots at 5¢ @ 5¼¢ by the outside manufacturers, and Lead in Oil at ⅛¢ @ ¾¢ above those figures. It is stated that orders for deliveries during the first quarter of next year would be booked at the same rate.

Red Lead.—Few orders for round lots have been placed, and the demand for jobbing quantities has hardly reached the average volume. Prices are a little weak, particularly on foreign stock for future delivery, but no positive changes have been quoted.

Litharge.—Orders have been almost uniformly rather small and few in number. Interest in future deliveries continues tame. Previous prices are asked for both foreign and domestic, but the market is rather weak.

Zincs.—Deliveries of domestic Oxide on old contracts cover about the entire movement at present. Hardly any disposition is shown to contract for supplies for next year. Former prices are generally quoted, but the tone of the market is soft. Foreign brands are very slow of sale.

Colors, &c.—Bulk colors have been taken sparingly by the large consumers, nearly all of whom claim to have enough stock to last 60 days ahead. Oil Colors have also had slow sale. Varieties taken by the retail trade fared very little better, if at all, while mixed Paints continued exceedingly dull. Prices are more or less variable, but no radical changes have been quoted during the past week.

Oils and Turpentine.

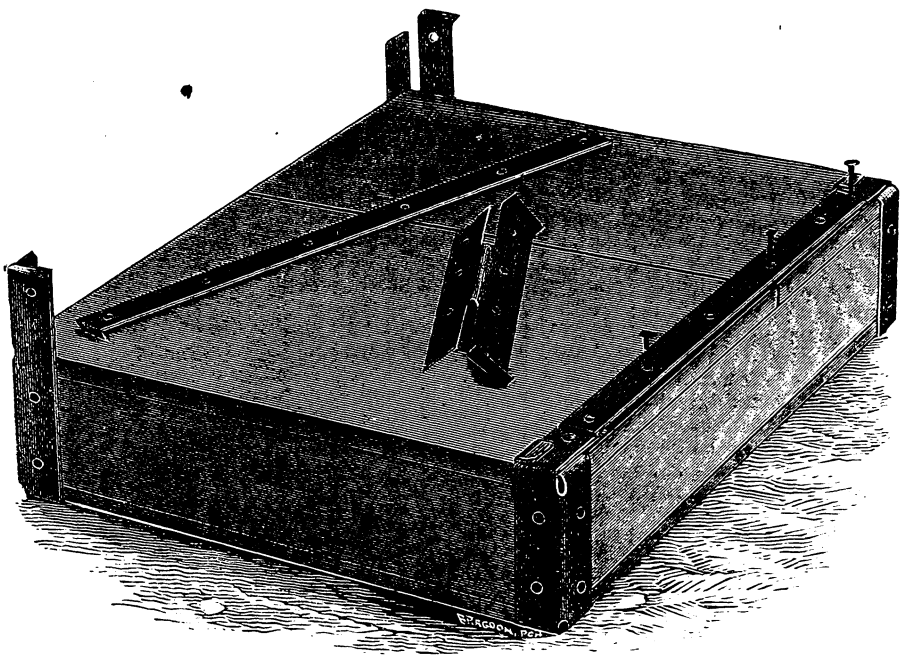
The movement of Oils from first hands has been commonplace and jobbers note a tame experience also. Speculation seems to have disappeared for the time being, since there is no incentive to venture, and regular trade purchases are gauged almost wholly by imperative wants. Prices are somewhat uneven, as is generally the case when trade runs slow, but no radical changes have taken place.

Linseed Oil.—City crushers maintain the prices that have ruled for several weeks, but state that sales are light at present and that the demand is remarkably slow. There has been rather freer offering of out of town brands, in carload lots, and prices have ruled irregular; sales were made at 37¢ @ 38¢, according to brand.

Cotton Seed Oil.—Conditions have been more or less adverse, and the market has suffered, Supplies are larger here, the offering for future delivery is more liberal, while lower prices for Lard and inferior greases have prevailed. Late business was at prices on the basis of 35¢ @ 36¢ for prime crude and 39¢ @ 40¢ for prime Summer Yellow.

Lard Oil.—Prime brands, local make, were sold as high as 80¢, but the price subsequently weakened to 78¢, and the market is now unsettled, with sellers at the last named rate. There is hardly any movement at present except of rather small lots, and the demand is tame.

Fish Oils.—No change has taken place in the market for crude Sperm or crude Whale. Sellers seek former prices, but find no outlet at present. Crude Menhaden has been sold to a fair extent at former rates. Prices for the pressed and bleached Oils are unchanged, and the market is quiet.

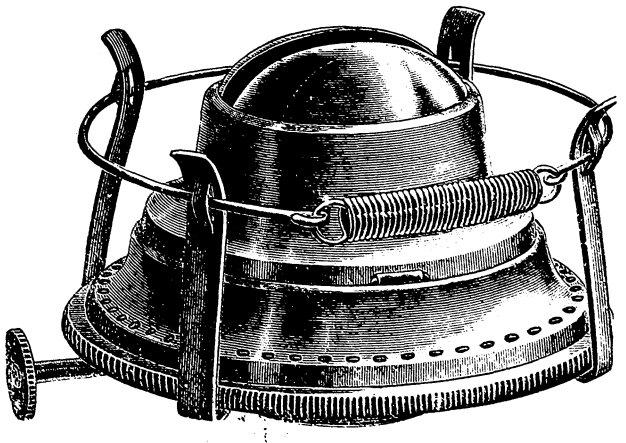


Miscellaneous.—Common Olive Oil on the spot is firmer at 60¢ @ 62¢, but for future deliveries there are sellers at 55¢ @ 57¢. Business is moderate. Ceylon Cocoanut rather weak, with sales at 5⅜¢ @ 5½¢. Cochin sold at 6⅝¢ @ 6¾¢, in moderate quantities. Red Oils are quiet and unchanged.

Spirits Turpentine.—Prices have remained almost stationary at 30¢ for regular and 30½¢ for machine barrels. There is no new feature, supply being fair and the demand very ordinary.

Hosted by Google

Box Strap and Corner Iron.

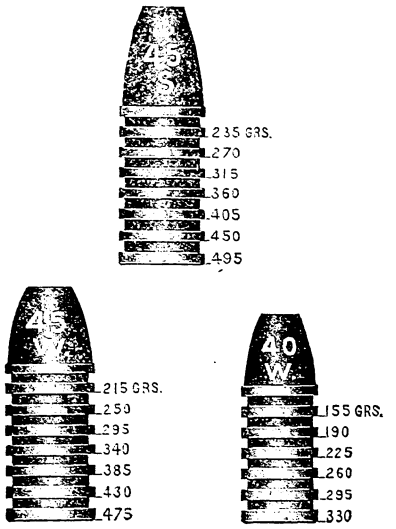


The accompanying cut represents a box strap and corner iron being introduced by Dunshee & Snowden, McKeesport, Pa. One of the straps and one of the corner irons are shown across the top of the box, in the cut, while straps and corners are fastened to the box, to show the manner in which they are applied. After the corner piece has been nailed in position its wings or ends at top and bottom are beat across one another. One of the wings at each end has hook shaped ends, which are engaged with similar hook shaped ends on the strap pieces when put in position on the box and then hammered together. The straps and corners have countersunk holes, to allow the edges of the holes to be driven into the wood, and to prevent the nails or screws projecting beyond the surface of the metal. The side edges of the straps and corner irons are beveled or curved, to prevent the otherwise sharp edges of the irons catching against persons or other boxes, and to provide runners upon which the boxes may be easily slid. The object of the device is to adapt boxes of somewhat frail construction to receive and transport materials of great weight. The manufacturers remark that the straps and corner irons are well adapted to boxes for tin plate, as shown in the cut, and that the corner irons and bottom strips are best put on during the construction of the box. Straps and corner irons suitable for boxes of any size are made to order.

Box Strap and Corner Iron.

Improved Security Burner.

The accompanying cut represents an improved burner being introduced by the Bristol Brass & Clock Company, Forestville, Conn., and 32 Warren street, New York. The improvement consists of a circular shaped wire, with a spiral spring connecting the ends. It is designed to secure the chimney in place and to make a hand lamp safe to carry about the house. The manufacturers claim that the burner secures a steady light, obviates accidents, results in better combustion and prevents chimneys falling off and breaking.



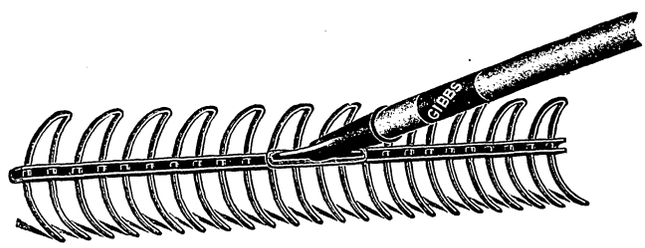
Improved Security Burner.

Meriden Bronze Company, 30 Park place, New York, in addition to several other recent departures in the way of supplementing their already large line of fine lamps, table and art goods, have just brought out an assortment of hall lanterns for gas in Venetian wrought iron work, consisting of many attractive shapes and designs in dead black finish. There are also a number of chandeliers for gas of the same character of workmanship, together with a line of chandeliers of the same sort, finished in real gold plate, some of which also combine onyx effects. These goods were all prepared for the current season's trade and have just been placed in their showrooms.

Ideal Bullets.

The Ideal Mfg. Company, New Haven, Conn., have designed the bullets herewith shown for 45 caliber Sharp's rifles, or Ballard or Winchester rifles using 45-70 Sharp's shells $2\frac{1}{10}$ inches, 45-90 Sharp's $2\frac{6}{10}$ inches, 45-105 Sharp's $2\frac{7}{8}$ inches and 45-120 Sharp's $3\frac{1}{4}$ inches. It is remarked that these shells are nearly straight, and are loaded at the factory with patched bullets and not with grooved bullets. The cut 45 S illustrates a grooved bullet, or series of grooved bullets, for use in the above shells. It is cast in one of the Perfection molds, and represents seven different weights, ranging from 495 to 235 grains. The point is made that the forward part of the bullet is such that all the various weights shown carry symmetry with them, none appearing out of balance. When desired a single mold of any of the weights shown may be had. The manufacturers state that the bullet represented in the 45 W cut covers the same ground for all of the 45-caliber Winchester rifles, such as 45-60-300, 45-70-350, 45-75-350, 45-90-300, 45-125-300. Attention is called to the fact that the forward part of this bullet is identical with all of the above 45-caliber Winchester, so that the bullets cast in these molds may be seated in the shells with the regular standard tools; thus those having the Winchester make of tools or the Ideal tools will require only the mold. The same may be said, it is stated, of the 40 W, for 40-60-210, 40-65-260, 40-82-260 and 40-110-260 Winchester rifles or others chambered for these cartridges. Thus, it is explained, bullets of various weights may be had, with which, with different charges of powder, the shooter may make his ammunition as he desires.

Ideal Bullets.

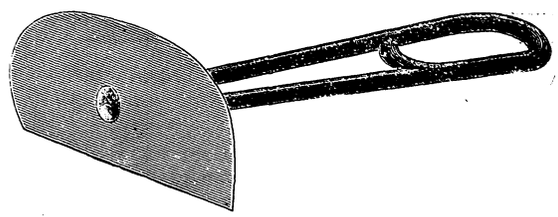


P. & F. Corbin, New Britain, Conn., and 24 Murray street, New York, several weeks ago placed several sets of

Hosted by Google

their double action butts (with automatic device to prevent sagging) on the heavy double swinging storm doors of the Equitable Building, 120 Broadway, this city. This place was selected so as to afford a severe test. The advantage claimed for this particular hinge is that no matter from which side the door is opened, in closing it will never swing past the center, and that it cannot sag, thereby striking its mate or the jamb if it be a single door. Their liquid door check, which belongs to the set, closes the door gently and expeditiously, and there is no risk to a person following being struck by the door in returning to its position.

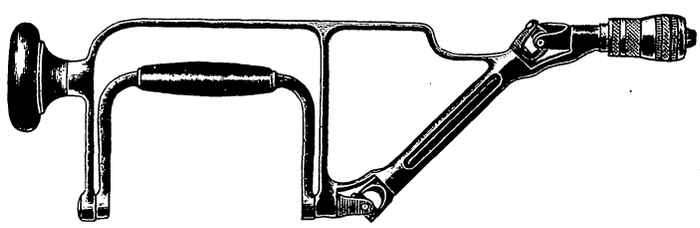
The Hustler Lawn Rake.



Gibbs Mfg. Company, Canton, Ohio, are putting the Hustler lawn rake on the market, as shown in the accompanying cut. The rake has a steel head bent to secure stiffness, in which the teeth are held. The socket is referred to as strong and firmly fastened to the head without the use of rivets. The rake is coated with tin to give it a fine, bright finish and to prevent rust or its becoming shop worn. It is reversible, the single teeth for taking up cut grass and the double teeth for leaves and rubbish. The manufacturers claim that in either position a hood is had which gives more raking capacity; that the curve of the teeth is such as to run smoothly and rake clean without tearing the sod, and that the teeth do not clog, a backward motion cleaning all the teeth at once.

The Hustler Lawn Rake.

Smith's Novelty Scraper.

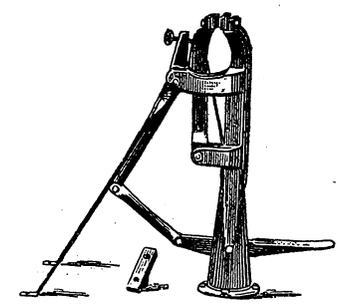


Fernando B. Smith, Canton, Ohio, is putting on the market the scraper herewith shown. The scraper is well and strongly made, a steel blade being attached to a malleable iron japanned handle. The manufacturer remarks that with it any kitchen utensil can be cleaned, whatever its shape—corners, angles, flat and round surfaces, any kind of kettles, sinks, chopping bowls, tables, cupboards, molding boards, rolling pins, bread and pudding pans, &c. It is further remarked that fish are easily cleaned with the scraper, and that it will be found useful for scraping walls preparatory to papering. The point is made that in its use the hands are not soiled, as it is not necessary to put them into hot or greasy water, and that all danger of cutting or burning the hands or tearing the finger nails is avoided.

Smith's Novelty Scraper.

Universal Brace.

The accompanying cut represents the Universal brace which is being introduced by the National Mfg. Company, Wilkesbarre, Pa. The brace is described as having a light frame, rigid and strong, made of the best malleable iron, with a crank arm of steel resting in solid upper and lower journals in the frame. It is remarked that the universal joints merely convey the rotary motion of the crank arm to the bit spindle, and carry no other strains. It is further remarked that the prominent feature of the brace is convenient as well as effective operation, that the brace is readily and firmly controlled in any desired position with one hand, and that the working of the crank arm, as in the ordinary brace, is at right angles to the bit; thus the use of the tool is at once familiar and natural. The point is made that the construction of the brace shows a high grade of workmanship; that all parts are simple and durable, and that in case of damage any part can be duplicated. The tool is designed for boring and screw driving in angles, corners, close to washboards and walls, and in all places difficult to reach with the ordinary brace.



Universal Brace.

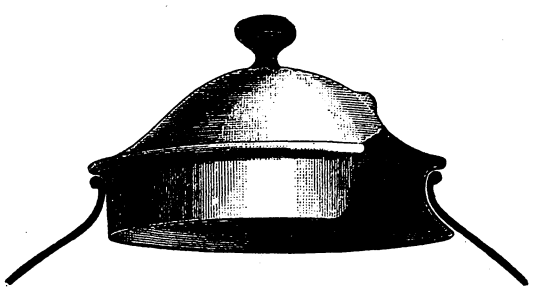
The Folsom Locking Vise.

The Kinsley Iron & Machine Company, Canton, Mass., are offering the locking vise illustrated herewith. The vise is described as being made of the best stock in every part, the jaws being of tempered steel of high grade and interchangeable. The locking parts are so made that a single pressure of the foot, it is stated, sets the jaws as though screwed up in a screw vise. The jaws are adjustable to different thicknesses of iron by means of the thumb screw near the top of the vise.

The base is made small, so as not to be in the way of the workmen's feet, and is secured to the floor by lag screws. The vise was designed especially for hot filed shoes, but, it is claimed, is equally serviceable for ordinary blacksmiths' work, and may be used in place of a screw vise.

The Folsom Locking Vise.

Linenoid Goods.



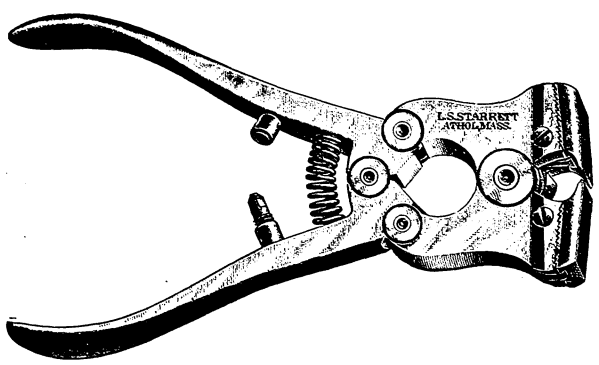
Crane Brothers, Westfield, Mass., manufacture a line of goods made of linenoid, including seamless pleasure boats, canoes, warehouse and mill baskets; butchers', grocers', bakers' and laundry baskets; desk, office and school baskets; bathtubs, washtubs, umbrella holders, &c. The manufacturers state that in making linenoid nothing is used but the strongest new linen stock, such as linen threads, canvas cuttings, &c., which, after being reduced to pulp in a beating engine, and chemically treated to render it impervious to water, is run on a cylinder machine into endless sheets of any size and thickness. It is then molded on wooden or iron forms, subjected to great heat and pressure, which, it is stated, results in a material that cannot be broken; that is light, tough, water proof, durable, taking a high polish, and similar in appearance to rawhide. It is remarked by the manufacturers that owing to their method of molding boats on forms, and thus making them seamless, they have what makers of wooden boats have been aiming to produce for years—absolute freedom from leakage. Another advantage mentioned is that, as there are no seams to open,

Hosted by Google

the boats are not affected by heat or cold, will not warp, crack or split, and gain no weight by use.

Hingeless Cover.

Stransky & Co., 27 Murray street, New York, are introducing hingeless covers, as shown in the accompanying



Hingeless Cover.

cut, in connection with their Cameo English tea pots. The breast of the pot is represented by the lines on each side of the rim of the cover. It will be noticed that one side of the rim corresponds to the shape of the breast lines, while the other side of the rim is straight, also that a small elevation on the cover above the rim indicates the point at which the flare of the rim is the most pronounced. In use the cover is placed on the tea pot so that the flare of the rim is at the back of the pot nearest the handle. As the pot is tipped forward the flare of the rim is to prevent the cover from falling off the pot. The cover is stamped from one piece of metal, which obviates the possibility of the rim coming off.

Starrett's Adjustable Jaw Cutnipper.

The adjustabe jaw cutnipper, shown herewith, is put on the market by L S. Starrett, Athol, Mass. The head and

Starrett's Adjustable Jaw Cutnipper.

handles are described as being made of drop forged steel, finely finished, and all parts case hardened except the jaws, which are made from a high grade of steel, nicely tempered. The jaws are detachable, so that they can be removed, ground and adjusted when they become worn. It is pointed out that each jaw can be ground away to the extent of ¼ inch, remaining as good as new for practical use; and when used up, if ever, new jaws can be procured. The jaws have a dovetailed slot in their under side to receive a spline which extends into a slot in the frame. A tapering screw through the frame and spline draws the jaw firmly down to a toothed seat in the frame, holding it securely. The nipper has a flat spring below the cutting edges and over the joint, forming a yielding seat for the end of the wire to press against while being cut. This spring is to obviate the breaking of the jaws, which might occur if the wire was inserted against a solid surface, thus creating a pushing out strain on the jaws when they are pressed together. Jaws warranted to stand for cutting music wire have the cutting edge ground to a steep bevel. The jaws for general use, it is stated, are not ground to so acute an edge, and are better for cutting soft wire and for ordinary purposes. The tool shown in the cut is known as No. 1, and is 6 inches long. A larger size, we are advised, will be made later.

Metallic Weather Strips.

A line of metallic weather strips is being manufactured by W. H. Cosper Company, 63 and 65 South Canal street, Chicago, in connection with which, it is stated, the best quality of rubber is used. The strip is made of copper, brass, german silver and zinc. The copper strip has rubber of a deep maroon color to harmonize with many of the finest varieties of wood. German silver, brass and zinc strips have gray rubber. The manufacturers remark that the rubber will remain soft and pliable, being made for them, and after being cured to a certain degree of temperature it is subjected to a test before being used. The strip is regularly cut into 7-foot lengths, tied up 36 pieces to the bundle, four bundles for 1000 feet; this allows 8 feet for waste in each 1000 feet. The strip is designed for use on cars, residences, &c.

The American Aluminum Pencil Company, Cincinnati, Ohio, are adapting aluminum as a material for slate pencils. The handle is of red enameled wood, similar in appearance to a penholder, attached to which by means of a ferrule is a point of pure aluminum, over 1 inch long, thoroughly finished with chemical processes so as to make it write perfectly smooth upon any school slate without injuring the slate's surface. The point is made that the pencil can be used two or three years, as no sharpening is required, and that the markings can be quickly erased with a damp sponge or cloth.

Buckingham's Check Controlled Umbrella Lock.

The accompanying cuts represent an umbrella lock controlled by a check, which is offered by the Check Controlled Lock Company, Cleveland, Ohio. The

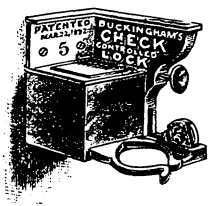


Fig. 1.—Buckingham's Check Controlled Umbrella Lock.

lock, as shown in Fig. 1, consists of a nickel plated box, with movable circular arms at the bottom, in which the handle of the umbrella is held. The box is also provided with a slot, into which the check is dropped, and a push button. As in Fig. 2, an ornamental cap surmounts the box, to prevent the umbrella or cane from being lifted up and out of the locked arms ; and a ring is placed under the box to receive the

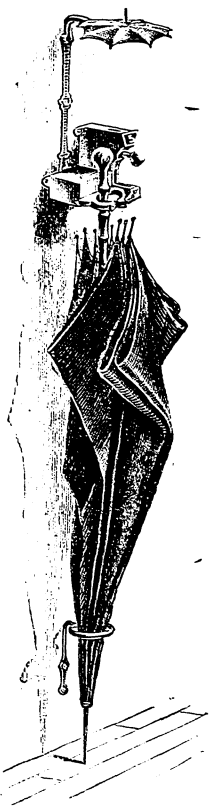

Fig. 2.—Lock and Other Parts in Position.

lower part of the article. The check is a brass disk, with grooves to correspond with projections at the mouth of the slot. In operation the check is dropped into the slot at the top of the box ; the box is unlocked only when the check is inside. The umbrella is

Hosted by Google

then stood in the lower ring, the handle between the arms, and after they snap shut the button is pressed, the pressure being continued until the checks roll out into view, as in Fig. 1. The umbrella is then locked up. The point is made that an umbrella can thus be put in without wrapping it up, thus allowing it to drip and dry.

The owner keeps the check in his possession while his umbrella remains in the lock. The locks are designed to secure umbrellas against borrowers and others, and are recommended for use in hotels, halls, churches, libraries, art galleries, business houses, billiard rooms, barber shops, club houses, offices, flats, residences and other places.

Union Skate Sharpener.

The Union Hardware Company, Torrington, Conn., and 95 Chambers street, New York, are putting a skate sharpener on the market, as shown in Fig. 1.

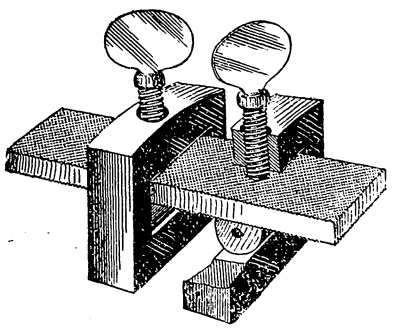

Fig. 1.—Union Skate Sharpener.

A file 1½ inches long, ¾ inch wide, is held in two metal frames by set screws. The file rests on rollers, one side of which is flattened, to allow the frames to be adjusted to any make or style of runner. In Fig. 1 one of the frames is cut away to show the position of the screw and roller. In operation the sharpener is adjusted to the skate as in Fig. 2, and is pushed forward and backward on the runner. The manufacturers claim that the article sharpens perfectly with little labor; that to use it requires no practice or skill, a child being able to do as good work as a machine shop; that being composed of but three pieces it is easily adjusted at once; that the sharpening is done with a file set in frames, and can be so adjusted that there is no chance to do anything but perfect work, and that it can be carried in the pocket, always ready for work.

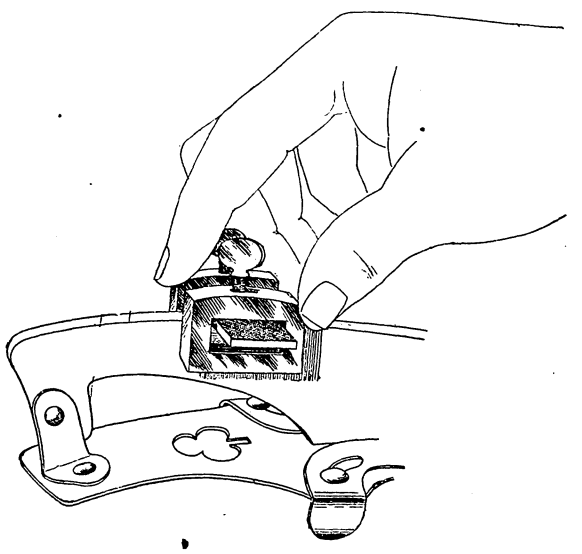

Fig. 2.—Skate Sharpener in Use.

Improved Lamp.

Clark Bros. Lamp, Brass & Copper Company, 43-45 College Place, New York, and Trenton, N. J., whose plant is operated by the American Lamp & Brass Company, are introducing an improved center draft lamp, the main features of which are alluded to by them as follows: The fount has sufficient oil capacity to burn eight hours. There is a patented feeder cup, with double seating, making it oil tight, also a lift guide of extra length. A patented concave chimney gallery contains 1080 extra large perforated air conductors, making, it is remarked, by improved combustion a reduction in heat equivalent to 40° F. by actual test. There is likewise a new chimney lift and beaded top center tube to keep the flame spreader from direct contact with the wick, thereby preventing the weeping of oil down the center tube. It is also provided with an improved wicking device. This lamp carries an 8-inch wick.

THE DEATH is announced in the English journals of Henry Harrison, one of the founders of the well-known Sheffield Cutlery firm of Harrison Brothers & Howson of that city. The present Master Cutler of Sheffield, George Howson, is a member of the firm.

A METHOD HAS BEEN ADOPTED by the W. Bingham Company, Cleveland, Ohio, for calling attention to special goods, which is unique in its conception and bids fair to make an effective appeal to the trade. An open letter to the trade, the first of a promised series, one of which is to be sent each month, is issued in circular form, and comes "From the corner desk." "The man in the corner" writes in an interesting, social way, combining valuable suggestions about increasing trade with mention of desirable goods with which to supply the trade. Carvers are the line to which particular attention is directed in the November letter. An attractive representation is given on the front cover of the man at his desk in the corner, while on the back cover are cuts of Carvers in cases.

Current Hardware Prices.

NOVEMBER 15, 1893.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers at the figures named.

The character @ is used to indicate a range of price; thus discount 50&10@50&10&5 % signifies that the goods in question are sold at prices ranging from discount 50 and 10 % to discount 50 and 10 and 5 %.

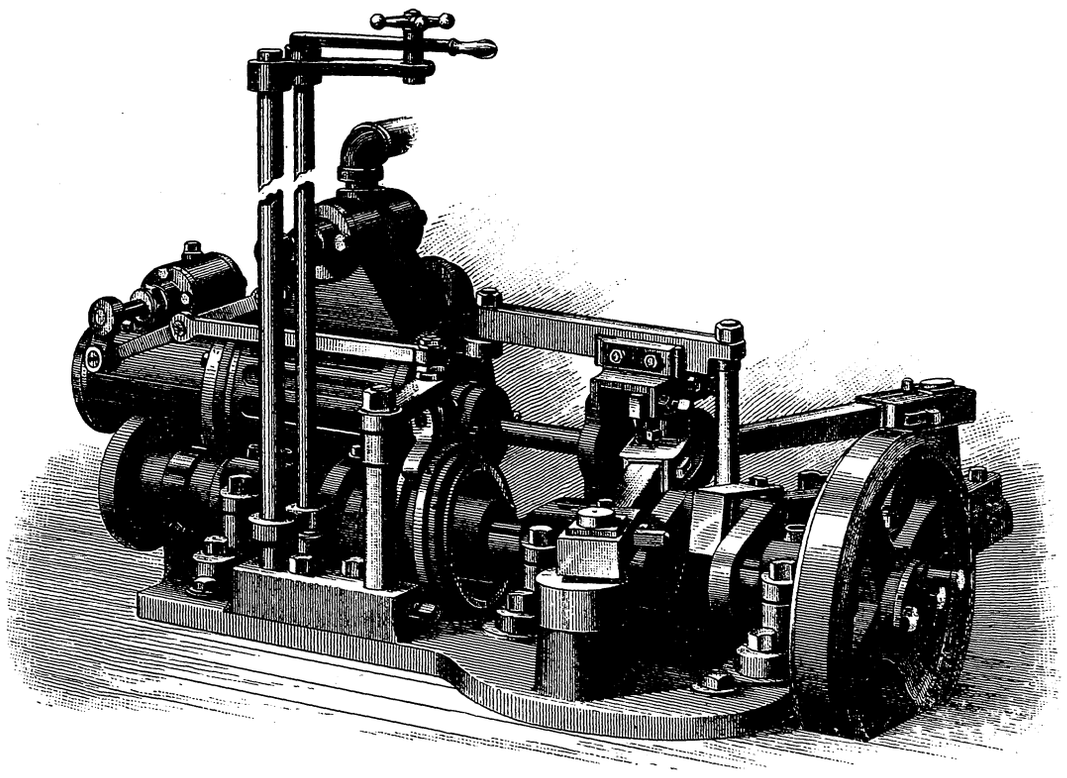
THE IRON AGE

THURSDAY, NOVEMBER 23, 1893.

The Smoke Nuisance in Massachusetts.

The last Legislature of Massachusetts passed a law regulating the smoke nuisance in the large cities. This law provided that in cities of over 300,000 inhabitants, after July 1 of the present year, no person should "use bituminous coal for the purpose of making steam in boilers in any building, unless the furnace in which said coal is burned is so built or equipped that at least 75 per cent. of the smoke is consumed or otherwise prevented from entering the atmosphere, the degree of suppression being determined by the quantity of such smoke emitted, as shown by the density and color of the issuing smoke and the length of time which it is visible, the maximum standard of comparison being a continuous discharge of dense, dark smoke during the time the furnace is in active operation." The penalty was fixed at not less than $10 nor more than $100 for each week during which the violation of the law should continue.



Acting under this law the Mayor of Boston named the superintendent of streets as the official to be charged with the enforcement of the act, and the latter, in order to secure some ground on which to deal with the smoke nuisance, instructed a thorough system of inquiry throughout the city. Inspectors were instructed to see every factory and other business place where bituminous coal was used. The investigation extended to a large number of items, including the time of erection of boilers, their number and size, as well as horse-power, the area of heating surface and of chimney and smoke flues, the daily amount of coal burned and the number of hours in use of boiler, summer and winter, and any devices for smoke consumption in use or contemplated. Naturally such an investigation, if properly conducted, could not be finished in one week or two weeks, and it has occupied nearly two months or more; but, as a result, a large amount of reliable information has been collected, and the superintendent will soon be in a position to deal with any manufacturer who shows no disposition to comply with the law.

Desertions from the United States Army show a large increase for the last fiscal year, and the problem is one which is said to be greatly exercising the minds of the military authorities. Meanwhile, however, enlistments have been so brisk, owing to the hard times, that more good recruits offer themselves for service than the army limit will admit.

French foreign trade showed a marked falling off for the first nine months of this year, compared with the corresponding period of 1892 and 1891, judging from the published official statistics. The imports were less by $69,888,000 than they were last year, and by $114,624,000 than in 1891. The exports were reduced to the extent of $18,048,000 when compared with those of last year, and of $24,960,000 with 1891.

A Yacht Engine of New Design.

All the main features of a yacht engine designed by C. F. Littlejohn of Bridgeport, Conn., are illustrated by the accompanying engravings. It may be said to be a wide departure from the usual forms or types of marine engines now in service. The engine is a compound tandem having a high pressure cylinder 3¾ inches in diameter, a low pressure 6 inches in diameter, and a stroke of 6 inches, and drives a propeller 30 inches in diameter, 54 inches pitch, at 170 revolutions per minute, giving a speed to the boat in which it is placed of from 7 to 8 miles per hour. Steam is supplied by a Foster serpentine steam generator built by Charles W. Foster of New Haven, Conn. The engine is placed in a boat having a length over all of 30 feet, length on water line of 25 feet and beam of 7½ feet, and draft forward of 1½ feet and aft of 3½ feet. The general arrangement of the boat and the position of the engine and boiler are clearly shown in the cross section and vertical longitudinal section, Fig. 4. The engine is about 4 feet long, 3½ feet wide at the widest part, and at no place does any part of it come above the floor of the boat.

YACHT ENGINE OF NEW DESIGN.

The main peculiarities of the engine are found in the method for transmitting power from the piston rod to the propeller shaft and in the valve gear. It will be noticed from the perspective view and from Fig. 2 (the plan) that the propeller shaft is placed parallel with and alongside of the piston rod. Power is applied to the central joint of

Hosted by Google

a set of toggle levers by means of the sliding cross head, having a transverse slide in it to accommodate the sweep of one of the levers, which is fulcrumed to a stationary stud or pin. The outer end of the other lever is fulcrumed to a pin in an auxiliary cross head, which supplies the power to the crank by means of a connecting rod made in the usual way. This mechanism will be understood by reference to Figs. 1 and 2, showing the engine in plan and side elevation. E and F represent the high and low pressure cylinders respectively, G being the steam chest. To the piston rod I is attached the cross head J, to which the two connecting levers K L of the toggle are connected in such a way that they have a free sliding movement in the cross head, and, therefore, in no way interfere with the travel of the piston rod in a straight line. The rod K is fulcrumed to the bed A of the engine at the point shown. The other lever L of the toggle is pinned at Q to the auxiliary cross head R, which is arranged to move in the guide S. To this cross head is united the connecting rod T, which joins the crank pin D and drives the propeller shaft B in the usual way. It will be noted that all parts of the engine are mounted on the bed A, no frame of any description being employed, which fact, together with the general design and arrangement of the parts, make the engine extremely compact and of very low hight.

A notable feature in the working of the engine is the almost total absence of vibration even when running at its highest speed. This is accounted for by the fact that the heaviest reciprocating parts, the pistons and piston rod connections, move in a line parellel with the keel, the only cross vibrations being those arising from the movement of the auxiliary cross head and its connections with the crank. So far the engine has given no trouble whatever and has performed its work with absolutely no hitch. Being the first one of this design, there are naturally several points where the construction could be improved and which would add materially to the efficiency.

The valve gear is shown in the first three views, and its construction and method of operation will be understood from Figs. 5, 6 and 7, the latter drawings not being taken from this particular yacht engine, but being taken from a former construction of a vertical engine embodying the same features. The valves of both cylinders are worked by the valve gear, also the invention of Mr. Littlejohn, which consist of a grooved ring, 3, Figs. 5, 6 and 7, which revolves with the shaft and is fastened to the hub by gimbal joints or pivoted screws held in position by nut and jam nut, as clearly illustrated in Fig. 5. This ring is also fastened to the sliding collar by means of the connecting rod 2. This sliding ring can be shifted longitudinally on the shaft by means of the rod 5, thereby changing as may be desired the angle of inclination of the grooved ring. Fitted to slide in the groove of the ring is a block to which the valve rod 6 is connected. It is evident that by shifting the grooved ring to one extreme angular position the valves will be given the greatest travel. This travel will also be reduced as the ring approaches a position having its plane at right angles with the shaft, in which latter position there will, of course, be no movement of the valve. Continuing to shift the ring in the opposite direction, the valves will be given their greatest movement when the greatest angle of inclination is reached and the engine reverses its movement. In the yacht engine shown in perspective view the grooved ring is operated by means of a lever, the connecting rod of which is shown broken. A noteworthy feature of this design is its extreme sensitiveness; the slightest movement of the lever which shifts the sleeve on the shaft, and thereby alters the angle of inclination of the grooved ring, is instantly perceptible in the working of the engine.

Another adaptation of this method of moving the valves is found in the fact that the valve rods from four different valves can be connected in four different places in the grooved ring, and that each valve will have its proper movement independent of either of the others. This would permit in this engine of placing two more cylinders tandem fashion parallel with the two it

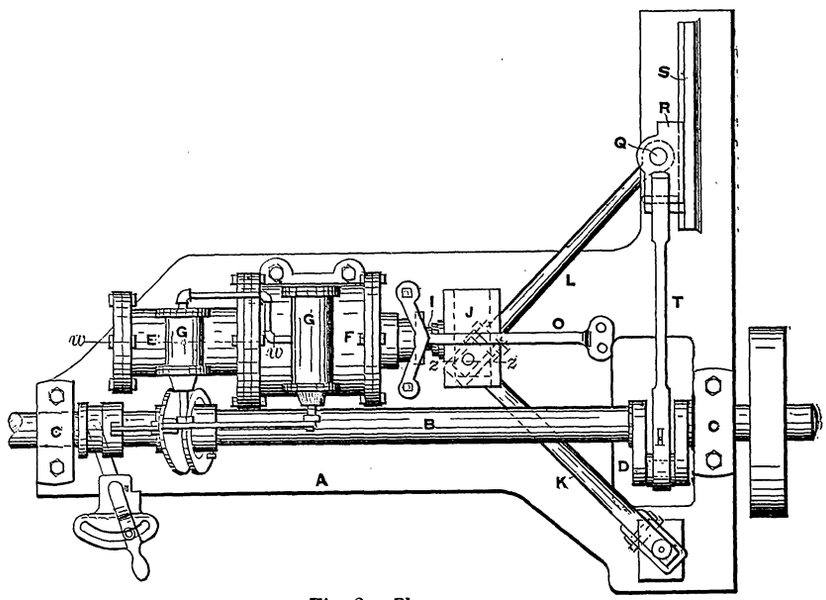


Fig. 2.—Plan.

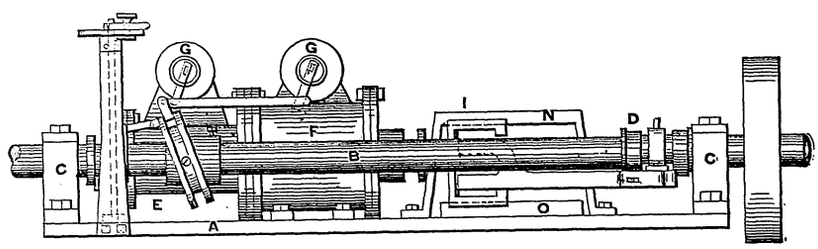

Fig. 3.—Side Elevation.

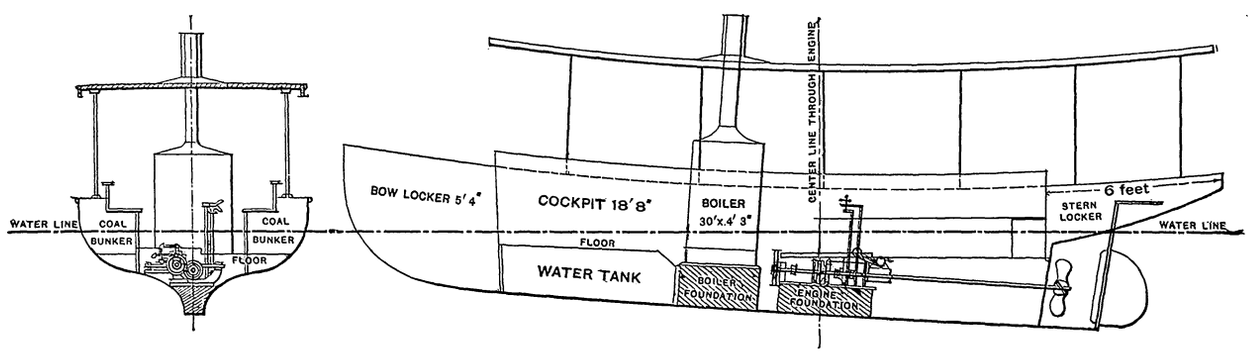

Fig. 4.—Cross and Longitudinal Section of Steam Yacht "Vena."

YACHT ENGINE OF NEW DESIGN.

Hosted by Google

now has and operating them by means of the same valve gear. Therefore the only additional parts, in order to transform this engine into a quadruple expansion, would be in adding two more cylinders and their connections with the crank. These points, in the opinion of the inventor, will greatly reduce the cost of such engine as compared with the usual construction, and by doing away with all framing render the engine stiffer and wonderfully more compact. Adding two more cylinders to this engine in order to make it a quadruple expansion would increase its size to only 6 feet square, but would not increase the hight of 18 inches at all, so that it would be entirely below the deck of the boat and also below the water line.

It will further be seen that by slight changes in the design the engine can be adapted for manufacturing purposes, and can be made either of the vertical or horizontal type.

Electric Propulsion of Canal Boats.

The practicability of electricity as a motive power for canal boats was successfully demonstrated last Saturday on the Erie Canal. The experiment then made was the outcome of a message from Governor Flower to the New York State Legislature last winter, in which he suggested that an appropriation be made to prove whether or not canal boats could be propelled by electrical force. This suggestion was adopted by the Legislature, which appropriated $10,000 for the purpose, and the attention of inventors was invited to the matter. As a consequence the Westinghouse Company of Pittsburgh were intrusted with the work of supplying the machinery and apparatus necessary for the experiment, and it was their system that was tried last week. The trial took place at the Pittsford level of the Erie Canal, about 3 miles distant from Rochester, N. Y., the electrical power being supplied by the Rochester Railway Company, whose trolley wires run out to Brighton on the line of the canal. These were tapped on to the canal trolley wire, passing thence through the motors and up another trolley to the return wire. The canal trolley wires were stretched for nearly a mile along a portion of the canal which presents several sharp turns, and therefore gave as severe a test of the system as could be desired. An old steam canal boat was used, its engine and boiler being removed and their place taken by two Westinghouse motors of the standard street railway type, with the standard Westinghouse series multiple controller placed in the stern of the vessel, and connected with the propeller formerly operated by the steam engine. By the side of the steering wheel of the boat was placed a nickel plated switchboard similar to those used in street cars, which was designed to enable the steersman to apply or shut off electrical power as required, and so control the movement of the boat.

The arrangements for the experimental trip were made under the direction of Frank W. Hawley, vice-president of the Cataract General Electric Company of Niagara Falls, and the trial was witnessed by a number of distinguished electricians and other prominent persons from New York City, Buffalo, Rochester and other cities, as well as a large representation of State officials, who accompanied Governor Flower in the boat. At 11 a.m. on November 18 the official start was made, the Governor turning on the current. The boat moved off smoothly and steadily at an estimated speed of 3½ miles an hour, working up later to 8 miles an hour, with the apparatus operating to the entire satisfaction of those interested in the important experiment.

The desired proof being given of the practicability of the system, it now remains for the Legislature to determine as to whether it shall be generally adopted on the canals, and of this there is little doubt. It is just 64 years ago since the first canal boat went through the Erie Canal, and there has been no change in the method of propulsion, so that the employment of electricity is likely to revolutionize canal traffic. The innovation, too, is calculated, in the opinion of good judges, to immensely increase the freight traffic on the Erie Canal. This now amounts to some 3,000,000 tons annually, but with the aid of electrical motive force it could, it is believed, be increased fourfold, giving, as Governor Flower said, "new life to the commerce of States along the great lakes, and making the transportation on the Erie Canal equal to that on the Mississippi." It is intended eventually to supply the necessary electrical power from Niagara Falls, through the medium of the Cataract General Electric Company's system.

Among the distinguished persons who witnessed the experiment were George Westinghouse, Jr., Lemuel Bannister and Brayton Ives of the Westinghouse Company of Pittsburgh; Nikola Tesla, the electrician; Francis Linde Stetson, Dr. Coleman Sellers, H. B. Platt, Henry C. Brewster, Evan Thomas, Senator Parsons, John Bogart and other prominent citizens of New York and Buffalo. Nikola Tesla expressed himself as entirely pleased with the experiment, and declared that, in his opinion, "the people of the city of New York will eventually use electrical power from Niagara Falls to heat their houses and cook their meals." Mr. Westinghouse, speaking of the economy of running electrical canal boats, said: "I understand that eight men are now required to run canal boats. An electric canal boat will require two men—one to run the boat at night and one in the day. Moreover, space will be saved, for there need not be any place left for stables for the horses or mules."

YACHT ENGINE OF NEW DESIGN.

The Chattanooga *Tradesman* makes a statement which reveals how very grave was the position of some of the Southern iron makers during the recent panic. Our contemporary says: "A good deal of Southern iron is held by railroads that have taken it in payment of freights, and though this in the aggregate is not large as compared to the whole product there is enough of it to seriously interfere with the market, for it is understood the holders of this railroad stock will sell at net cost, if they cannot do better. Some 2000 tons of this surplus was sold a few weeks ago at private figures, but the price was generally understood to be about $1 a ton below furnacemen's quotations of the same brand." Unless some of the lake iron ore carriers have been forced to hold on to ore as security for freight bills there has been no other branch of the iron trade, so far as we can learn, in which the railroads control product.

Heavy Steel Forgings.—I.*

Their Production in the United States.

BY RUSSELL W. DAVENPORT, BETHLEHEM, PA.

After dealing with the history and the development of the forging plant of the Bethlehem Iron Company, Mr. Davenport, second vice-president of the company, discussed as follows the conditions necessary and the most improved methods employed for producing uniformly reliable forgings of such quality as to offer maximum resistance to working strains.

The subject may be divided as follows:

1. The casting of ingots.
2. The conditions of shaping or forging.
3. Treatment after forging.
4. Introduction of unusual ingredients into the composition of the steel intended to give to it desirable qualities.

Casting of Ingots.

There are certain defects which are likely to occur in all steel ingots. They are of more frequent occurrence and more serious in their nature as the ingots increase in weight and dimensions. In general they are developed during the solidification and cooling of the fluid steel, and are, for the most part, caused by the great change of temperature which then takes place. They can be classified as follows :

Interior shrinkage, or "piping," caused by the outside of the ingot cooling more rapidly than the inside and producing cavities and a porous condition of metal along the central axis, or line of last cooling. These defects assume serious proportions and concentrate within conical lines in about the upper one-third of the ingot.

Blow holes, or cavities, due to the evolution of gas during cooling and solidification, which under certain conditions of melting and composition occur throughout the mass, but especially near the surface and toward the upper part of the ingot.

External or surface cracks, caused by the rapid shrinkage of outside or skin of ingot, and at times due to hydrostatic pressure of the internal and fluid portion.

Internal cracks, due to interior strains set up by too rapid cooling, and occurring most frequently in ingots of hard steel.

Segregation, which is the name given to the change which takes place in the chemical composition of a mass of steel in cooling, and is due to the liquation or concentration of certain ingredients, principally carbon, phosphorus, sulphur, and to a less degree silicon and manganese, toward the central and upper portion of the ingot, where cooling and solidification of the metal last takes place.

A number of expedients are resorted to in ordinary practice, with more or less success, for controlling and avoiding these defects, but, without doubt, the most efficient of all methods is the application of the Whithworth process of fluid compression.

At the Bethlehem Works this process is in daily use in the production of large ingots for gun, shafting and miscellaneous machine forgings, and masses of steel of great weight are thereby produced which are to a high degree sound and homogeneous, and which, when prepared by boring for hollow forging, are practically free from all defects.

Conditions of Shaping and Forging.

When a mass of steel is to be shaped or forged the first requisite is careful and uniform heating to a proper temperature. This is greatly a matter of experience and skill and requires unremitting care and attention. The next requisite, and one of the first importance, in order to obtain reliable results, is the use of forging machinery of proper design and power for the work in hand.

The presence of internal strains and defects, causing failure of many forgings, can be attributed to the shaping being done with hammers of insufficient power, and especially if the power is developed by a high velocity of impact rather than by weight of falling mass.

The pressure applied in shaping a body of steel should be sufficient in amount and of such character as to penetrate to the center and cause flowing throughout the mass. This flowing of the metal requires a certain amount of time, and therefore the requisite pressure should be maintained during a corresponding period in order to insure thorough action. The quick blow of a hammer of insufficient power is absorbed near the surface of the mass struck, and there causes a local movement or extension, and repeated blows of this description, stretching the exterior more rapidly than the interior, bring a tearing strain on the core or central portion, producing at times actual cavities, which are defects of the most dangerous kind. This action is visibly demonstrated by the ends of forgings made under the last conditions named assuming a concave or cupped form, due to the exterior drawing more rapidly than the central portion.

The conditions of forging attained by the use of the hydraulic press are evidently the reverse of those above mentioned, and are correspondingly favorable to obtaining the best results. The pressure is definite and constant and acts slowly but uniformly throughout the distance traversed by each stroke. As a result, there is ample time for the pressure to distribute itself, and if sufficient in amount it causes flowing throughout the entire section operated upon, the tendency being to squeeze out and extend the central portion even more rapidly than the exterior. A similar effect is attained, though to a less degree, by the use of a hammer developing ample power for the work to be done, especially when the power is due to a great weight falling by the force of gravity only and thus reducing the velocity of impact to a minimum. The action of the forging presses in the Bethlehem shops fully substantiates the theory as above indicated, and no forgeman can observe the actual slow but continued flowing of the metal throughout the section and the central bulging at the ends without knowing the shaping is being done under the most favorable conditions. The increase of the falling weight of the great Bethlehem hammer to 125 tons, as already mentioned, was an eminently wise step as insuring to a considerable degree conditions similar to those above described, even when forging the ingots of the great weight and section required for heavy armor plates. The thoroughness of the work done is indicated by the comparatively small number of blows required to effect the reduction in area and by the bulging convex shape of the ends of plates.

A most important factor in the use of hydraulic presses for forging is the ability to produce with them long lengths forged hollow over a mandrel, and this class of forgings is especially adaptable to marine shafting and the parts of built up guns.

In the manufacture of hollow forgings the conditions of shaping are in all respects favorable to the production of sound work of the highest quality. A hole of suitable size is bored throughout the central axis of the unforged ingot, thereby removing the portions rendered defective by segregation and piping and disclosing any interior defects that may not have been removed by boring. The bored ingot forms a hollow cylinder with walls much thinner than the cross section of the solid ingot; this condition greatly facilitates heating and practically removes the danger of internal cracking during that operation. The forging of the comparatively thin walls of the cylinder over a solid mandrel also insures thorough work and makes it possible to turn the forging out at a low and uniform heat, thus fixing a uniformly fine or amorphous grain. A solid forging, on the other hand, of the same outside diameter, would be much hotter toward the central axis than on the outside, and the gradual loss of this high internal heat will tend to coarsen the grain by crystallization and set up internal strains. In the hollow forgings any internal defects show themselves on the inner surface, while in solid forgings their presence is hidden and can only be disclosed by boring. Hollow forgings of beautiful appearance and of large variety of dimensions are daily produced under the hydraulic presses at the Bethlehem forge, and this class of work is well represented in the company's exhibit at the Chicago Exposition by several fine specimens, one of which is a shaft 20 inches outside diameter, 67 feet long, with a hole 8 inches in diameter forged through the entire length.

Treatment After Forging.

There are two processes usually employed in the treatment of steel forgings after they leave the press or hammer—viz., annealing and tempering, or hardening, or a combination of the two. To these must be added surface or case hardening, which, while heretofore frequently used in the treatment of small forgings, has recently come into prominence on a large scale in the application of the Harvey and other processes to the production of hard faced armor plate.

The primary object of annealing is to relieve internal strains set up by forging, and by rapid and irregular cooling during and after forging. In addition to this, annealing alters the molecular condition of the steel, and when applied under proper conditions has a tendency to break up crystallization and fix a finer or more nearly amorphous grain, whereby the toughness of the material is increased. The general affect of annealing, as indicated by the tensile tests of specimens, is to lower the tensile strength and elastic limit and increase the elongation and contraction of area.

Hardening or tempering of steel forgings consists in cooling them rapidly, usually by immersion in oil, from a red heat varying in degree according to conditions, and hence it is generally

* From a paper read at the first annual meeting of the Society of Naval Architects and Engineers.

Hosted by Google

spoken of as oil tempering. The object of this treatment is, 1, to break up the irregular and more or less laminated and coarse crystalline structure produced by forging, and to fix a fine or amorphous condition of grain; and, 2, to modify the physical properties of the metal, with a view of obtaintaining the most desirable combination practicable.

The sudden cooling in oil or otherwise naturally produces strains which, unless properly guarded against and relieved, are hurtful, and under certain conditions may be so great as to cause actual rupture. To avoid this latter danger, precautions both as to shape and composition are necessary; but of first importance is the removal, when possible, of the metal along axial lines before tempering, so as to effect internal as well as external cooling. This must often be done by machining, but it is evident that forging hollow furnishes a product especially well adapted to tempering. Annealing is resorted to after tempering, 1, to relieve strains, and, 2, to soften the metal to a degree required to obtain the physical qualities aimed at. The effect of this double treatment—tempering and annealing—as indicated by tensile tests, is in general to increase the elastic limit relatively to the tensile strength and, when the hardness is "drawn" by annealing, to increase materially the elongation and especially the contraction of area.

Treatment by tempering has been applied in the manufacture of steel gun forgings and armor plates for a number of years with highly satisfactory results, and the great amount of testing, by breaking specimens cut from full sized prolongations of the actual forgings after treatment, required in gun steel and armor plate specifications, had provided such a mass of information bearing upon the effect of this treatment on various grades of steel as to enable the manufacturer to obtain with great precision certain specified qualities in tempered material. Comparatively little has been as yet done toward the treatment by tempering of marine shafting and engine forgings; but it is believed that with the growing importance of decreasing the weight and increasing the strength of such forgings, a large field for improvement is open in this direction to the marine engineer.

Introduction of Unusual Ingredients.

The introduction into steel of ingredients other than those usually present, for the purpose of imparting to the metal desirable physical qualities, is a subject which has called forth much experimental work and study.

Results of practical value have been obtained with chromium, tungsten, manganese (in more than usual quantities), aluminum and nickel, and some experiments have been made with copper.

Chromium and tungsten, in moderate amounts, are for the most part used in high carbon crucible steels, to which they impart special hardening properties found useful for cutting tools. Chrome and tungsten steels, especially the former, have also of recent years been brought into prominence by their successful application to the manufacture of armor piercing projectiles, and a considerable amount of chrome steel is now produced in open hearth furnaces.

Manganese, when introduced in considerable quantities, say from 3 to 15 per cent., imparts to steel remarkable toughness, together with such great hardness as to render machining impracticable, and its useful application is therefore limited.

Aluminum in small quantities acts in a remarkable manner to increase the fluidity of steel when cast, and prevents the formation of blow holes during solidification, and has consequently found wide use in the production of solid steel castings.

The introduction of nickel into steel, while only of recent development, has been found to impart to the metal highly desirable qualities, and as this alloy, containing definite proportions of nickel, can be successfully and uniformly produced by the open hearth process, it is especially applicable to the classes of large forgings now under consideration. The physical properties of the alloys of nickel and steel were first brought to general public notice in an admirable paper by James Riley of Glasgow published in the *Journal of the Iron and Steel Institute*, Vol. I, 1889.

Experiments in the use of nickel steel for armor plates were soon after undertaken by the Creusot Works, and were so successful that during the winter of 1890 Schneider & Co. were ready to submit a plate of nickel steel for public trial. The probable superiority of nickel steel for armor had been early brought to the attention of the Navy Department, and in 1890 Secretary Tracy authorized the purchase from the Creusot Company of two experimental 10½-inch plates, one of simple and one of nickel steel. A Cammel compound plate of same dimensions was also procured, and in September of the same year the famous comparative trial of the three plates above named took place at the Annapolis Proving Ground. As is well known, the nickel steel proved superior to the others, especially on account of its freedom from cracks. As a result of this trial, nickel steel was adopted for the armor of the navy. The production of nickel steel was undertaken by the two firms having contracts for armor—viz., the Bethlehem Iron Company and the Carnegie Steel Company, Limited—and within a year after the above mentioned trial successful results were obtained. Since then nickel steel armor plates have been regularly produced in large quantities.

The physical properties of nickel steel vary greatly, according to the amount of nickel contained. A steel containing about 3½ per cent. of nickel has, up to the present time, been generally used for armor plate, and much information as to its qualities has been obtained. In general, the presence of this amount of nickel (3½ per cent.) increases the hardness—*i. e.*, the tensile strength and elastic limit—without causing a corresponding reduction in elongation and contraction; and the elastic limit is also increased relatively to the tensile strength. These properties indicate toughness.

The presence of this amount of nickel appears also to hinder crystallization after forging and favors a finely granular or amorphous condition. It also renders the steel more susceptible to the effects of tempering, and it is in tempered steel that the improved qualities are most apparent. As shown by the ballistic tests of armor plate, the presence of nickel materially increases resistance to shock, and, in short, in all respects improves the physical qualities of mild steel.

From the above it is evident that the use of nickel steel should not be confined to armor plate, and that a wide field of application is open to it in the fabrication of gun and marine engine forgings, as well as many other products.

In conclusion, it may be of interest to summarize, from a metallurgical point of view, the present status of the manufacture of the three classes of steel forgings under consideration, and to indicate the lines in which improvements can be made.

American Society of Mechanical Engineers.

The next convention of this society will be held at the home of the society, 12 West Thirty-first street, New York, December 4 to 8. At the first session, Monday evening, the president, Eckley B. Coxe, will welcome the members and deliver his presidential address. There will be no sessions during the afternoons; members can then visit the following places:

Morgan & Quintard Iron Works; North River Iron Works; Pond Machine Tool Works; Stevens Institute of Technology; Columbia College, School of Arts, Law, Mines; Columbia College, School of Medicine (College of Physicians and Surgeons); Pratt Institute; Washington Bridge; Shipyards and Works, S. L. Moore & Sons Company; Metropolitan Museum of Art; Museum of Natural History; East River Gas Works; Ball & Wood Engine Company; Power Houses, Broadway Cable Road; Power House, 125th street Cable Road.

The following papers will be presented:

A. K. Mansfield, "The Buckeye Engine Valve Gear."

R. H. Thurston, "The Maximum Contemporary Economy of the High Pressure Triple Expansion Engine."

Geo. A. Morison, "Expansion Bearings for Bridge Superstructures."

Barton Cruikshank, "A Device for Drill Jigs"

Fred'k A. Scheffler, "A Curve Delineator."

Fred. W. Taylor, "Notes on Belting."

R. C. Carpenter, "Some Experiments on the Effects of Water Hammer."

R. C. Carpenter, "Constants for Correcting Indicator Springs which have been Calibrated Cold."

W. S. Aldrich, "The Use of the Indicator in Dynamometric Testing."

R. C. Carpenter, "A New Form of Prony Brake."

D. S. Jacobus, "A Comparison of Mean Effective Pressures of Simultaneous Cards taken by Different Indicators."

H. L. Gantt, "Recent Progress in the Manufacture of Steel Castings."

Wm. A. Pike, "Steam Piping and the Efficiency of Steam Plants."

Chas. H. Manning, "A Method of Manufacture of Large Steam Pipes."

Jas. B. Stanwood, "Strength of Rim Joints in Flyband Wheels."

R. C. Carpenter, "Experimental Determination of the Effect of Water in Steam on the Economy of the Steam Engine."

F. A. Scheffler, "Test of a Boiler Using Grates with a Small Percentage of Openings."

Wm. A. Rogers, "The Cumulative Errors of a Graduated Scale."

The Bailey Air Pump.

From the recent report of Geo. W. Melville, Engineer in Chief of the Bureau of Steam Engineering, United States Navy, we take the following account of a test made of this pump, which was designed by Passed Assistant Engineer Frank H. Bailey, United States Navy, at present attached to the Bureau of Steam Engineering, for the purpose of securing a pump which would be very small and light, and at the same time efficient at very high speeds, so that it might be attached directly to the main engine in the case of steam launches, torpedo boats, and other small fast-running engines.

The essential idea in the pump is to have no foot valves and to have delivery valves, *a o*, which cover the whole end of the cylinder, thus insuring complete discharge of the contents of the pump at the end of the stroke without much effort being required.

The pump which was used for the experiment was adapted to fit a launch engine with cylinders 3½ and 7 inches by 5 inches stoke, and for that reason the shape of the pump is somewhat different in details from pumps designed with a new engine. The details of the pump are shown on the annexed drawings. It will be seen that the diameter of the pump is 2 inches and the stroke 1¼ inches.

The piston *d* has a width of 1 inch, and is so designed with reference to the length of the cylinder that when at the end of the stroke it just passes the opening *b* for the admission of air and water from the condenser. After traveling a short distance on the return stroke this suction opening is shut off and remains so until the other end of the piston has passed it, the contents already received being driven before the piston until near the end of the stroke, when the discharge valve is lifted and the contents expelled.

The suction opening consists of a port cut in the shell of the cylinder all the way round except for the bridges necessary to hold the two halves together. The discharge valves in this case were $\frac{1}{16}$-inch thick, of composition, held in place by light springs and guided so as to insure their seating evenly.

The pump was driven by means of a beam with connection to the low pressure cross head of the engine.

Four trials were made. The first, with the boat tied to the wharf and in still water; the second, with the boat under way and under normal working conditions. Both of these trials were made with the propeller attached to the shaft. In order to secure a higher number of revolutions than was possible with the screw connected, it was then removed and the third trial was made with the boat alongside the dock and the water around the boat at rest. The fourth trial was made with the boat moored in a current of about 2 knots an hour.

The condenser was of the keel pattern, consisting of a copper pipe running from the condenser discharge on one side around to the air pump on the other, and, of course, when the boat was secured to the wharf the circulation of the water past it was absolutely *nil* in the case of disconnected propeller, while with the propeller connected it was very small.

The results of the tests are shown in the following table, and it is to be noted that at as high a speed as 1000 revolutions per minute, and with the poor flow of refrigerating water, due simply to the current in which the boat was moored, the vacuum was still 21 inches. It will also be noted that, under normal conditions, with the propeller in place and the boat driven through the water, the vacuum was 25 inches at as much as 250 revolutions.

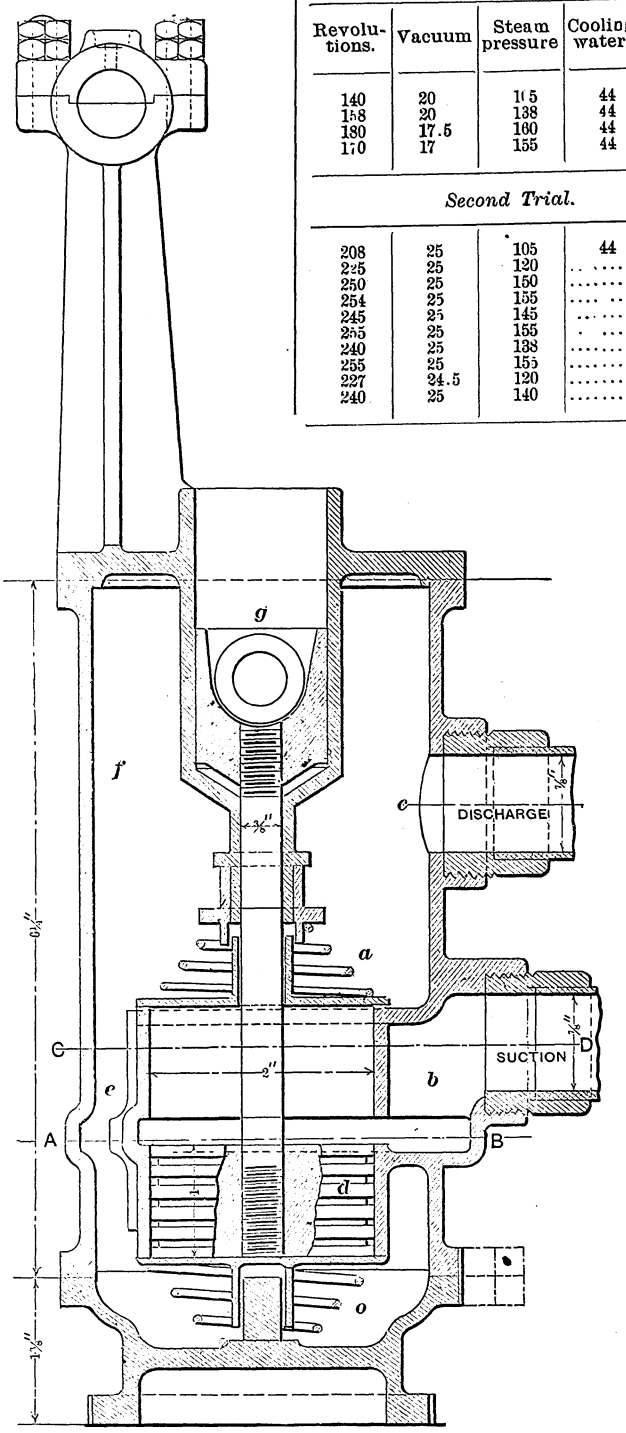

Fig. 1.

THE BAILEY AIR PUMP.

The pump ran quietly and without any jar or thump, and on examination after the trials were finished the valves, springs and pistons were found in good condition.

The pump in question was designed simply for experimental purposes, and there was, therefore, but a single one. In ordinary work the pumps will be in pairs, inasmuch as it might happen, if a single pump were used, that the main engine might stop in such position that the suction opening would be closed and the condenser might fill with water, due to the use of the "bleeder." To obviate this the pumps are arranged in pairs, with the cranks or eccentrics driving them at right angles, and the suction openings of such a size that it will be impossible, in any position, for both suctions to be closed.

The Naval Architects.

Inaugural Session of the Society of Naval Architects and Marine Engineers.

The first annual meeting of the Society of Naval Architects and Marine Engineers was held in the rooms of the American Society of Mechanical Engineers on the 16th and 17th insts., with C. A. Griscom, president of the International Navigation Company, in the chair. The president in his welcoming address said: "It seems to me to be significant that our society should be called into existence coincident with the construction of our new national navy, showing that the appropriations made by Congress for a series of cruisers and battle ships not only bears an influence to our flag, but tends to stimulate throughout the land an interest in maritime affairs without which no nation can be truly great. The national sentiment which is now producing a new navy cannot overlook the axiom that a navy cannot be maintained without a merchant marine to sustain it. That the art of shipbuilding has not expired with you is shown by the magnificent types designed and constructed for the trade of our coast. Nothing can be more significant than the fact that you were always able, when necessary, to build a better naval cruiser than the last, and a better yacht to defend the "America's" cup. As I am one who believes the cup is here to stay, so I believe also that your architects and engineers and mechanics will show that the skill still remains with you not only to cope with the highest talent of any country, but also to keep in advance of it."

Francis T. Bowles, chairman of the Executive Committee, then presented a report showing the society to be in a flourishing condition, both in regard to its membership and finances. It had 4 life members, 4 life associates, 260 active members, 165 associates and 2 juniors, making a total of 435; the total receipts, $5403; total expenditures, $767, leaving a surplus in the treasury of $4636.

The officers elected for the ensuing year were:

President, Clement A. Griscom of Philadelphia, president International Navigation Company.

First vice president, Theodore D. Wilson of Washington, ex-Chief Constructor, U. S. N.

Vice-presidents, Chas. H. Cramp of Philadelphia, president Wm. Cramp & Sons' Ship and Engine Building Company; George W. Melville of Washington, D. C., Engineer-in-Chief, U. S. N.; Geo. W. Quintard of New York, president Quintard Iron Works; Irving M. Scott of San Francisco, vice-president and general manager Union Iron Works; Francis A. Walker of Boston, president Massachusetts Institute of Technology; Wm. H. Webb of New York, naval architect (retired); Charles H. Loring of Brooklyn, ex Engineer-in-Chief, U. S. N.; Philip Hichborn of Washington, Chief Constructor, U. S. N.; R. W. Meade, Commodore, U. S. N.

Secretary and treasurer, Washington L. Capps of Washington, Assistant Naval Constructor, U. S. N.

Among those present at the meeting were the following: R. W. Davenport, vice-president Bethlehem Iron Company, South Bethlehem, Pa.; Charles E. Emory, New York; G. A. Cormack, secretary Corinthian Yacht Club; W. M. McFarland, Bureau Steam Engineering, U. S. N., Washington; Col. E. A. Stevens, president Hoboken Ferries, Hoboken, N. J.; Francis T. Bowles, Naval Constructor, U. S. N., Norfolk, Va.; J. F. Holloway, 145 Broadway, New York: Wm. Gardner, 1 Broadway, New York; C. D. Mosher, 1 Broadway, New York; Col. H. G. Prout, editor *Railroad Gazette;* M. N. Forney, editor *American Engineer and Railroad Journal;* Charles Kirchhoff, editor *The Iron Age;* M. N Baker, associate editor *Engineering News;* S. D. V. Burr, mechanical editor *The Iron Age;* Prof. J. E. Denton, Stevens Institute, Hoboken, N. J.; Prof. W. F. Durand, Cornell University, Ithaca, N. Y.; S. Dana Greene, General Electric Company, New York; Jas. T. Boyd, general manager George F. Blake Mfg. Company, New York; C. H. Haswell, New York; H. B. Roelker, New York; A. A. Henderson, Chief Engineer, U. S. N.; A. P. Niblack, Lieutenant, U. S. N.; J. J. Woodward, Naval Constructor, U. S. N.; A. H. Raynal, superintendent S. L. Moore & Sons Co., Elizabeth, N. J.; Prof. C. H. Peabody, Massachusetts Institute Technology, Boston; F. M. Wheeler, Wheeler Condenser & Engineering Company, New York.

The first paper presented was by Charles H. Cramp, president of the Wm. Cramp & Sons' Ship & Engine Building Company, on

The Evolution of the Atlantic Greyhound.

The author stated that for general purposes of historical accuracy it was sufficient to say that the first real "send off" in the great modern steamship race was given by the Inman Company in 1869-70 by the "City of Brussels," which broke the record by a passage of 7 days 22 hours and 3 minutes, being the first to get within the eight-day limit. She was 390 feet long between perpendiculars, 40 feet 4 inches beam, and registered 3090 tons gross, her displacement at 26 feet draft being 6900 tons. Her engines were simple, direct acting, with two 90-inch cylinders of 54 inch stroke, and with steam at 30 pounds she developed 3020 indicated horse-power and realized an average speed of 14.53 knots in her best trip. The White Star people then built the "Oceanic," which was of 3808 tons, 420 feet long, 40 9 feet beam and depth of 23.4 feet. She was powered with a pair of compound engines having four cylinders, two high pressures of 29 and two low pressures of 78 inches diameter, on the tandem plan, with a 60-inch stroke, and carried usually 66 pounds of steam. The distinguishing feature of the "Oceanic" was her extraordinary proportion of length to beam, and her ratio of 10¼ to 1 in that respect was considered a remarkable venture on the part of her builders. The same company then brought out the "Adriatic" and "Celtic" of 3886 tons, 417 feet long, 41 feet beam, and propelled by 4-inch cylinder compound engines. The former lowered the record to 7 days 16 hours and 26 minutes.

While these enterprises of the White Star Line were in progress a movement was started on this side of the ocean which at first bid fair to permanently enlist American capital and spirit in an effort to regain the position of a maritime commercial power which had been lost through the war. This resulted in the formation of the American Steamship Company and the construction by the Cramp Company of four steamships known as the "Carolina," "Illinois," "Pennsylvania" and "Ohio," which were commissioned in 1872-73. They made eight day trips, and for a time attracted their share of the transatlantic traffic, but succumbed at length to the competition of their subsidized British

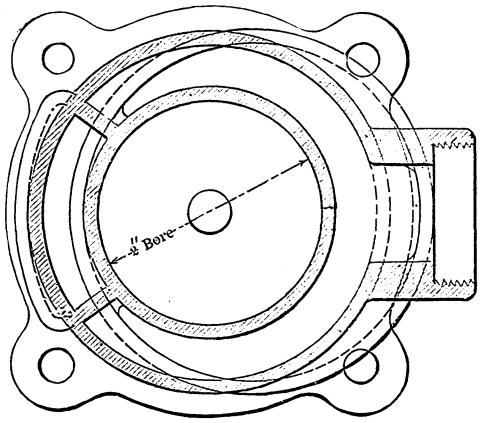

Fig. 2.—Section on C D of Fig. 1.

THE BAILEY AIR PUMP.

Hosted by Google

rivals and ultimately passed under the control of the International Navigation Company, by whom they have been considered worth re equipment with new triple expansion engines after 20 years of continuous service. These ships, though not so large or so high powered as some contemporary vessels, embodied the best shipbuilding practice of their date as to material and workmanship, and are still creditable specimens of American shipbuilding skill 20 years ago, as well as of first-rate efficiency in their classes.

The "City of Berlin" was contracted for by the Inman Company in 1873. She was distinguished by having the greatest proportion of length to breadth thus far attained—namely, 11 to 1. In other respects the "Berlin" was the finest ship of her time, and she brought the record down to 7 days 15 hours and 28 minutes. Then followed the "Germanic" and "Britannic" of the White Star Line, which brought the record down to 7 days 6 hours and 52 minutes. These ships held the pennant from 1874 to 1879. The "Arizona" of the Guion Line then entered the race and made a record of 7 days 3 hours and 38 minutes, which she held during 1879–80. Her principal dimensions are 450 x 45.4 x 35.7 feet, and she is powered with three-cylinder compound engines, having one 62-inch high and two 90-inch low pressure cylinders, 66-inch stroke, and, with steam at 90 pounds, developed 6640 indicated horse-power.

Next came the "Alaska" and "City of Rome," between which the contest was fierce. Trip after trip they sped over the ocean "neck and neck," as horsemen say, the average difference between their records being but a few minutes. Finally, however, the "Rome" got down to 6 days and 18 hours, which beat the "Alaska's" best by 37 minutes, and then the "Rome" hoisted the banner in her turn. The "Rome" was the largest ship of her day, excepting, of course, the "Great Eastern;" at all events the largest single screw ship up to her date. Her dimensions are 560 x 52 x 37 feet, her gross tennage 8144 and her maximum horse-power 11,500 indicated.

The "America" of the National Line then made a record of 6 days 14 hours and 16 minutes, and was followed by the "Oregon" of the Guion Line with 6 days 9 hours and 22 minutes. The "Oregon's" engines were three-cylinder compound of the highest working pressure attempted up to that time. Her high pressure cylinder was 70 inches and her two lows 104 inches, with 72-inch stroke, and, carrying steam at 110 pounds, she developed 13,200 horse-power, by far the most massive and powerful engines built at that date. The "Umbria" and "Etruria" of the Cunard Line then brought the record to 6 days even, and held it during 1884–89. It was evident that in them the possibilities of single screw propulsion had been exhausted, and owners and builders who meditated an advance beyond them had to contemplate twin screws.

During the years 1885, 1886 and 1887 there was much activity on the part of the French and Germans. The latter brought out the "Aller" of the North German Lloyds in 1885, the "Saale" and "Trave" in 1886 and the "Lahn" in 1887. These were British ships built at Fairfield. They were all single screw vessels, but they had the distinction of introducing the triple expansion engine in transatlantic propulsion. The "Fürst Bismarck" is chiefly remarkably as being the most important commercial ship ever built in Germany, and as a result of the policy adopted by the German Emperor to encourage home shipbuilding by making marked discriminations in favor of such ships as compared with those built abroad. Her dimensions are 502½ x 57½ x 38 and tonnage 8874. Her engines are triple, with cylinders 43 5/16, 66 5/16 and 106 5/16, having a stroke of 63 inches. She developed 16,800 indicated horse-power as a mean of six days on the trip which gave her for a brief period the Southampton record.

We have now to consider the latest types, the "New York" and "Paris," the "Majestic" and "Teutonic," and the "Campania" and "Lucania." These ships are so well known and have been so recently and minutely described that it is not necessary to reproduce their details, and I will pass at once to another, and perhaps more interesting phase of my subject, but before passing on, it should be mentioned that to the International Navigation Company in procuring the building of the "New York" and "Paris" belongs the credit of inaugurating the evolution from single to twin screws in passenger ships, and of first offering to the public steamships so subdivided as to be unsinkable with three compartments flooded and with no water-tight doors near or under the water line.

The author criticised the principal fad of the great English builders who have an aversion to statical stability; a repugnance to metacentric hight. As one of their standard authorities remarked in a recent paper, "a ship will roll; you cannot help that. Therefore the problem is to make her period as long and her motion as easy as possible."

The author believed that any design which contemplates the carriage of water ballast (or other dead weight not cargo or coal) as an inseparable condition of stability under any circumstances is radically defective and should be condemned.

Under such a system no advantage can be taken of decreased draft caused by consumption of coal or absence of cargo, but the ship must always be kept down to a load draft in order to stand up.

The proposition that you must carry 1000 or 2000 tons of dead weight in water ballast when you happen to be short of cargo or run down in coal is one that I cannot really discuss with patience when it is possible to build the ship on lines that will make her stand alone without detriment to any other desirable quality, and with vast improvement to her most important characteristic, that of safety at all times and in all conditions.

After briefly considering the increase of size as an element in the development of speed, the author made the following remarks on the two ships his company are building for the International Navigation Company: Length on load water line, 536 feet; length over all, 554 feet; extreme breadth, 63 feet; molded depth, 42 feet; gross register, about 11,000 tons; first cabin capacity, 320 passengers; second cabin capacity, 200 passengers; third cabin capacity, 900 passengers.

Their propulsion will be by twin screws, actuated by two quadruple expansion engines on four cranks, which, with steam at 200 pounds, will probably develop about 20,000 collective indicated horse-power. To support the outboard shaft bearings the hull is built out in a horizontal web to a steel frame having both bosses cast in one piece and weighing about 68,000 pounds. The after deadwood is cut away and the keel slopes up so that the shoe meets the boss frame at the after end. It will be observed that these ships are considerably larger than the "New York" and "Paris," or about half way between them and the "Campania" class. I will not venture a prediction as to their probable performance, but I will guarantee them to be perfectly safe, comfortable and economical ships.

They are to be followed closely by other ships, which I will not now describe, except to say that they will not shrink from any comparison or competition.

The paper by James T. Boyd, general manager of the George F. Blake Mfg. Company, criticised the present inspection laws for machinery and boilers, and presented suggestions as to their improvement. The pay is at present too small, and an increase should be graded somewhat according to the localities, but not with any such difference as now exists. The samples received for tests are generally the only material seen by the inspectors until work is completed and ready for certificate No visits are made to the works during construction; the only knowledge the inspectors have of the boiler work is the description given on affidavit, submitted with samples, and occasionally by a blue print of the boiler drawing. Proper inspection should include the examination of the work at different stages, and allowances should be made where good workmanship is shown and deductions where work is poor.

The author was of opinion that the number of inspectors should be increased, especially in those districts where vessels are built and engined. There are no rules to govern an inspector in regard to machinery. Concerning tests of boiler plates, it is stated that the elastic limit should be determined in all tests for tensile strength, and a percentage of this limit should be used in the formulæ for strength of shells in place of a percentage of the ultimate strength. The author was of opinion that a complete revision of the rules should be made.

Coal Bunkers and Coaling Ship

was the title of a paper by Lieut. A. P. Niblack, U. S N., who presented an array of facts showing that the vessels of the navy could not be coaled rapidly because of the disposition of bunkers and lack of adequate facilities. The following table shows the capacity of the bunkers of some of the ships of the navy and the time required to fill and trim them:

	Total coal capacity. Tons.	Time required to fill bunkers. Hours.
Atlanta	490	33
Chicago	824	28
Charleston	758	26
Yorktown	380	24
Baltimore	1,145	60
San Francisco	628	33
Newark	800	28

As a remedy the author proposed that in cruising ships the bunkers below the protective deck be extended the breadth of the ship, but be divided in two by a fore and aft bulkhead amidships. A pair of bunkers, starboard and port, would thus take up all the space vertically between the protective deck and the inner bottom, and, longitudinally, between the athwartship water tight bulkheads. It is proposed that one pair be forward of the fire room and another between the en-

Hosted by Google

gine and fire rooms; or, in case there are two fire rooms, as is usual, and it is desired to add a third pair of bunkers, then between the two fire rooms. From their large size they would admit of rapid coaling, and from their position would be a great protection from raking fire either forward or aft. The paper then described and illustrated the appliances necessary for handling the coal.

A most valuable paper, profusely illustrated, on

Steel Ships of the United States Navy,

was prepared by Theodore D. Wilson, ex-Chief Constructor, U. S. N. He first described the principal features of the steel ships of the navy whose construction had been undertaken since 1883, and pointed out the differences and the reasons for the changes. Since the above date 43 vessels, of a total displacement of 180,478 tons, and two torpedo boats, have been added to or are being completed for the naval service.

In the class of torpedo gunboats, however, absolutely nothing has been accomplished; and when the marked development which this class of vessels has received in all foreign services is considered in connection with the great military value that may be given to these small and comparatively inexpensive vessels, their total absence from our fleet is greatly to be regretted. It is true that the construction of one vessel of this class has been authorized, but as the appropriation was insufficient, nothing has been done. The number of vessels of different types which have been built, when compared with those added to foreign services, show that we have a satisfactory proportion of cruising gunboats, but in battle ships and topedo boats we are weak. With the material resources now available there is no longer any limitation to the results that may be accomplished other than that which the wisdom of Congress and the Executive may place upon the naval designer through the limitation of cost.

In conclusion the writer said:

"It is impossible to conclude this brief summary of the work accomplished toward the construction of a modern fleet without referring especially to the manner in which the private shipyards of the country have contributed to the success of the results obtained. When it is remembered that all but four of the new steel ships have been built by contract, the aid rendered the country by private shipbuilders will be appreciated, and higher praise to the thoroughness of their work cannot be given than is implied by the simple statement of fact that in no case has the contract speed of any vessel failed to be obtained on trial."

A paper on the "Comparative Performances of American and Foreign Freighting Ships," by W. W. Bates, late Commissioner of Navigation, United States Treasury Department, showed the superiority of both the iron and wooden boat of American construction in every particular. "Thoughts on the Design of New York Ferryboats" was the subject treated by Col. Edwin A. Stevens, president of the Hoboken Ferries. He mentioned the characteristics a ferryboat should possess, and then described the main features of the screw ferryboats and their peculiar adaptability to the service. Other papers presented were as follows: "The Influence of Speed and Weight of Machinery on the Determination of the Other Elements of Design of Steam Vessels," by J. J. O'Neill, 'naval architect and marine engineer;' "The Wetted Surface of Ships," by D. W. Taylor, Naval Constructor, U. S. N.; "On the Law of Frictional Resistance," by Prof. W. F. Durand, Cornell University, and "Notes on the Machinery of the New Vessels of the United States Navy," by Engineer in-Chief Geo. W. Melville.

Notes on the Imataca Iron Ore Range.

BY S. NORTON, HOKENDAUQUA, PA.

In order to call the attention of the furnace companies at the present time to a new iron ore range a person must be anything but a pessimist in his views in regard to the iron and steel business. The greater number of large and high grade ore bodies of the United States that are suitable for making steel are located around the shore of Lake Superior. We have, on the east of the Alleghenies, the Chateaugay, which by concentrating is without doubt the purest iron ore in our market. The cost is all that can be said against it. The Benson is a deposit of inexhaustible magnitude, but the ore must be concentrated. The same can be said of the Cranberry range. Port Henry and Crown Point are also able to produce a considerable quantity of Bessemer ore. There is also a quantity of carbonate iron ore of a good Bessemer grade in the Hudson River Valley. But none of these ores will work alone, neither will they together make a good working mixture; therefore it is necessary to bring ore from other parts to complete the mixtures.

There are only two points from which this ore can be derived; either it must come from the Lake Superior regions or from foreign lands. While it is possible, and not only possible but necessary, for Eastern furnaces making foundry iron to use Lake Superior ores with the cheap magnetic ores of local mines, when they come to the Bessemer steel business they have no cheap local ore to lower the cost of their mixtures in order to compete with Western steel manufacturers, who have fuel at a low cost and ore costing less by the amount of the freight. It becomes necessary for the Eastern furnaces to either find some cheaper ore or to give up the field to their Western brethren. Providence has kindly placed at their doors an iron ore range that is second to none on this earth.

Situated 54 miles from the mouth of the Orinoco and on a small arm of the same, and not more than 1500 feet from where vessels drawing 18 feet of water can come within 20 feet of the shore, sheltered from winds and in fresh water, is the Eastern end of an iron ore range that is only waiting for the hand of man to open it up. The quality of the ore is of the best. Enough of the ore has been shipped and used at Troy and Scranton to establish the quality of the ore. This ore was taken from what has since been found to be the small end of the deposit.

Explorations carried on to the west, or parallel to the Orinoco River, show that as the hight of the hills increases the size of the ore bodies increases also, until at places the outcrop is from 100 feet to 300 feet wide; and as these explorations now extend over about 6 miles and each succeeding test trench to the westward shows more and more ore, and as we know that the ore is to be found at a point 35 miles beyond, we have, I think, good reasons to believe that there is at least 35 miles of an ore range. There are on the north slope of the hills, as far as I have been, thousands of tons of ore which have been worked down from the disintregrated vein matter. So that if I should do as many others do in describing the range, I would say that the outcrop was from 500 to 1000 feet wide. Still, this ore could be easily and cheaply won by any person who had ever seen how the brown hematites of Lehigh County, Pa., are prepared. As to the navigation of the Orinoco there is not the slightest trouble. We came out of the river in the night and the lowest water we found was 22 feet. In all the mining regions I never saw a place where a beginning could be made at so low a cost; in fact, the location is a perfectly ideal one, the only possible objection that can be made is that this great body of iron ore is on the Orinoco and not on the Delaware River. The whole region is a perfect wilderness and there are no restrictions in regard to importation of labor of any and all classes and no royalty, taxes or duty on anything to be used in carrying on the mining work. The concession requests the company to do the policing, and this I consider one of the most valuable considerations, as it practically gives the mining company the government of its own property.

There is also covered by the concession the trade of the Orinoco River. This by proper work could be made of great value, as the Orinoco River is navigable for 1200 miles, and this whole region is open for American trade, and would give return cargoes to vessels engaged in the transportation of the iron ore.

The Imataca iron ore range is very similar to the Cuban, and with these two regions open and furnaces and steel works at Norfolk and in reach of cheap coke, the United States could bid defiance to the world in cost and quality of pig iron and steel. There is no good reason, judging from the cost of mining in the Lake Superior regions of this same class of work, why this ore cannot be mined and placed on board vessel for 50 cents per ton. Transportation should not be more than $1.50 per ton to the United States, as this would be more than the actual cost of the same class of work on our great lakes, and there would be this great advantage, that vessels could be employed the whole year and not lose the winter either in transportation or in carrying large stocks of ore; $300,000 would be ample capital to open up the range to ship 15,000 to 20,000 tons per month, and $1,500,000 would open up the mining and build vessels, and also open up the trade on the Orinoco River.

In working this body of ore it should be done by importing cheap Spanish, Italian or Coolie labor, as the conditions of the steel and iron business in this country make it necessary that they have cheap ore. To do this there must necessarily be used as miners the lowest priced labor that it is possible to procure. Coolie labor will be able to stand the climate and can live on rice and fish, with no expense for buildings, since only a roof is needed to keep off the rain. As the ore will for years be all mined in the open this class of labor will be the best.

The vessels used in transporting the ore should be sailed under the Swedish flag and manned by men of that nation. The wages of these would be less than one-half of what is paid for the same class by our lake steamers. This fact, coupled with the fact that steamers

Hosted by Google

could be employed the whole year instead of seven months, would, at a rate based on what has been paid from Two Harbors to Buffalo during the past summer, bring the cost of freight down to less than 90 cents per ton from Imataca to New York or Philadelphia. As we all expect the duty to be taken off, I see no reason why it is not possible with these facts before us to deliver ore at a price that steel can be made in the East.

Of a necessity there must be low wages at furnaces and mills in this country, but we must have iron and steel, and if we have to meet the world in the open market we must expect to pay less rather than more for the same work. "You cannot eat your cake and keep it too." These things must come or we must close our mills and furnaces and let others who will work for less do our work while we take a rest.

To the parties who have the necessary money and push there is not a better field. For a comparatively small amount of money there is a field for Yankee push and daring that must in the near future bring a rich harvest.

There is no iron made in Venezuela to my knowledge and there is no coal that is being worked. All the necessary materials are at hand at Imataca to make charcoal iron. There are thousands of acres of hard wood timber which can all be reached by water transportation on the hundred arms and inlets of the Orinoco, so that there are right here the ore and fuel with which cheap labor should make cheap charcoal pig iron.

There are also thousands of acres of the best sugar and coffee lands in the world, that are to be had by simply going in and possessing the land. All that is required is money and labor to make this one of the greatest wealth producing spots. I append analyses of Imataca ore:

Analyses of Imataca Iron Ore Taken from Points on the Range Over a Distance of 5 Miles.

The Lyons Exhibition.

The main building for the international exhibition to be held next year at Lyons, France, will be a remarkable structure. From a description given in *Le Génie Civil* it appears that the building will consist of two practically distinct parts, a central dome like structure and a circular gallery running entirely round it. The dome will be 361 feet in diameter and formed by 16 parabolic half arches. These will be hinged at the bottom and each connected at the top to a circular crown. Each arch will act independently of the others. The roofs of the surrounding gallery will be carried by a peculiar form of a cantilever truss. The total weight of each main arch is stated to be 30.3 tons, and each roof truss of the galleries weighs 44 tons. The total weight of the iron work in the building will be about 2500 tons, and the area covered 9.4 acres, a trifle more than the annex to the Transportation Building at the Columbian Exposition.

The Chicago foundries whose owners failed during the summer have in but few cases been reorganized and put in operation. The F. E. Roberts Company are still in the hands of an assignee and the works are closed. The Chicago Foundry Company have not resumed. The Chicago Iron Works are standing idle, with little hope of resumption by the old management. Turner & Dickinson's foundry is operated by a receiver, but the creditors are considering a plan of settlement, which may be accepted, restoring the property to the old firm. The Bouton Foundry Company, under an assignee, have finished up contracts on hand at the time of the failure and the works will be closed until a reorganization, now being considered, can be effected. The W. H. Chenoweth Company have arranged terms of settlement and will shortly resume control of their works. The Eureka Foundry of Wiltshire & Graf will be operated hereafter by Kolben Johnson, who formerly ran it.

Management of Men and Manufacturing Industries.

FIRST PAPER.

Elements for Consideration in Locating Manufacturing Enterprises.

BY THOS. D. WEST.

It very often becomes a serious question with contemplated enterprises where to locate their works. They are often solicited to settle here and there, and shown advantages until their heads fairly swim with bewilderment. And having themselves no definite reasons why they could not settle as well in one place as another, it is no wonder they are "all at sea," and the one giving them the most wind carries them to anchorage.

No enterprise should choose a location without being able to have a chart upon which they could knowingly write the advantages and disadvantages of any place which might be brought to their notice for consideration. To have logical reasons for locating there, and not at some other point, is one of the first essentials to giving confidence in sailing onward to success, and not becoming weak-kneed at the first squall that blows adversity; for those engaging in any new enterprise can make up their minds that they will have to weather many a storm before they can reach, by experience and good financial steering, an open port in which they can be secure from foundering.

No two enterprises can be said to require the same conditions to exist in choosing localities. What might be an advantage to one would be a disadvantage to another. There is much more in being able to foresee what elements should exist than there is in seeing what do. Often the most experienced are deceived in their first conceptions and opinions. After getting started or having the plant in operation they find that they had jumped too quick at conclusions and had not taken sufficient time for investigation and study of prevailing conditions and elements which would rise, interfere, injure and be detrimental to their business.

Before treating this subject further the writer will endeavor to classify as far as he can the different conditions and elements that generally should be weighed by experience and judgment before contemplated enterprises are located. The first and in many cases the most important is: Good opportunity for procuring labor and knowledge concerning the character and training of the people where labor is expected to be obtained.

2. The advantages a locality may afford in the transportation of the concern's imports and exports.

3. Protection to life and property.

4. Cost of living and taxation.

5. The sphere there is for the enlargement of a plant.

This first proposition, that of procuring good labor in a new field, has often proved adverse to conceptions when labor came to be practically tested. Every industry has its own characteristic elements that demand from man an endurance and tax upon physical powers peculiar to and different from what some other line may call for. We find that one industry calls for spasmodic efforts of man. Another for constant steady labor—not one minute should they be idle. Then again we find industries calling for accuracy and neatness, while others require neither of such qualifications.

Still further on we see industries requiring men to withstand offensive odors and injurious dusts. Then we have those necessitating man to be standing or sitting in one position all day long. Also such as require him to endure all kinds of weather; and again we find him being required to withstand oppressive heat and flaming fires. It is often remarkable how men can be found "standing up to work" day after day that from observation or a short trial would by many be thought unbearable.

The lesson to be learned by study of the demands made upon a man's endurance in our different callings is that he can do most anything if only schooled and trained to it, but the trouble begins when we are required to do some labor foreign to what our endurance by actual experience has been trained to withstand. Of course, we have men that can conform readily to almost any kind of labor. As soon as they find some new muscles or sensibilities being made to pain or suffer they don't think they are going to die immediately. But men that will stick to labor that aches until their muscles become used to the work are scarce and far between. Any enterprise looking for a location should investigate very thoroughly the training men have had in the vicinity from which they expect chiefly to obtain their labor. For if they start in a vicinity where the schooling in endurance of labor differs radically from that which their industry demands, they can make up their minds to having much trouble and financial loss before they can procure and educate labor to profitably operate their plants. Heretofore this is a factor that has not had the attention it should have had. It has had, if the truth were only known, as much to do with strikes and failures in business as some other elements that might be mentioned. Every observing manager who has "knocked around" much will, I think, agree with the writer in saying that in changing localities he would be often deeply impressed how the little technicality and customs one place would think just right would at once cause dissention in some other locality. Therefore, to the interest of labor as well as capital it behooves the latter to use good reasoning in judging of labor in selecting its location and in the disciplining of it when first starting operations.

Hosted by Google

The Advantages a Locality May Afford in the Transportation of Imports and Exports

Means for any enterprise to figure out as far as possible what it would cost for freight or cartage of any raw materials or products it might require coming to its plant, and what it would cost to ship their finished product to contemplated customers. With enterprises intending to do a national business, the latter becomes a very important factor, for long railroad freights are a costly item, and all care in locating should be taken in figuring to avoid long hauls in freights to customers or their own plant, for ofttimes the imports or raw materials an enterprise may use in the manufacture of its product might cost more to be conveyed or shipped to its plant than its product would be to contemplated customers, and, other things being equal, it may often be much more advantageous to be located near to the section for obtaining the raw material than to the customers using the finished product.

Where a question of freights in imports or exports would be the most essential to be considered in locating, a good plan is to lay out a map, encircle by a mark the sections from which the raw materials are expected and trade to be catered for, and then locate nearest to the sections thought to be most advantageous in saving cost of freights.

Protection to Life and Property.

Manufacturing buildings going up at the present day are, as a general thing, being constructed as much fire proof as possible, and many buildings are all iron or brick and iron, and their owners care little for fire protection or insurance. If this can be done, it is certainly the wisest plan to adopt. But where it cannot be and fire protection is required, such should not be looked into after the buildings are up, as is the case many times. Enterprises locating within city limits are, as a general thing, fairly protected; but outside of such, and in villages and so forth, the protection against fire is generally very poor, and new enterprises should endeavor if at all possible to construct fire proof buildings. Another point which might be well to hint at is the question of floods. It is always well to figure to be high and dry. Protection to life is an element not to be overlooked, for all business must feel that it will be protected against ruffianism, drunkenness and theft. In cities aid can very soon be had to repel attacks or insults of this character, but in small towns, villages, and so forth, a man is generally left to defend himself, for the protection that may exist is generally so meager and out of sight it rarely can be found when wanted.

Cost of Living and Taxation.

These factors are also very essential to be investigated. If food, clothes and house rent are dear, a firm can safely figure that wages will be higher than in places where living is cheaper. As a general thing house rent is much cheaper in the smaller places and oftentimes food, but for clothes the cost is much less in the large towns and cities than in villages, and so forth. Taken as a whole the wage earner can live much cheaper in small towns, and so forth, than in large cities, and during business depressions is better taken care of when out of work in the small than in the large places, for the supply dealers are confined to a small territory for trade, and as what is one man's business is generally everybody's business, the dealer fears the ill will of one man might seriously hurt his business. Hence he will let him have credit to a larger extent than could be obtained in a large city and take his chance for pay when the man returns to work. In regard to taxation little is to be said other than upon general principle, and that is, taxation is found much lighter in small than in large places.

Enlargements of Plants.

While this is a point that would be thought to be minor and sure to be provided for, yet it is astonishing the lack of foresight manifested by many firms in locating a plant. For had they at all figured on such, thousands of dollars could often have been saved by their locating in some other locality or building different. A new enterprise, in planning their works, should look ahead and figure so that if any enlargement is necessary after they get started half of their building will not have to be torn down to obtain what they desire. The condition can be but rare that would not permit original plans to be made of the largest plant that might be necessary, and in starting in only build as much of it as will assure sufficient room for a moderate business; and then, when a growing trade would demand more room, it can be constructed without destroying present building or causing a loss of time to manufacture.

The Advantages and Disadvantages of City and Village.

It would not be doing justice to say either one was the best for any contemplated enterprises. To decide such a question can only be done by taking into consideration the various elements herein cited, and if more points are found favorable to the village let it be accepted, but if the points are in favor of the city, why then let it have the preference. Each has its advantages and disadvantages, and if logical reasoning is only used a firm will not be misguided in their choice. A few elements yet exist that might be well discussed in regard to procuring labor in the city and village. In the village labor will be found much more characteristic in having established customs and habits than in cities, and any new industry that might call for characteristic elements different than those found in the locality in which, for other reasons, they would like to locate, they can make up their mind that if they start in they will have much trouble and expense before they get their labor to the proficiency they would desire. In a large city the lines of habit and custom are not so clearly drawn, and there is a large body of labor to draw from, so that a firm can much quicker obtain the characteristic element they need to best suit their requirements of manufacture, and, of course, in the matter of obtaining supplies for repairs, and so forth, and chances for communication with the outer world by mail, wire or telephone, the city has many advantages over the village. In starting any enterprise every possible advantage should be taken. To be well located means that half the battle to win success is fought. Too much care and judgment cannot be exercised in choosing a locality, and if the reconnoiter, in starting out, will but keep in the files of his memory the factors, characteristic requirements for labor, transportation, protection to life and property, cost of living, and taxation and accommodation obtainable in matter of supplies, mail, telephone and telegraph, he cannot make any very serious mistake in selecting a locality which in after years experience will surely have proved to be a good locality.

The Tariff Bill.

(From our Special Correspondent.)

WASHINGTON, D. C., November 22, 1893.

The draft of the new tariff bill on purely revenue lines is before the majority of the Committee on Ways and Means. The Sub-Committee on Customs, consisting of Wilson, Bynum, Breckenridge, Stevens and Tarsney, has concluded its portion of the work, subject to revision.

It is now proposed to lay the bill before the minority on next Friday, if possible, in order to give them the full ten days required by the resolution authorizing the bill, when completed, to be handed to the clerk of the House for printing. The majority are by no means in accord on the customs provisions and are worse divided on sugar and income tax.

Notwithstanding the protests from influential quarters, coal and iron ore have been placed upon the free list. Pig iron and scrap iron are reduced to $\frac{2}{10}$ cent per pound instead of $\frac{3}{10}$. Throughout the metal schedule the rates are below those of the act of 1883, and range from 25 to 40 per cent. lower than the existing rate. Railway bars of iron or steel or in part of iron and steel and T-rails and punched iron or steel flat rails, under the law of 1883 at $\frac{9}{10}$ and $\frac{8}{10}$ cent per pound, had a reduction in the act of 1890 to $\frac{6}{10}$ cent per pound. It is now proposed to further reduce them to $\frac{4}{10}$ cent per pound. All iron or steel sheets or plates, &c., coated with tin, &c., are placed at 1 instead of $2\frac{2}{10}$ cents a pound.

The cardinal principle of the bill as prepared is revenue only, and therefore for the encouragement of importations to the utmost extent without reference to the interests of home manufacturers or wage workers.

It does not seem possible that such a measure can even pass the House. It will certainly meet with decided opposition in that body. In the Senate 11 Democrats voted against a less objectionable bill on a former occasion, and a sufficient number, it is claimed, can be relied upon to prevent too radical legislation now.

The rough draft which has been prepared is, however, still subject to modification.

An international exhibition of foods, showing the means of provisioning armies, means of communication, saving of life, &c., combined with a special sportsman exhibition, will be held in Vienna from April 20 to June 10, 1894. The latter feature will embrace sporting goods of all kinds. Further particulars can be obtained on application to the Exhibition Office, Austellung's Amt, Minoxitenplatz 4, Vienna, Austria.

Continued inactivity in the iron mines of the Gogebic range has brought great suffering on the people of that section. No less than 20,000 persons are said to be reduced to the verge of starvation, and relief measures have been started for their benefit.

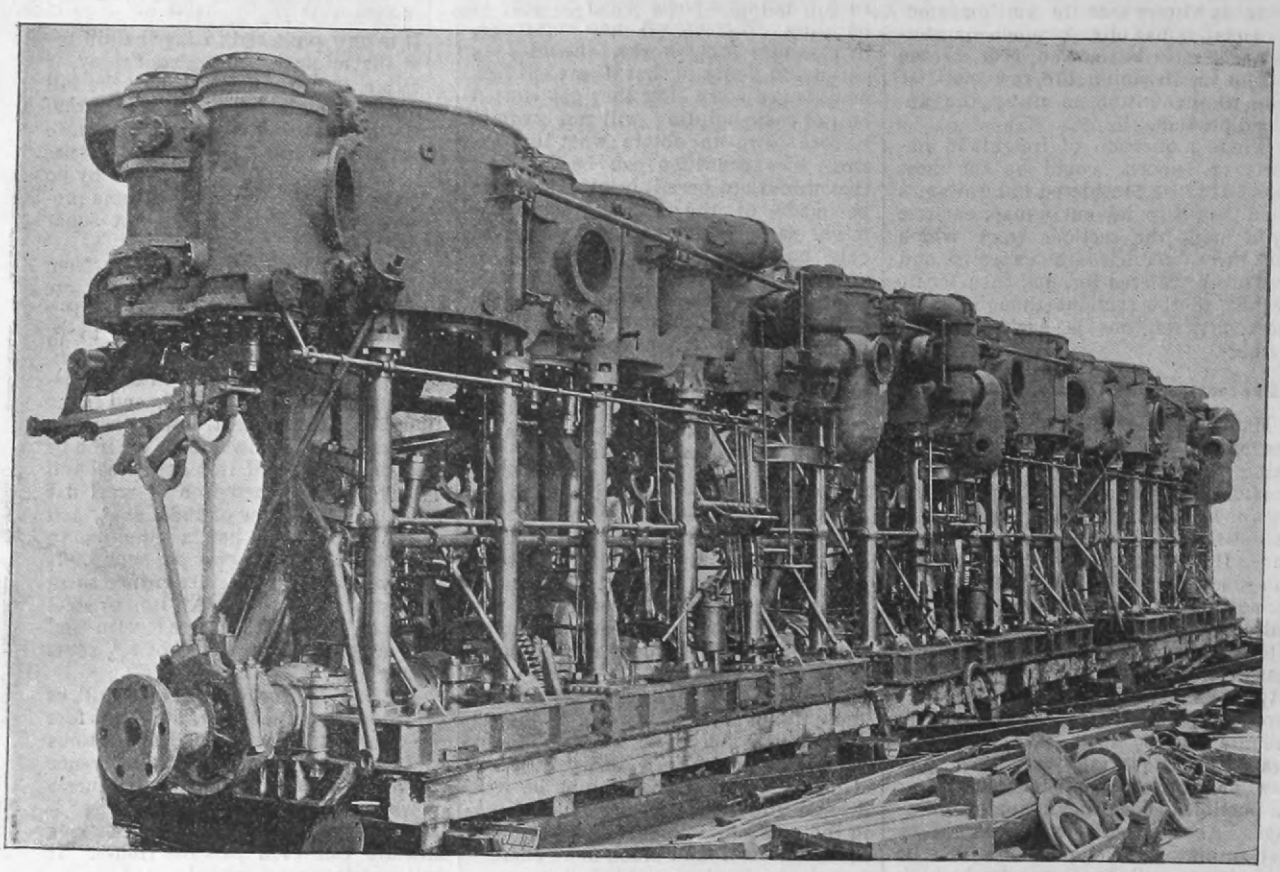
The "Columbia"

That the latest of our cruisers should be of such phenomenal speed and also so felicitously named is gratifying to every American whose patriotism is normal. The mere contemplation of the fact that both ship and machinery are wholly of domestic material and make, and that the design and workmanship are unexcelled, if not unrivaled, the world over, should make our people proud and our steel makers glad, for in this vessel there is a greater percentage of steel used than in any previous American ship of great power. With this material it has been possible to so proportion the parts as to produce a remarkably light and beautiful set of engines, and which scarcely appear to be of half the power they actually are to the eyes of those who are used to seeing the massive framings of cast iron usual to marine work.

The adoption of forged steel front columns and single housings, in lieu of the clumsier looking double housings, is the most striking feature of the design with the possible exception of the slender steel bed plates, which contrast so strongly with the greatly heavier iron castings of the ordinary construction.

Full descriptions of these engines have been repeatedly published, and it is only necessary here to give such brief details as may interest metal workers and designers; and as each of the three sets of engines is identical in every respect, what is said of one applies to all.



The diameters are 42, 59 and 92 inches for the high, intermediate and low pressure cylinders respectively, and the common stroke is 42 inches, the piston speed being about 950 feet per minute.

The intermediate and low pressure cylinders are steam jacketed. The pistons are of cast steel and conical. All main valves are of the piston type. The reversing gear is of the bar link type. The shafting is hollow steel (forged), 16 inches diameter, with an axial hole 6 inches in diameter. The crank pins are 17 inches diameter and 21 inches long. The connecting rods are 7 feet from center of cross head to center of crank pin, and weigh, with brasses and caps, 6500 pounds each. The main cross head guides are entirely on the back housing, the backing guides being bolted to the main guides and overlapping the sides of the cross head slippers. The latter are of manganese bronze. The screw propellers also are of this metal, and have a pitch of 21 feet 6 inches, the center screw being 14 feet in diameter, while the two side screws are 15 feet.

The main steam pipes are of lap welded steel, 20 inches in diameter and ⅜ inch thick.

There are eight main double ended boilers, made of steel throughout. Their shells are over 1¼ inches thick and have a diameter of 15 feet 6 inches and a length of 18 feet. Their average weight being about 70 tons each, empty, as shown in the view here presented, while with contained water and necessary fittings their total weight is about 1000 tons, or more than half the weight of the entire machinery, in which, of course, they are included. One of the most important features is the sufficiency of these boilers, they being capable of producing, without any great forcing, more steam than the engines can use, thus insuring protracted efficiency, as the general decrease in speed of ships after years of service results from boiler deterioration and lack of steam producing power.

The view of the engines here given is from a photograph taken when erected in the shops.

ENGINES OF THE "COLUMBIA."

Official Trial of the "Columbia."

The wonderful speed made by the "Columbia" in her official trial last Saturday is received with pleasure throughout the entire country. That she would exceed the 21 knots an hour called for by the terms of the contract was expected by all; that she would maintain an average speed of 22.81 knots an hour and thereby earn for her builders the sum of $350,000 was at least hoped for; but that she would in a spurt of 7¾ knots attain a speed of 25.31 knots per hour was unexpected even by those most familiar with the design.

The trial was made off Cape Ann, the course being marked by Government vessels. The cruiser ran north and then turned and came back over the same course. The following table gives the speed and time between each station:

The Run North.

Station vessels.	Distance in nautical miles.	Elapsed time. M.	S.	Speed in knots.
"Dolphin".....	0.00	..	..	.....
"Irwana".....	2.37	6	18	22.65
"Kearsarge".....	6.66	18	04	22.11
"Leyden".....	6.66	17	18	23.10
"Fern".....	6.4	18	16	23.55
"Narkeeta".....	6 4	17	16	22.22
"Fortune".....	7.74	21	36	21.53
"Vesuvius".....	7.74	18	18	25.31

Elapsed time, 1 hour 55 minutes 7 seconds to cover a distance of 43.97 miles, giving an average of 22.92 knots for one-half the course.

The Run South.

"Vesuvius".....	0.00	..	..	.. ..
"Fortune".....	7.74	18	45	24.77
"Narkeeta".....	7.74	22	00	21.11
"Fern".....	6.4	17	45	21.64
"Leyden".....	6.4	16	11	23.77
"Kearsarge".....	6 66	17	24	22.96
"Irwana".....	6.66	17	53	22.71
"Dolphin".....	2.37	6	17	22.70

Elapsed time, 1 hour 56 minutes and 17 seconds to cover a distance of 43.97 miles, giving an average of 22.7 knots. Run north, 22 92 knots. Run south, 22.70 knots Average for both runs, 22.81 knots.

Hosted by Google

That the "Columbia" will be able to capture any vessel now afloat she may desire to, and that she will be able to assume any desired position—fight or keep at a distance, according to the strength of her opponent—appear to be conclusively proved by her trial.

Changes in the Scale.

The second convention of the Amalgamated Association held in Pittsburgh this year met in that city on Thursday morning, the 16th inst., the session closing on Friday night at midnight. About 125 delegates from different sections of the country were in attendance, and some material reductions in the wage scale for 1893–94 were made. As already noted, this is the first time in its history that the Amalgamated Association has met in regular conference twice in the same year, but owing to the unsettled condition of the labor market and also to the fact that the mill owners in the Mahoning Valley and other points in Western Ohio had arranged a scale with the National Union of Iron and Steel Workers, a rival labor organization, thus ignoring the Amalgamated Association, it was deemed advisable to hold another convention, and, if possible, make such changes in the scale as would induce the manufacturers to sign it and continue to recognize the Amalgamated Association. After the delegates had formally assembled, President M. M. Garland made a lengthy statement, in which was set forth the reasons for calling the delegates together for the second time within a year. Three committees were then appointed to represent the different departments of the scale in which it was proposed to make changes. One of these committees was to consider the request of the Valley manufacturers for a reduction in the price of boiling from $5 to $4.50 per ton, another to represent the finishing departments of the scale and the third to act upon the request of the members of the Association of Iron and Steel Sheet Manufacturers for a reduction of 10 per cent. in the sheet scale. At the Friday session it was decided to make no changes in the scale in convention, but instead, these three committees were given full power to act. After the disposal of some routine business the convention adjourned.

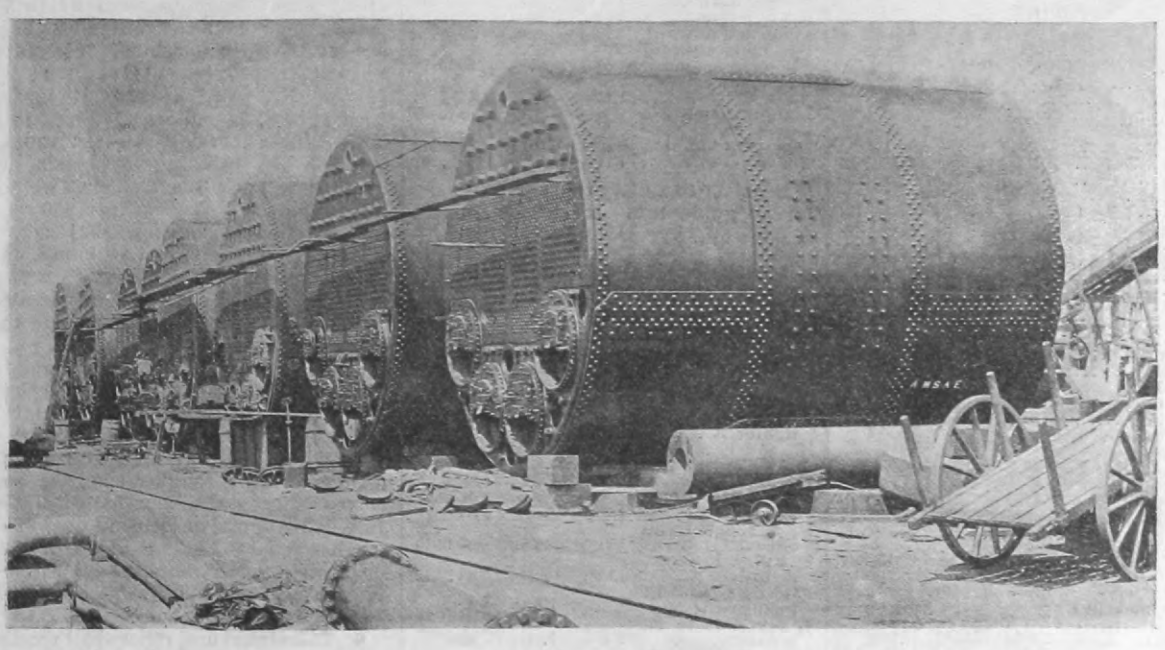
On Saturday the Committee on the Boiling Scale met the Valley manufacturers in conference in Youngstown, and after two sessions lasting some hours each, the request of the manufacturers for a $4.50 boiling rate was compromised and $4.75 as the price of boiling was adopted, with the usual advance of 10 cents per ton for every advance of $\frac{1}{10}$ cent per pound in the selling price of iron. The base of the scale was also changed from 2 cents to $1\frac{1}{2}$ cents, but it should be here noted that the scale is in force only until April 1, 1894, and in the meantime the question of making the scale a perpetual one will be submitted to the sub lodges of the Amalgamated Association for consideration. In case it should be decided by the lodges to have the scale a perpetual one, only to be changed by three months' notice from either side, then it is likely that the base price of boiling will remain at $1\frac{1}{2}$ cents. If the decision is against the perpetual scale then it is probable that the base price will be changed back to 2 cents. In the foot notes following the boiling scale, paragraphs 7, 9 and 12 were changed to read as follows:

7. For cast iron swarth worked on cinder bottom the price per ton shall be $4.50.

9. For wrought iron turnings, worked on cinder bottom, $3.09 per ton; the price for working turnings to advance and decline in the same proportion as the boiler's scale.

12. For all light scrap worked alone in a boiling furnace the same price, ($3.09) shall be paid as that for working wrought iron turnings; this to cover hoop No. 19 and lighter, wire No. 5 and lighter, sheet, and what is known as Norway scrap; this scrap to be cut from eight (8) to ten (10) inches in length for charging.

Immediately after the settlement of the boiling scale had been effected the finishing departments were taken up, and it was finally decided to adopt the scale of the National Union of Iron and Steel Workers signed by some of the Valley mills two weeks before. This scale in full is as follows:



Bar and Nail Plate Mills.

Western Iron Association card rates. Bar iron.	Bar rolling and heating, 2240 per ton.
1 5-10 cents	$0.56¾
1 6-10 cents	.58
1 7-10 cents	.59¼
1 8-10 cents	.60½
1 9-10 cents	.61¾
2 cents	.63

1. All sizes below $1\frac{1}{2}$ x $\frac{1}{2}$ inch flats, 1 inch rounds and $\frac{7}{8}$-inch squares when worked on a bar mill to be paid for at guide mill prices. One inch rounds when worked by hand on a bar mill shall be paid for at guide mill prices.

2. All sizes below $1\frac{1}{2}$ x $\frac{1}{2}$ inch flats, 1 inch rounds and $\frac{7}{8}$-inch squares when worked on a 12-inch mill to be paid for at guide mill prices. One inch rounds when worked by hand on a 12-inch mill shall be paid for at guide mill prices.

3. Catching on a bar mill shall be five-eighths of the price paid for rolling on a bar mill.

BOILERS OF THE "COLUMBIA."

4. Heating nail plate to be the same price as bar mill heating.

5. Heaters on 12-inch mill to receive bar mill prices, to be paid by the company.

6. On all bar mills working bar or skelp iron one man's help shall be furnished by the firm on piles of 150 pounds and over, and an additional man for 250 pounds to shove under at the rolls on all passes. This shall not apply to mills now giving extra help.

Guide, 10-Inch, Hoop and Cotton Tie Mills.

It is agreed that the base price at a $1\frac{5}{10}$ cents Western Iron Association's card shall be the straight $1.17½ per ton for rolling, 58¾ cents for heating, and 29⅜ cents each for roughing and catching iron or steel on a guide, 10-inch, hoop or cotton tie mill, with 2 per cent. additional for each $\frac{1}{10}$ advance on said card from $1\frac{5}{10}$ to $2\frac{5}{10}$ cents card, and for each $\frac{1}{10}$ advance or decline above the $2\frac{5}{10}$ cents card 3 per cent. shall be added or deducted, as the case may be. The roller, heaters, roughers and catchers shall each be paid by the company. It is understood, however, that

Hosted by Google

this arrangement shall in no way detract from the authority of the roller in controling all hands on mill, including hiring and discharging, and, as heretofore, the roller shall be held responsible for the work done.

¾	2.39	1.19½	.59¾
⅞	2.02½	1 01¼	.50⅝

NOTES.

1. The price for rolling cotton ties out of muck billets and 1¼-inch and lighter soft steel billets shall be $1.36 per ton, heating 68 cents per ton, roughing and catching, each 34 cents per ton. But when so using muck billets during the three summer months—June, July and August—the company shall pay heater's helper at the cotton tie furnace, and an extra rougher and catcher at the cotton tie rolls; that is, one man at the rolls who shall assist both rougher and catcher.

2. All sizes made from a regular 2-inch and lighter reworked billet made from all muck iron; and on all products except cotton ties made from 1¼ and lighter soft steel billets, 20 cents per ton for rolling, 10 cents for heating, 5 cents per ton for roughing and catching less than the above prices.

3. For cut hoops, No. 10 and lighter, the following extras shall be paid: Rolling, 12 cents; heating, 6 cents; roughing, 3 cents, and catching, 3 cents per ton.

4. Lightning rod, $\frac{9}{16}$ and No. 5, or all sizes weighing from 62 to 70 pounds per 250 feet, rolling, $2.82½; heating, $1.14¼; roughing, 70⅝ cents, and catching, 70⅝ cents per ton; 11/32, 23/32 and No. 4, or all sizes weighing from 71 to 85 pounds per 250 feet, rolling, $2 02½; heating, $1.04¼; roughing, 51⅝ and catching, 58⅛ cents per ton; ⅝ Nos. 2 and 3, and all sizes weighing 86 pounds and over per 250 feet, rolling, $1 84½; heating, 92¼ cents; roughing, 46⅛ cents, and catching, 46⅛ cents per ton.

5. Any smaller sizes not enumerated in the 10-inch scale shall be paid the same as guide mill prices.

6. The prices paid for making odd sizes not enumerated in the scale shall be the mean between the next higher and lower prices.

7. Where a mill averages over $25.92 per day a third rougher shall be employed during the months of June, July and August on demand of roller, rougher and catcher. Said extra man shall assist both rougher and catcher and shall be paid half by roller and half by rougher and catcher.

8. The night turn roller shall receive two-fifths of the roller's wages on said night turn.

The settlement of the wage scale of the Valley mills was the cause of much rejoicing among the citizens of Youngstown, as the mills there have done nothing for more than four months and as a consequence business of all kinds was in desperate straits. Some of the mills started up to partial capacity on Monday morning, the 20th inst., and others will resume during this week. During the long idleness the various plants were completely overhauled and additions made to equipment, and as a consequence the mills are in excellent shape for a long run.

The committee appointed to represent the sheet mills met the Executive Committee of the Association of Iron and Steel Sheet Manufacturers in Pittsburgh on Monday, the 20th inst.

These two committees were in session at the headquarters of the Association of Iron and Steel Sheet Manufacturers in the *Times* Building, Pittsburgh, from about 2 p.m. on Monday until after midnight, without a settlement being reached. The manufacturers insisted upon a straight reduction of 10 per cent., while the concessions offered by the workmen amounted to 7½ per cent. The

Hosted by Google

different sides of the case were exhaustively argued by the respective sides, but without result. Present indications point to a struggle between a number of the sheet manufacturers and the Amalganated Association. On the authority of Secretary John Jarrett it can be stated that an agreement has been entered into and signed by the sheet manufacturers in which they bind themselves not to accept orders for future delivery, and in all probability a number of the mills will be closed down at an early date, and when operations are resumed it will be with non-union labor. Three concerns have adopted this course and are now operating their plants with non-union men. These are the Apollo Iron & Steel Company of Pittsburgh, Kirkpatrick & Co., also of Pittsburgh, whose mills are located at Leechburg, Pa., and Britton Iron & Steel Company of Cleveland, Ohio. In case the workmen desire to have another conference with the manufacturers it will be granted by them, but it is stated that under no circumstances will the manufacturers ask for another meeting with the Conference Committee representing the Amalgamated Association.

PERSONAL.

B. J. Arnold, formerly with the General Electric Company, and consulting engineer of the Columbian Intramural Railway Company, has opened an office as consulting and constructing electrical engineer at The Rookery, Chicago.

After seven years of successful service as the superintendent of the Pullman Iron & Steel Company, Pullman, Ill., Samuel Job tendered his resignation, which is to take effect at once.

C. McKinney, recently of the Maryland Steel Company, Sparrow's Point, Md., has been appointed general manager of the rail mill department of the Lackawanna Iron & Steel Company, Scranton, Pa. Henry Wehrum of Scranton was made general superintendent.

J. D. Carey, president of the National Union of Iron and Steel Workers, has taken the position of heater at the plant of the Mahoning Valley Iron Company, Youngstown, Ohio.

The general state of trade throughout Ohio shows considerable improvement during the past ten days, but the change is not so great as anticipated by those whose view of the situation was taken from a sentimental point. Manufacturers in all branches of the iron and steel trade are feeling easier, orders and inquiries are more numerous, and some new enterprises are projected. If the improvement in business becomes permanent these enterprises may soon become realities. The fact that the wages scale has been settled for rolling mills and that sheet mill workmen have gracefully accepted the 10 per cent. reduction is a subject of much talk and favorable comment. While these settlements only affect certain localities directly, it is generally felt that the success which has attended the negotiations between employers and workmen will have a beneficial effect on all manufacturing industries.

Swedish magnetite ore, 60 per cent., has been sold, delivered, at Dortmund, Germany, at 16.50 marks, equal to $4.10 per gross ton.

THE WEEK.

The curious spectacle of an entire city being sold for debt was seen in West Virginia last week, when Kanawha City, a town founded several years ago to rival Charleston, was put up at auction in 3000 lots.

Unemployed workmen are flocking from the small towns and country districts into the large cities, hoping to get work. As in most of the cities it is a difficult matter to provide for their own unemployed, this fact is naturally a cause for complaint. New Orleans, Pittsburgh and Indianapolis are among the cities suffering from this invasion.

The first shipment of cotton direct from Charleston, S. C., to Liverpool and Bremen was made recently, when two large steamships sailed from the first named port with over 17,000 bales, the largest cargoes ever shipped from Charleston. These steamers are to run regularly during the cotton season.

The cost of insurance against accidents to workmen in Switzerland, as provided by a recent law, is to be borne as follows: Half by the employers, a quarter by the State and a quarter by the workmen.

Japan is to have a National Industrial Exhibition in 1895, to be divided into seven sections, namely: Industry; art and art industry; agriculture and horticulture; marine products; education and science; mining and metallurgy, and machinery.

The passenger transportation record of the Illinois Central Railroad Company during the six months of the World's Fair reaches the unprecedented total of 19,342,684 persons carried on their lines.

The longest iron railway bridge on the European Continent was opened last week across the river Vistula, between Forden in Prussian Poland and Culmsee in Germany. It is 1450 yards long and cost 8,000,000 marks.

England's prolonged coal strike has at last been settled. This end was accomplished at a conference arranged by the Government between the mine owners and miners. Over 350,000 men resumed work on Monday at the old rates, which will continue in force until February, when a board of conciliation will be formed to arrange a final settlement of pending questions. Great suffering has resulted from the strike, the loss by which is estimated to amount to $150,000,000.

"El Cid," late of the Morgan line, purchased by the Brazilian Government and fitted out as a war vessel, sailed from New York under her new name, the "Nictheroy," on Monday. She took on board the former steam yachts "Javelin" and "Feiseen," now turned into torpedo boats, and a large supply of torpedoes and ammunition. The steamship "Britannia," also purchased by Brazil, is taking in her supplies and will follow as soon as her heavy armament is received. Rumor has it that the insurgent Admiral, Mello, is making preparations to intercept the vessels.

W. H. Preece, the famous English electrician, remarked during his recent visit to this country that one of the things that struck him most forcibly was the number of very young men that were coming to the front in the various branches of electrical effort. This impression might well be intensified by a recent announcement that the control of the entire electric system of the town of Bloomfield, N. J., has been placed in the hands of a juvenile electrician named Perry, whose years number just 15. This electrical prodigy has, it is said, invented a model electrical car possessing points of merit, and he is at work on other experimental lines in the same field.

The winter railroad schedules, which went into effect on November 18, are marked by the discontinuance of the Chicago fliers, and the practical adoption by all the trunk lines of 26 hours as the standard running time between New York and the metropolis of the West.

By the use of the improved dock equipment at the ports of the Lake Superior region, the expense of handling the iron ores has of late been remarkably reduced, as well as the time occupied in loading and unloading. Where the expense of putting the ore into the holds of vessels was estimated at from 10 to 15 cents per ton, with the apparatus in use at some of the docks this ore is now lifted from the vessel, carried back 350 feet, and dumped, at a total cost, including all expenses, of from ¾ cent to 1¼ cents per ton. With 21 men in the hold of a vessel carrying 2000 tons of iron ore, the entire cargo has been stocked in 17 hours.

Postmaster-General Bissell is considing a scheme by which the Government may hereafter do its own printing of postage stamps, and probably of postal cards and postal notes. The Superintendent of the Bureau of Engraving and Printing has been instructed to submit a formal bid together with a statement of the facilities of the Department for doing the work.

Active preparations are being made for the canal conference to be held in New York City on December 5.

Negotiations are reported to be on foot, backed by the Russian Government, with the view of ending the competition between the Russian and American petroleum interests, and forming a great international trust. The recent cutting of prices is said to have led up to the proposal, which is made by the Russian dealers. The alleged scheme is that Russian oil producers shall control the Eastern, European and Asian markets, while America shall hold England and Western Europe.

At a recent meeting of the New York Board of Fire Underwriters a resolution was adopted authorizing the president of the board to address a communication to the Governor of the State of New York, calling his attention to the enormous increase of fire waste of late years, due largely, in the opinion of the underwriters, to the improper wiring of buildings for electric lights and power, asking his influence to secure legislation which shall require that no person shall be permitted to wire buildings for electric light and power purposes who has not been duly licensed as competent to perform the task by some Board of Control competent to test the qualifications of applicants, as is now the case in connection with engineers having charge of boilers.

The large turbine wheels for the Niagara Falls Electric Company's system are now ready to be put in the pits, into which the water will be introduced in about two weeks' time. The dynamos, which are being built by the Westinghouse Company, will not, however, be ready until the spring.

Pig Iron Production

The recovery in the iron trade will have to be very rapid indeed if the prophecies of our statisticians are to be fulfilled. In times like these we are apt to forget the exuberant visions in which men have indulged when business skies were unclouded. In 1890 particularly the outlook seemed to favor a long continuance of prosperous condition. Trade was very active and production in almost every line was at its maximum, but prices were not booming and business seemed to be on a remarkably substantial basis. What more could be asked than full employment for all the facilities of commerce and manufactures, with reasonable prices on all kinds of merchandise and reasonable profits to all concerned? Looking back, it seems to have been an ideal year. Prices were high as compared with those which have ruled since then, it is true, but it must be remembered that we have passed through a period of abnormally low prices of late, and those of 1890 were by no means excessive for this country. It was, however, a year in which to take a roseate view of the future and to make calculations of further expansion in production to meet the enormous demand, which seemed almost insatiable. When a famous Boston statistician turned his attention to the tremendous possibilities of the American iron trade, and as a result of exhaustive research and most rigid examination of prevailing conditions said that the product of pig iron in the United States in the year 1900 would be about 42,000,000 tons, there were others who even surpassed him in this ecstatic view of the future and thought it might run up to 45,000,000 tons.

In the calculations which were made at that time there was no allowance by any one for a period of severe reaction, but all estimates of future production were based on a sort of law of accelerating demand which seemed to have manifested itself for a sufficient duration of time to be accepted as established. In the last decade our pig iron production jumped most marvelously, trebling itself from 1879 to 1890, and placing this country in advance of all other countries in the world in the output of iron. It was no wonder that the future looked big with possibilities. A rate of progress had been shown for a long stretch of more than ten years with hardly a break, which seemed destined to continue. Had the reaction of this year been then foretold, it would have been so greatly at variance with the manifest destiny of the iron trade of this country that the prophet or seer would have been treated with the most scornful contempt. Having produced over 9,000,000 tons in 1890, by this time we should be producing at the rate of 12,000,000 tons this year, if the law of accelerating demand were really in force. Instead of that we shall probably make something over 7,000,000 tons, or less than the output of 1889. Being thus thrown back four years in our triumphant progress, it will take probably a year or two to catch up to our standing in 1890 to 1892. From that time to 1900 there would be the most wonderful activity ever shown on this earth to realize the prophecies to which reference has been made.

The more this matter of forecasting the production of pig iron is examined the more remarkable does the prescience of Hon. Abram S. Hewitt appear. In 1856, in an address before the American Geographical and Statistical Society, he put the pig iron production of the world at 14,000,000 tons in 1875 and 28,000,000 tons in 1895. As nearly as can be ascertained, his prediction for 1875 came within a few hundred thousand tons, which is wonderfully close considering that in 1856, when the forecast was made, the world's annual production had only attained 7,000,000 tons. According to statistics collected by James M. Swank, the world's production of pig iron in 1890 was a little in excess of 27,000,000 tons. The reaction since then, and the recovery to be expected, will probably bring the output in 1895 very close to Mr. Hewitt's figures. In 1890, in an address before the American Institute of Mining Engineers, he estimated that the world's output in 1900 would be 35,000,000 tons, of which the United States must supply 45 per cent., or say 15,750,000 tons. Should even this be a correct estimate of the expansion of the trade by 1900, the closing years of this century will be marked by very great activity and a reaction from the present depression must soon make itself strikingly manifest.

Engineer-in-Chief Melville in a report to the Secretary of the Navy, dated October 15, 1890, gave the reasons for the adoption of three screws in the "Columbia." He said that it was extremely improbable that shafting of the great size necessary to transmit this enormous power (21,000 horse) to twin screws could be obtained in this country, either in reasonable time or with any guarantee as to its strength. Therefore it was decided by the bureau to depart from the usual practice and divide the power into three parts. A further consideration in favor of three screws was that either propeller could be disconnected from its engine and left free to revolve, thus retarding the speed of the ship but very slightly when she is propelled by two engines. In moderate cruising only one engine would be necessary and this could be driven at its most economical speed. It was estimated that one screw would drive the ship at the rate of 15 knots and two at the rate of 18 to 19 knots.

The Steel Rail Situation

From the chaos into which the steel rail trade was plunged for a brief period has arisen a new organization, which has rectified the cardinal error of the association whose life ends with this year. That error, it is frankly conceded, lay in the failure of the combination to follow downward in price with the declining market of raw material. As we stated in our recent review of the history of the old association, the price ruling when it was formed was fair alike to producer and consumer. Public expression of that fact was given repeatedly by representatives of the latter, and by the excellent technical papers which represent that interest.

We have pointed out that starvation prices are in the long run as dangerous to the best interests of the consumer as they are destructive to the weaker producer and crippling to the stronger makers. The selling prices named lately simply meant the abandonment of rail making by some of the concerns, and threatened to render the producing capacity inadequate in future periods of a suddenly expanded demand.

The war begun during the past few weeks promised to crowd down values to unprecedented figures, and sundry writers jumped at the conclusion that it would not stop until an assumed cost had been reached. A good deal of wisdom was aired as to what figure represented that cost, Pittsburgh reaping the distinction of being the victim of these calculators with the price of billets as the basis. Aside from the circumstance that pretty wild guessing was indulged in, the fact was ignored that conditions are very different in other parts of the country.

We understand that the arrangement entered into during the past week is that the mills of the Maryland Steel Company and the Pennsylvania Steel Company have been leased by the other concerns, to be held in reserve until the demand makes it necessary to draw upon their capacity. The mills are now quoting $24, f.o.b. This, it will be observed, is an adaquate concession to ruling circumstances so far as the price of raw material is concerned. It allows all the mills a moderate profit, considering that they are only partially employed, and is entirely fair to the railroads, who get their material cheaper than ever.

So far as the general iron trade is concerned this announcement will be received with some satisfaction, since it promises to give tone to the soft steel market, through the stoppage of operations at the Maryland works. We have heard rolling mill owners of national reputation assert that they would rather pay producers of soft

Hosted by Google

steel billets a price representing a living profit than have the trade in the demoralized condition in which it has been for some time past.

A Heavy Drop in Molders' Wages

The Western foundry trade has been badly demoralized by the dearth of business since last spring. It will be remembered that but a short time before the financial panic, yet with indications of commercial congestion plainly visible, the molders undertook to force an advance in wages. The stove molders, wiser than their brethren in other lines, receded from this position, but the machinery molders and workmen in jobbing foundries went ahead, contrary to the advice of disinterested persons. The foundrymen who were caught with partly filled contracts, or those whose financial condition would not permit them to shut down, yielded to the molders' demands, although in the majority of the foundries affected the employers made a successful resistance. Probably the condition of the foundry business during the summer might not have been any better if this fight over wages had not occurred. The depression in trade was due to other and more general influences. But bitter reflections must nevertheless come to the leaders now when they see to what straits their followers have been reduced. At a time when they might have been earning very fair wages they chose to be idle. Since then they have been forced into more prolonged idleness by the total lack of employment. Work is now being resumed in the foundries in a half hearted fashion, and those workmen are esteemed lucky who are able to get partial employment at low wages. It seems like a cruel punishment on men who were not satisfied when they were fairly remunerated, but demanded "more." Instances are known in which molders who were successful last spring in establishing a minimum of $2.75 per day are now working for $1.25, and are glad to get even that. This is not in some hamlet where living is cheap and wages are never very high, but in the city of Chicago. The class of work done by them is not such as requires a high order of skill, it is true, but the drop in the earnings in this line has been very great to occur within nine months. It will take a long time, we fear, for matters in this branch of business to work up to their old level of prosperity for both employers and employed.

Last year about 1,250,000 tons of cotton seed were crushed in the United States, from which were extracted 1,000,000 barrels of oil. A Southern journal shows where the bulk of this product goes, as follows: Chicago pork packers buy 300,000 barrels, most of which is made into lard. Maine sardine packers use 20,000 barrels. Between 50,000 and 100,000 barrels are consumed by various soap makers. Between 200,000 and 300,000 barrels go to Europe, where it is made into "butter."

Washington News.

(From our Special Correspondent.)

WASHINGTON, D. C., November 21, 1893.

The tariff, Hawaii, silver and other problems of state are forgotten for the moment in the exuberance of national pride in Government circles over the triumphs of American nautical skill achieved in the cruiser "Columbia." The acknowledged hero in this peaceful conquest on warlike lines is Commander George W. Melville, Engineer-in-Chief of the United States Navy. The acknowledgment of the fact is the telegrams of congratulation from naval and marine engine experts in the United States, England, France, Germany and Russia, and naval officers and departmental officials, and attaches of foreign embassies and legations at the American capital. Commodore Melville was promenading back and forth in his spacious official apartment, as is his wont when not indicting professional or official papers at his desk. He is a man without frills. Speaking of the "Columbia," "the modern gem of the ocean," the commodore said in his usual quiet way: "Her engines were designed for 21 knots, with a surety of 22 knots, a possibility of 22¼ knots and an outside speed of 22½ knots. They have exceeded even these liberal judgments of the calculations. The whole run of the 'Columbia' over her whole course as telegraphed to the department was 22.85 knots. In my opinion 25 knots was a mistake.

"The speed attained by our warship exceeds that of the ocean greyhounds the 'Campania' and 'Lucania,' built in England by the Fairfield Engine Building Company. They have made 22 knots for the whole trip. Therefore the 'Columbia' is the fastest ship in the world to-day, merchant or naval.

"The phenomenal burst of speed, 25 knots, accredited to the 'Columbia' over the short distance, 8 knots between buoys, must have been due to buoys shifting or drifting.

"I had an intimation from her experimental trip that she could make 23 knots over the whole course, but it was necessary on the official trial to slow down engines on account or foaming water, probably from grease or dirt in the boilers.

"Ten blowers drive into each fireroom, really a large air tight box in which the boilers are placed, 20,000 cubic feet of air.

"The triple screw had been tried by Italy, Germany and France. The French ship 'Dupuy de Lome' was particularly important, as for two years she has been trying to run off her steam trial. At last accounts they intended to remove her boilers. The German ship 'Kaiserin Augusta,' 6000 tons, with her three screws, made a maximum of 20 knots, and was considered fairly successful, but she has not the reserve of power to in any way approach the speed of the 'Columbia.' The Italian ships are small. The three screws on both these ships are on the same horizontal plane.

"The advantage claimed by the Bureau of Steam Engineering Navy Department is that the position of the three screws are not on the same plane in any direction. In the first place, the two side screws are spread from forward to aft, giving room for the screws to work in solid water and avoid the friction of the hull. They are also placed as far forward of the center screw as the formation of the hull will permit. The center screw is placed lower down and inclined downward from forward to aft.

"Yes, I realize it was a bold stroke, but I was convinced that by a proper distribution of the screws it would be a success. The venture was made in the face of many persons in authority and the engineering world, and I presume if it had not been a success I would have met the common fate; but the application has been a success in efficiency and economically.

"The engines are our type of triple vertical overhead expansion. Two screws with the same power should produce the same results if it could be applied. A large ship is easier to drive, horse-power per ton, than a small one. The 'Columbia' is 7000 tons.

"The engines of the 'Columbia' were designed wholly in the bureau, but the Cramps deserve the highest praise for accuracy of workmanship. They deserve their premium, whether $350,000 or $400,000, if they get 23 knots.

"Yes, I think the limit has about been reached. The speed can be increased if that alone is required, but a man of war must be a compromise. Too much speed detracts from her other qualities. Such ships must be designed as fighting machines and for celerity of handling in close quarters or entering harbors."

Chief Naval Constructor Hichborn said: "The question of speed, of course, is a problem of steam engineering, but the building of a hull which will produce the best results from a given amount of power and stand the enormous strain belongs to construction. In the designing of the 'Columbia' it was known beforehand that the very highest rate of speed attainable consistent with the purposes of the ship were desired, therefore all the calculations were pointed that way. It was the aim to avoid all useless weights and to apply increased strength where strength was required to meet the great forces to be encountered under a high rate of speed. The lines were also laid with a view to speed. The 'Columbia's' hull went through the ordeal magnificently and comes out without a strain. The 'Campania,' the ocean greyhound, as she is called, a British built ship, when driven 22 knots an hour on her trial, was so torn and strained that she had to be sent back to the contractors, and her designers, I understand, were dismissed. The 'Columbia's' hull will be a model for the study of our foreign friends, and Melville, with his machinery, got out of the lines all the speed there was in them."

OBITUARY.

ALBERT TRACY CONVERSE.

Albert Tracy Converse, a resident of Norwich, Conn., and one of its best known and most respected citizens, died on the 16th inst. at his residence in that city, of pneumonia. Previous to 1840 he conducted an iron foundry known as the Phœnix Foundry, when he went to California, where he made the first casting ever made in San Francisco. There he was appointed United States Lighterman, having charge of transportation to the Custom House of all the dutiable goods discharged from foreign ships at anchor in the harbor. In 1856 Mr. Converse became a partner in the Arcade Malleable Iron Company

Hosted by Google

of Worcester, Mass., and after his establishment at Norwich in the hardware and iron business in 1860 he carried on large business interests in the former city. He was in his seventy-first year.

JOHN P. CHATILLON.

John P. Chatillon, of John Chatillon & Sons, scale makers, who, it will be remembered, left New York in search of health November 17, 1892, on the "Fuerst Bismarck" for Naples, died in Paris Friday, November 17 last, in his forty-ninth year, of Bright's disease, just a year from the time he left here. His body will arrive in this city by the steamer "La Bourgogne," leaving Havre November 25. The funeral service will be held in St. Ann's Church in East Twelfth street, New York, due notice of which will be given. A more extended reference to Mr. Chatillon will be given in these columns later.

GEORGE SELDEN.

George Selden of the Erie City Iron Works, Erie, Pa., is dead. He was born at Lynn, Conn., served in the East India trade, was among the successful forty-niners, and in the late fifties engaged with Col. John H. Bliss and others in the Erie City Iron Works.

FRANK F. CLEVELAND.

Frank F. Cleveland, secretary and treasurer of the Erie, Pa., Engine Works and president of the Union Iron Works, died on the 20th inst. after a lingering illness. He went to Erie when a lad, and from a bank clerk engaged in the engine building business, in which he was very successful. Two years ago he was poisoned by inhaling fumes during the burning of his residence and he never recovered from its effects.

MANUFACTURING.

Iron and Steel.

Work on the new Bessemer plant now under construction by the Ohio Steel Company, at Youngstown, Ohio, is progressing favorably, 300 men being employed at the present time. Much of the machinery has arrived, and the work of putting it in position will be pushed without delay. The foundations of the two large engines are also nearly completed.

The Fox Furnace Company were organized at Columbia, Ohio, last week, with a capital stock of $35,000. The incorporators are F. B. Fox, Aldin Guilford, Thomas E. Henry, E. C. Fox and Chas. H. Henry, all of Cleveland, Ohio.

It is probable that the mill of the Wilkes Rolling Mill Company, at Sharon, Pa., which has been idle four months, will start up within a few days.

The Catasauqua Mfg. Company, Catasauqua, Pa., have started up two of their mills.

The Ashland Coal & Iron Company, Ashland, Ky., have reduced the wages of their furnacemen from 10 to 20 per cent. The cut was accepted.

King & Andrews Company, 218 North Union street, Chicago, have added to their foundry a plant for the manufacture of semi-steel by the McDowell process. This department is known as the Semi-Steel Company. They have contracts with the Standard Oil Company, Wheeler & Tappen and the North Chicago Street Railway Company. The department operated as the Semi Steel Company will manufacture semi-steel, ferro aluminum, bronze and anti-acid castings. The company have issued a circular covering these specialties and noting their qualities and uses.

The Carpenter Steel Company of Reading have paid a dividend of 1½ per cent.

It is announced that the Irondale Rolling Mill, recently burned at Anderson, Ind., will be rebuilt at Middletown, Ind., providing a bonus of $50,000, 8 acres of land for a site and a gas well is given.

The puddling department of the Passaic Rolling Mill, at Paterson, N. J., which closed down some time since, has resumed operations.

Potts Brothers Iron Company, Limited, Pottstown, Pa., have started their rolling mill after a stoppage of three months.

At New Haven, Conn., the New Haven Rolling Mill has started up with a full force after an idle summer, and a noticeable improvement has also taken place in the business of other industrial establishments of that place. The city presents a more businesslike appearance than for many months past.

The Columbia Rolling Mill Company, at Columbia, Pa., have reduced the price paid for puddling to $3 per ton and other work in proportion. The company state that this action was necessary in order to compete with mills paying $2.50 and $2.75 for puddling.

The entire plant of the West Hamburg, Pa., Rolling Mill has been dismantled.

The Malleable Iron Works, at Chattanooga, Tenn., which recently went into receivers' hands, will be kept in operation and there will be no reduction in the force of workmen. One of the receivers states that the concern is a paying one, and the appointment of receivers was only due to a temporary embarrassment.

A press dispatch from Anderson, Ind., dated November 16, says that William Chambers, superintendent of the Anderson Steel Casting Company, has brought suit in the Circuit Court asking for the appointment of a receiver. The capital stock of the company is $50,000, with liabilities amounting to $20,000.

The schedules of Frank L. Froment, iron and steel commission merchant, at 446 West street, New York, show direct liabilities, $90,464; contingent liabilities, $26,126; nominal assets, $103,403; actual assets, $40,644. The principal creditors are A. & P. Roberts, Philadelphia, $36,237; Mary E. Bacon, Boston, $10.000; Thames Iron Works, Norwich, Conn., $5432; William Clark's Son & Co., Pittsburgh, $4405; Susquehanna Iron Company, Columbia, Pa., $6320; Columbia Iron Company, Columbia, Pa., $2716; Lebanon Rolling Mills, $2500.

In open hearth mill No. 2 at the Homestead Steel Works, Homestead, Pa., two new open hearth steel furnaces are being constructed. It is stated that the hot metal route which has been in operation for some time carrying hot metal from the Edgar Thomson blast furnace at Bessemer to the Homestead Steel Works has not been as successful as anticipated by the firm and will be abandoned. Considerable money was spent in building it, and now that it has been decided to abandon it, it is not improbable that the long deferred question of building additional blast furnaces either at Duquesne or Homestead will again be considered by the firm.

The James P. Witherow Company, engineers and contractors, of Pittsburgh, whose works are located at New Castle, Pa., will shortly start up this plant, which has been idle for two or three months. It is stated that the firm have secured sufficient orders to warrant a partial resumption of operations.

We are advised that the report in circulation at Pittsburgh last week to the effect that the Carnegie Steel Company, Limited, had purchased the Lower Union Mills of the Oliver Iron & Steel Company in Allegheny, Pa., is without foundation.

At the Homestead Steel Works, at Homestead, Pa., 1500 horse-power Babcock & Wilcox water tube boilers are being installed, also 500 horse-power of the same type of boilers at Lucy Furnaces, Pittsburgh.

The plans of the reorganization of the West Superior Iron & Steel Company, at West Superior, Wis., are said to call for an expenditure of $1,500,000. The proposed additions include an open hearth furnace, blast furnace and coke ovens.

Lawrence Furnace of the Lawrence Furnace Company, at Ironton, Ohio, which has been idle for some time, has again resumed operations.

The Malleable Iron Works, at West Troy, N. Y., which have only been running one furnace during the past two months, started another furnace November 16, to be followed soon by another.

Extensive improvements and additions will be made to the plant of the Pomeroy Rolling Mill, Pomeroy, Ohio, owned and operated by the Union Iron & Steel Company of Youngstown, Ohio. Lately a railroad has been built into Pomeroy, and it is claimed the prospects of this plant running full time in the future are considerably improved in consequence.

It is stated that Vesuvius Furnace of the Ironton Coal & Iron Company, at Ironton, Ohio, which has been idle for some months, will be started up about the first of the year.

The plant of the Oil City Tube Company, at Oil City, Pa., has gone on full time, giving employment to about 300 men.

An effort is being made to interest the citizens of Trenton, Mo., in the erection of a rolling mill. There is an abundance of coal in that vicinity, scrap iron can be had cheap, and the projector of the enterprise, whose name is I. L. Morris, thinks it is a good location for the manufacture of sheet iron or tin plate. The prominent business men of Trenton have been strongly impressed by the facts presented for their consideration.

The Morewood Company, manufacturers of tin plate, at Gas City, Ind., are represented in Chicago by Saunders, Fielding & Bond, Room 419 Ashland Block, corner of Clark and Randolph streets. The company are now making several brands of bright and roofing plate, but have been hampered hitherto by the deficient supply of black plates. They started their tinning pots first, and have been purchasing plates in Pittsburgh, as well as importing from Great Britain, but in a very short time they will have an independent source of supply in their own rolling mills, which are now completed at Gas City and will be run slowly until the machinery is found to be in proper condition for regular work.

Corporate articles have been filed with the county recorder at Des Moines, Iowa, by the Mexican National Iron & Steel Company, with capital stock of $3,000,000. Richard Honey is president, J. R. Barcroft, vice-president; James McCaughan, secretary, and Thomas Phillips, treasurer. The other incorporators are A. A. Robinson, J. H. Hampson and J. G. Rounds. The company have leases upon 40,000 acres of land near Durango, and own numerous mines and the furnaces and rolling mills which were formerly owned by the Durango Steel & Iron Company, and which it is intended shall be put in operation.

The Andrews Bros. Company of Youngstown, Ohio, have resumed operations in all departments and are now supplying the trade with iron and steel bars, bands and hoops to 16 gauge inclusive, and light sheets, together with Haselton, Scotch and Haselton strong pig iron. During the long shut down the rolling mills were thoroughly repaired and improvements were also introduced which will enable the company to serve the interests of their patrons even better than before. John McLauchlan is Western manager, at 59 Dearborn street, Chicago.

The Whitaker Iron Company, at Wheeling, W. Va., manufacturers of black and galvanized sheet iron, advise us that the plant will be rebuilt on a larger scale as soon as the insurance has been adjusted.

Last week one lap weld furnace in the plant of the Duquesne Tube Works Company, at Duquesne, Pa., was put in operation, giving employment to about 150 men. This week it is expected that one butt weld furnace will be started up, giving employment to a large number of additional men. This firm have quite a number of orders on hand for boiler tubes, of which they make a specialty, and expect to keep their plant in operation throughout the winter, though not to full capacity.

Wallace, Banfield & Co., Limited, operating the Irondale Rolling Mills, at Irondale, Ohio, manufacturers of tin and terne plate, are operating their entire plant to its utmost capacity, three turns of eight hours each being the rule. The firm have met with gratifying success since they embarked in the manufacture of tin and terne plate, and have had a ready sale for their product right along as fast as it could be turned out. They are running on orders only, and find it necessary to operate their plant as noted above in order to keep pace with the demands made upon them by the trade for their plate.

This week two sheet mills at the plant of the Ætna-Standard Iron & Steel Company, Bridgeport, Ohio, will be laid off, and other departments will be closed down unless an agreement is reached with the Amalgamated Association on the wage scale governing sheet mills.

The night turn at the Beaver Falls Mills, Beaver Falls, Pa., has been discharged.

Hosted by Google

This turn was engaged in filling orders for shipment, and these orders running short the services of the men were no longer required.

A portion of the plant of the American Tube & Iron Company, at Youngstown, Ohio, which has been entirely closed down for some months, was put in operation last week. Should business continue to improve other departments of the plant will be started up.

The 18-inch train at the Albany Iron Works, Troy, N. Y., was put in operation November 16. The Belgian and 14-inch trains are also running, giving employment to more men than have been on duty at the big plant for many months.

The Hamilton Iron & Steel Company, Limited, have just been organized at Hamilton, Ont., Canada, with a capital stock of $1,000,000, divided into 10,000 shares of $100 each. The objects of the company are to mine, operate blast furnaces and steel works. The city of Hamilton has donated the company a suitable furnace site, on which they intend to build, and have, in fact, already commenced on the foundations a furnace, 18 x 75 feet, of the very latest type, including compound cross condensing engine, hot blast stoves of the Gordon-Cowper-Whitwell patents, and all the latest improvements of a first-class furnace plant, expecting to make at least 200 tons per day. They will use Connellsville coke, but all the ores will be native, which are found in Ontario, the promoters state, in great abundance, suitable for both the manufacture of foundry and Bessemer pig. Later on the company intend to build a steel plant in connection with the blast furnace for the manufacture of steel in all shapes for the market. New York and Hamilton and Toronto parties are interested in the project, the officers being Wm. Foster, Jr., president, New York; John H. Tildon, vice-president, Hamilton, Ont.; J. J. Morehouse, treasurer and general manager, New York, and H. M. Curtis, secretary, New York.

The works of the H. M. Myers Company, located at Beaver Falls, Pa., manufacturers of shovels, spades, scoops and drain tools, which have been closed down for several months on account of the severe business depression, will resume operations to nearly full capacity about December 1 next. Indications are that prices of shovels and other similar goods will be somewhat lower this year than last season. Notwithstanding this, however, the above firm propose to maintain the high standard of excellence in finish and quality of their goods.

The Carpenter Steel Company, Reading, Pa., have sufficient Government contracts on hand for steel armor piercing projectiles to keep their plant in operation to full capacity well into the future. Some additions to equipment have recently been made by this concern, included in which is a large steam hammer.

William Kemp and James Keenan, the receivers for the Troy (N. Y.) Steel & Iron Company, have sent out circulars inviting interested parties to submit bids for the plant, which they now intend to dispose of, if possible. The bids will be received and opened December 13, but it is possible that the sale will not be consummated at that time, as the circular is mainly to obtain an idea as to whether a suitable price can be obtained.

There is a project on foot to build a rolling mill for making iron and steel sheets at a point on the Missouri River near Clinton, Iowa.

Ninety tons of black and galvanized sheets are kept out of the market each day in consequence of the recent destruction by fire of the plants of the Irondale Steel & Iron Company, Anderson, Ind., and the Whittaker Iron Company, Wheeling, W. Va.

A company has been formed and active steps taken toward the erection of a sheet mill plant near Saltsburg, Pa., to consist of four light mills. A. Gourley, superintendent of P. H. Laufman's sheet mills, at Apollo, Pa., is the leading spirit in the enterprise.

During October there were 3609 names on the pay rolls of the Pennsylvania Steel Company, at Steelton, Pa. On Saturday, November 18, $58,500 were paid to the employees of this concern for two weeks' wages.

The fourth sheet mill of the Cambridge Iron & Steel Company, Cambridge, Ohio, was put into operation last week. This mill had been idle many weeks in consequence of dullness in the market. Revival of trade in galvanized sheets caused its resurrection. This company now have two galvanizing pots running steadily.

It is stated that a movement is on foot for the transfer of the interest of the Pottstown Iron Company, Pottstown, Pa., from the receiver's hands to the old firm. The basis of settlement will be that the creditors will receive one-half of the money in 5 per cent. bonds and the other half in preferred stock. It is stated that a paper is now being circulated among the creditors for their signatures to the above agreement and February 1 is set as the time for the transfer to be made.

The Edgar Thomson Steel Works, at Bessemer, Pa., has been closed down and the reason given for the suspension of work at this time is that it is desired to make the usual annual repairs.

Machinery.

The Scott Foundry & Machine Company, Reading, Pa., have secured an order from the Wm. Cramp & Son, Ship Building & Engine Company of Philadelphia for eight massive plates weighing 35,000 pounds each for the compound triple expansion marine engines to be used on the two new ocean liners now building for the American Steamship Company.

H. K. Porter & Co. of Pittsburgh, builders of light locomotives, will shortly commence the erection of a new brick machine shop 72 x 135 feet in size and two stories high. A new office building to cost $5000 will also be built by this firm.

The Biggs Boiler Company of Akron, Ohio, make a specialty of the manufacture of steam boilers and rotary bleachers. This firm have secured some fair sized orders recently and report the outlook for the future as much improved.

The Spicer Mfg. Company, New Philadelphia, Ohio, recently shipped two carloads of nail machinery to the Superior Barb Wire Company, Dekalb, Ill., consisting of nail cleaning barrels of 25 keg capacity, saw dust separators, sheet iron hoppers, counter shafts and nail trucks.

The new roll turning shop under construction for some time by the Leechburg Foundry & Machine Company of Pittsburgh has been completed. This shop is equipped with roll turning lathes of modern design and large enough to turn the largest rolls used. This firm have recently awarded a contract to the Buffalo Forge Company, Buffalo, N. Y., for a 100-inch fan to heat the shop with hot air. The same firm have also placed an order with the Lodge & Davis Machine Tool Company of Cincinnati, Ohio, for one of their large radial drill presses.

The New Doty Mfg. Company, makers of punching and shearing machines, Janesville, Wis., have kept their shops running continuously during the last few months, but with a reduced force and on shorter time. The improvements which the company contemplated making to their plant have been postponed until better times.

The Bates Machine Company of Joliet, Ill., have made a very creditable record this year. Not a day was lost on account of the financial stringency or the depression in business. Their working force was reduced to some extent, but not very seriously. Their output for the year will average an engine a week, ranging from 75 to 1500 horse-power, besides other work. They have recently furnished a number of electric street railroads with engines, the demand from that class of trade having been the heaviest.

The Bridgeport Crucible Company, Bridgeport, Conn, whose plant was destroyed by fire a short time since, will rebuild at once. The company have been doing a prosperous business and should they rebuild a larger plant will be constructed than the one destroyed.

Dean-Whiting Elevator Company, 140 Union street, Worcester, Mass., have recently purchased the stock, tools, &c., of the Worcester Hydraulic Mfg. Company and will carry on the business of manufacturing hydraulic elevators and dumb waiters, in connection with their former lines. Seven of these hydraulic dumb waiters have been shipped to the insane asylum at Northampton, Mass.

The Coventry Machinist Company, Coventry, England, have closed up their offices in Chicago and Boston and in the spring will open a general office in New York.

Application has been made to Justice McLennan of the Supreme Court, Syracuse, N. Y., by Edward Nottingham, attorney for the Phœnix Foundry & Machine Company, for the appointment of a receiver for the affairs of that concern. The motion for a dissolution was a surprise, but was decided upon by the Board of Directors. A. Caldwell Belden was made receiver. All debts will be paid in full and the company will wind up their business. The capital stock of the concern is $60,000. The assets are set down at $239,031, the actual liabilities at $167,248 and contingent liabilities at $26,680. The Phœnix Foundry & Machine Company were organized in the spring of 1881, succeeding the firm of Cobb, Herrick & Co., who carried on the same business at the same place. The plant was very complete. The company manufactured engines and boilers. Alvin J. Belden managed the business. All of the property will be closed out.

Batt, Bonnell & Thompson of 34 Dey street, New York, have been appointed agents for New York State for the Philadelphia Drop Forge Company, makers of drop forgings in iron, steel, copper and aluminum.

The Eady & Maddox Machine Works have been incorporated at West Point, Ga., with a capital of $15,000, by T. J. Eady and J. H. Maddox of that place.

The foundry and machine shops of A. G. Morris have been started at Harrisburg, Pa.

The Belknap Motor Company, Portland, Maine, have recently secured an order for a 500-light dynamo and plant for the Vermont State Insane Asylum, at Waterbury, Vt.

Among recently authorized corporations in Illinois are the following: Northern Illinois Coal Company, Chicago; capital stock, $100,000; incorporators, H. E. Bell, Albert Phalen and W. E. Waite. Owens Brass & Copper Works, Chicago; capital stock, $10,000; incorporators, Nathan C. Moore, William B. McIlvane, Max Baird. Southwestern Construction Company, at East St. Louis; capital stock, $100,000; incorporators, Adiel Sherwood, Charles Voyce and Joseph P. O'Connor. The Challenge Machinery Company, at Chicago; capital stock, $30,000; incorporators, Walter Birdsall, Theodore Johnson and W. D. Latimer.

Pedrick & Ayer of Philadelphia report that they are now in operation, running 10¼ hours per day, with about half the regular force at work. They find that orders for railroad tools are coming fast enough to warrant running continuously. The firm are now under the management of James M. Hibbs, as assignee, pending the formation of a new company of which Mr. Pedrick will be one of the largest stockholders, Mr Ayer going out and Mr. Pedrick managing the mechanical part of the business, as heretofore.

P. Pryibil, whose machine shops on West Forty First street, New York, were recently burned, has taken out a building permit for a five story brick structure, to cost $20,000.

Hardware.

Bucher & Gibbs Plow Company, Canton, Ohio, have resumed operations in nearly all departments at an average reduction of 20 per cent. in the wages of employees. About 400 men have been given employment.

The employees of Reynolds & Co., New Haven, Conn., who have for some time been working three days a week, have begun to work four days a week at seven hours a day.

The Howe Scale Company, Rutland, Vt., have commenced to run 7½ hours a day and six days a week.

The plant of the McDonald Mfg. Company, manufacturers of tinware, Montreal, P. Q., was damaged by fire on the 8th inst. The loss foots up $40,000, on which there is an insurance of $27,000.

The Chicago Emery Wheel Company, Chicago, have filled a certificate of an increase in capital stock from $10,000 to $50,000.

The implement manufactory of Selby, Starr & Co., Peoria, Ill., has resumed operations. They have started up with a reduced force of men, but the management expect to be under full headway in a short time.

All the handle finishers employed by Landers, Frary & Clark, New Britain, Conn., have resumed work. They have been out for four months.

On the evening of the 15th inst. there was a slight fire in the office of the Pennsylvania Bolt & Nut Works, Lebanon, Pa.,

Hosted by Google

but it was fortunately extinguished before damage of any account occurred. It is supposed that the fire originated from the steam pipes.

The Eagle Lock Company's works, at Terryville, Conn., are now running five days a week instead of four days, as heretofore.

Andrew Terry & Co., Terryville, Conn., are running five days per week.

C. S. Weber & Co., 415 Broadway, New York, sole agents for the American Wire Glass Mfg. Company, Tacony, Pa., have just closed two large contracts for wire glass. One contract calls for 6000 square feet of ¼-inch thick wire glass, to be used as a roof for the New York Post Office. Geo. Bickelhoupt is furnishing the skylight work. Another large contract calls for 1700 square feet of ¼-inch thick wire glass, for two of the largest skylights ever designed or used in New York. They were designed by Architect Stephen D. Hatch, and the contract for the work was awarded to Geo. Hayes, the expert on fire proof construction.

R. G. Surbridge, formerly president of the Surbridge Mfg. Company, Hagerstown, Md., manufacturers of cycles, has acquired the entire interest of all the other stockholders in the company, and is now handling it as an individual business. They are making some changes in and additions to their plant, and their capacity for the coming season will be largely increased.

The Consolidated Lamp & Glass Company, Pittsburgh, Pa., have just closed negotiations with the Fostoria Shade & Lamp Company, Fostoria, Ohio, for the purchase of their plant and business. Arrangements have also been made for the purchase of the business of the Wallace & McAfee Company, Limited, Pittsburgh.

The Cortland, N. Y. screen factory is putting in a new 200 horse-power Harris & Corliss engine similar to the one used in the Cortland Wagon Company's plant.

The works of the Youngstown Carriage & Wagon Company, at Youngstown, Ohio, which have been running to half capacity or less for several weeks, will go on full capacity about December 1, giving employment to a large number of additional men.

It is stated that some Eastern capitalists have acquired possession of the old hob nail works at Bridgewater, Pa., and will establish a plant there for the manufacture of tin and terne plate.

J. P. Turner, 40 and 49 Cortlandt street, New York, who puts up lightning rods of all kinds, also weather vanes, bannerets, finials, &c., says he has no cause for complaint as regards trade. He is busy at present with a dozen houses in a North River town, and will commence on a large hospital in Elizabeth, N. J., at once, in addition to other work in hand. Among some satisfactory contracts just finished he mentions the lightning rod equipment for the two power houses and tall chimneys of the Third Avenue Cable Road in this city, Edison Building in Newark and a cathedral in Jersey City, N. J.

The Hatch Cutlery Company of South Milwaukee, Wis., have filed an amendment to their articles of incorporation, adding $100,000 to their capital stock, the latter to be preferred stock, upon which a dividend of 7 per cent. per annum is to be paid out of the first net earnings of the company, such dividends to be cumulative.

The Woodman-Cook Company, successors to Stevens, Woodman & Co., Portland, Maine, have since last January, when the change in firm style took place, nearly doubled their facilities for manufacturing. They advise us that although the season has been a dull one they have been running constantly with the exception of two weeks in July, and have been running evenings since September 1 endeavoring to keep up with their orders. They are employing about 30 skilled workmen. They are manufacturing britannia ware to some extent, but their business is mostly in silver plated ware. They do not issue a catalogue, but sell mostly from photographs or samples. A department of the plant is devoted to the repairing and replating of damaged, defaced or otherwise injured plated ware.

J. W. Fiske, 39-41 Park place, New York, has recently manufactured for the Hotel Waldorf a number of iron vases to contain flowers, shrubs, &c., to be placed around the building just inside the street walks. They have been made from special designs, and are not to be sold to any other hotel in this city. The vase represents an acorn cut in two horizontally, this emblem being a portion of the Astor coat of arms. The acorn rests on the rustic stump of an oak tree. It is also made with a square base to set low.

The plant of the Century Cycle Mfg. Company, successors to the Standard Mfg. Company, Indianapolis, Ind., is now in operation and they are turning out some of their Arrow wheels preparatory to the spring trade. The Arrow is referred to as a strictly high grade machine.

Bennett Mfg. Company, 19 Pearl street, Boston, Mass., manufacturers of the Bennett sash fast, advise us that their fast is meeting with favor. To supply the demand the company are about to enlarge their plant and capital.

Shoenberger & Co., Juniata Iron & Steel Works, Pittsburgh, Pa., are meeting with a gratifying demand for their various brands of steel horseshoes, their sales in this direction showing constant increase. During the past three or four months this firm have operated their horseshoe department to full capacity, shipping the product about as fast as made. A pamphlet recently issued by this firm contains interesting information regarding steel horseshoes.

The Pittsburgh Plate Glass Company have released all of their employees at Ford City, Pa., from payment of house rent during the months that the works were idle. Although it had been previously decided to retain a month's rent from the monthly wages until all should be paid, as was done when the last pay was made, the firm have reversed their decision to correspond with the above.

Miscellaneous.

The Southern Pacific Railroad Company will build a new cotton shed at New Orleans, 120 feet wide and 350 feet long. They have placed the contract with the Berlin Iron Bridge Company of East Berlin, Conn. The building will be entirely of iron, the sides being made with the Wilson patent rolling shutters.

It is stated that the Watsontown Car Works, Watsontown, Pa., may be removed to Williamsport.

The prospects are that the plant of the Gilbert Car Mfg. Company of Green Island, N. Y., will continue to run regularly. It is understood that the creditors will be asked to assign their claims to the committee appointed and let them run the plant until the debts are paid, rather than to sell the plant at much less than its value.

The Commodore Mining Company, with a capital of $100,000, were granted a charter of incorporation last week. The principal offices of the new concern will be located at Cleveland and the company propose to lease mines, mine ore, ship and sell it and to own cars and vessels for its transportation. The incorporators are James Corrigan, Franklin T. Ives, Stenveson Burke, Ernest T. Laydon and Price McKinney, all of Cleveland, Ohio.

Two blocks of the oxide department of the Lehigh Zinc & Iron Company, at South Bethlehem, Pa., have started up after being idle for several weeks.

The Bullard Foundry, at Poughkeepsie, N. Y., has been destroyed by fire.

The Baldwin Locomotive Works, Philadelphia, have started up on full time to complete a number of engines, work on which was suspended during the recent stringency, and which the company have lately been instructed to complete. While the present limited force will not be increased, the men will work 60 hours per week instead of 32.

The tin plate department of the Niedringhaus plant, at St. Louis, Mo., which has been shut down for some time owing to a break in the machinery, has resumed. Between 700 and 800 men were given employment in this department of the works.

A dispatch from Joliet, Ill., says that the plant of the Windsor Wire & Spring Company has been seized by the Sheriff to satisfy a claim of $15,103.

The Wharton Switch Works, at Jenkintown, Pa., have, for the first time in the career of the concern, been compelled to shut down in every department owing to the lack of orders.

The Brooke Locomotive Works of Dunkirk, N. Y., are employing only about 100 men, as against a force of 1300 men during prosperous times. The shut down is not occasioned from lack of orders, it is said, so much as from inability to secure ready money for finished work. There are but few manufacturing concerns in Dunkirk in operation, and the streets are thronged with idle men, who are without any hopes whatever of securing work through the winter.

It is stated that the Holland Radiator Company of Bremen, Ind., have erected a branch works at Avonmore, Pa., some 40 miles from Pittsburgh.

The Lebanon Mfg. Company, Lebanon, Pa., who have given steady employment to their workmen throughout the season, at present have but 20 cars to build, and as these will be completed in three days it is almost certain that from 150 to 175 men will be added to the army of Lebanon's unemployed.

On Monday, the 20th inst., the Bucher & Gibbs Plow Company, Canton, Ohio, manufacturers of chilled and combination hand and sulky plows, resumed operations in all departments at an average reduction of 20 per cent. in the wages of employees. This resumption of operations puts only a part of the force of the above firm to work at present, the basis of earnings being from $2 to $3 per day.

The new and extensive plant of the Union Car Company, at Depew, N. Y., affords a striking example of the suddenness with which this enterprising suburb of Buffalo has sprung into existence. Although only begun in May last the company's works, occupying a tract of 50 acres and covering nearly 300,000 feet of ground, are already nearly completed and ready for operation. Briefly considered the works comprise the following group of buildings: Wood working shop, 100 x 400 feet, with a wing 80 x 120 feet, designed as a planing mill; the blacksmith or iron department, 100 x 400 feet; truck shop, 100 x 120 feet; power house, 60 x 150 feet, containing a Hamilton Corliss engine of 1000 horse-power; two erecting shops, 130 x 340 feet each, with a capacity of 50 cars each; two paint shops, also 130 x 340 feet each, with a capacity of 75 cars; the wheel and axle shop, 30 x 300 feet, the pattern shop being situated on the second floor, and the car wheel foundry, 125 x 400 feet, with a capacity of nearly 400 wheels a day. It is understood that the company will start up their works as soon as there is any demand for cars, beginning with a small force and gradually increasing their capacity as required.

The Cost of Mesaba Ore —A good deal of figuring is going on on the cost of putting down Mesaba ore at Cleveland and other lower lake ports We understand that at the large mines the cost of delivering the ore into cars, including stripping, &c., is from 25 to 30 cents per ton. The royalty ranges from 50 to 65 cents. The freight to Duluth is 80 cents, the only item in which there is some chance for reduction. The freight from Duluth to Cleveland has been as low as 95 cents to $1. Under the most favorable circumstances, therefore, the cost of delivering the ore would be $2 50 to $2.75 per ton, or for 60 to 65 per cent. ore 4 16 to 4 59 cents per unit. Since none of the mines of the other ranges can come near these figures, and since the Mesaba cannot supply more than a moderate share of the whole demand, it is utterly useless to expect that values as low as $2.75 for ore can become general next season. It is reported that the Rockefeller interest has control of about 300,000 tons of ore for next year's delivery at $2.05 per ton. This could, of course, be used quite effectively to keep prices low, and so dishearten the owners of other mines that their control would pass into the hands of the Standard Oil interests.

The Sheet Mill Scale.—The latest advices indicate that a settlement has been reached between the Amalgamated Association and the Western sheet iron manufacturers. A proposition was accepted to continue the weighers' and catchers' wages at $2 25 per day, the rollers assuming the 10 per cent. reduction. The scale will be signed.

Hosted by Google

TRADE REPORT

The event of the week has been the sudden cessation of war among the Steel Rail mills, through the completion of an arrangement by which the Illinois, Carnegie, Cambria, Bethlehem and Lackawanna mills lease the Rail making plants of the Maryland and Pennsylvania Steel companies. We understand that the former will be closed down with the exception of the Marine department, and that the latter will cease making standard sections, a business from which it has practically withdrawn for some time. The price of Rails is now $24 at Eastern mills and $25 at Western works, for delivery during the year 1894.

Whether the railroads will enter the market at that figure may be regarded as doubtful, since they will probably hold that they have nothing to lose by delay. So far as the Steel trade generally is concerned these latest developments will probably prevent the improvement in the demand for Pig and Ore which it was expected would follow war prices for Rails. On the other hand, it is believed that the stoppage of the Maryland plant may have some effect on the Eastern Billet market, since the company in question were at times heavy producers of Soft Steel.

On the whole, reports from the different markets are not encouraging. The blows of Pittsburgh competition are being felt in all sections. Bessemer Pig there is weaker and Steel Billets are again showing a declining tendency. There are indications that suitable terms would fetch very low prices.

The expected adjustment of prices for Finished Material on the basis of the low prices for Soft Steel has come, and figures which were mentioned under the strictest pledge of secresy some weeks since are now openly spoken of in the trade.

Pittsburgh concerns are making what is practically a clean sweep in Eastern markets. They are underbidding in a way which leaves rolling mills east of the Allegheny Mountains hopelessly out of the race. It almost looks as though their future existence depends upon the grace of the Smoky City. At present prices for raw materials and present rates of labor the mills of Pittsburgh and its allied districts can put down Rolled Iron and Steel in Eastern markets below the cost of production of Eastern mills. That fact has been proven during the past few months. The only consolation is that the Western works are unable to supply the whole demand in times of ordinary business activity.

Pittsburgh.

(By Mail.)

Office of *The Iron Age*, Hamilton Building, PITTSBURGH, November 21, 1893.

The situation in the Iron and Steel trades as compared with that of, say, one month ago can be stated in a few words: The volume of business is larger, prices are weak and lower. The increased demand is pretty general all along the line, and the further decline in prices also applies to nearly all kinds of Raw and Finished Material. There is no denying the fact that there is little prospect of prices getting better until after the first of the year, and it is somewhat doubtful if there will be much improvement in this direction before spring. Commencing with Pig Iron, it can be said that Bessemer is weaker than one week ago. Billets are also a little easier and $17.25, Pittsburgh, would be readily accepted. Structural Material is in slow demand, with prices a shade weaker. Plates are fairly active, with competition as keen as ever and prices somewhat demoralized. In other lines there is little change to note, with the exception that Wire Nails are in active demand. Coke is also in better demand, owing to the blowing in of a number of stacks in the Pittsburgh and Mahoning and Shenango Valley districts. Interesting rumors have been afloat here for the past few days concerning a new deal to be made by the Rail makers Gossip has it that a new agreement has been fixed up, and that the control of two Eastern mills has been secured, and that one or both of these will be closed down for an indefinite period. It is also claimed that a new price has been fixed, said to be $24 or $25 at maker's mill, with chances favoring the first named figure. Confirmation of the above could not be secured, but it is claimed that the deal, as outlined above, has been practically closed.

Pig Iron.—While there is a little more metal moving, the condition of the market is far from being a satisfactory one to makers. As is well known, there are large stocks of Iron on hand here and in the Mahoning Valley as well, and with the recent increase in production it will take just so much longer to clean this stock up. One prominent concern in this city is said to have about 100,000 tons of Bessemer on hand, while others have from 20,000 to 40,000 tons. There is considerable pressure to sell Pig Iron, and as a consequence prices are somewhat easier, $11.25, Pittsburgh, for Bessemer having been slightly shaded on some recent transactions. While the market is undeniably weaker, makers claim that the price cannot well go much lower, for the reason that it takes the very best furnace practice to make Bessemer even at our quoted prices. Where a furnace is using a full ton of Coke to a ton of Iron, and is paying market prices for it, and using Ore bought early in the season, it would seem that the claim of the furnace owners that cost price has about been reached is not far from being correct. Gray Forge is in a little better demand, with prices ruling at about $10.50, Pittsburgh. We quote as follows:

Neutral Gray Forge	$10.50 @	.....	cash
All-Ore Mill	10.50 @	10.75	"
Bessemer	11.10 @	11.25	"
No. 1 Foundry	12.50 @	13.00	"
No. 2 Foundry	11.50 @	12.00	"

We note a sale of 1000 tons of Bessemer for December at $11.15, Pittsburgh, and 1500 tons for November and December at $11.10, Pittsburgh. Also 1000 tons of Gray Forge for December at $10.50, Pittsburgh. It is said that some deals are involving a large tonnage of Bessemer, and that some of them may be closed this week.

Billets.—Considerable Steel is changing hands, with prices slightly weaker, although no marked decline has taken place. Buyers are now endeavoring to couple Steel for January, February and March of next year with December Steel, but in only a few instances have they been successful. When a buyer is prepared to place a fair sized order for Steel, with prices and terms of payment satisfactory to maker, it is possible that it would be accepted and deliveries made into the first quarter of the year. However, this is exceptional, as some makers absolutely refuse to sell a pound of Steel at ruling prices for delivery after January 1. They argue that there is greater probability of Steel bringing better figures after January 1 than there is of it selling lower at that time than it is to-day. Prices depend altogether on size of order and terms of delivery. For ordinary business we quote $17.25 @ $17.50, at maker's mill. For desirable business our lower quotation could probably be shaded to a slight extent. We note such a sale, being 3000 tons for close delivery at a price equal to $17.10 at maker's mill. Also a sale of 1000 tons for delivery before January 1, at a price equal to about $17.35, at maker's mill.

Ferromanganese.—We quote at $52.50, delivered at buyer's mill, for domestic.

Steel Rails.—The local mill has closed down, and it is announced will undergo repairs. The Light Rail department continues in operation on double turn. Reports are afloat concerning a new agreement among the Rail makers, and if these prove to be true much of the uncertainty now surrounding the Rail situation will be cleared up.

Plates.—There is a better demand, but prices are again a peg lower. A recent sale of Tank Steel made here is said to have been at a price considerably under our lower quotation. We quote as follows: Tank, 1.35¢ @ 1.45¢; Shell, 1.55¢ @ 1.60¢; Flange, 1.65¢ @ 1.75¢; Fire Box, medium quality, 2.50¢ @ 3¢, best quality, 3.50¢ @ 4¢.

Muck Bars.—A fair amount of Muck Iron is being sold, although the demand is much restricted owing to the low price of Steel. We quote best grades Muck Bars at $20.75 @ $21.25, delivered at buyer's mill. We note a sale of 500 tons at $21.10, delivered.

Structural Material.—The building season is practically over, and as a consequence Beams are in light demand. There is a fair amount of bridge material selling, but mills are not pushed by any means. For ordinary lots we quote as follows: Beams up to 15 inches, 1.50¢ @ 1.60¢; Angles and Universal Plates, 1.50¢ @ 1.60¢; Tees, 1.75¢. For desirable orders the above prices could probably be shaded. It is stated that the new wage scale to become operative at the Homestead Steel Works on and after January 1, 1894, carries with it material reductions in wages, especially of high priced labor.

Bars.—The Valley mills have arranged a wage scale with the Amalgamated Association, and a number of them have already started up some departments. The basis of the settlement is $4.75 for puddling, while in the finishing departments the same concessions were granted by the Amalga-

Hosted by Google

mated Association as were contained in the wage scale of the National Union of Iron and Steel Workers, signed about two weeks ago by a number of the Valley mills. The mills in the Pittsburgh district who signed the Amalgamated Association scale, which was based on $5 ℔ ton for boiling, will, of course, participate in all the reductions granted to the Valley mills. The market on Bars is slightly weaker, probably occasioned by the fact that the Valley mills are again becoming producers. We quote Steel Bars at 1.35¢ @ 1.40¢, with Bar Iron extras. For desirable orders our lower quotation would probably be shaded. In the Valley, mills are holding Bars at 1.30¢, half extras.

Merchant Steel.—Mills report only a fair demand, with prices somewhat lower for desirable orders. We quote Open Hearth Spring Steel at 1 90¢ @ 2¢; Bessemer Machinery, 1.55¢ @ 1.60¢; Toe Calk Steel, 2¢; Tool Steel, from 5½¢ upward, according to quality.

Wire Nails.—The demand for Wire Nails continues active, some very large shipments having been made recently by Pittsburgh mills and those further west. Notwithstanding the active demand prices show no improvement, and we continue to quote at $1.25 in carload lots at mill. As stated last week, this price would be slightly shaded by some mills for round lots. The demand for Cut Nails is also very satisfactory and $1 at mill, with the usual averages, is being maintained.

Barb Wire.—There is no improvement in demand, and we continue to quote Four-Point Galvanized at $2.20 @ $2.25 in carload lots at mill, with the usual advances for less than carload lots. We quote Plain Wire at $1.50, for Nos. 6 to 9, in carload lots.

Pipes and Tubes.—We are advised that there is a slightly better demand for Pipes and Tubes, and the outlook for further improvement in this direction is promising. At the plant of the American Tube & Iron Company, at Middletown, Pa., the lap weld department is on full and the butt weld department to half capacity. The plant of this firm at Youngstown, Ohio, is also being operated to about half capacity. The plant of the Duquesne Tube Works Company is also in operation to nearly full capacity, with good prospects of this being kept up through the winter months.

Skelp Iron.—There is a slightly better demand for Skelp Iron, and we quote Grooved at 1.37½¢ @ 1.50¢, and Sheared at 1.50¢ @ 1.60¢, according to order.

Coke.—There is a slightly better demand for Furnace Coke, particularly from the Pittsburgh and Valley districts. The shipments to Eastern points also show a slight increase. For the week ending November 11 there were 6485 ovens in the Connellsville region in blast, and 11,005 idle, with a total estimated production for the week of 57,755 tons. Compared with the previous week this was a net gain of 525 active ovens and an increase in production of 2475 tons. Prices show no improvement, and we continue to quote Furnace Coke at $1.10 per ton, f.o.b. cars, in region, while Foundry Coke is ruling at $1.50 to dealers and 1.65 to consumers. It is stated that one or two operators in the region have recently shaded our quotations on Foundry Coke to slight extent.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St., PHILADELPHIA, Pa., November 21, 1893.

Certain movements have been made in various branches of the Iron and Steel trades which indicate that the extreme point of depression has been reached, if not actually passed. There is no absolute improvement in prices, neither is there any very decided increase in the demand, yet the feeling is becoming more confident every day. A curious feature in this connection is that prices of Finished Material have reached not only unprecedented, but startlingly low figures. It is currently reported and generally believed that Pittsburgh mills have taken orders for Plates subject to very stringent requirements at a good deal less than 1.35¢, delivered. There is hardly a pretense of getting more than 1.45¢ to 1.50¢ for any good sized lot, while those who made the inquiries claim to have beaten the inside figure so far that local mills had no chance whatever. Low water mark must certainly have been reached in Finished Material, even if the price (said to be 1.2¢) was f.o.b., instead of delivered. The most important event of the week, however, is the new deal among the Steel Rail companies, by which prices for 1894 are definitely fixed at $24, f.o.b., or $25, tidewater. There will be no deviation from these figures, and, as the control will be closer than under any former agreement, there can be no misunderstanding as to the price of Rails during the period mentioned. The next strong feature is the gradual development of a feeling that Pig Iron has seen its lowest figures. Taken as a whole, therefore, there is an intuitive belief that the beginning of 1894, and possibly before the close of 1893, the trend of the market will be the reverse of what it has been during the past two or three years. There is nothing definite in sight beyond what is above mentioned, and nothing to warrant the expectation of any decidedly aggressive movement, but a gradual return to normal conditions seems to be pretty well assured.

Pig Iron.—No material change can be noted in this interest, unless it be that sellers appear to have better control of the market. Good buyers can get all the Iron they want at last week's prices for reasonably early deliveries, but for long dates sellers either quote slightly higher figures or postpone acceptance of bids that have been made to them. They may yet decide to accept the offers; but be that as it may, holders are clearly not as demoralized as they were some time ago, or they would accept almost any offer that they could get. The movement may be a little premature, but there is a strong impression that the ultimate outcome will be a rising market. For the present quotations for Philadelphia deliveries may be given as follows:

No. 1 Foundry	$13.75 @ $14.25
No. 2 Foundry	13.00 @ 13.25
Standard Gray Forge	12.00 @ 12.50
Ordinary Gray Forge	11.50 @ 11.75

Steel Billets.—Very little business has been done in this vicinity, as consumers were not inclined to place orders except for such small lots as they are likely to require during the balance of the year. Asking prices are $20 @ $20.25, delivered, with a chance that considerably better could be done on firm offers for good sized lots. It is not clear what effect the new arrangement among the Rail mills will have on the Billet trade, but most likely it will not affect it at all. Since writing the above we are advised of a sale of 1000 tons at less than $19 50, delivered to near by mill.

Finished Material. — The demand has been somewhat heavier, and nearly all the mills are doing better than at any time since July, but, as already noted, the business is done at terribly demoralized prices. It is difficult to account for such wanton slaughter, but when certain of the Pittsburgh mills want business they offer to take it at prices and on terms which leave no alternative to their competitors but to stand aside and let it go West. This applies not only to Plates and Sheets, but to every class of rolling mill material. On such a market it is impossible to quote prices with any degree of exactness, but for small lots asking prices are about as follows:

Grooved Skelp, delivered	1.45¢	@	1.50¢
Best Refined Bars	1.45¢	@	1.55¢
At interior points	1.35¢	@	1.40¢
Tank Steel	1.45¢	@	1.55¢
Heavy Plates	1.50¢	@	1.60¢
Shell	1.60¢	@	1.75¢
Flange	1.90¢	@	2.00¢
Angles	1.60¢	@	1.70¢
Beams and Channels	1.75¢	@	1.90¢

Old Material.—There is so little change that the reports of several preceding weeks might almost be repeated verbatim. Asking prices are about as follows, with a fair amount of business, chiefly at inside figures:

No. 1 Wrought Scrap, delivered	$12.00	@	$13.00
Machinery Cast, delivered	10.00	@	11.00
Heavy Steel Scrap, delivered	12.00	@	13.00
Old Iron Rails, delivered	14.00	@	14.50
Old Street Rails, delivered	15.50	@	16.00
Wrought Turnings, delivered	10.00	@	11.00
Cast Borings, delivered	6.00	@	7.00
No. 2 Light Scrap	6.00	@	7.00

Chicago.

(*By Telegraph.*)

Office of *The Iron Age*, 59 Dearborn street, CHICAGO, November 22, 1893.

The market here remains in an unsatisfactory condition. Any improvement recently noted seems to have been only spasmodic. An increased demand is followed by a relapse into dullness, and a slight firmness in price seems to be immediately followed by decided weakness. The whole machinery of trade is in bad shape, and now and then seems to slip a cog or two. The past week has been dull in all lines.

Pig Iron.—The drop in Southern freight rates has disappointed all interested, as it brought no improvement in the volume of business. Consumers are only purchasing according to their necessities, and few are inclined to anticipate their requirements to any extent, even if the bait of lower prices is held out. The sellers of both Southern and local Coke report the week very quiet. The only business of any consequence seems to be in Ohio Softeners and Lake Superior Charcoal. The demand for Ohio Soft Irons has made marked improvement within the last few weeks, but this is evidently owing to the scarcity of local brands of Soft Iron, which for a long while has occupied the local field to the exclusion almost entirely of Ohio brands. The Charcoal Iron market is irregular. Some makers are getting mere anxious to sell and transactions which have recently come to light are on a somewhat lower basis. Bankrupt stocks are still being offered, and

Hosted by Google

these tend to depress the market. Quotations are now as follows for cash:

Lake Superior Charcoal	$15.50 @	$16.00
Local Coke Foundry, No. 1	13.50 @	14.00
Local Coke Foundry, No. 2	12.75 @	13.00
Local Coke Foundry, No. 3	12.25 @	12.75
Local Scotch	14.00 @	14.50
Ohio Strong Softeners No. 1	15.50 @	16.00
Southern Silvery, No. 1	@	14.25
Southern Silvery, No. 2	@	13.75
Southern Coke, No. 2	11.85 @	12.10
Southern Coke, No. 3	11.10 @	11.35
Southern, No. 1, Soft	11.85 @	12.10
Southern, No. 2, Soft	11.10 @	11.35
Tennessee Charcoal, No. 1	16.00 @	16.50
Southern Gray Forge	10.60 @	10.85
Alabama Car Wheel	18.25 @	18.50
Jackson County Silvery	16.50 @	17.00
Other Ohio Silvery	15.00 @	15.50

Bars.—Trade in Bar Iron and Bar Steel is of a better character than in almost any other line. The demand is general, showing that manufacturing consumers are again at work. There are now few concerns using Bars that are entirely shut down. Even the car works are getting more business, although the orders are seldom for more than 100 cars. Bars are irregular, owing to the efforts made by local mills to control as much business as possible and prevent outside manufacturers from capturing trade which is regarded as belonging here. Prices in this way range from 1.35¢ to 1.45¢, Chicago, half extras, depending upon the location of the mill. The Valley mills appear to be standing at 1.30¢ at mill, and are getting some business at this rate. Soft Steel Bars are the subject of considerable competition, with prices ranging from 1.45¢ to 1.55¢, Chicago, according to the character of the order. Jobbers report a better demand from store, but prices are not so firmly held, and while the usual quotations are 1.60¢ @ 1.70¢ for Bar Iron and 1.65¢ @ 1 75¢ for Soft Steel, these rates are shaded according to circumstances.

Structural Material.—Business in this line is quiet, with no change in prices. Quotations are as follows, Chicago delivery: Beams, 1.65¢ @ 1.75¢; Tees, 1.90¢ @ 2¢; Angles and Universal Plates, 1.60¢ @ 1.65¢. Small lots are sold from stock at an advance of 10¢ @ 15¢ ℔ 100 above those prices.

Plates.—Dealers report a better trade this month than last. Consumers have begun to anticipate their wants to some extent, but their purchases are not of large quantities. Mill orders are scarce. Mill shipments, Chicago delivery, are quoted as follows: Tank Steel, 1.62½¢ @ 1.70¢; Shell Steel, 1.82½¢@1.90¢; Flange Steel, 2.2½¢ @ 2.10¢; Fire Box, 2.75¢ @ 5¢. Store prices now prevail as follows: Iron or Steel Sheets, Nos. 10 to 14, 2.25¢ @ 2.40¢; Tank Steel, 2.10¢ @ 2.20¢; Shell Steel, 2 20¢ @ 2.40¢; Flange Steel, 2.50¢ @ 2.65¢; Boiler Tubes, 70 and 5 % off.

Sheets.—Trade is quiet, as the present period is now between seasons and not much is being done in mill orders. Prices continue at about 2.75¢, Chicago, for No. 27 Common, and 75 % off for Juniata Galvanized, mill shipment. Small lots from stock are selling at 2.90¢ @ 3¢ for No. 27 Common, and 70 % @ 70 % and 7½ % for Juniata Galvanized. Sheet Copper is quoted at 35 % off in large lots and 30 % off in small lots.

Merchant Steel.—Nothing of any special moment has transpired in this line. The demand is moderately fair and prices are unchanged. Mill shipments, Chicago delivery, are quoted as follows: Smooth Finished Machinery, Tire and Open Hearth Spring Steel, 1.90¢ @ 2¢; Ordinary Bessemer Machinery, 1 60¢ @ 1.65¢; Ordinary Bessemer Tire, 1.55¢ @ 1.6 ¢; Ordinary Tool Steel, 6¢ @ 7¢; Specials, 12¢ and upward.

Billets.—The Joliet works opened on Monday after an idleness of 11 months. No large inquiries are in the market for Steel Billets and quotations continue at $19.25 @ $19.50, Joliet.

Rails and Track Supplies.—Railroads are not asking quotations on Steel Rails and it is expected that they will not be in the market until some time next month. Prices here are expected to be $25 for standard Rails, as the result of the agreement reached at the meeting of the manufacturers held last week in New York City, but the announcement is not made officially. Almost nothing is doing in Fastenings, and quotations are nominally continued at 1.50¢ @ 1.60¢ for Splice Bars; 2.55¢ @ 2 60 ¢ for Track Bolts with Hexagon Nuts, and 1.90¢ @ 1.95¢ for Spikes.

Old Rails and Car Wheels.—A sale of Old Iron Rails is reported at a shade under $14, Chicago. The sale was made by a dealer, which indicates that low values on this class of material are now recognized. Railroad companies are also more easy in their views, and some of them have offered Rails within the past week at $14. Old Steel Rails are selling at $7.50 @ $10, according to length. A considerable movement has taken place in Old Car Wheels, but entirely of a speculative character. Railroads have sold large quantities at prices varying from $9.50 to $10, but in no case do consumers appear to have taken hold.

Scrap.—The movement in Old Material has been fair. Quotations are maintained at old figures: No. 1 Forge, $10; No. 1 Mill, $8; Sheet Iron, $4.50; Pipes and Flues, $8; Axles, $16; Horseshoes, $11; Fish Plates, $12; Spikes and Bolts, $10; Cast Borings, $4.50; Wrought Turnings, $6.50; Axle Turnings, $8; Heavy Cast, $9 50; Stove Plate, $7.75; Malleable Cast, $8; Mixed Steel, $7, gross ton; Leaf Steel, $14 50.

Metals.—A little more is doing in Lake Copper, with the price unchanged at 10⅜¢ for carload lots. Inquiries for casting brands are somewhat better, and quotations are asked for future deliveries. Standard brands continue to be quoted at 9¾¢. Spelter is reported in better condition. Owing to the large exports now being made, producers are quoting on a basis of 3 65¢, Chicago. Pig Lead has been sold to the extent of some 600 tons, and prices are steadily maintained at 3.30¢ @ 3.35¢, according to quantity.

Cincinnati.

(By Telegraph.)

Office of *The Iron Age*, Fifth and Main Sts., CINCINNATI, November 22, 1893.

The volume of business in Pig Iron has been comparatively small during the week. The Iron Pipe works, having previously supplied their wants for a long time, have not been in the market and consumers did not want much, but stove works and agricultural works have bought to a fair extent, and although their orders seldom reached 1000 tons in any one instance, yet in the aggregate they were larger than usual of late, but no better prices were realized. In fact, the tone of the market is easier, for purchases are being made for the first half of next year at the same rates as current for spot delivery. No. 1 Foundry is especially weak, there being little demand for that grade, and sales have been made as low as $9.50 ℔ ton, f.o.b. Birmingham. The other grades are well sustained, there being a fair demand for No. 2 Foundry and for Gray Forge. The trade contends that the outlook, from a statistical point of view, is more favorable and that there should be an early improvement in prices, but as long as buyers can supply their wants at the current low rates they pay little attention to sentimental views. Quotations are as follows:

Foundry.

Southern Coke, No. 1	$12.25 @	$12.50
Southern Coke, No. 2	10.75 @	11.00
Southern Coke, No. 3	10.25 @	10.50
Ohio Soft Stone Coal, No. 1	15.50 @	16.00
Ohio Soft Stone Coal, No. 2	14.50 @	14.75
Lake Superior Coke, No. 1	15.00 @	15.25
Lake Superior Coke, No. 2	14.00 @	14.25
Hanging Rock Charcoal, No. 1	18.50 @	19.00
Hanging Rock Charcoal, No. 2	17.50 @	18.00
Tennessee Charcoal, No. 1	14.00 @	14.25
Tennessee Charcoal, No. 2	13.00 @	13.25

Car Wheel and Malleable Irons.

Standard Southern Car Wheel	17.75 @	18.00
Lake Superior Car Wheel and Malleable	17.00 @	17.25

Forge.

Gray Forge	9.75 @	10.00
Mottled Coke	9.50 @	9.75

St. Louis.

(By Telegraph.)

Office of *The Iron Age*, Bank of Commerce Building, ST. LOUIS, November 22, 1893.

Pig Iron.—The improvement noted in our last report continues, and inquiries are beginning to result in some business. Consumers in nearly all lines report a steady trade in small lots, which in the aggregate makes a good showing. There is less pressure to sell, as the furnaces now in blast appear able to take care of themselves, and are apparently not compelled to sell their product to keep going. A steady trade is anticipated from now until after the holidays, when a revival is confidently expected. We quote as follows for cash, f.o.b. cars St. Louis:

Southern Coke, No. 1 Foundry	$13.25 @	$13.50
Southern Coke, No. 2 Foundry	11.50 @	11.75
Southern Coke, No. 3 Foundry	10.75 @	11.00
Southern Gray Forge	10.25 @	11.50
Southern Car Wheel	17.25 @	18.25
Lake Superior Car Wheel	16.50 @	17.00
Ohio Softeners	16.00 @	16.50

Bar Iron—Jobbers continue to report an active demand at 1.75¢ from store. Mills are not running very full and competition is brisk to secure trade. Some low prices have been made to a few special users of Iron, which, while very low, hardly constitute the market. Mills quote 1 45¢ for carload lots, half extras, f.o.b. cars East St. Louis.

Barb Wire.—The demand for Barb Wire continues to be of good volume and prices are unchanged. Mills quote Painted in carload lots at $2 @ $2.05 and Galvanized at $2.40 @ $2.45. Jobbers ask $2.10 @ $2.15 for Painted, with 40¢ ℔ hundredweight additional for Galvanized.

Wire Nails.—A fair demand is reported for Wire Nails, but prices do not seem to stiffen much. Mills quote $1.40 in carload lots to jobbers. Smaller lots are quoted at $1.45 @ $1.55, according to quantity.

Rails and Track Supplies.—There is a good trade in Track Supplies at unchanged prices, as follows: Splice Bars, 1.65¢ @ 1.70¢; Spikes, 2¢ @ 2.05¢; Bolts, Square Nuts, 2.50¢; with Hexagon Nuts, 2 60¢. Old Rails are of-

Hosted by Google

fered at $14, but buyers are scarce. Steel Rails are in a mixed condition, and all sorts of prices are current. A sale is reported of 4000 tons to the Jacksonville and Southeastern Railroad at a price less than $21, f.o.b. Pittsburgh. Locally trade is dull, and $23 @ $24 50 seems to be the selling price.

Pig Lead.—This metal is in an unsettled condition. A sale is reported of 300 tons made to-day at 3.20¢, but offerings late to-day at 3.17½¢ did not find buyers. There is a weak undertone to the market, which will doubtless soon make itself felt in prices.

Spelter.—There is no change to report in Spelter. Offerings are made at 3.40¢, but sales are limited to carload quantities, even the largest buyers refusing to buy heavily at to-day's prices.

Metal Market.

Copper.—Regarding the alleged late sales of Ingot by the Calumet & Hecla Company, no official information is imparted, but facts came out from outside sources going to show that about 5,000,000 lb were disposed of to exporters and that the price was 9¾¢ ℔ lb. Rumor has it that sales have also been made to home consumers at similar price, with deliveries running up to March 1, if not further ahead, and that some business has been done at 10¢. The latter price is now bid for round lots and most sellers have advanced their limits to about 10¼¢. In this connection it is interesting to note that bids on the Metal Exchange of as high as 10.15¢ were made for December and 10.25¢ for January and February delivery, with some indication that prominent interests have a reason to place values on a higher plane. While there would thus appear to be something in the nature of substantial firmness to the market for Lake Superior product, the cheaper varieties of Copper merely hold their own in price and meet with only ordinary sales. Electrolytic may be secured at 9½¢ @ 9¾¢, and common casting stock at 9¼¢ @ 9⅝¢, according to brand and quantity.

Pig Tin.—Prices have been moved a little higher, or to 20.65¢ @ 20.70¢ for present or next month delivery. Comparatively little Tin has changed hands in a speculative way, however, and regular consumptive movement is believed to have been below the average for the season. The turn for the better in prices, as a matter of fact, has the appearance of being what may be termed a nicely timed natural reaction, engineered by some few prominent operators, with nothing more substantial behind the manoeuver than the fact that this market is still a good deal below the level of Europe. "Short" interest in the speculative branch of the market here seems to have been pretty well eliminated, and the outside holdings are believed to be comparatively small.

Pig Lead—Sales have been reported here to the extent of about 750 tons common domestic for delivery during the balance of the year. Some lots went at 3.40¢ for November, but the greater portion of the business was in December delivery at 3.42½¢ @ 3.45¢. At this writing the offering is moderate, and while consumers manifest extreme indifference, the demand from other quarters, along with more or less reserved offering, serves to keep the market quite firm in tone.

Spelter.—The purchases of this metal have been confined chiefly to single carloads at about 3.70¢ for ordinary Western brands deliverable here during the next six weeks. In volume the business was moderate and the demand was very tame. It is stated, however, that very few smelters will take orders at current prices, stating that their probable output for the balance of the year is closely sold up and that present prices leave no margin of profit. Hence 3.80¢ is asked for January and later deliveries, although moderate quantities have been closed out for earlier delivery at the price above quoted.

Antimony.—Business has been of ordinary character, yet fair all told and sufficient to hold prices steady at 9⅝¢ @ 9¾¢ for Hallet's and 10⅛¢ @ 10¼¢ for Cookson's.

Tin Plate.—There has been some improvement in the demand for ordinary Cokes for future delivery, and enough sellers acceded to buyers' terms to bring about a fairly good volume of business. Interest in futures is tamer than usual at this season of the year, however, and, with spot dealings on strictly perfunctory lines, the market shows no improvement it tone. Spot quotations are as follows: Coke Tins—Penlan grade, IC, 14 x 20, $5.30; J. B. grade, do., $5.35; Bessemer full weight, $5.35; light weights, $4.95 for 100 lb, $4.85 for 95 lb, $4.70 @ $4.75 for 90 lb. Siemens Steel scarce. Stamping Plates—Bessemer Steel, Coke finish, IC basis, $5.60; Siemens Steel, IC basis, $5.65; IX basis, $6.75 @ $7. Charcoals—Melyn grade, IC, $6.37½ @ $6.50; Crosses, $8; Allaway grade, IC, $5.60; Crosses, $6.75; Grange grade, IC, $5.75; Crosses, $6.85. Charcoal Ternes—Worcester, 14 x 20, scarce; do., 20 x 28, $11.35; M. F., 14 x 20, $7.50; do., 20 x 28, $14.75; Dean grade, 14 x 20, $5.35; do., 20 x 28, $10.50 @ $10.60; D. R. D. grade, 14 x 20, $5.15; do., 20 x 28, $10.10; Alyn, 14 x 20, $5.32½ @ $5.35; do., 20 x 28, $10.40; Wasters—S. T. P. grade, 14 x 20, $4.75; do., 20 x 28, $9; Abercarne grade, 14 x 20, $4.60; do., 20 x 28, $8.87½.

The monthly production of Copper in the United States since July, 1892, has been as follows, the first column giving the aggregate returns from the reporting mines, which include the principal Lake, Montana and Arizona producers; the second being the metal from pyrites and from a number of smaller outside sources, being estimated:

American Product.

1892.	Reporting mines. Gross tons.	Outside sources. Gross tons.	Total. Gross tons
July	9,294	924	10,218
August	10,807	870	11,677
September.	9,710	994	10,704
October	9,668	1,289	10,957

New York.

Office of *The Iron Age*, 96-102 Reade street, New York, November 22, 1893.

Pig Iron.—As indicating that low prices for Pig Iron are attracting attention in distant quarters, the fact is cited that an English house has bought 5000 tons of Alabama Coke warrants at the reported price of $7.50 for No. 3, equivalent to $7.25 at furnace. Consumers are showing but little interest in the market, although bargains keep cropping up. We quote: Northern brands, $14 @ $15 for No. 1; $13 @ $14.25 for No. 2; $12.25 @ $12.50 for Gray Forge, at tidewater. Southern Iron, same delivery, $13 @ $14 for No. 1; $12 @ $13 for No. 2; $11.50 @ $12.25 for No. 3; $11.75 @ $12.25 for No. 2 Soft, and $12.25 @ $12.50 for No. 1 Soft. Gray Forge is $11.25 @ $12.

Spiegeleisen and Ferromanganese.—In the absence of business we quote: Foreign Spiegeleisen, 10 % @ 12 %, $21.50 @ $22, and 20 %, $25.50 @ $26, on cars, Jersey City, and Ferromanganese, $55 @ $55.50.

Billets and Rods.—There are indications that the requirements of the largest consumers have been covered for some time to come by a Pittsburgh mill at a very low price. Although Foreign Billets are being offered very cheap, buyers do not take hold. We quote nominally: Domestic Billets, $20.25 @ $22.50, and foreign Billets, $28 @ $28.50, tidewater; domestic Wire Rods, $28 @ $29, and foreign Rods, $39.50 @ $40, tidewater.

Steel Rails.—We refer elsewhere to the new arrangement which has been perfected by the Rail mills, which promises to hold the market steady for along time to come. During the brief period during which low offerings were being made very little business in the aggregate was done. Probably 25,000 tons would cover the whole. It is hardly to be expected that buyers will take hold until the present situation is thoroughly understood. The price now named is $24 at Eastern mills and $25 at Western mills for 1894 delivery.

Track Material.—We quote as follows for small lots: Spikes, 1.75¢ @ 1.90¢; Fish Plates, 1.35¢ @ 1.50¢; Track Bolts, Square Nuts, 2.20¢ @ 2.40¢, and Hexagon Nuts, 2.40¢ @ 2.50¢, delivered. Concessions would be made for round lots.

Manufactured Iron and Steel.—The market is practically bare of orders of any consequence. The prices at which

Hosted by Google

recent work has been taken are reported to have been exceptionally low. There has been some movement in Bars, some of the dealers buying for stock. Something has been done in Hoops. We quote nominally: Beams up to 15 inch, 1.70¢ @ 2¢; 20-inch, 2¢ @ 2.25¢, for round lots; Angles, 1.65¢ @ 1.80¢; Universal Mill Plates, 1.60¢ @ 1.75¢; Tees, 2¢ @ 2.15¢; Channels, 1.70¢ @ 2¢. on dock. Steel Plates are 1.55¢ @ 1.70¢ for Tank; 1.75¢ @ 1.90¢ for Shell; 2¢ @ 2.15¢ for Flange, and 2.50¢ @ 2.80¢ for Fire Box, on dock; Refined Bars are 1.50¢ @ 1.9¢, on dock, and Common, 1.40¢ @ 1.50¢; Soft Steel Bars are 1.50¢ @ 1.70¢; Scrap Axles are quotable at 1.70¢ @ 2¢, delivered; Steel Axles, 1.70¢ @ 1.90¢, and Links and Pins, 1.70¢ @ 1.80¢; Steel Hoops, 1.75¢ @ 1.90¢, delivered; Cotton Ties, 70¢ @ 72½¢ ℔ 45-lb bundle, at mill.

Old Material.—We note sales during the past week of 500 tons of special make Old Iron Rails at $12.50, and in the aggregate 1000 tons of Old Steel Rails at $8 @ $9, according to delivery. The supply of this class of material is exceptionally heavy. No. 1 Scrap Iron has been offered at $9 @ $10. The demand is very light. Old Car Wheels are very difficult of sale.

Financial.

Business conditions during the week have shown a continuance of improvement, which, although not as rapid as some persons expected or hoped for, is yet sufficiently decided. The effects of the severe financial depression of the summer are, naturally, still being keenly felt in many quarters, and serve to operate against anything beyond a very gradual recuperation. In general business circles, nevertheless, a decidedly more healthy and hopeful tone prevails; and all indications continue to be as favorable as could reasonably be expected. An improvement in the industries of the country is manifest from late trade reports which mention, almost uniformly, a very material increase in the number of mills and factories resuming work, as compared with those shutting down, or restricting operations. Western iron and steel mills and Eastern textile factories in particular make a favorable showing in that respect for the week, some of the largest producing concerns being reperted as resuming after prolonged shut downs. In general, however, industries are proceeding on unusually conservative lines, awaiting the general revival of demand from consumers. The present is naturally the quiet season of the year in most lines of business, and it is unlikely, save in the case of some special industries, that much new enterprise will develop until after the January settlements are made. Uncertainty as to the outcome of tariff legislation, too, is an important factor in the industrial situation. Numbers of new enterprises will be held in check until it is certain what will be done in this field; and buying all over the country will be confined to little more than absolute requirements, until producers and consumers know the new conditions to which they will have to adjust themselves.

A favorable feature of the week are the reports of improvement in collections. November payments are on all hands said to be far more satisfactory than was expected. Monetary difficulties are rapidly disappearing. Yet the accumulation of vast sums of surplus reserves by the banks at all the principal money centers is evidence of a lack of enterprise and speculation, with consequent stagnation in business. The receipts of currency by the New York banks from interior points continue extremely heavy and have served to pile up the already enormous reserve held by them to unprecedented proportions. Last Saturday's bank statement showed a further gain in cash of nearly $10,000,000, bringing the surplus reserve up to $65,500,000 above legal requirements. This is the largest ever known and is specially remarkable for the rapidity with which it has been accumulated. The greatest sum ever held hitherto was $64,000,000 in 1885, but that took 12 months to attain its magnitude after the panic of May, 1884, whereas the present accumulation of reserve has taken but three months. The unfavorable feature of the bank statement was a decrease of $1,253,200 in the volume of loans. As this condition cannot have been brought about by any unwillingness on the part of the banks to invest their superfluous funds in such profitable investment, it furnishes unquestionable evidence of the existing stagnation in trade and speculation. The following are the comparative statements of November 11 and November 18.

	November 11.	November 18.	Differences.
Loans...	$402,986,000	$401,732,800	Dec. $1,253,200
Specie...	98,644,900	99,924,300	Inc.. 1,279,400
Legal tend.	73,118,800	81,717,200	Inc.. 8,598,400
Deposits.	455,739,900	464,684,100	Inc. 8,944,200
Circulation...	14,356,300	14,076,600	Dec. 279,700

The following shows the relation between the total reserve and the total deposits at the respective dates:

			Increase.
Specie.....	$98,644,900	$99,924,300	$1,279,400
Legal tenders.	73,118,800	81,717,200	8,598,400
Reserve....	$171,763,700	$181,641,500	$9,877,800
Reserve required against deposits.	113,934,975	116,171,025	2,236,050
Surplus..	$57,828,725	$65,470,475	$7,641,750

Money continues extremely easy. In the call loan market rates have ranged from 1% to 2 %, averaging 1½ %, with but small demand from borrowers. The supply of time loans is so far ahead of demand that borrowers can almost dictate their own terms. Accommodation can be gotten on choice securities for almost any period for 3 %, while more than 4 % is seldom asked for any other securities or periods. There is a scarcity of commercial paper, for which the inquiry is much in excess of offerings. City institutions are said to be in the market competing for good paper, every acceptable note offered finding ready sale. Choice indorsed receivables are about 4 % @ 4½ %, and other bills 5 % @ 5½ %. There are said to be large offerings of loans on New York real estate at 5 %.

Business on the Stock Exchange has not attracted much outside interest during the week. The public still hold off and the market remains a purely "professional" one. It is, however, showing a steadier and more satisfactory feeling, and the market is getting into good shape for legitimate investment business so soon as the public is ready for it. The stock market toward the end last week showed a narrow volume of dealings, closing with some degree of firmness all along the line. The leading feature of Friday's business was a sharp fall in Reading shares and bonds, with active dealings in that stock. The movement was brought about by rumors of an unsatisfactory statement by the expert accountant who has been examining the books of the corporation. It was intimated that from $10,000,000 to $18,000,000 would be required to place the company on a secure basis. Later intelligence has not, however, confirmed the report. At the close of Saturday's business few stocks showed more than a fractional change. On Monday it was thought that the strike on the Lehigh Company's lines would have an unfavorable effect on the market. This was not, however, the case, although the company's stock fell several points on the Philadelphia Exchange. The market that day was somewhat dull and uncertain. Rumors of tariff revision served to weaken a number of industrial issues; and National Cordage broke sharply on unfavorable rumors reflective the reorganization of that combination. Tuesday saw a marked increase of activity and higher prices for both stocks and bonds. Sugar, which represented a third of the dealings, advanced over 4 points. National Cordage recovered on the publication of the reorganization scheme. All the granger stocks were strong, and some active. The rumored reorganization of the Union Pacific on a satisfactory basis served to tone that stock; and the general market closed strong at the highest prices of the day. London has been a larger buyer this week. The following list exhibits the extreme fluctuations of the stocks named during the week, with closing quotations on November 22 ·

	Highest.	Lowest.	Closing, Nov. 22.
Am. Sugar Ref.....	96¾	91⅛	95⅛
Atchison, T. & S. Fé....	20⅛	19	19¾

Government bonds have been strong and higher for the 4s. Latest quotations were as follows:

	Bid.	Asked.
2s, 1891, registered.....	91½	.....
4s, registered.....	112½	113¼
4s, coupon.....	112½	113¼

The great plethora of money has induced considerable investment business in first-class railway bonds. Transactions in the general bond market have been much larger the last few days than for some time, and prices have hardened considerable under the active and urgent demand. The revival of interest has, indeed, been quite remarkable, and the business well distributed over the whole list of issues.

Sterling exchange has been strong, with a very moderate supply of commercial bills and a good demand from remitters. Posted rates were advanced toward the close of last week, and, except for a slight weakening on Monday, the advance has been maintained. As there will, however, be important shipments of bonds to London this week, the chances are that exchange will again be lower in the immediate future. Actual business was done on Wednesday at

Hosted by Google

$4.82¼ @ $4.83 for 60 days; $4.85½ @ $4.85¾ for demand; $4.85½ @ $4.86 for cables, and $4.82 for commercial. Domestic exchange on New York is quoted as follows: New Orleans, commercial 50 discount, bank par; Charleston, buying $\frac{1}{16}$ discount, selling $\frac{1}{16}$ premium; San Francisco, sight 5, telegraph 10 premium; Savannah, buying par; selling ⅛ premium; Chicago, 75 premium; St. Louis, 90 premium.

Bar silver is quoted in London at 32¼ pence ℔ ounce and in New York at 70⅓¢. Heavy shipments of the metal have been made from this port during the week. It is shown that one result of the suspension of silver purchases by the Government will be a large contribution to our foreign trade. The 54,000,000 ounces taken by the Treasury each year, valued at 70¢ ℔ ounce, should swell the annual exports to the extent of $37,800,000 and give increased ability to command gold from Europe as needed.

The weekly railway statements of earnings for November show some encouraging signs. Several lines exhibit an increase of receipts over 1892, and it is believed that, especially with the Vanderbilt lines, the net earnings for the entire current year will show a gain over those of last year, while it is said that some companies will be prepared to declare larger dividends. A number of Western managers, now in New York City, give encouraging forecasts of the transportation outlook for their lines.

British Iron and Metal Markets.

[*Special Cable Dispatch to The Iron Age.*]

LONDON, WEDNESDAY, November 22, 1893.

The market for Pig Tin has been irregular and weak, with sales recorded at as low as £74. 17/6 for prompt delivery of Straits under the influence of free selling by importers and dealers. From this point there was a reaction of 12/6, due chiefly to covering of "short" accounts and some stimulus to buying by the improvement in the silver market, together with the announcement of smaller Straits shipments during the first half of the month. At the close the market was quiet, with Straits quoted at £75. 7/6 for prompt delivery and £76 for three months' futures.

Copper prices have undergone hardly any change and dealings have been small. Outside speculation has been very light, apart from some purchases for American account, chiefly from tired holders. Consumers are very indifferent buyers and the majority claim to be carrying very large stocks. Supply on the spot increased 300 tons during the first half of the month. The visible supply in Europe increased 297 tons during the same period. Furnace material has been rather difficult to sell and prices are easier, although not quoted lower. The turn in the coal trade dispute has had no effect thus far upon the metal markets. Late quotations on Merchant Bars were £42. 5/ for prompts and £42. 15/ for three months' futures. Best selected English, about £45. 15/ @ £46.

Tin Plate business has been dull, and the situation of the market is unchanged. Prices are rather weak throughout. Black Plate is also quiet. Finished Bessemer is offered now at £8 in Swansea. Liverpool quotations for Plates are as follows:

IC Charcoal, Alloway grade.....12/6 @ 13/
IC Bessemer Steel, Coke finish. ...11/3 @ 11/6
IC Siemens " " " .....11/6 @ 11/9
IC Coke, B. V. grade, 14 x 20.....11/3 @ 11/6
Charcoal Terne, Dean grade.....11/ @ 11/3

Pig Lead has met with rather slow sale, and the market is easier at £9. 12/6 for Soft Spanish.

Spelter has been in very fair demand and the market is quite firm at £17. 2/6 for ordinary Silesian.

Steel mills at Barrow have resumed work, owing to better orders for some lines of goods. There is no improvement in prices or demand, however, and prices continue unsettled in the face of some improvement in warrant Iron prices. Last dealings in warrants were at 42/8 @ 42/9 for Scotch, 34/7½ for Cleveland, and 44/6 for Hematite.

Cairene Houses.

The foundation walls, to the hight of the first floor, are cased externally, and often internally, with the soft calcareous stone of the neighboring mountain. The surface of the stone, when newly cut, is of a light yellowish hue, but its color soon darkens. The alternate courses of the front are sometimes colored red and white, particularly in large houses, as is the case with most mosques. The superstructure, the front of which generally projects about 2 feet, and is supported by corbels or piers, is of brick and often plastered. The bricks are burnt, and of a dull red color. The mortar is generally of mud in the proportion of one-half, with a fourth part of lime, and the remaining part of the ashes of straw and rubbish. Hence the unplastered walls of brick are of a dirty color, as if the bricks were unburnt. The roof is flat and covered with a coat of plaster.

The door of a private house in Cairo is often ornamented; the compartment in which is the inscription, and the other similarly shaped compartments, are painted red, bordered with white; the rest of the surface of the door is painted green. The inscription, "He" (*i. e.*, God) "is the excellent Creator, the everlasting," is seen on many doors, but is far from being general; it is usually painted in black or white characters. Few doors but those of large houses are painted. They generally have an iron knocker and a wooden lock, and there is usually a mounting stone by the side.

WINDOWS.

The ground floor apartments next the street have small wooden grated windows placed sufficiently high to render it impossible for any person passing by in the street, even on horseback, to see through them. The windows of the upper apartments generally project 1½ feet or more, and are mostly formed of turned wooden lattice work, which is so close that it shuts out much of the light and sun and screens the inmates of the house from the view of persons without, while at the same time it admits the air. They are generally of unpainted wood, but some few are partially painted red and green and some are entirely painted. A window of this kind is called a "róshan," or more commonly, a "meshrebuyeh," which latter word has another application, which will be mentioned below. Sometimes a window of the kind above described has a little meshrebuyeh, which somewhat resembles a róshan in miniature, projecting from the front or from each side. In this, in order to be exposed to a current of air, are placed porous earthen bottles, which are used for cooling water by evaporation. Hence the name ol "meshrebuyeh," which signifies "a place for drink" or "for drinking." The projecting window has a flat one of lattice work or a grating of wood or of colored glass immediately above it. This upper window, if of lattice work, is often of a more fanciful construction than the other, exhibiting a representation of a basin with a ewer above it, or the figure of a lion, or the name of Allah, or the words "God is my hope," &c. Some projecting windows are wholly constructed of boards and a few have frames of glass in the sides. In the better houses also the windows of lattice work are now generally furnished with frames of glass in the inside, which in the winter are wholly closed, for a penetrating cold is felt in Egypt when the thermometer is below 60° F. The windows of inferior houses are mostly of a different kind, being even with the exterior surface of the wall. The upper part is of wooden lattice work or grating, and the lower closed by hanging shutters, but many of these have a little meshrebuyeh for the water bottles projecting from the lower part.

HIGHT OF HOUSES.

The houses in general are two or three stories high, and almost every house that is sufficiently large incloses an open, unpaved court, called a "hósh," which is entered by a passage that is constructed with one or two turnings, for the purpose of preventing passengers in the street from seeing into it. In this passage, just within the door, there is a long stone seat, called "mastab'ah," built against the back or side wall, for the porter and other servants. In the court is a well of slightly brackish water, which filters through the soil from the Nile, and on its most shaded sides are commonly two water jars which are daily replenished with water of the Nile brought from the river in skins. The principal apartments look into the court, and their exterior walls (those which are of brick) are plastered and whitewashed. There are several doors, which are entered from the court. One of these is called "bab elharum" (the door of the harem); it is the entrance of the stairs which lead to the apartments appropriated exclusively to the women and their master and his children.

ACCORDING to one of the London architectual papers the new spire for the historical cathedral of Bern is nearly completed, after having been in the hands of the architect, Professor Beyer of Ulm, since 1889, and costing the enthusiastic subscribers to the building fund about £14,000 ($70,000). The committee of the "Münster-bau-Verein," in whose hands all questions of renovation and completion rest, has lately published its annual record of progress on the works, and, according to this report, as soon as the spire is finished the whole of the building is to be thoroughly overhauled and repaired, the proposed extra outlay for these improvements being estimated at £20,000 (about $100,000). This sum will, however, only cover the cost of such work as must be necessarily done if the building is to be preserved; a complete restoration, with an improvement of the immediate surroundings, requiring another £40,000 (about $200,000). That a comparatively small town like Bern should voluntarily subscribe so much for the spire and necessary repairs is so creditable to them that they might well spare the doubtful luxury of a restoration.

HARDWARE.

Condition of Trade.

AS the latter part of November usually witnesses a diminution in the volume of trade it is not a matter of surprise that at the present time there is no increase in business. It is, however, a matter of congratulation that there is little, if any, falling off, trade being characterized by a fair activity in view of all the circumstances. There is certainly a better feeling prevalent and more confidence in the early resumption of a normal activity. The policy pursued by merchants of limiting their purchases to early requirements is still adhered to, and with perhaps nearly as much conservatism as during the past few months. Stock orders are given sparingly, but dealers are purchasing frequently with a view to completing their assortments, being content, however, in nearly all cases to carry less goods than usual. Prices are without important change, the market being fairly steady with the exception of some staple goods, such as Nails and Wire, in which there is a perceptible downward tendency. The financial condition continues to improve, and it is pleasant to note that comparatively few failures are reported. There was some apprehension a few months ago that the condition of business and the financial stringency would result in a good many failures in the trade, and perhaps among retail merchants, but fortunately these fears have not been realized, and with the lapse of time there is less to apprehend in this regard.

Chicago.

(*By Telegraph.*)

Shelf Hardware jobbers report business to have improved a little during the past week, owing to the prevalence of cold weather throughout the Northwest, but it is still much under the normal volume. Merchants are fairly well stocked now on seasonable goods, and their orders are only small and evidently to cover sudden calls. Importers of Tin Plates represent their trade interfered with to an increasing extent by domestic Tin Plates, which are not only offered at lower prices, but on which better terms are given than customary in the importation of such goods. The movement is confined to small lots, but there is a fairly steady trade, in business of that character. Heavy Hardware jobbers are having a better demand in their line, not only in Iron and Steel, but also in winter goods. Material for bob sleds and other seasonable articles has been moving much more freely during the last ten days than at any previous time this fall. Collections are quite fair.

St. Louis.

(*By Telegraph.*)

There is a steady flow of orders, which while in themselves small in the aggregate made a good business. Country merchants are buying more liberally, and as money is becoming more plentiful daily, credits are not so closely watched as heretofore. Holiday goods are just now selling pretty freely, and notwithstanding the financial stringency prevailing during the past six months a good holiday trade is anticipated by all dealers. Prices do not improve to any extent, except that manufacturers do not appear so anxious to dispose of their product as they were two months since. Barb Wire is firm, while Wire and Cut Nails are weak. Heavy Hardware is moving freely, and in the line of machinists' and railway material an active trade is noted.

Notes on Prices.

Wire Nails.—The downward tendency in the prices of Wire Nails, which has been perceptible for some time, still continues, and on round lots at mill the market is represented by the quotation of $1.15 to $1.20. Some of the mills are holding to the latter figure, but there is little difficulty in placing attractive orders at the lower price named. In view of the desire of manufacturers to book orders and the active competition which prevails among them, relatively low prices are made on comparatively small lots, and a good proportion of the business consists of orders from the smaller jobbers and large retailers. The volume of business is only fair, but most of the mills are kept moderately busy. Small lots from store in New York are quoted at $1.55 to $1.60.

Chicago, by Telegraph.—Business in Wire Nails is moderately active outside of Chicago, but not so much has been done in the city during the past week. Manufacturers are trying to hold the market at $1.30 to $1.32½, Chicago. But these prices have been shaded by some of their competitors, who seem to possess special facilities in low transportation rates. Jobbers quote small lots from stock at $1.45 to $1.50.

Cut Nails.—The Cut Nail market shows but little change during the past few weeks, the volume of business remaining moderate and prices pretty evenly maintained on a basis of 95 cents for carload lots at mill. This quotation is not, however, rigidly adhered to and prices have reached a point where some of the mills are not netting over 90 cents. The market in the West seems to be on the whole in a better condition than in the East and prices are more firmly maintained. In view of the unsettled condition of business some of the mills are not in operation, but there is on the whole a larger production of Nails at the present time than for some months. Small lots from store in New York are quoted at $1.20.

Chicago, by Telegraph.—A continued good movement is reported in Cut Steel Nails, the best trade being, as heretofore, with points in the Southwest, now accessible by very low rates. These rates will run until early in December, and meantime the merchants of that section are stocking up heavily. Very good sales are also being made in the Western section of the country, especially in localities which can be reached by water from Wheeling. Prices on factory lots now run from $1.15 to $1.20, Chicago, according to the character of the order. Small lots from stock are selling at $1.30.

Barb Wire.—The demand for Barb Wire continues only moderate and the market is described as sluggish. Quotations are somewhat irregular and are represented by $2.15 to $2.20 for carload lots of Four-Point Galvanized at mill, the former figure being more readily obtainable than a week ago.

Chicago, by Telegraph. — Trade in Barb Wire has not shown any increase since last report, but the demand seems to be fairly steady within the contracted lines that have prevailed for so long. The demoralization in prices reported in other parts of the country has not yet reached this locality, probably because the orders coming up are not large enough to make it an object to cut prices in order to capture trade. The center of disturbance recently seems to have been in the South. Prices on factory lots of ordinary Galvanized Wire continue at about $2.40; carload lots of Glidden, Waukegan and Baker Perfect are selling at $2.50. Small lots from stock continue to be quoted at $2.55, but jobbers are doing but little in consequence of the increasing efforts of manufacturers to take the retail trade.

Hosted by Google

Market Wire.—The market on Plain Wire is suffering with other lines and lower quotations are developed. The greater part of the business is done at net prices instead of list and discount, and figures are being quoted which are lower than ever before. The decline in the price of the raw material contributes largely to this result, as does also the active competition between producers.

Cordage.—The Cordage market is quiet and the demand light. Prices, in sympathy with lower quotations on Hemp, have recently been tending downward, and are now quotably lower than a few weeks ago. It is reported that pure Manila Rope has been sold recently and is still obtainable at 7½ cents per pound. Sisal also has touched 5¼ cents a pound, and in round lots is also obtainable at this price. The market is thus represented by the following prices for large lots, f.o.b. factory or New York, the prices given being subject to a discount of 1½ per cent. for cash:

	Per pound. Cents.
Manila, 7-16 in. diam. and larger	7½
" ⅜ in.	8
" ¼ and 5-16 in.	8½
" Tarred Rope	7
" Hay Rope, Medium	7½
Sisal, 7-16 in. and larger	5¼
" ⅜ in.	5¾
" ¼ and 5-16 in.	6¼
" Hay Rope	5¼
" Tarred Rope	4¾
" Medium Lath Yarn	5
New Zealand, 7-16 in. and larger	5¼
" ⅜ in.	5½
" ¼ and 5-16 in.	6
" Hay Rope	5¼
" Tarred Rope	4¾

Ventilating Sash Lock and Fastener.—Bourke's Improved Ventilating Sash Lock and Fastener, manufactured by the Bourke Mfg. Company, Youngstown, Ohio, and illustrated in *The Iron Age*, November 9, 1893, is sold at from 40 to 45 per cent. discount from the following list:

	Per gross.
Genuine Bronze Metal	$60.00
Malleable Iron, Brass Finish	40.00
Malleable Iron, Oxidized	40.00
Malleable Iron, Amber Bronze	25.00

Glass.—During the past week the Plate Glass Manufacturers' Association having the central selling agency at Pittsburgh was dissolved, and the selling agency was abolished. The association was formed a year ago, with a capital of $10,000,000, and included the following concerns: The Diamond Company, with works at Ellwood and Kokomo, Ind.; the De Pauw Works, the Pittsburgh Plate Glass Company, having factories at Creighton, Ford City and Tarentum; the Charleroi Plate Glass Works, the Butler Works, and the Howard Company of Duquesne. The official information concerning the dissolution of the association is as follows: "The association was formed for one year, and the time for which it was formed having expired, owing to the financial situation of the country and the light demand for Plate Glass and foreign competition, the manufacturers decided not to continue the association longer. Therefore, its headquarters in Pittsburgh will be closed on and after this day." It is reported that the Diamond Plate Glass Works, Kokomo, Ind., have resumed operations on half capacity, employing 400 men. Window Glass factories continue to start up, the present capacity being equal to 785 pots, as against 182 pots reported in our issue November 2. The demand is not brisk, and it is reported that card rates have been shaded very materially, especially where money was necessary for factories to meet obligations. At the present time there appear to be no available quotations on any kind of Glass which would hold good under all circumstances.

Export Notes.

Opp & Grundy have formed a partnership for the purpose of representing American manufacturers in the markets of the English colonies of South Africa, Australia (including Tasmania) and New Zealand. They will also have a branch in London, England. They will occupy the premises at 15–25 Whitehall street, recently possessed by R. H. Dana Company, with whom both were connected as individuals for five years. We are informed that they have already taken over a large number of the concerns with which the old concern did business. A. M. Grundy, the junior, was from 1879 to 1888 employed successively by W. H. Crossman & Bro. and Arkell & Douglas. As soon after next January as possible he will go to London, England, for the purpose of establishing their concern there, and then to South Africa and Australia. He has had three years' experience in Australia in this line of trade with the importing houses of those countries.

F. Porter Thayer, who has recently been made export manager for Aultman, Miller & Co., Akron, Ohio, manufacturers of Mowers, Binders and Binding Twine, expects his new duties will keep him abroad almost continuously. He will also represent P. P. Mast & Co., Springfield, Ohio, makers of Grain Drills and Cultivators, and devote himself exclusively to the export trade. He will leave here by the "Teutonic," November 22, for River Plate ports, in South America, via England. From Uruguay and Argentina he will go overland to Chili and return to New York about April 1 by way of Panama. After that his plan now is to go to London, Russia, Roumania and Bulgaria in Europe, and within the year to the colonies in South Africa. His former position in New York will be filled by his son, Charles F. Thayer, who has been made Eastern manager for home trade, with headquarters as heretofore at 18 Warren street, New York.

THE UNION CYCLE MFG. COMPANY have moved their offices from Highlandville, Mass., to 239 Columbus avenue, Boston, Mass.

Improved Methods.

REYNOLDS & CO., New Haven, Conn., are now introducing an improved system of boxing and labeling Set, Cap and Machine Screws of their own manufacture. The principal features of the plan consist in putting all goods in a standard package of 50; in packing them in neat, strong, double boxes covered with light colored manila paper, and in marking them with printed labels on different colored papers, so that the different kinds of Screws may be distinguished by different colors. Thus Iron V-thread Screws are put up with green labels, U. S. thread Screws with

Green Label.

Yellow Lable.

Reynolds & Co.'s Lables.

yellow labels, &c. The accompanying cuts represent the styles of labels used, which will commend themselves, because of the clearness with which the diameter and length of the Screw is given, and the distinctness with which the kind of Screw is shown. The company issue a large sheet, upon which are shown 16 labels handsomely printed in colors, in the center of which is a labeled box in colors. The colored labels on the sheet show Iron Cap Screws made with V threads in round, square, hexagon, button and flat heads; U. S. thread in the same assortment of heads, also with oval and cupped points, and V-thread Steel Set Screws with oval and cupped points. This will be recognized by the Hardware trade as an improvement over old methods, and as an advantage in lessening labor and avoiding errors in getting out goods.

BARNEY & BERRY, Springfield, Mass., and 114 Chambers street, New York, in their advertisement in this issue relating to their Ice and Roller Skates allude to the award granted them at the World's Fair and the fact that their Skates are for sale by the leading jobbers of Hardware and Sporting Goods.

Benjamin Stiles Brown.

BENJAMIN STILES BROWN, manufacturer and capitalist, Columbus, Ohio, a son of Henry and Harriet Brown, was born in Southbury, New Haven County, Conn., February 22, 1824. He spent his early boyhood on his father's farm and attending the district school. Later on he went to Litchfield, Conn., to finish his scholastic education. In the spring of 1845, when 21 years of age, he started out in life as a cattle speculator, and traversed the States of Ohio, Indiana and Illinois in pursuit of his vocation, and for six years was a successful trader. In December, 1851, he located in Columbus, Ohio, as a permanent resident and commenced the manufacture of Agricultural Implements, and was at the time of his death president of the Brown, Hinman & Huntington Company, who manufacture Farming and Garden Tools, which are shipped to all parts of the American Continent and to Europe.

Mr. Brown was an excellent illustration of the amount and variety of business in which one man may be engaged, and that, too, with success and thoroughness. He was president of the Door, Sash & Lumber Company, the Ohio Furniture Company, the Commercial National Bank; also director of the Columbus Machine Company and the Ohio Pipe Company, all of the city of Columbus. He was also president of the Austin, Tomlinson & Webster Mfg. Company and the Withington & Cooley Mfg. Company of Jackson, Mich. Also president of the Iowa Farming Tool Company of Fort Madison, Iowa, and a director of the Kelley Nail & Iron Company of Ironton, Ohio, the Cleveland, Columbus, Cincinnati & St. Louis Railway Company and the Geneva Tool Company of Geneva, Ohio.

Mr. Brown was married December 19, 1877, to Miss Emma, the daughter of the late distinguished botanist. William Starling Sullivant. In religious faith Mr. Brown was a Presbyterian, and in political faith a Republican. He was a man whose life had been full of business enterprise and activity, crowned with success. To him was due a very large share of the credit for the great progress in manufactures that his adopted city of Columbus has made.

A man of the highest integrity and strictest honor, where best known he was most admired. He was the living exponent of the sterling virtues of the Pilgrim Fathers, from whom he was a descendant. Calm, cool and collected, quick to discern and decide, he executed his manifold business cares with dispatch and accuracy, and his death will be recognized as that of one of the country's best known and most successful manufacturers.

BENJAMIN S. BROWN.

The Well-Informed Clerk.

WM. H. MAHER.

A FIRM in an enterprising town in New York lately advertised for a clerk to take charge of their grocery department, and among the qualifications necessary was this:

"One who has taste for reading the trade journals with a view to being well informed."

It would seem as if every merchant and every clerk would be only too glad to avail himself of every help in the way of education, and particularly so in the direct line of his business or employment.

One source of information is the trade journal, wherein are gathered items regarding the goods handled in the special branch of trade to which the journal is devoted, discussions upon trade matters, suggestions as to trade points, drawn from the experience of others, and gossip as to the world of business.

It matters not how thoroughly one is posted as to his own trade and locality, there is never an issue of his trade journal that will not contain that which he can read with interest as well as profit. If this is true of the merchant how much more generally it will apply to clerks!

It is the one encouraging feature to the ambitious young poor man of the present that his competitors in the ranks are so superficial, so anxious to shine to-day, and so antagonistic to hard work. A large number, a large proportion are "graduates" of a school system that teaches a smattering of everything from drawing to Greek, and teaches nothing thoroughly. The "graduate" has a fine sense of his own ability and importance and rests upon this. His place in "society" is of much greater importance to him than his position in the store, and so much of his time is taken up with his social duties he has no hours to spare for reading either trade journals or anything else.

There is usually in the same store a young man who is too insignificant to have a place in "society." His mind is too warped to enjoy the small gossip that occupies the mouths of his more expansive companions, and his business occupies his thoughts during all his waking hours. He is the one clerk who sees the weekly trade journal; not infrequently he digests its contents better than does his employer. He thinks over the things he reads and assimilates them — makes them his own, and in due course of time is referred to by all around him for this or that bit of information.

As a salesman he is able to explain in an intelligent manner why things are thus and so. Buyers see that he knows his business and they like to trade with him.

When goods are called for that are not kept in stock, or may never have been kept in stock, he knows about them, can show where they are weak or strong, and can advise with his employer as to whether it would be wise to add them to the stock or not.

His greater knowledge of everything about the goods helps him to remember prices better, and he is hourly consulted by his associates about points in which they are uncertain. Whatever changes are made in the force he is sure of his place until the day comes when he has a store of his own or is given an interest in the firm.

It is not the brilliant fellow that succeeds. When he does he is the exception. It is the plodding man, who is thorough, careful, intelligent.

When I was a salesman on the road and, upon entering a store, saw the trade journal unopened, circulars and price-lists unread, I always knew I might ask good prices with safety. On the contrary, where I saw the trade paper open at the desk I felt my way carefully to discover what prices I might get.

To-day the trade journal has a much more distinctive field than it had 20

Hosted by Google

years ago; it is less a mere price-list and more an intelligent friend. No merchant can afford to discard its help, and no clerk should miss the opportunity of going to the school that it conducts for his benefit. But this article is not written to increase the circulation of trade journals; it is to emphasize the benefit of being a well informed clerk. Trade journals are one medium through which he can inform himself, and they ought to induce him to try further fields of reading.

One of the best salesmen that I ever met was one who always carried an educational book in his gripsack; when he had to wait for a delayed train or had an hour to spare at the hotel he had his book in his hand.

I found him a pleasant companion and so did his customers. He was respected and liked by all who knew him, and deserved the success that came to him later. He was a well-informed man; interested in everything worth a man's thought, with no time to waste over billiards or barrooms or worse things.

One of the high salaried men that called on me from New York had the faculty of picking up the latest story and repeating it to perfection. He was equal to many men on the stage. But if I asked for specific information about an article in his line he could not give it; he had the sample and there was the price; he could tell a good story and was free in paying for refreshments, if you would have them, but beyond this he had nothing.

I was not surprised when his employer told me that he would be allowed to resign at the end of the year. Said he: "He sells less each trip. Everybody likes him and speaks well of him, but each time they see him they buy less of him."

I thought I understood the reason. Stories are good in their way; cigars and wine influence some, but, after all, men think, "business is business," and they want to buy of a man who understand his goods from A to Z.

It is for this reason that merchants are looking around either for well-informed clerks, or for those of such frame of mind that they will inform themselves as they grow in business. If the desire is there the rest will follow.

Twenty-five years ago a young man worked in a stove store next door to me. He worked hard, too, for he had to run stoves out and in, black stoves, set them up, and do anything and everything needed to be done. Shops in those days kept open till 8 o'clock every evening, and were opened early in the morning. But this young man found time to study up everything connected with stoves and tin. By and by, with a very few hundred dollars and some credit, he opened a shop to make tin cans, and to-day he is at the head of the largest factory of this kind in all the world.

He read and studied "with a view to being well informed," just as the New York advertisement wants a young man to do, and his information became valuable capital.

The young man of to-day should take courage and press on in the same direction. Well-informed men are needed, always will be needed, and will always get to the top.—*Trade.*

Trade Items.

THE J. E. FORSEE COMPANY, Room 203, 411 Olive street, St. Louis, Mo., have established themselves as manufacturers' agents, having already secured a good line of accounts. Among them are the Pullman Sash Balance Company, the Rockford Bit Company, the Maryland Tack Company, the Chillicothe Mfg. Company and the U. S. Crayon Company. J. E. Forsee was the buyer for the Wyeth Hardware & Mfg. Company of St. Joseph, Mo., and has a wide acquaintance among the Hardwaremen of the entire country.

HENRY DISSTON & SONS, Philadelphia, in their advertising space are calling attention to their Improved Saw Clamp and Filing Guide, an article especially designed to assist those not skilled in the art of saw filing to file a saw correctly.

PADDOCK & KLEINE, 107 Chambers street, New York, are presenting a handsome and useful desk accessory in which a Calendar and Clock are combined. A leather covered frame 5¼ x 8 inches in size, ¼ inch thick, is supported in an inclined position by a rest at the back. In the upper left hand corner is a clock with a 2-inch face. An opening 3½ x 4 inches takes up a large portion of the remaining room on the face of the frame, and is supplied with monthly calendars, which slide in from the end of the frame. Above the opening is the name and address of the concern, and below are the words: "Wagon and Carriage Wood Work, Hardware and Trimmings for Export," and appropriate illustrations of Wheels. The gilt lettering on the leather, the date cards printed in red and black, the neat appearance of the whole affair, together with the friendly ticking of the little timepiece, are at once pleasing to the recipient. Though intended for 1894, they have been prepared thus early to avoid the annual flood of calendars.

T. H. SPEDDY, Worcester Block, Portland, Ore, has recently been East visiting the parties for whom he is representative, among others. Mr. Speddy is the manager of the Pacific Coast business of a number of Eastern manufacturers, and his line includes general Hardware, Carriage and Saddlery goods.

ANNOUNCEMENT is made by Robley & Brundage, 142 Chambers street, New York that their partnership was dissolved on November 13, by mutual consent. Partnership debts and obligations have been assumed by James H. Rooley, who will continue the business at the former address.

BOAS BROS., 233-235 Greenwich street, have ceased to sell their Adamant Enameled Ware on joint agreement with Lalance & Grosjean Mfg. Company and St. Louis Stamping Company. This line of goods is of German manufacture.

IN RECOGNITION of a prosperous year's business, Carter & Huckins, Hardware merchants, Oberlin, Ohio, tendered a banquet to their employees and a few invited friends on the evening of the 8th inst. Nineteen persons, fourteen of whom are in the firm's employ, sat down to an excellent supper. After the supper D. C. Foote, the head clerk of the firm, in a neat speech tendered the thanks of those present to Messrs. Carter and Huckins for the bountiful repast, and testified to the high esteem in which these gentlemen are held by their employees. Mr. Huckins and Mr. Carter responded in complimentary terms, in the course of which reference was made to the confidence which the firm had ever reposed in their employees. The evening's proceedings, which had been of an exceedingly happy character, were brought to a close by a few appropriate remarks from the Mayor of Oberlin.

THE ADVERTISEMENT of J. Frank Greene & Co., 276 Water street, New York, in this issue, requests the trade to write for estimates on Leather Parts, such as Straps, Washers, &c., which they are furnishing. They advise us that by economy in cutting by reason of making a great variety of shapes and by the use of improved appliances they are able to furnish any shape or article in leather cheaper than a manufacturer can make it himself.

THE READING HARDWARE COMPANY, who for some time have been seeking more commodious quarters than those now occupied by them at 79 Reade street, have leased the premises 96-98 Reade street, in this city, for a term of years, and expect to occupy them on or about February 1 next. They have secured the street floor, basement and sub-basement, and will fit up the place in modern style, thus securing excellent facilities for handling business, showing goods and samples, &c.

IT WILL BE OBSERVED that the Putnam Nail Company, in their advertisement in this issue relating to their Horse Nails, refer especially to the award of the World's Columbian Exposition, giving the wording of the diploma granted them.

CHARLES C. STELLE of 81 Fifth avenue, Brooklyn, N. Y., has lately succeeded to the old established Sap Spout business of C. C. Post of Burlington, Vt., and has removed the business to the above address in Brooklyn. The Spouts are well and favorably known to the trade, a feature in their construction being the patent air trap for excluding the air, and, as a result, preventing the sap from freezing and drying up. By conducting the business in Brooklyn goods can be shipped more quickly and at less expense than formerly. It is Mr. Stelle's intention to maintain the high stardard which these goods have obtained, and to merit the confidence of the trade, both old and new. The Sap Spouts are particularly referred to in his advertisement in this issue.

JAMES MANN & SONS, Buffalo, N. Y., as per their announcement on another page, are offering Heavy Strap Hinges, 6, 8 and 10 inch, at a discount of 50 and 10 and 10 and 10 and 10 per cent.

THE BONNETTE ARC LAWN SPRINKLER COMPANY, Bay City, Mich., have appointed John H. Graham & Co., 113 Chambers street, New York. as their general agents for the sale of their Arc and Hustler Lawn Sprinklers.

Mexican Tariff.

THE Bureau of American Republics has received information of certain modifications in the existing customs tariff of Mexico which are of interest to importers. The Government has issued a law requiring importers on and after January 1, 1894, to pay, by way of municipal duty, 1¼ per cent. on and in addition to the regular import duties. This is equivalent to an augmentation of the present duties by 1¼ per cent.

Hosted by Google

Arrangement of Stores.

S. H. BERRY HARDWARE COMPANY.

THE S. H. BERRY HARDWARE COMPANY, Dover, N. J., who started business in a small way about 18 years ago, have recently erected a handsome building, and arranged it for the needs of their increasing trade. The building, interior views of which are shown in the accompanying cuts, is 35 x 67 feet in size, of Amboy buff brick with red sandstone trimmings, the water shed being of Morris County granite. The hight of the four stories is as follows: First, 12½ feet; second, 11 feet; third, 10 feet; fourth 9 feet. The first, second and third stories are used for the business. As shown by the ground plan, Fig. 801, the first floor is divided into two rooms, the corner one, 20 x 65 feet, being used by the firm. All the rooms above the first floor are the full width of the building. A counter runs along in front of the shelving on the right of the entrance to the window near the elevator. A Morse freight elevator runs from the basement to the fourth floor, and can be worked by either water motor or electricity. Doors open from the elevator shaft on the first floor to the sidewalk, and as the ground slopes back from the front of the building a wagon can back up and load or unload goods from or into the elevator. The elevator openings at each floor are provided with automatic scuttles or doors for safety; also to prevent fire from rushing up the elevator shaft. The entire building is heated by steam and lighted by electricity, and the office is connected with each floor by speaking tubes. Each floor is supplied with city water. The cost of the structure, not including the ground, was from $10,000 to $12,000.

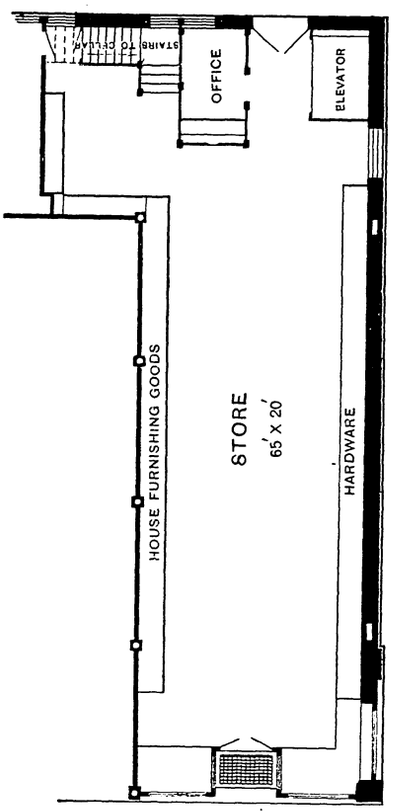

Fig. 801.—First Floor Plan, S. H. Berry Hardware Co.

SHOW WINDOWS AND SHELVING.

At the right of the entrance is the show window, as appears in Fig. 802.

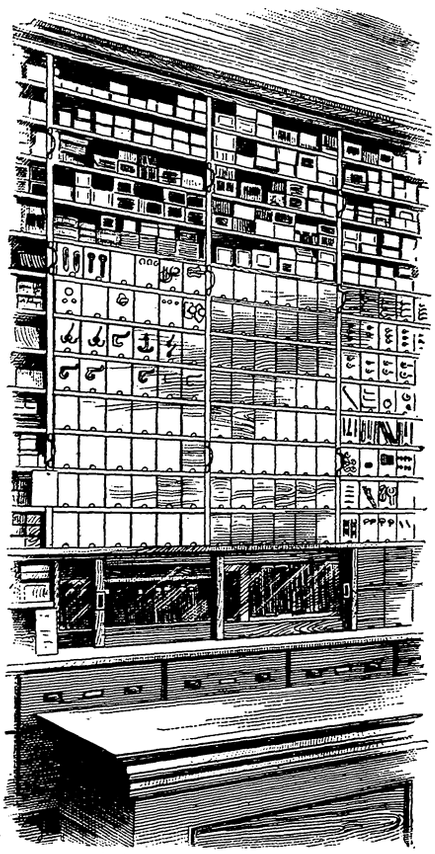

Fig. 803.—Counter and Shelving.

Fig. 804.—Wall Case and Hand Saws.

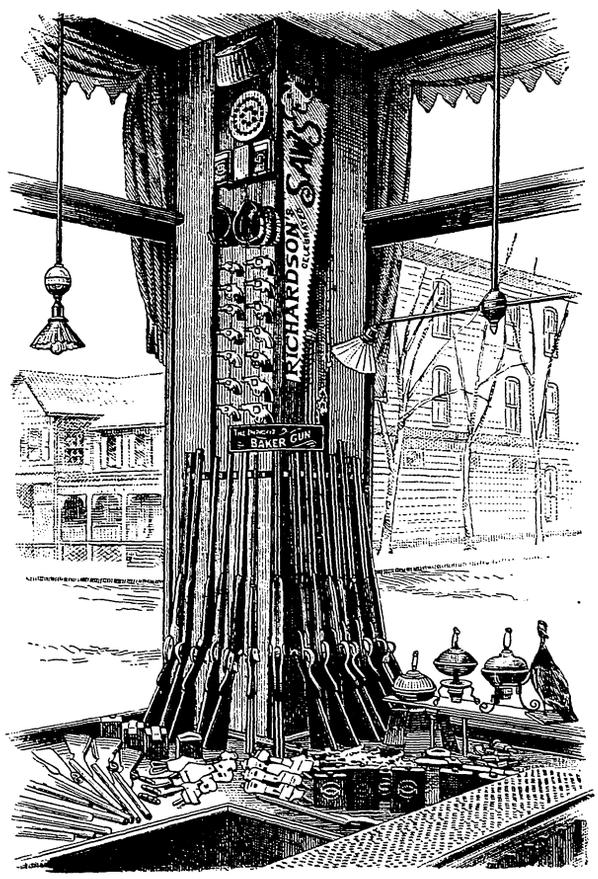

Fig. 802.—Show Window.

The view being from the inside of the store. The window being on the corner gives ample room for an elaborate

Hosted by Google

display of goods. The show window on the opposite side of the entrance is devoted to House Furnishing Goods, and a tier of shelves on the wall for the display of Tea and Coffee Pots, and similar goods. The fixtures on this floor are of ash, finished in natural wood. Along the right hand side of the room are shelving and counters, a portion of which are shown in Fig. 803. The shelves run to the ceiling, the lower portion being built in the form of steps, as shown in Fig. 804. with brass handles on the partitions to assist in reaching the boxes and the goods above. There are 400 wood boxes or drawers in the shelving, made interchangeable in size, the boxes measuring 4, 5 and 7 inches across their fronts. The boxes are provided with Franklin Brass Company's No. 254 pulls, the goods being sampled above. The company first intended lettering the drawers instead of sampling them, but found samples much more simple. and more productive of business. Customers can see such goods as they want, and can be served much more expeditiously, especially when there is a rush of customers, or when short handed. Stacy bins, of which there are 38, are used for Nails, and open to the back side of the counters. Table Cutlery is kept in the shelving case, behind sliding glass doors, provided with flush brass pulls, as shown in Fig. 803. The case is high enough to allow standing the original boxes on end, upon which the Knives and Forks are sampled.

An ingenious arrangement is shown in Fig. 804 for keeping the stock of Hand Saws in the original boxes, this being in the end of the shelving near the elevator. False fronts are substituted for the last tier of drawers under the ledge, and the Saw boxes are accommodated on shelves open at the end. It is found, however, that the limited space provided for these goods is not sufficient for their stock, otherwise it is a very satisfactory arrangement. The wall case above, with sash to raise, is devoted to Planes on shelves and to a display of Saws of various kinds, hung on pegs above.

THE OFFICE.

The office in the rear is commodious and is inclosed with paneled wood work and glass. A standing desk for bookkeeper faces the storeroom, the rest of the space being devoted to a roll top desk and a safe. It is the intention to elevate the entire office about 3 feet, so as to bring it on a level with the platform of the stairs. This arrangement will give a better view of the store and will also provide room underneath the office for Handles and goods of unusual length. A small brass rod hung horizontally in screw eyes at each end provides a place for hanging Chains ; the rod is placed on the stairway at the foot of the stairs.

LAG SCREWS, WASHERS, ETC.

The shelving represented in Fig. 805 is located in the corner of the L at the left hand side of the store. The counter in front is supplied with Stacy Nail bins. and the traveling ladders were furnished by the Coburn Trolley Track Mfg. Company. The bins at the end of the counter are devoted to Lag Screws, Machine Bolts, Washers, Strap and T Hinges, &c. The bins extend to the floor, though not so shown in the cut. Full packages of Tire and Carriage Bolts, Glue, cans of Carriage Varnish, Carriage Paint, Nail bins, drawers, &c., occupy the shelving behind the counter.

HOUSE FURNISHING GOODS.

In front of the shelving devoted to House Furnishing Goods on this side of the store, and near the corner just described, are Dayton cases on square bases, standing on the floor, holding the retail stock of Tire and Carriage Bolts, Wood Screws, flat and round-head Brass Screws, Morse Drills, &c. Some of these cases were made to order, of special size to accommodate the line of goods carried.

The shelving for House Furnishing Goods, which extends along this side of the store, is shown in Fig. 806, there being no counters on this side. Under the ledge the goods on the shelves are protected by doors sliding on two tracks. The two wall cases extend nearly to the show window, and are provided with glass sash to raise. In these cases are kept Carvers, Brass Tea Kettles, Spoons, Scissors, Tea and Coffee Pots and other high grade goods.

In the shelving to the right of the wall cases, the shelf immediately above the ledge is narrower than the shelves above, thus giving a better view and more easy access to Long Handle Spoons, Dippers, Ladles and the kitchen utensils belonging to the line lying on the ledge. The shelving is without partitions, being supported by light turned standards at the front.

The wall space between the wall cases and the show window is used for sampling goods. In front of this, leaving sufficient room for a passageway to the show window, is the buyer's

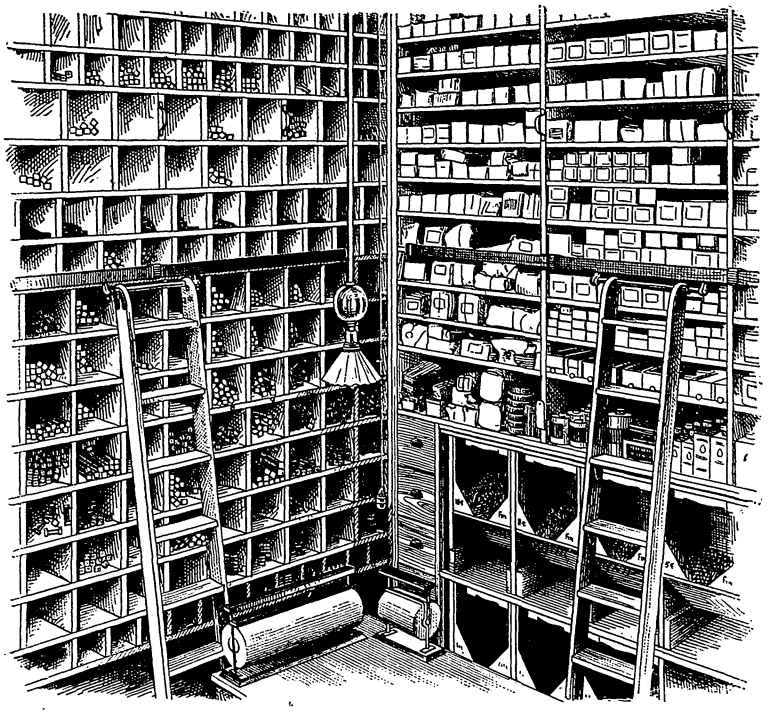

Fig. 805.—*An Interesting Corner.*

Fig. 806.—*House Furnishings and Cupboards.*

Hosted by Google

desk. This has a roll top and is conveniently situated near the door, so that the buyer can welcome customers and see that they are properly waited upon.

SECOND FLOOR.

The treads of the steps going to the second story have strips of stair rubber; the paneled door above and the stairway are finished to correspond with the other wood work in the room below. On the second floor racks are provided for Spokes, Shafts, Oars and Glass. Wheels, Boys' Express Wagons, Sleds, Shovels, Enameled Duck and Carriage Trimmings are also kept here. Along one side of the wall is shelving for surplus stock of shelf goods. A Weather Strip rack, arranged similar to a rack for Bar Iron, is on this floor. The rack is 8 feet long by about 3 feet wide and 5 feet high, and is mounted on casters so as to be moved about. The wooden Weather Strip is put in and taken from the various apartments from the ends.

THIRD FLOOR.

On the third floor are kept Rims, Wheelbarrows, Carriage Bodies, Corn Shellers, Cutting Boxes, Cider Mills and other goods of this character.

BASEMENT.

In the basement are assembled all blacksmiths' goods. A rack, with 245 compartments, is devoted to Bar Iron and Steel. Forty-one bins are provided for Horseshoes, the stock carried including steel, snow, toe weight, side weight, light, medium and Mule Shoes. Tuyere Irons, Anvils, Sledges and other goods found here make it possible to accommodate a blacksmith with almost anything in his line. Hubs are kept on swinging shelves in a cool and dark part of the basement; Rope is also kept here as the most appropriate place. Near the front of the basement, convenient to the coal, is a Dunning steam heater, which supplies the entire building with warmth. Stone steps leading down from the sidewalk provide a way for entering or leaving the basement without going through the store, and a chute is used for sliding down kegs of Nails, Horseshoes, &c. A number of sheets of No. 12 Iron fastened to the floor at the end of the chute prevent heavy goods breaking up the floor as they descend.

The store is well lighted, and taken as a whole is very thoroughly provided with conveniences and labor saving devices.

Price-Lists, Circulars, &c.

PITTSBURGH BRASS COMPANY, Pittsburgh, Pa., and 36 Park place, New York: illustrated catalogue and price-list of Piano, Banquet, Vase, Table and Bracket Lamps. The book is divided into several sections, each class of goods by itself, to facilitate choosing what is wanted. There are a number of metal and onyx Tables, both with Lamps and without. Also an assortment of Shades and Shade Holders for Piano and Banquet Lamps, together with decorated Glass Shades for Table and Hand Lamps.

GRAND RAPIDS HAND SCREW COMPANY, Grand Rapids, Mich.: Factory Furnishings. An 1893-94 catalogue illustrates, with descriptions and prices, patent Hand Screws, Case and Glue Clamps, Cabinet Makers' Benches, Carvers' Benchers, Factory Trucks, Saw Tables, &c.

THE BOURKE MFG. COMPANY, Youngstown, Ohio: Ventilating Sash Lock and Fastener, Diagonal Sash Lock and Fastener, Nonpareil Window Cleaner, Extension Handle Socket, Excelsior Bar Cleaner and Floor Scrubber and Dryer. A catalogue illustrates these goods, with descriptions and list prices.

JOHN ROBBINS MFG. COMPANY, 58 Kneeland street, Boston, Mass.: Badges, Medals, Plates and Checks. A catalogue gives 40 pages of illustrations of Badges and Medals, including aid and athletic Badges; Badges for army corps, bicycle and boys' clubs, for policemen, constables, detectives, firemen; fire alarm box Tags, sporting Medals, &c. These goods are made in solid gold, silver or nickel, and special designs are furnished when desired.

B. STAUBACH, 236 Greenwich street, New York: Butchers' and Packers' Machinery, Tools and Fixtures, Engines, Presses and general supplies; Meat Cutters in great variety, Meat Mixers, Stuffers, Knives, Saws, Scales and Balances, Blocks, Counters, Racks, Trucks and Cleavers, together with a large assortment of miscellaneous goods used by dealers in food products. A feature of the book is a number of lists on many of the goods so arranged, both by the dozen and single article, as to be available as a selling price as between the retailer and his customer. This permits of the book being shown with cuts and descriptive matter where goods are not in stock.

AMERICAN NET & TWINE COMPANY, 34 Commercial street, Boston, Mass., and 199 Fulton street, New York: Cotton and linen Fish Nettings and Twines. Their large sized catalogue of 60 pages illustrates the process of Net manufacture, and shows the use to which different kinds of Nets are put. Among these are Menhaden Purse Seines, Snell Traps, Weirs, Salmon Traps, Salmon Gill Nets, Inland Seines, Minnow Seines, Trammel Nets, Fyke Nets, Cast Nets, &c. Something like 100 different kinds of articles are included in the catalogue, of which prices of the various styles and sizes are given.

THE UNION HARDWARE COMPANY, Torrington, Conn., and 95 Chambers street, New York: Ice Skates. An illustrated price-list shows their Lock Lever Skate in various finishes, Lock Lever Union Extension Skates, Ladies' Lock Lever Skate, Ladies' Lock Lever Union Extension Skate, Ladies' Wood Top Skates, Donoghue Racing Skate, Union Skate Sharpener, &c.

THE BUCKLIN CAN FILLING COMPANY, 233 East Hamburg street, Baltimore, Md.: Automatic Can Filler. The machine is intended for filling cans with tomatoes, and has a stated capacity of 4000 cans per hour. It is explained that the filling is done with little or no waste, and that the machine fills, tops and wipes the cans. The company, formerly of Keyport, N. J., have secured works in Baltimore, where all correspondence should be addressed.

PENNSYLVANIA BOLT & NUT COMPANY, Lebanon, Pa.: 1894 catalogue relating to hot and cold punched square and hexagon Nuts, Machine, Carriage and Track Bolts, gimlet pointed Coach Screws and Lag Screws, bolt ends and Turn Buckles, solid die Boiler and Bridge Rivets, wrought and cast Washers, Rods for bridges and buildings, Arch Bars, Body Bolsters and Car Forgings, refined Bar Iron. The catalogue, which is handsomely printed and well arranged, gives illustrations, descriptions and list prices of this line of goods. Many of the price-lists are accompanied by tables of weights, special sizes, number to the pound and other valuable information arranged in a convenient and comprehensive manner. An extensive telegraph code is given near the back of the book, preceded by a telegraph code index. The work will prove a valuable one for those interested in this line of goods.

J. W. FISKE, 39 and 41 Park place, New York: Ornamental Iron, Brass, Bronze and Zinc work. An illustrated catalogue supplements a former edition calling attention to an extensive line of artistic Wrought Iron, Brass and Bronze work for use in public buildings, parks, institutions, private residences, stores, stables, &c. It is particularly designed for architects, contractors, builders and those having to do with choosing materials of this character. The assortment is a very complete one and ranges from goods of moderate cost to those of elaborate and expensive designs. Among the leading articles may be mentioned Grilles, Transoms, basement and cellar Window Guards, Gates for a multitude of purposes, Newel Posts, with and without Lamps, Vestibule Door Grilles, Sheet Iron Doors, &c. The house is also continually executing orders for work made according to special designs. In the catalogue each plate has a separate number to avoid confusion in identifying any particular article. There has lately been issued an illustrated supplement and price-list of Copper Weather Vanes, Bannerets, &c., which contains designs not heretofore shown. Among these is one designated as Nancy Hanks, with pneumatic tire sulky, a Hackney stallion, made specially for the Dacotah Flats, Horse over Hurdle, Steam Fire Engine, Locomotive and Tender, &c. Attention is called to the fact that all these goods are made of copper and gilded with pure gold leaf.

It Is Reported—

That the Hardware store of H. Watson, Jonesboro, Ark., was entered by burglars recently and three double barreled breech loading Shot Guns carried off.

That on the 7th inst. fire broke out in the Hardware store of William Hunton, Granger, Texas, and entirely consumed the stock and building. The stock was valued at $1600, with insurance for $1000. Loss on building, $500; no insurance. The origin of the fire is unknown.

That almost the entire business part of the town of Latham in Butler County, Kan., was destroyed by fire on the morning of the 6th inst. Among the heaviest losers by the fire were the Winfield Hardware Company.

That Mason & Dale's Hardware store was considerably damaged by smoke and water in a fire at Bowmanville, Man., on the 6th inst.

That E. N. Falke has opened a new Hardware store at 811 Monroe street, Toledo, Ohio.

That burglars broke into C. M. Jones' Hardware store, at Ripley, N. Y., on the 8th inst., and carried off Revolvers, Knives and Razors to the amount of $150.

That in a fire at Memphis, Tenn., on the 13th inst., the stock of the Schmalzried Hardware Company suffered to the extent of $35,000. The insurance is $28,000.

That in a fire in the Phœnix Block, Concord, N. H., on the 11th inst., the

Hosted by Google

stock of Hardware of Thompson & Hoague was damaged, mainly by water, to the extent of $15,000. The firm have opened a retail store in their wholesale establishment on Depot square, and will conduct the business there for the present.

That Arnold & Whitmore have entered the Hardware and Implement business at Ludlow, Ill.

That the store of C. Schnepff, Elkport, Iowa, was recently damaged by fire.

That G. W. Weston is closing out his Hardware business at North Branch, Mich.

That F. D. Woodworth, dealer in Hardware, Stoves, &c., Onondaga, Mich., has sold out to J. H. Strong.

That the Rockford Hardware Company, Rockford, Mich., have dissolved.

That R. Edmunds & Son, Warren, Pa., are out of business. They have been succeeded by T. O. Slater.

That the firm of Heacock & Durfee, Gloversville, N. Y., dealers in Hardware, have dissolved. Mr. Heacock will continue the business alone.

That Hamilton Welton is intending to enter the Hardware and Implement business at Paragon, Ind.

That Edward Thomas has purchased a half interest in the Hardware store of Herbert A. Wolcott, Carthage, Mo., and hereafter the firm name will be H. A. Wolcott & Co.

That A. A. Suppigar, of the firm of Kreige & Suppigar, Hardware dealers, Edwardsville, Mo., has sold his interest in the firm to J. C. McKitrick.

That C. W. McMahon has sold his interest in the Hardware business at Center Junction, Iowa, to his partner, Herbert Mackrill.

That H. Stonebrook and Theodore Thome have opened a Hardware store at Nashville, Ohio.

That the firm of Hancock & Boyes, Hardware merchants, Emerado, N. D., have dissolved.

Death of C. A. S. Fraser.

THE TRADE will learn with sincere regret of the death of C. A. S. Fraser at Los Angeles, Cal., November 9, of consumption, aged about 41 years. Of a genial and companionable nature he readily made friends. Starting in business with Pugsley & Chapman he went with the Hart, Bliven & Mead Mfg. Co. in 1870. Rising through all the departments, he became successively city and stock buyer and then represented the company on the road. In 1878 he connected himself with Woodburn Sarven Wheel Company, Cincinnati, Ohio, and afterward with Hibbard, Spencer, Bartlett & Co. and the National Saw Company. He is referred to in very kindly terms, indicating the regard in which he was held. Permanent interment will be made in Greenwood Cemetery, in the family plot.

Paints and Colors.

It should be understood that the prices quoted in this column are strictly those current in the wholesale market, and that higher prices are paid for retail lots. The quality of goods frequently necessitates a considerable range of prices.

In this line there is something of the unpleasant experience that has been common in most branches of business since the early part of the autumn season. Pressure of circumstances has forced competition in various departments and practically wrecked price-lists. The combined corroders, for example, have to contend with a growing antagonism from outsiders and more than ordinary effort on the part of manufacturers of cheaper pigments to push the sale of their goods. Along with this is more or less irregularity in prices of American Oxide Zinc and a revised official list showing about ¼¢ ℔ reduction from the old one. Then some other base mateaials are being urged with a persistency indicative of inclination on the part of producers and importers to cut their stocks down as low as possible before the end of the year. Hence a generally weakish undercurrent and hardly anything more than routine trade except such transactions as may be facilitated by the force of exceedingly low prices.

White Lead.—Reports as to aggressive spirit on the part of "outside" corroders and manufacturers of quick process Lead continue and enough facts come out to show that those reports are not without foundation. In fact, the appearances are that the minority interest is gradually becoming more influential and that the combined corroders may find it expedient to issue a new list or acknowledge that the one in existence is purely "nominal." As matters stand, some of the outside producers are offering dry White Lead at 5¢ less a commission, or more than ¼¢ below the minimum rate quoted by the combine. Similar irregularities exist in quotations for Lead in Oil where large quantities may be involved, while jobbers still adapt prices to circumstances with the small trade. To all appearances the market is more ragged now than it has been at any time since the leading corroders consolidated. Business is slow and the demand strictly commonplace.

Zincs.—The announcement is made of a reduction of ½¢ in manufacturers' prices of American Oxide, bringing the range down to 3¾¢ @ 4½¢, according to quality and quantity, with the usual rebates to large buyers. Care has been taken to give the impression that manufacturers are working harmoniously and that there is no really aggressive competition, but facts indicate that the productive capacity is not only excessive but large enough to strain old combinations of manufacturers. In other words, it looks very much like a free and open market, with more than a bare chance that purchases on strict cash terms could be made at some concession from the prices generally quoted. Foreign brands are also selling at irregular prices, although no change in regular lists have been announced thus far.

Red Lead and Litharge.—The movement in Red Lead has been slow and seemingly low prices on foreign stock, to arrive, seem to possess little or no attraction at the present time. The old list for American brands is still quoted, but few if any sales are making at those figures. Litharge has met with rather slow sale, the large consumers being careful in their purchases, while the jobbing trade has bought in a hand to mouth way only. Prices are rather weak, but show no radical change.

Orange Mineral.—Foreign brands are not urged for sale in any remarkable degree, but there is enough effort to keep prices somewhat unsettled and slightly in buyers' favor. The volume of business is moderate, and the demand seems to be slower, if anything, than usual at this season of the year.

Colors, &c.—There is not the least new feature in the market for Dry or Oil Colors. For all staple lines not under control of combinations prices are extremely variable, and some that are supposed to be thus controlled are let out occasionally at cut prices. Meanwhile sales are slow and chiefly of hand to mouth character. Oil Colors, drawing the line at a few specialties, are in about the same position. With ready mixed Paints it is the old story of as many prices as there are varieties.

Miscellaneous.—Block Chalk has undergone no change in price, and the market remains in a languid condition. Whiting finds slower sale, but the business passing is chiefly at former prices. Barytes and the general line of Clays realize about former prices, but sell rather slowly.

Oils and Turpentine.

There have been no really new developments in the market for Animal and Vegetable Oils, drawing the line at Linseed Oil, which is momentarily affected by a sharp rise in the cost of raw material. Lard and Cotton Seed Oils have continued to depreciate in value, chiefly because of indifferent buying. Other goods have just about held their own in price and met with fair sale in routine way. Speculation seems to be at a standstill, export interest is tame and home trade buying is of strictly perfunctory character.

Linseed Oil.—A quite sharp rise in cost of raw material has caused some modification of selling pressure by out of town crushers and at this writing it seemed doubtful that either State or Western brands could be secured at less than 38¢. In fact, bids of 38¢ for deliveries during the first quarter of 1894 were said to have been turned down. City crushers have thus had better opportunity to push their product, but the outlet was narrow, as usual at this season of the year, and only routine sales have been effected. City Oil, made from American seed, brings 40¢ for raw.

Cotton Seed Oils.—Under the influence of lower prices for Lard and inferior Greases the market for Cotton Oils has ruled rather weak. The lower level of prices has failed to stimulate either export or home trade purchases, and the market is therefore not only weak, but rather dull. Prime crude has been sold at from 36¢ down to 30¢; Summer Yellow at from 41¢ down to 38¢, and other varieties at corresponding prices.

Lard Oil.—Pressers in this city and vicinity are gauging their product as closely as possible to current sales. The latter, however, have been quite below calculations, and there is enough surplus to have a weakening influence upon prices. Prime city went at 75¢ @ 76¢ in wholesale quantities, and the lower grades are offered at corresponding prices. The movement has been slow, and the demand at present is tame.

Fish Oils.—There has been no movement in the crude Menhaden, Sperm or Whale Oils and sellers' figures stand just about as they were a week ago. The manufactured products have met with merely jobbing sale, chiefly at former prices. Cod Oils steady in price, but quiet.

Miscellaneous. — Common Olive Oil in barrels has met with somewhat freer sale. Spot parcels brought 60¢ upward and future shipments still command about 55¢. There is no speculative movement at present. Cocoanut Oils are a shade firmer, since late low prices have led to cleaning up of weak holdings. Prices, however, show no radical change. Red Oils and Neatsfoot Oil sell in moderate quantity only, but realize former prices.

Spirits Turpentine.—Prices have remained almost stationary during the week. The range was 30¢ @ 30¼¢ for regular and 30¼¢ @ 30½¢ for machine barrels. Business has been fair in volume, but of strictly routine character.

Lane's Sliding Door Latch.

The sliding door latch herewith shown is put on the market by Lane Brothers, Poughkeepsie, N. Y., for whom John H. Graham & Co., 113 Chambers street, New York, are agents. All exposed parts of the latch are made of steel, and one pattern is designed for all doors, there being no rights and lefts. The latch is constructed to operate equally well when placed on either end or either side of the door, also whether the door be made to slide outside or inside the building. The door pull is set in flush on the partition side as in Fig. 1, and is also utilized for raising the latch, no other device being required. While this article is designed chiefly as a latch, yet it can be conveniently locked with any ordinary padlock, and when so locked, it is stated, there are no exposed bolts or screws that can be removed from the outside. The point is made that consequently the door cannot be opened except by destruction of the wood work. The latch is designed for use on sliding doors of carriage houses, stables, warehouses, barns, &c., as the general introduction of improved anti-friction door hangers has created a demand for a latch adapted to the purpose.

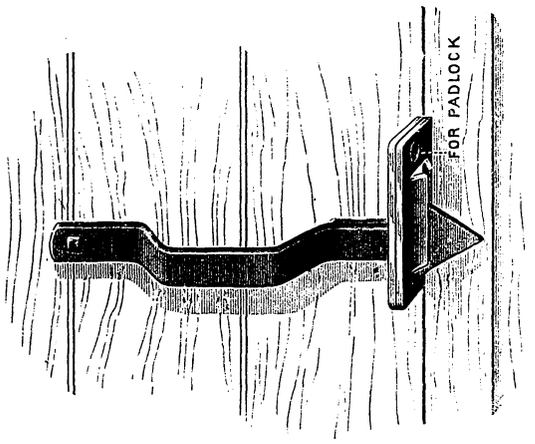

Fig. 1.—Showing Holes for Padlock.

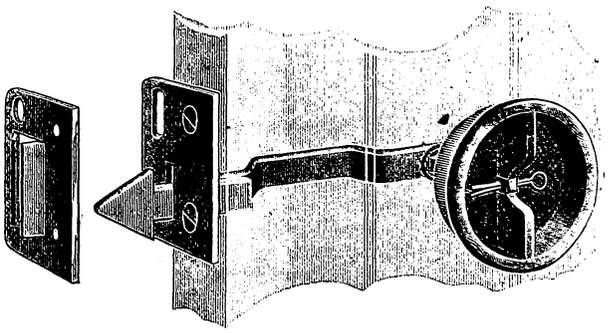

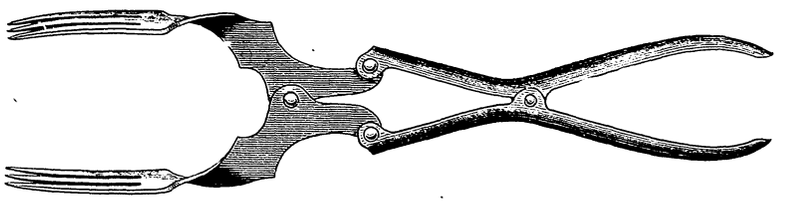

Fig. 2.—Lane's Sliding Door Latch.

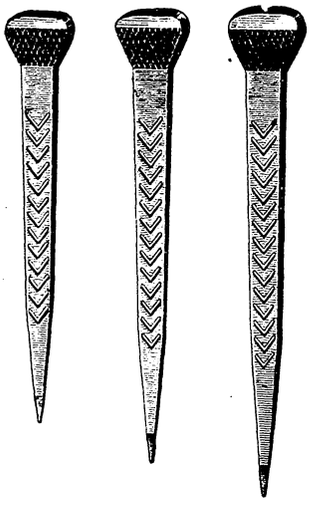
The Marvelous Duplex Serving Fork.

The duplex serving fork shown herewith is introduced by the Duplex Fork Company, Fremont, Ohio. The fork is described as being made of the finest steel, triple plated, and, it is stated, will wear for years if properly taken care of. The fork, it is stated, is always open and ready for use, and the slightest pressure can be felt. The fork is designed for serving salads, vegetables, meat, &c. As a carving fork it holds the meat without puncturing or tearing it. Similar forks are made for kitchen use, designed for taking meats, vegetables or anything hot from the oven. Sugar or pickle tongs are made on the same principle for table use, in serving sugar, or pickles from jars or cans. This tongs is carved and plated. These goods are sold in sets consisting of kitchen fork, serving and carving fork, as illustrated, and pickle tongs, or any of the three can be purchased separately.



The Marvelous Duplex Serving Fork.

European governments are co-operating in vigorous efforts to suppress the anarchism which has been rampant of late, particularly in Spain and France.

Capewell Corrugated Horse Nails.

The accompanying cuts represent corrugated horse nails offered by the Capewell Horse Nail Company, Hartford, Conn. The nails have straight ridges on the surface, which are referred to as not obstructing their passage through the hoof, and are designed to give a secure hold without the necessity of clinching. It is pointed out that a hoof presents a better appearance when the nails are not clinched, and that the operation of clinching is frequently painful and attended with difficulty and danger on colts and restive animals. The manufacturers state that the corrugated nails have been found by practical test to hold a shoe as securely and as long as a clinched nail. These nails are made in all sizes.

Capewell Corrugated Horse Nails.

Toledo Wheelbarrow Wheel.

The improved wheelbarrow wheel herewith illustrated is offered by G. W. Thomas & Co., proprietors of the Toledo Wheelbarrow Works, Toledo, Ohio. A ⅝-inch round spoke is used, which is cast in the hub, as in Fig. 1. The spoke passes through the tire in a wedge shape, as shown in the sectional cut, Fig. 2. It is claimed that by this arrangement twice the strength of the

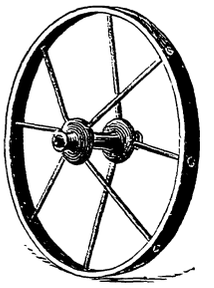


Fig. 1.—Toledo Wheelbarrow Wheel.

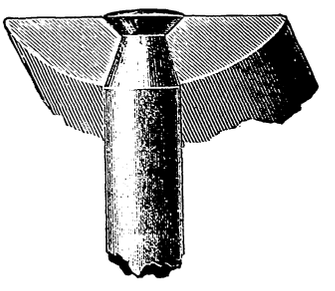

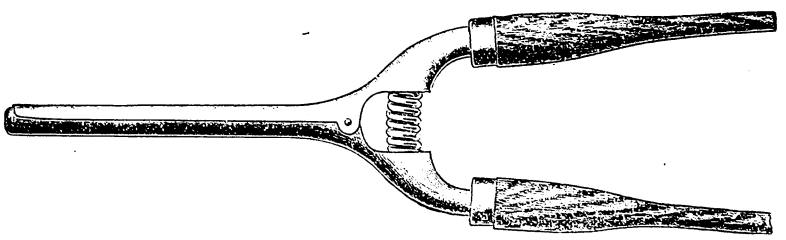

Fig. 2.—Shape of Spoke in Tire.

Hosted by Google

spoke is obtained, as in dumping the barrow the spoke cannot push through or pull out. These wheels are warranted by the makers to give satisfaction and are placed on all barrows when steel wheels are ordered.

Aluminum Hair Curlers.

Gibbs Mfg. Company, Canton, Ohio, are introducing curling irons of aluminum, as herewith shown. The manufacturers claim for the curling irons that they will not rust or tarnish by use, that they may be kept bright by

Aluminum Hair Curlers.

simply wiping after using, that they heat in half the time that iron or steel curlers will, that they retain the heat longer, and that they are only one-third as heavy. The curlers are made in three sizes—Nos. 3, 4 and 5.

Steel Fire Proof Security Box.

The Sidway Mfg. Company, 32-40 South Jefferson street, Chicago, are placing on the market the steel fire

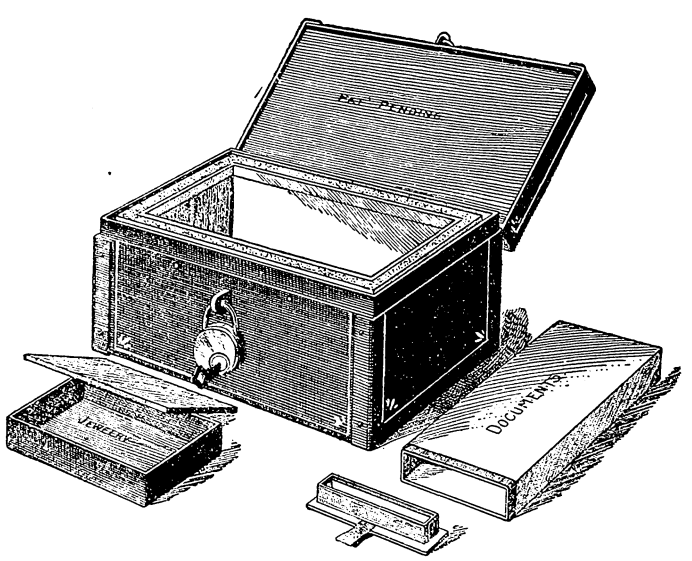

Fig. 1.—Steel Fire Proof Security Box.

proof security box shown in Fig. 1. The box is made of $\frac{1}{16}$ inch cold rolled pickled steel plates in three sizes, the inside one being $11\frac{1}{8}$ inches long by $6\frac{1}{8}$

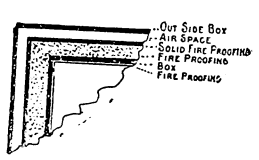

Fig. 2.—Sectional View of the Box.

inches wide and $5\frac{7}{8}$ inches high; while the outside one is 7 inches longer and properly proportioned in other directions. These plates are securely riveted together, rendering a space inside measuring 9 inches in length, 4 inches wide and 4 inches high, the space between the inner and outer boxes being filled with fire proofing, as is shown in Fig. 2. The interior is furnished with two boxes—one for jewelry and the other for documents. The first is made of galvanized iron, lined with fire proofing, while the document case is covered with the same material. The interior is properly lined with soft plush felt.

The outside of the box is handsomely japanned and striped with steel and brass trimmings, nickel plated. The entire box weighs $11\frac{1}{2}$ pounds, and is designed for those who desire a keep-safe for valuable papers in the house. We are advised that the box has been subjected to a white heat for a half hour without the contents being affected, not even taking the polish off of brass.

Columbian Sash Lock.

The Columbian Sash & Door Lock Company, Wauseon, Ohio, are putting the sash lock on the market as herewith shown. Fig. 1 represents the lock when fastened on the sash and locked. Fig. 2 shows the lock more in detail and the position of the parts when unlocked. The lever is held when disengaged, as in Fig. 2, by a spring in an upright position, so as to render injury to the lower sash impossible when the sash is carelessly moved up or down. The end of the lever where it engages the keeper fastened to the lower sash is hooked so that when the lever is pressed down the upper and lower sash are drawn together and centered. It is explained by the manufacturers that this action forces the upper sash up and the lower sash down, locking them three ways with one motion of the lever, making them as tight and secure as in a vise, anti-rattle and burglar proof. The notched piece at the back of the lock is held by a spring in a forward position

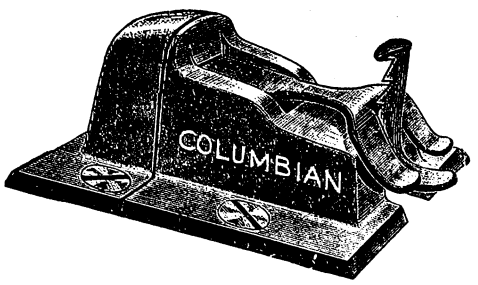

Fig. 1.—Columbian Sash Lock.

to lock the lever when pressed down as in Fig. 1. Upon pressing the notched piece down the lever is released and the window unlocked. The point is made that the lock is very simple in operation and is strong. The cuts also rep-

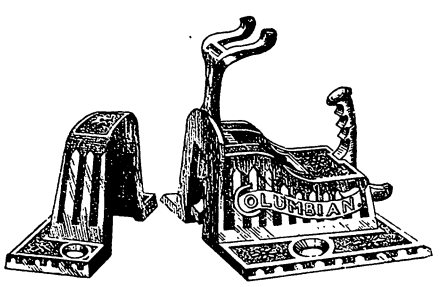

Fig. 2.—Columbian Sash Lock Open.

resent the two styles in which the lock is made, which are furnished in iron bronzed, nickeled, malleable iron in a variety of finishes and in real bronze metal.

Iron Clad Salamander Ware.

Iron Clad Mfg. Company, 22 Cliff street, New York, are putting Sala-

Fig. 1.—Iron Clad Salamander Cook Pot.

mander ware on the market, as illustrated herewith. The body of the ware is

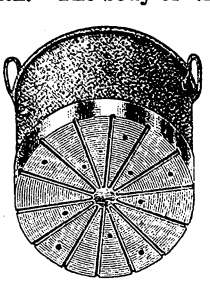

Fig. 2.—Second Bottom of Pure Copper.

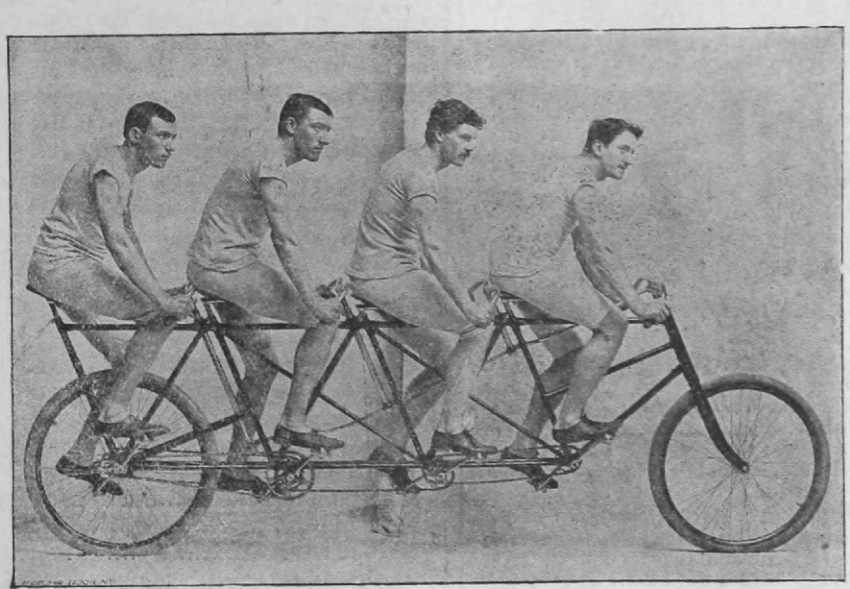
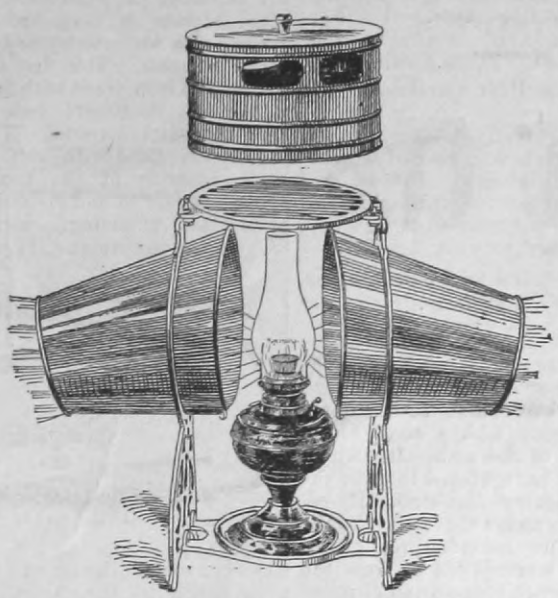


made of steel, seamless, and is covered with Iron Clad enamel, as in Fig. 1. In addition to this, each utensil has a

Hosted by Google

second bottom, as in Fig. 2, seamless, made, it is claimed, of the best quality of copper. The second bottom is perforated and ridged, and is permanently attached to the article, so that an air chamber is formed, to permit a free circulation of air, and to prevent the contents from burning or scorching. The makers claim that this ware can be used in direct contact with the fire without injury to the vessel or contents. In addition to the cooking pot shown in Fig. 1, saucepans and saucepots are made of this ware, all in ½, 1, 2, 3, 4 and 6 quart sizes.

Stearns' Quadruplet Pace Maker.



The cut here shown represents the quadruplet built by E. C. Stearns & Co., Syracuse, N. Y., and which accompanied John S. Johnson on his Stearns wheel as pace maker at Independence, Iowa, in recent races. The quadruplet was mounted by the following riders, reading from the left: John H. Gardner, C. A. Benjamin, John Wilkinson and William Van Wagoner, the racing team of the Syracuse Athletic Association. We are advised that this quadruplet is the second one ever built in this country, and is considerably lighter than the first one. It is geared to 80 inches. The rake of the head is designed to insure accuracy and ease of steering, and the principle upon which the frame is constructed is such as to give the greatest amount of strength consistent with lightness. The tread is very narrow. Wooden rims are used on the wheels, and as the combined weight of the riders amounts to about 750 pounds, the wheel, driven at a high rate of speed in pace making, is referred to as affording an excellent test of the strength of wooden rims.

Stearns' Quadruplet Pace Maker.

The Climax Lamp Stove.

Clarence M. Kemp, 101 North Frederick street, Baltimore, Md., has just placed upon the market a lamp stove of novel construction, intended for heating, lighting and cooking purposes. The illustration which we present shows the general arrangement of parts and the method of operation. Simply removing the top or heating drum discloses a large grate, which can be used for boiling, baking, roasting, heating flat irons, &c. The manufacturer states that the frame work is sufficiently strong to sustain a weight of over 100 pounds, and that the device can be set on the floor or on a table, as may be most convenient. From an inspection of the cut it will be seen that the position of the lamp is such that it can be instantly removed without disturbing other portions of the stove. Mr. Kemp states that this stove does all that any other lamp or oil stove will do, and in addition warms the feet, as it throws the heat to the floor.

The Climax Lamp Stove.

The Beardsley Door Check.

The Beardsley & Monat Mfg. Company, 234 Lake street, Chicago, have recently introduced the Beardsley door check, of which the accompanying illustration presents a front view. The check is screwed to the bottom of the door. Pushing in the button near the top of the check releases the plunger bolt, which is forced downward by a heavy spring, projecting a rubber foot from the casing against the floor, and thus, it is stated, holding the door instantly and firmly. When the door is to be moved, the bolt is raised by the thumb piece at the top of the check and retained again in the casing by a lock. The device is designed to do away with bricks and wooden blocks, and to prevent the slamming of doors or breaking of glass. The manufacturers claim that the check prevents doors sagging and pulling out of hinges, and that it will keep a door either partly or wholly open.

The Beardsley Door Check.

M. A. Briggs advise us that he has severed his connection with the Hardware firm of W. H. Briggs & Sons of Valdosta, Ga., and is open to an engagement in any line of Hardware.

Hosted by Google

Ideal Storm Sash and Window Screen Fastener.

C. H. Congdon, 643 St. Anthony avenue, St. Paul, Minn., is introducing the storm sash and window screen fastener herewith illustrated. The fasteners are made of malleable iron, finished in japan. When putting them

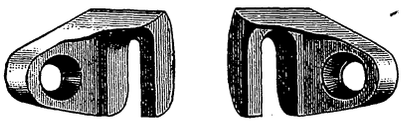


Fig. 1.—Ideal Storm Sash and Window Screen Fastener.

in place the fastener is pivoted to the stop by means of a small 1-inch screw. The open end slot is first turned down into engagement with a screw head upon the face of the sash, after which the screw can be tightened to draw the sash tightly against the stop. By reversing the operation the sash may be removed. The manufacturer claims that as the fastener is put on from the inside, it is easy to operate and obviates the use of a ladder; that it secures the sash tightly, keeping out the cold; that it does not disfigure the building; that the fasteners and screws need not be

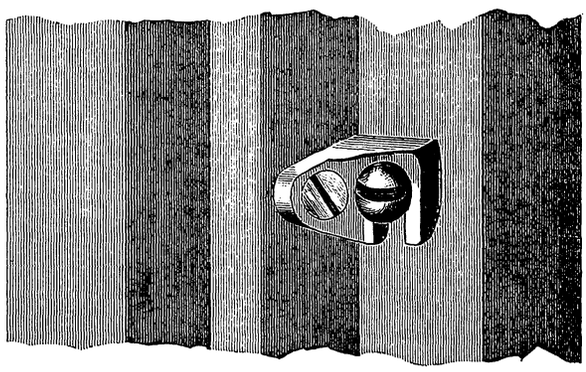

Fig. 2.—Fastener Applied from the Inside.

removed, and that the same fasteners may be used for window screens.

Ætna Curling Iron Heater.

Nicol & Co., 55 West Washington street, Chicago, offer the Ætna curling iron heater, cuts of which are shown herewith. The frame work fits snugly over the neck of the burner, thus bring-

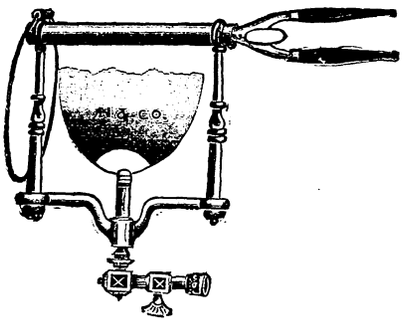

Fig. 1.—Ætna Curling Iron Heater.

ing the nickel plated case, which holds the curling iron proper, directly over the flame, thus obviating blistered or black fingers, or singed hair. Fig. 2 shows the Ætna with wire attachment for heating liquids. This is referred to

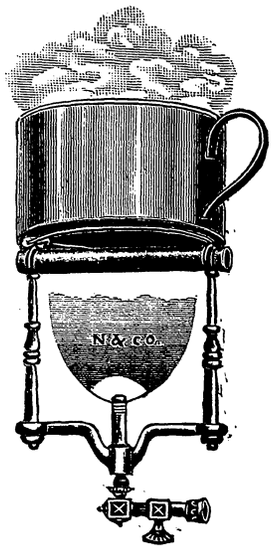

Fig. 2.—Ætna Heater with Wire Attachment.

as a convenient device and as contributing much to the desirability of the heater.

H. A. Earsy & Co., 280 State street, Boston, Mass.: Brushes. A price-list recently issued of the goods manufactured by the company includes Paint, Varnish, Wall, Kalsomine, Whitewash, Artist, Paper Hangers and Liners', Brushes; Sash Tools, Lettering Pencils, &c. Each of these lines of Brushes is listed in great variety.

Bennett Mfg. Company, 19 Pearl street, Boston, Mass.: The Bennett Sash Fast. A circular price-list illustrates and describes the Fast. It is claimed, among other advantages, that the Fast draws the upper sash up, or pushes the lower down, from a distace of almost 1 inch; that it draws the sashes firmly together; that it cannot be opened from the outside, and that if the sashes cannot be brought into place because of swelling of the wood, or ice, or any other obstacle, top or bottom, the window can still be securely locked. The manufacturers state that they have recently changed the style of the Fast somewhat and also increased the weight, thus improving it in several respects.

Chandler Pump Company, Cedar Rapids, Iowa: Pumps. Their revised illustrated catalogue and price-list shows Lift and Force Pumps, both single and double acting, Iron Pumps for hand and windmill purposes, Cistern and House Force Pumps containing the Haight patent valve, Iron Pipe, Well Casing Brass Goods, Fittings, Tools, &c.

Current Hardware Prices.

NOVEMBER 22, 1893.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers at the figures named.

The character @ is used to indicate a range 'of price; thus discount 50&10@50&10&5 % signifies that the goods in question are sold at prices ranging from discount 50 and 10 % to discount 50 and 10 and 5 %.

THE IRON AGE

THURSDAY, NOVEMBER 30, 1893.

Steel Castings.

BY JOSEPH S. OWEN, CHICAGO, ILL.

Within the last ten years steel castings have come very extensively in use, but they have not given universal satisfaction. Invariably complaints come in about "blow holes." I cannot see what trouble there is to be feared if the holes are small—that is, if the general appearance of the casting is not bad, inasmuch as the solidity of a casting is obtained at the expense of the strength in general. Therefore, castings with blow holes are stronger than solid ones, everything else being equal chemically Blow holes can be prevented chiefly by the addition of silicon, aluminum and manganese in proper quantities and at the proper stage of the operation. About 17 years ago the properties of silicon in reference to the manufacture of steel castings became known and appreciated, and at that time attention was called to the fact in a paper which was read before the British Iron and Steel Institute on the manufacture of solid steel castings. In that communication attention was called to the fact that the gases produced in the manufacture of steel, alike by the Bessemer and open-hearth processes, were retained in the liquid metal and caused the blow holes, or air bubbles, that have been found in steel castings and are so difficult of expulsion. That is to say, the gases occluded in the liquid bath, and which when the metal becomes solid are still unexpelled, constitute the source of the honeycombed structure which was formerly so frequently to be met with. Silicon, however, when introduced at the proper time and in certain proportions into the liquid metal enables those blow holes to be got rid of and a solid steel to be produced. The rationale of this action of silicon has been much discussed among scientific metallurgists. So long as the only gas discovered in the liquid metal and in the blow holes of the solid metal was carbonic oxide the matter appeared to be simple enough, and the explanation of the effects of silicon which was suggested at that time was that silicon neutralized carbonic oxide in the production of silica and free carbon according to the formula $Si + 2CO = SiO_2 + 2C$. This explanation appeared to be satisfactory enough until Dr. Mueller discovered, and Mr. Richards and Mr. Stead afterward confirmed, the fact that the greater part of the gases occluded in the blow holes was not carbonic oxide at all, but was hydrogen resulting from the moisture of the air, hence the new problem was presented of the effect of silicon on hydrogen. These considerations led to the investigation of the phenomena of the increasing solubility of both carbonic oxide and hydrogen when silicon is present in sufficient quantities. This action is analogous to that which is obtained when limestone is dissolved in water in the presence of carbonic acid; however, such an explanation appears to be a little open to question still, in my way of thinking.

Aluminum in very small proportions produces a very marked effect on a bath of soft steel. In Osberg's petroleum furnaces, known as the Mitis process, from 0.05 to 0.10 of 1 per cent. of aluminum was added to metal low in carbon, being also fairly low in silicon. The results were very satisfactory for soundness and toughness. These results were obtained at one establishment in particular by the crucible process. Aluminum increases fluidity when working with steel low in carbon, but thickens to a certain extent high carbon metal. Aluminum seems to oxidize very quickly, as only traces are found in the castings by analysis. Aluminum, however, releases gases from metal through the suddenly increased fluidity, inasmuch as after the "stock" is melted gases are then taken up by the metal. "Killing" the steel is not necessary when aluminum is properly used by the crucible process.

For castings that are liable to draw and crack in cooling, manganese, in my opinion, is essential, its presence giving the casting strength when in the semi-solidified condition. Manganese when added to oxygenated iron removes the oxygen as oxide of manganese or silicate of manganese, thus it is a positive cure for red shortness by setting free intermixed particles of slag as a double silicate of manganese, at the same time being a strong carrier of sulphur in the slag. Steel foundrymen have a dread of high manganese in their castings, but the writer has seen steel castings carrying as high as 0.85 to 0.95 of manganese, which proved very tough and strong. This does not support the theory that 5 parts of manganese are equal to 1 part of phosphorus in producing brittleness.

The Mansfield Disappearing Gun Carriage.

One of the most important questions at present confronting the army is that of carriages for the heavy guns and mortars intended for seacoast defense batteries. In this matter it appears that the guns have reached a degree of perfection, comparatively speaking, far in advance of the carriages.

It is therefore interesting to present a description of a design the invention of Lieut.-Col. S. M. Mansfield, Corps of Engineers, U. S. A. This system possesses an elasticity throughout which relieves the carriage from undue strain. Further, it is composed of few parts, which are strong, and there is no delicate machinery liable to get out of order. In the firing position the muzzle of the gun is put well over the parapet, where the blast of discharge will do it no injury. With a reduced charge of powder giving an initial velocity to the projectile of about 1800 feet a second the gun will recoil gently to the loading position. The excess of energy of recoil due to charges giving a projectile velocity up to 1975 feet is taken up by a hydraulic buffer in the rear of the lower carriage.

Inside of the parapet is a well, Fig. 4, in which is suspended a counterpoise from the upper carriage on which the gun is mounted. The top of the well is covered by a metal plate having a hole formed in it for the passage of the rope from the counterpoise. The lower carriage is adapted to be traversed in a horizontal plane as usual, its upper end being for this purpose pivoted on a hollow cylindrical hub projecting upward from the well cover. Journaled near the upper end of the lower carriage and arranged to roll on the well cover, or on a circular plate attached to its top, are wheels or rollers. The lower end is provided with a series of wheels rolling on a segment, as is com-

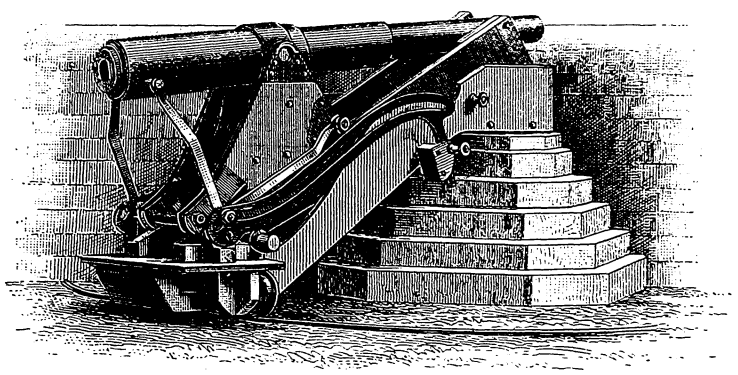

Fig. 1.—Gun in Depressed Position.

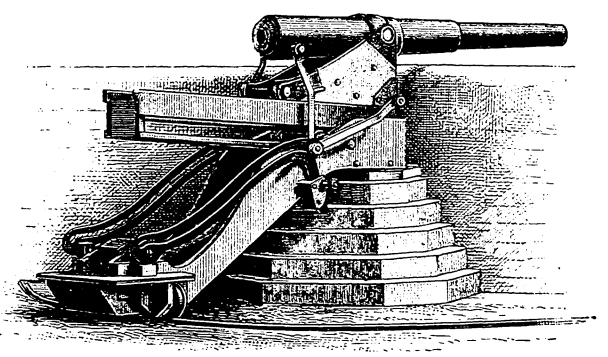

Fig. 2.—Gun in Firing Position.

THE MANSFIELD DISAPPEARING GUN CARRIAGE.

Hosted by Google

mon in gun carriages, shown plainly in Figs. 1 and 2. The chassis is between the upper and lower carriages, and is pivoted near its forward end to the lower carriage. The upper carriage is provided with wheels to act when the gun is run into battery, but during recoil the carriage rests upon its shoe, so as to cause a sliding and frictional resistance; the rear wheels being journaled eccentrically to allow of ready transfer from sliding to rolling friction, or *vice versa*.

For the purpose of automatically inclining the gun from its loading to firing position, and *vice versa*, there is pivoted on each side of the rear end of the lower carriage a slotted bar of desired curvature, the upper end of which is movable for the purpose of adjusting the gun in a vertical plane after it has been raised above the parapet, as shown in Fig. 4, or it may be set for elevation before the gun is raised into battery. The adjustment of the upper end of each of the slotted bars is accomplished by means of a pinion meshing in the teeth of a curved rack, forming a part of the upper end of each of the slotted bars, these pinions being secured to a shaft journaled in the upper end of the lower carriage and actuated by means of power applied to a crank. To each side of the rear end of the gun is pivoted loosely journaled on a transverse shaft, on which is also journaled a pair of rollers adapted to roll on the upper edges of the lower carriage during the depression of the gun. It is essential that the roller shaft should be connected to the upper carriage during the depression of the gun, and for this purpose the upper carriage is provided with one or more vertically yielding spring actuated clutches adapted when released to encompass the roller shaft during the recoil and depression of the gun, and to be automatically released from the shaft shortly before the upper carriage reaches its lowest position on the chassis, such release being accomplished by the lower end of the clutch coming in contact with a cam surface or incline on the lower carriage. During the upward motion of the carriage on the chassis and upward swinging motion of the latter on its pivot, the roller shaft remains in the rear end of the grooves until the chassis inclines slightly downward, when the shaft rolls forward in the grooves until it reaches its position, where it is ready to engage with the upper carriage in its elevated position ready for a discharge. When the chassis by the gravity of the gun is swung into position for discharge the clutches are automatically raised to allow the shaft and its rollers to come into the position above mentioned, and this is accomplished by means of a lever (for each clutch) pivoted to the lower carriage, the rear end of which lever is swung upward against the lower end of the clutch when a projection at the front end of the chassis comes in contact with the forward end of the pivoted lever, as shown in Fig. 4.

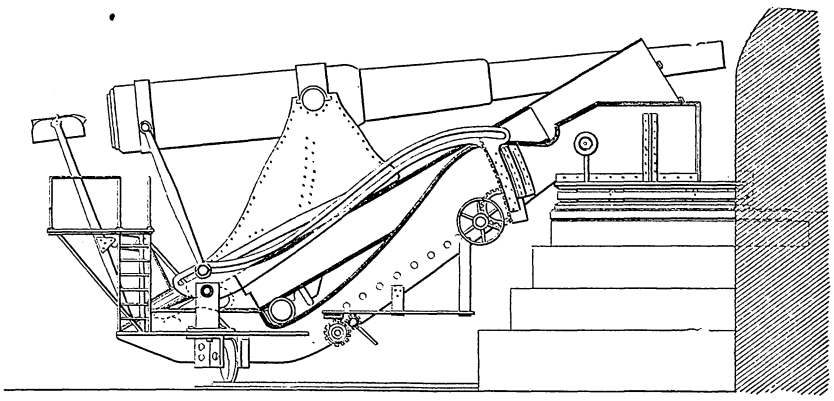

Fig. 3.—Side Elevation of Gun in Depressed Position.

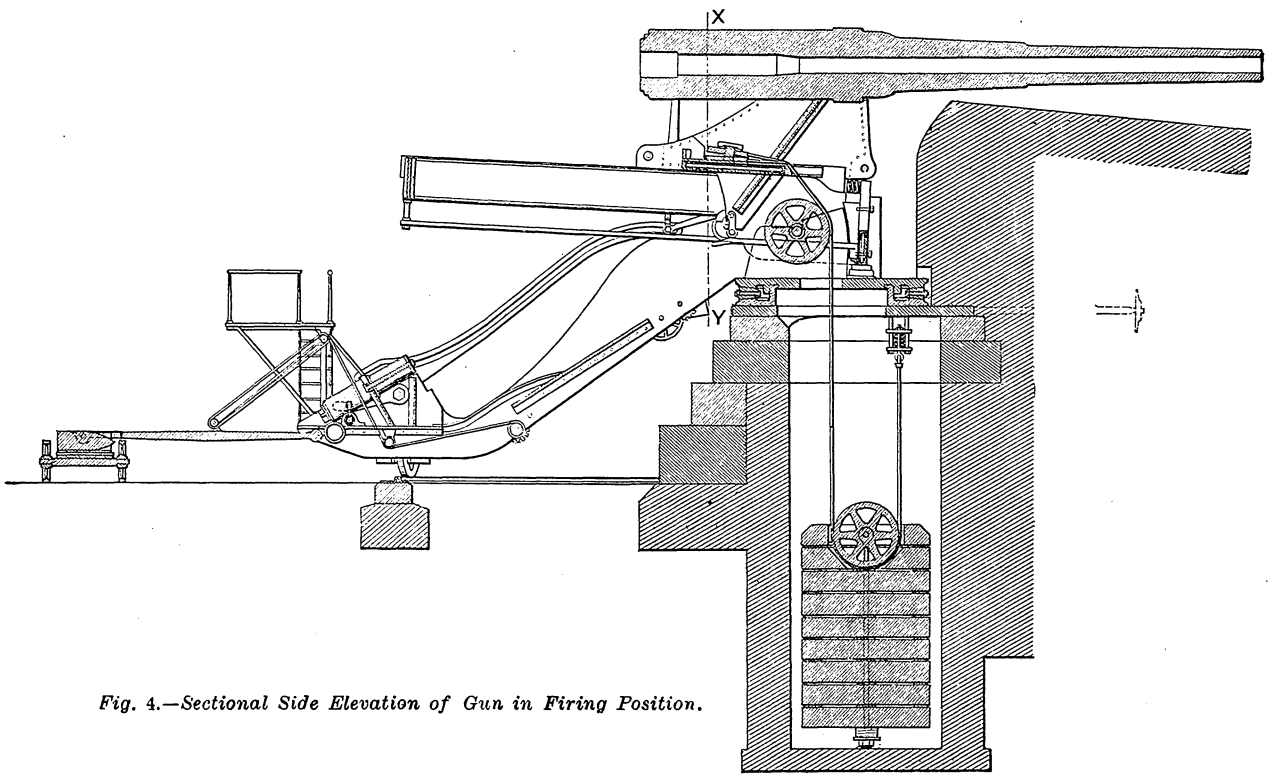

Fig. 4.—Sectional Side Elevation of Gun in Firing Position.

THE MANSFIELD DISAPPEARING GUN CARRIAGE.

a link, the lower end of which is guided in the slotted bar, and to the lower end of the link is pivoted a link, the forward end of which is pivoted to the upper carriage, as shown in the drawings. By this arrangement of links and grooved bar the gun is automatically guided from the position shown in Fig. 3 to the position shown in Fig. 4, and *vice versa*, during the raising or lowering of the gun to or from firing position.

Each chassis rail has on its under side a longitudinal groove formed by means of a rail secured at a suitable distance from the under side of such chassis, as shown in Figs 4 and 5. In these chassis grooves are located rollers

The operation of the system is as follows: Supposing the gun to be in the elevated position and ready for discharge, as represented in Fig. 4, the discharge of the gun causes its carriage to recoil on the chassis under sliding friction. The clutches on the upper carriage are automatically connected to the roller shaft the moment they pass beyond the rear end of the levers. The chassis commences to swing downward as soon as the center of gravity of the gun and its carriage has moved back of the pivot where the chassis is hinged to

Hosted by Google

the lower carriage, and during such downward swinging motion of the chassis the rollers on the shaft are caused to roll respectively against the under side of the chassis and top of the lower carriage, by which the downward sliding motion of the upper carriage on the chassis and the tipping motion of the latter on its fulcrum are properly constrained and retarded so as to check recoil and prevent a too rapid and dangerous descent of the gun to the depressed position. When the chassis reaches its lowest position its rear end comes to a stop against an abutment on the lower carriage. During the descent of the upper carriage as it approaches its lowest position on the chassis the weight of it and the gun will be overcome by the counterpoise, causing the upper carriage to be automatically moved upward and forward on the chassis, and as the center of gravity of the gun and its carriage comes in advance of the fulcrum the chassis will gradually assume the slightly forward tipped position shown in Fig. 4, and as it reaches such position the clutches are automatically raised by the projection and lever, allowing the shaft and its rollers to roll forward on the rails until the rollers on the shaft are brought to the forward end of the chassis grooves ready to engage with the upper carriage, as before stated. During such upward motion of the gun it is gradually inclined from the position shown in Fig. 3 to the one shown in Fig. 4 by the agency of the links and grooved bar, as stated.

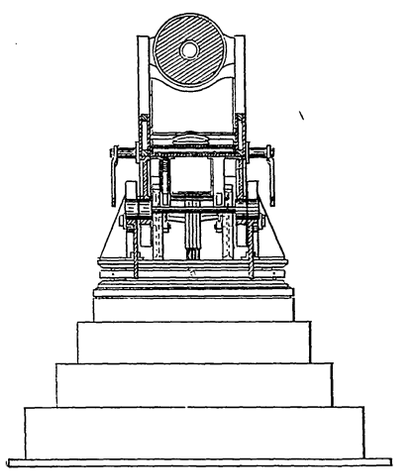

Fig. 5.—Section on Line X Y of Fig. 4.

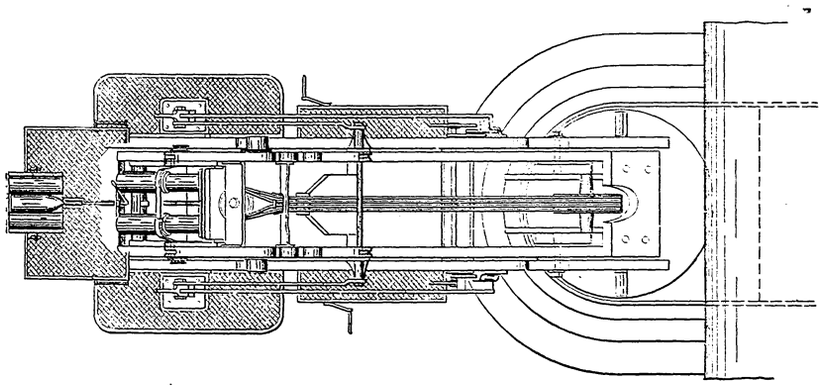

Fig. 6.—Plan of Carriage with Gun Removed.

THE MANSFIELD DISAPPEARING GUN CARRIAGE.

clutches are automatically released from the shaft by a cam or incline, and the carriage is brought against the buffer, causing the gun to come to its loading position without shock or jar. During the descent of the gun the counterpoise attached to the carriage is raised and its rope guided on the rotary wheel or pulley. The gun will remain in its depressed position by the frictional resistance between the carriage and upper portions of the chassis. During the descent of the gun it is automatically inclined from the position shown in Fig. 4 to the one shown in Fig. 3 by the pivoted links and grooved bar, as before mentioned. After loading the gun, when it is desired to raise it, it is only necessary to cause the upper carriage to rest with a rolling friction on the chassis, which is done simply by adjusting the eccentric rollers until they bear on the chassis, when the rolling friction of the carriage and of the drum, which blows the scale out of the boiler. The device is nearly completed and ready for trial.

F. E. Fitch of the Northern Central machine shops, Elmira, N. Y., is the inventor of a device called a circulator, which is attached to the boiler of a locomotive. It has long been a source of great trouble to engineers to have the scale caused by unclean water in the boiler cling to the flue pipes, and in time make what is called mud burn, which wears out the boiler. Engineer Fitch conceived the idea that circulating water would stop the scale deposits, and has arranged a set of 4-inch pipes which lead from the rear end of the boiler down through the fire box into a drum which is located about 4 feet in front of the fire box. The drum is 3 feet long and 1 foot in diameter. A blow off cock is located in the bottom

Governor Peck of Wisconsin is receiving donations at Milwaukee for the destitute iron ore miners of the Lake Superior region. Generous contributions of food, clothing and money have already been forwarded from Chicago, while the citizens of Wisconsin are making vigorous efforts to help the sufferers.

The demand for water works machinery is growing very much livelier. During the past two weeks bids were opened in New York for two 10,000,000 gallon and two 4,000,000 gallon engines, in Philadelphia for four 20,000,000 gallon engines and in St. Louis for two 30,000,000 gallon engines.

Heavy Steel Forgings—II.*

Their Production in the United States.

BY RUSSELL W. DAVENPORT, BETHLEHEM, PA

Gun Forgings.

The high working strains to which modern heavy ordnance is subjected have called for the highest attainable qualities in the material of which the parts are made. To insure this end, the specifications governing the manufacture of gun forgings have been drawn with great care, a large number of test specimens, cut from the actual forgings after final treatment, are required to show uniform and high physical qualities, and the manufacture is subject to constant and thorough inspection. The result is that the steel for gun forgings is melted of the best obtainable material, ingots are cast with special care to avoid cracks, blow holes and other defects, hollow forging is practiced whenever possible, and tempering and annealing is universally applied. In short, all the resources of the steel maker's art have been called upon to insure a perfect product in which the highest attainable physical qualities have been developed. As steel gun forgings have up to the present time been in general made of simple steel, improvements in physical qualities to meet the demands of higher working pressures must be looked for in some steel alloy. Chrome has been used to a limited extent for parts of small dimensions where great hardness and high elastic limit are aimed at, as in the Brown segmental gun, but nickel offers the best promise of improvement in the physical qualities of gun forgings. A complete set of forgings for an 8-inch gun has been made by the Bethlehem Iron Company for the Bureau of Ordnance, U. S. Navy, of nickel steel and are now being assembled at the Washington Navy Yard. The average physical qualities obtained in these forgings in transverse specimens were:

	Tensile strength. Pounds per square inch.	Elastic limit. Pounds per square inch.	Extension. Per cent.	Contraction of area. Per cent.
Tube..	93,200	58,300	21.2	42.0
Jacket	99,900	60,000	20.4	45.9
Hoops.	109,100	68,200	20.5	46.9

Size of specimen, 2¼ inches diameter and 2 inches long.

As compared with an average of qualities usually obtained in corresponding navy gun forgings, made of simple steel, the tensile strength shows an increase of about 10 per cent., and the elastic limit an increase of from 22 to 28 per cent.; the elongation and contraction of area are but slightly reduced.

It is believed that by modifying the composition of this steel a considerably higher tensile strength and elastic limit can be obtained without dangerous sacrifice in ductility.

The Ordnance Department of the Army have also ordered a tube for a 12-inch gun, model 1892, to be made of nickel steel. The physical qualities guaranteed in transverse specimens $\frac{9}{16}$ inch diameter and 3 inches long are as follows: Tensile strength, 85,000 pounds per square inch; elastic limit, 53,000 pounds per square inch; elongation, 18 per cent.; contraction of area,

* From a paper read at the first annual meeting of the Society of Naval Architects and Engineers.

Hosted by Google

35 per cent., which is an increase of 9 per cent. in tensile strength, 26 per cent. in elastic limit, 6 per cent. in extension and 17 per cent. in contraction of area over the usual minimum requirements.

It is thought probable that tubes of nickel steel may offer an increased resistance to erosion of bore as compared with simple steel, and it is hoped that more extended experiments will be made to determine this important point.

Armor Plate.

The remarks made regarding the high standard aimed at in the manufacture of gun forgings are also applicable to that of steel armor plate. "The best is none too good," is a safe motto. Besides meeting certain physical requirements in specimens taken from the plates, the manufacturer has to guarantee a successful ballistic trial of any plate of a group which the inspector may choose to select; and as the financial loss in case of failure may be very great, it is evident that every possible care must be taken to perfect and control the manufacture. The ballistic acceptance test of armor plate for the United States Navy is more severe than that demanded in any other country.

Forged armor plates made of simple steel, as originally developed by the Creusot Works, offered a much greater resistance to penetration than wrought iron or even compound plates when attacked with steel armor piercing projectiles, but the vice of the all steel plate lies in cracking, and it was the introduction of nickel into the steel, as already stated, which to a great degree corrected this defect.

It is probable that an increased resistance to penetration may be obtained by the introduction of other metals along with nickel, and at the St. Chamond Works, in France, steel containing both nickel and chromium has given good results. Developments in this direction, however, have been somewhat checked by the advent of hard faced steel plates, by which it is aimed to stop and break up the steel projectiles before serious penetration takes place.

The introduction of carbon by cementation into the face of the plate with subsequent water hardening, as proposed by Harvey, and known as the "Harvey process," has, up to the present time, given the best results in this direction. The application of this process, which was developed at the Bethlehem Works, with the energetic aid of the Bureau of Ordnance of the United States Navy, has now passed its experimental stage for plates of medium thickness, and the Harveyized 12-inch taper plate representing the side armor of the "Maine" (recently tested at Indian Head), and manufactured by the Bethlehem Iron Company, gave highly satisfactory results, and is beyond doubt the most resisting "service" armor plate ever submitted to trial.

Marine Shafting and Engine Forgings.

It may be said that in the manufacture of this class of heavy steel forgings it is not yet the usual practice to aim at the highest attainable combination of physical qualities, and that therefore there is a wider field for improvement in this direction than in the case of forgings for guns and armor plate.

From this statement it must not be inferred that the demands of the United States Navy specifications, which may now be taken as the standard in this country, are not such as to insure an excellent quality of steel; on the contrary, the conditions of inspection are rigorous, the amount of testing large, and the physical qualities demanded are such as can only be obtained by the use of high grade stock, by ample forging facilities and by careful manufacture throughout. The present physical requirements for shafting, including cranks, are: Tensile strength not less than 58,000 pounds per square inch, and an average elongation of not less than 28 per cent. in longitudinal specimens ½ inch diameter and 2 inches long, cut from full sized prolongations of forgings. For connecting and piston rods a somewhat harder steel, with a tensile strength of not less than 65,000 pounds per square inch and an elongation of not less than 25 per cent., is used. No treatment other than annealing is prescribed, and the elastic limit is not considered as a condition of acceptance. From these requirements it will be seen that a distinctly soft steel is being used, in which the elastic limit often falls to about 27,000 pounds per square inch, and averages something over 30,000 pounds. In adopting such soft steel, the practice of the English Admiralty and merchant marine has been followed, and in view of the fact that this practice is based upon wide experience and the use of a very large amount of material, much of which has done excellent service, it has been a wise and conservative course to make no hasty and radical departures from same.

It must indeed be conceded that soft steel presents in some respects marked advantages as the standard material for shafts and engine forgings, particularly when the manufacture is intrusted to forges having insufficient facilities and lack of experience in handling the harder classes of steel. In the ingot form and during forging soft steel can bear with safety rougher treatment than harder steels; it is less sensitive to the hurtful effects of irregular and repeated heatings, and dangerous internal strains and defects are less apt to be developed thereby; these are important considerations, especially in the case of forgings of irregular shape, such as solid forged cranks, connecting rods, &c. Further, by the use of soft steel the cost of machining, and hence the cost of finished forgings, is reduced to a minimum. It is natural, therefore, that marine engineers should hesitate to make a change in a matter of such importance, feeling, as they do, that in soft steel forgings there is an element of safety that cannot be overlooked.

In calculating the dimensions of marine engine forgings the elastic limit of the material used has not been as important a factor as in the designing of heavy guns. This is principally due to the larger factor of safety used in engine forging to insure stiffness or rigidity of parts under transverse strains. There is much evidence at hand, however, to indicate that the importance of a high elastic limit in steel forgings has not been sufficiently considered, and that many failures of soft steel forgings of excellent quality can be ascribed to a low elastic limit. A notable instance is that of locomotive crank pin forgings, where soft steel has in many cases failed by breakage as frequently as wrought iron, and where a harder steel with higher elastic limit has given far better results. The length of service of hammered piston rods has also been much increased by the use of steel of high elastic limit. These are instances of machine parts subjected to exceptionally severe working strains.

In the highest development of the modern marine engines reduction of weight of all parts is of prime importance. This can only be accomplished by reducing sectional areas. On the other hand, outside dimensions cannot be usually reduced without sacrificing necessary stiffness. We are, therefore, led to removing the metal along the neutral axes, or, in other words, to the use of hollow forgings. This practice has been followed in designing the shafting of all the ships of the new navy except the four Roach ships.

In most cases, however, the danger of too great a reduction of sectional area has evidently been feared, and the diameters of axial holes have been made too small to allow of advantageous hollow forging on a mandrel. Solid forging with subsequent boring has, therefore, been necessary, whereby a distinct loss in quality of metal has occurred.

It is evident that to reduce further relative weights as well as to increase the absolute strength of parts, the designer of marine engines needs a stronger material than that now employed; that is, a material having a greater elastic limit, but at the same time possessing such a degree of toughness as to insure resistance to sudden strain or shock. Such a material can be found in steel harder than that now used, strengthened and toughened by tempering and annealing. Simple steel of the proper natural hardness, and so treated, will show in specimens cut from the center of sections, say 3 to 6 inches thick, an elastic limit of about 45,000 pounds per square inch, an elongation of about 23 per cent. in 2 inches and a contraction of area of from 50 to 55 per cent. To allow of safe and effective tempering forgings must be made hollow wherever possible, rectangular sections reduced in thickness as far as practicable, large fillets used, and sharp re-entering angles and sudden changes from thin to thick sections avoided. In shafting, axial holes should be made large enough wherever practicable to allow of hollow forging, and additional strength with the same weight obtained by increasing both outside and inside diameters and thus reducing thickness of walls.

A further and very pronounced improvement in strength and toughness can be obtained, as already indicated, by the use of nickel steel, tempered and annealed and prepared for treatment as above described. The use of nickel allows a reduction of carbon, makes the steel more sensitive to temper, and facilitates the tempering of irregular shapes. Specimens from nickel steel forgings, tempered and annealed, will show uniformly an elastic limit of from 50,000 to 55,000 pounds per square inch, an elongation of 23 per cent. and above, in specimens 2 inches long and 1½ inches in diameter, and a contraction of area of from 55 to 60 per cent. In cases where, owing to thickness of section and irregular shape, tempering is not advisable, nickel steel will still show a higher combination of elasticity and toughness than any other material known under the same conditions.

Here, then, is a material admirably suited to the shafting and engine forgings required by the marine engineer in the construction of modern high service engines, and it is believed that as its merits become known its use will be widely extended.

The Bureau of Steam Engineering has already taken this material into consideration, and in designing the shafting

Hosted by Google

of the "Brooklyn" and "Iowa," it was decided to make the two propeller shafts of the former and the two intermediate line shafts of the latter ship of nickel steel. The diameters of the "Brooklyn's" propeller shafts will be 17 inches outside and 11 inches inside, giving walls 3 inches thick, while the line shafts of the "Iowa" will be 15¾ inches outside diameter and 9¾ inches inside diameter, with walls also 3 inches thick.

The specifications prescribe that these shafts shall be oil tempered, and demand a tensile strength of not less than 85,000 pounds per square inch, an elastic limit of not less than 50,000 pounds, an average elongation of 23 per cent. in specimens 2 inches long and ½ inch in diameter (no specimen to fall below 20 per cent.).

A comparison of the strength of these shafts within their elastic limit with that of solid shafts of same sectional area made of soft, simple steel, having an elastic limit of 30,000 pounds per square inch, and also a comparison of their weights per linear unit with that of soft steel solid shafts of equal strength may be of interest. The following table gives the results of calculations made by Prof. Mansfield Merriman of the Lehigh University:

Comparison of three steel shafts. Case I.	Propeller shaft United States steamship "Brooklyn." Hollow. Outside diameter 17 inches, inside diameter 11 inches. Nickel steel. E. L. 50,000 pounds per square inch.	Solid shaft, same (approximate) sectional area. Diameter 13 inches. Simple steel. E. L. 30,000 pounds per square inch.	Solid shaft of same strength under applied loads, or horse-power. Diameter 18.9 inches. Simple steel. E. L. 30,000 pounds per square inch.
Areas of sections, square inches	131.95	132.73	280 55
Weights per yard, pounds	1,346	1,354	2,861
Comparative strengths under applied loads in flexure, or under applied horse-power in torsion	307	100	307
Load, in pounds, at middle of a span of 12 feet on two supports, which strains to one-half elastic limit	276,200	89,900	276,200
Length of beam on two supports, which is strained by its own weight to one-half elastic limits, feet	121.6	77.6	83.4
Horse-power transmitted at 50 revolutions per minute when strained to one-half elastic limits	15,780	5,130	15,780

Comparison of three steel shafts. Case II.	Intermediate line shaft United States steamship "Iowa." Hollow. Outside diameter 15¾ inches, inside diameter 9¾ inches. Nickel steel. E. L. 50,000 pounds per square inch.	Solid shaft, same (approximate) sectional area. Diameter 12⅜ inches. Simple steel. E. L. 30,000 pounds per square inch.	Solid shaft of same strength under applied loads or horse-power. Diameter 17.71 inches. Simple steel. E. L. 30,000 pounds per square inch.
Areas of sections, square inches	120.17	120 28	246.34
Weights per yard, pounds	1,225	1,227	2,513
Comparative strengths under applied loads in flexure, or under applied horse-power in torsion	293	100	293
Load which, at middle of a beam 12 feet in span on two supports, causes strains equal to one-half elastic limit, pounds	227,200	77,500	227,200
Length of beam on two supports which is strained by its own weight to one-half elastic limits, feet	115.6	75.9	80.8
Horse-powers transmitted at 50 revolutions per minute when strained to one-half elastic limits	12,980	4,430	12,980

From the above it will be seen that by the use of the hollow shafts made of the stronger steel there is again in strength of three to one and a reduction in weight of more than one-half as compared with solid steel shafts of equal weight and equal strength respectively.

It must be borne in mind that this gain in strength and reduction of weight are not obtained at a dangerous sacrifice of toughness, for the stronger tempered steel is also extremely tough, as shown by cold bending and by the extension and the contraction of area of tensile specimens.

It will be readily admitted that such gains cannot be overlooked by the marine engineers and that there is here a wide field open for improvement in marine engine forgings.

The Morewood Company's Tin Plate Works.

The Morewood Company are now getting in shape their new tin plate works at Gas City, Ind. For some time they have been running the coating department, but results have not been satisfactory, owing to frequent delays in receiving supplies of black plates, some of which have been purchased from American makers and some imported from Wales. Meantime the erection of rolling mills has been pushed, and these will shortly be in operation, after which there will be no interruption to the company's business for lack of essential materials.

The establishment of this plant at Gas City is wholly due to the enterprise of the president of the company, J. H. Rogers, one of the foremost manufacturers of tin plate in Wales, operating two large works. For some years Mr. Rogers had foreseen that the United States would eventually engage in the manufacture of tin plate, and contemplated making a venture on his own account. Some two years since this idea developed into a determination, and he visited this country to survey the field with that object in view. Early in 1892 he decided to locate at Gas City, but in the meantime put up temporary coating works at Elizabethport, N. J., which are now being removed to Gas City. Contracts for the building and much of the machinery were let in the spring and summer of 1892, but ground was not broken for the foundations until October. Since then work has been pushed as rapidly as consistent with the erection of a good plant on a thoroughly substantial basis. The buildings which have been erected are all strictly fire proof, having steel frames and metal roofs and sides. They are equipped with the best machinery adapted to the manufacture of tin plate, among which are found numerous special machines devised by Mr. Rogers for the rapid and easy handling of materials.

At present seven tinning stacks are in operation, but within a month three more will be at work. Of these there are three that exclusively run on ternes, while the others can vary from bright to ternes, according to the requirements of the trade. The pots used are not new, being principally of the kind invented by Mr. Rogers' father. This is a point upon which Mr. Rogers has expended much thought and investigation. He has decided that instead of seeking rapidity and cheapness in coating, at the sacrifice of quality, he will manufacture after the old style of soaking instead of merely painting the plate with a thin coat of tin in one passage through rolls. By this method say 40 sheets are placed in the tin bath at a time, then removed and the oxide of tin wiped off, after which they are dipped again and run through rolls in palm oil. This insures a perfect union of the tin with the steel sheet and makes a more durable plate. For months Mr. Rogers visited meat and fruit packers and other tin plate consumers, getting their criticisms of the ordinary plates and finding out what was demanded. The personal contact with the consumer convinced him that tin plate makers were altogether on the wrong track in trying to make their plates as cheaply as possible. Hence his decision with regard to the method of coating. He believes that this will obviate the long-standing complaint of pin holing.

In the pickling, annealing and rolling departments old methods are, however, dropped as much as possible. Here every effort is made to economize labor and insure rapidity of operation. Pickling vats are filled, agitated and emptied by ingenious machinery. Annealing furnaces are operated by a mechanical charger. The rolls are arranged on a plan not hitherto known in this country. There are four cold rolling mills in which the trains are set in parallel rolls run by gearing from a common engine. In other works the practice is to set the rolls in a straight line. There are numerous reasons advanced by the Morewood Company in favor of their method, in which they follow the latest and most improved practice in the best Welsh mills. The hot rolling mills now in course of construction will at first comprise four mills, but it is expected that four more will be added between now and next summer. For the present tin plate slabs will be purchased, but it is the intention of the company to erect steel works at an early day to make their own steel, and thus control the quality of their material as far as possible.

Hosted by Google

The brands adopted by the company thus far are as follows: F. W. B. This is the heaviest possible coated roofing plate. J. H. R. is the next grade of terne plate, and is of Worcester grade. H. C. B. is the Lille grade of terne. P. T. L. is a bright terne, and is the grade with which the exposition buildings in Philadelphia in 1876 were roofed. R. H. J. is a bright plate intended for the use of canners of meat, fish, fruit, &c., and will be made as near perfection as possible.

These statements are subject to some qualification, in view of possible action upon the tariff question. Mr. Rogers states that, from his knowledge of wages on both sides of the Atlantic, any serious reduction in the tin plate duty must be met by heavy reductions in the wages paid here or the manufacture of tin plate will have to be abandoned. Even with wages reduced to some extent during the prevailing depression, the labor cost in the rolling department is treble the cost in Wales, and in the finishing department it is double. If the duty is not disturbed it is the intention of the company to push extensions of the plant steadily forward until it becomes the largest in the world. In the arrangement of their buildings this has been kept in view, and plenty of room has been kept for that purpose. The inclosure comprises over 50 acres. It is in one of the best gas districts in Indiana, where the pressure is constant at nearly 300 pounds. Railroad connections are afforded by the Panhandle branch of the Pennsylvania system.

Modern Fixed Ammunition*

BY HAROLD THOMAS ASHTON.

(*Concluded from page* 851, *November* 9.)

Completing Operations.

The head is turned by a cutting tool, which is brought against it while the case is rotating at a high speed in a tightly fitting coned chuck, into which it has been fed by the usual combination of slides and spring fingers, or by hand. The distinguishing marks are stamped on the base by steel dies, under which the cases are brought by a revolving table. The fire hole is pierced at two operations, the first consisting in merely making a center mark, through which the hole is punched in the second operation. The machines for each are similar, the cases being fed by hand into a revolving table which carries them opposite the tools. The cases are cleaned by dipping them into an acid solution, and, after they have been washed, placing a number of them at a time with hard sawdust in a revolving drum. The cap chamber is rectified by the insertion of a plug made of the exact size required, serving to correct any distortion of the chamber due to the operation of tapering the case. The mouth of the case is finally reamed to give it the exact length required, and, by beveling the edges internally, to facilitate the insertion of the bullet when the case is loaded. This is done by feeding the case into a coned bush, in which it is moved up against rapidly revolving cutters.

Necking.

The cases are then examined and gauged, but though the reduction of the mouth of the case to the bottle necked shape, Fig. 13, is not conducted in the small case under consideration until after it has been charged, it may be most conveniently described here. In the larger cartridge case, where the mouth is not rendered inconveniently small for the insertion of the charge by the process, the neck is formed before loading, and the case leaves the factory in its finished form; while in some types, such as the 1-inch Nordenfeldt machine gun and the revolver pistol ammunition, necking is not required. The method of operation is an extension of that used for coning the case. For this purpose the case is supported on its base, and a die brought down upon its mouth reduces it in diameter, and forms the straight cylindrical part and the shoulder. As under this treatment the metal does not thicken appreciably at the mouth, but obtains relief by extending slightly in length, a considerable strain is thrown on the portion of the case immediately below the shoulder, which, if too soft, bulges or buckles. Another defect occurring at this time if the metal is unequally distributed around the mouth, either as regards quality or quantity, is the formation of a crease or fold longitudinally in the straight part of the neck.

Final Examination.

The examination of the finished cases is most severe. No case with the smallest scar, scratch or blemish in the shape of scaly or doubtful metal is allowed to pass, unless it is found on a second examination to be less defective than certain defined standards. The dimensions at every portion of the case are also tried by gauges made to the upper and lower limits of size allowed. The difference between the two is so small that the gauges require considerable care to prevent their wear becoming a serious source of error in passing the work. Thus, in the diameter of the cap chamber, the difference between the high and low gauges is only 0.001 inch, and an expert examiner will go through 7000 cases in an ordinary working day, the examination of each one wearing the gauge slightly. In the other dimensions somewhat more play is allowed, to the extent of 0.003 inch in the diameter of the body, 0.006 inch in the thickness of the head, 0.010 inch in the depth of the cap chamber, 0.020 inch in diameter of head, and 0.015 inch in total length. All the gauging has beeen done till recently by hand, but machines have been in use in Germany for some time which, it is stated, do the work as well or better than the inspectors they replace. They have been tried in the Royal Laboratory, but have not been found entirely satisfactory. With a view to obtain uniformity in the metal of the case, the weight is also laid down as 164–5 grains.

General.

To insure this high degree of exactitude in the product of so many operations, it is necessary that each one should do its share of the work of manufacture with equal precision. In order that this may be done the same standard of accuracy must be maintained in the various stamping, drawing and cutting tools. As these are exposed to considerable wear in the performance of their work it is necessary to make them of the extreme limits of size allowable, and extremely hard, so that they may work for as long a time as possible before wearing to a size which causes them to produce work that would be rejected by the gauges. Also, as apart from accidents, the only stoppages in the running of the machines are those made to allow the tools to be changed, it follows that not only the quality, but also the quantity of the work done by any manufacturing plant is dependent on the excellence attained in the tools. These may be classified as punches, dies and cutting tools. With the cutting tools no great difficulties are experienced, as they can be made small in size and easy to harden, while the cartridge metal cuts freely, and so does not wear them seriously. The punches and bolsters are required to be as hard as possible, consistent with the possession of sufficient toughness to allow them to withstand considerable shocks and to yield slightly to work which has not left the previous operation absolutely correct. The dies for extending, coning, &c., should be somewhat harder than the punches, as they have more surface wear to resist; they must not readily score or chip at the edges, and must not split.

In making these tools, the actual shaping presents nothing more than accurate machine work finished to gauge, but in hardening them considerable skill is needed. Methods of hardening steel tools are very numerous, but the greater their simplicity and uniformity the better are the results obtained. Of the means specially adapted for cartridge case manufacture the following have been found most servicable: A small gas furnace is convenient for heating the tools, as it is clear and the temperature can be easily watched and regulated. For dies requiring a specially hard surface, an application of potash while the die is hot gives excellent results; and for many of the tools sulphuric acid as a cooling agent gives better results than water, which is, however, more generally useful. It is not well to be continually experimenting with either the steel or the methods of hardening, nor, if the usual methods or temperatures used prove unsatisfactory, is it wise to change them at once. Sometimes steel which has turned out badly at one time has been laid aside for weeks or months, and has then, when treated apparently in precisely the same manner, worked well, owing to some changes in the condition of the steel or of its surroundings. Changes of atmospheric temperature have a most marked effect on the hardened tools, so much so that those left in the machines from Saturday to Monday in frosty weather, or even over night if the temperature of the factory falls considerably, rarely last beyond a very short time after the work has been resumed, the punches breaking off short, and the dies bursting and cracking. With these, as with all other hardened steel articles, an interval between the time of hardening and the time of using adds to their stability.

In manufacturing the smaller sizes of solid drawn cartridge cases the use of hardened steel for all tools is obligatory; but for the larger varieties, where the masses of metal in the tools are large and the stresses upon them less concentrated, cast iron and unhardened steel may be used occasionally. Strong cast iron has been found particularly economical for use in the coning dies for the quick firing cases; it is cheaper than and has not the same tendency to score the cases as unhardened steel, while in hardening steel dies of the size required there is great loss owing to cracks and deformations. For large drawing punches chilled cast iron is used with success, and for the large drawing dies a high carbon steel, un-

* From the proceedings of the Institution of Civil Engineers.

Hosted by Google

hardened, is found most suitable. Some other variations from the course pursued in making the smaller cases are also noticeable in the manufacture of the large cartridge cases for quick firing guns.

As the cases increase in size they are made in tens instead of in thousands, and are fed into the comparatively slow running machines more often by hand and less by automatic gear. The machines employed are entirely different. The drawing machines have heavy saddles in which the dies are placed, traversed slowly to and fro in their frames horizontally by screws or racks like planing machine tables. The punches are fixed on both sides of a central stationary yoke, up to which the dies are moved alternately, work being done first on one side and then on the other, the traverse of the machine in each direction being utilized to effect different operations. The trimming machines develop into specially designed lathes with chucks, into which the cases are fitted by hand. The heading machines are large hydraulic presses which upset the heads of the cases under a pressure measured in hundreds of tons, or their place is taken by steam hammers in which a number of blows are substituted for one squeeze. Also in the large cartridge cases the primer occupies a smaller proportion of the area of the base than is required in the smaller ones and the hole for it is usually bored out of the solid metal.

One question enters into the construction of the machinery for the manufacture of all cases, particularly of the smaller kinds, which has not been touched upon and is of some interest. This is whether it is advisable to make machines so that the attendant merely feeds the cases into a slide or revolving table, and leaves the rest to the machine; or whether, as is possible in many of the lighter operations, such as trimming, the cases should be brought to the tools entirely at the will of the operator and at a speed dependent on his skill, enabling him at his best to exceed somewhat the speed of working of an automatic machine. The non-automatic machine is simpler, and is consequently less liable to stoppages due to accidents, but the automatic machine has the advantage of running more steadily when at work. The solution of the question depends chiefly on the human element involved, and, although there are exceptions, it appears generally best to place as much reliance on the machines and as little on the attendant as possible.

Here it may be well to consider the behavior of the case when set to do the work for which it was made. Defects which are not evident till the case fails in firing are for the most part due to the bad quality of the metal of which it has been manufactured; but some faults are due to methods of manufacture. Of these the most serious are the complete or the partial separation of the base from the body, owing to internal folding of the metal where the walls of the case spring from the base, arising from incorrect shaping of the punches used in the later drawing operations, and escapes of gas around the primer in consequence of imperfect consolidation of the metal of the head. Splits at the mouth must either be due to bad metal or to imperfect annealing having left it hard and inelastic. On the other hand, the metal may err by being too soft, making it difficult to extract the case after firing, owing to the head and body having expanded permanently. Splits and bursts may also occur anywhere owing to defective metal. A good case may be fired several times, if ordinary gunpowder forms the charge, provided the residue from the explosion is promptly cleaned away, as otherwise the metal deteriorates. If, however, the charge is composed of any of the smokeless explosives based on the nitro-compounds, although the pressure to which the case is exposed may be lower, the intense heat accompanying the explosion appears to render the thin metal rotten and untrustworthy for future use. In the stronger quick firing cases these evil results are not so marked, as the metal is thicker and has a greater factor of safety.

MODERN FIXED AMMUNITION.

Means of Ignition.

The method of ignition, although not particularly affecting the active efficiency of the cartridge, provided that the ignition is uniformly and readily obtained, has an important bearing upon the safety of the ammunition during transit and use. A central firing percussion cap is now always used in small-arm ammunition and in the smaller varieties of quick firing cartridges. It consists of a cup of brass, or of an alloy of copper with a small percentage of lead, having cylindrical sides, with a layer of detonating composition pressed into the crown. This cup is tightly fitted mouth forward into the chamber prepared for it in the base of the cartridge case, in the center of which, either separate and inserted with the cap or formed as part of the case by raising a conical projection in the center of the chamber, is the anvil. When the cap is struck centrally the crown gives way and the detonating composition, crushed between the crown of the cap and the anvil, detonates and fires the charge by the flash it transmits around the anvil and through the hole or holes pierced for the purpose in the base of the cap chamber. The pressure caused by the explosion expands the cap tightly in its chamber and prevents all escape of gas around its edges, while the cap is prevented from being blown out by the friction between its walls and that of the chamber into which it has been forced. The

Hosted by Google

sensitiveness of the cap can be regulated by varying the material used for the detonating composition or the thickness of the crown. In the larger sizes of fixed ammunition an electrical primer is usually screwed in the base of the cartridge case so as to be removable at pleasure. An insulated contact piece and the body of the primer are connected by a fine wire bridge, which, when heated after the completion of the electrical circuit, fires the priming surrounding it, which in turn ignites the main charge. Escape of gas through or around the primer is prevented by packing or gas checks.

The Projectile

The remaining component of the cartridge to be considered is the projectile. This, the actual agent of the work to be done by the ammunition, has as many forms as there are classes of targets to be attacked, and their detailed consideration would form a wide subject of inquiry. As, however, only a relatively small quantity of shot and shell are made up in fixed ammunition, for which the great majority of projectiles are merely what may be classed as bullets, it is proposed to consider these only; and as with the cases so with the projectiles, those for the new small bore rifle appear the most worthy of detailed consideration, as they are made in the largest quantities and present the most interesting features in manufacture. A principal object in the design of any projectile is that its powers of penetration on reaching the target should be sufficient to do the work required of it. The material and the striking velocity of the projectile are the chief factors in this equation. It is necessary that the larger projectiles used against all varieties of defenses and objects should be made of some of the hardest materials available, but this is not so with the bullets whose employment is principally against men. For these lead is universally adopted as the main element of their composition, owing to its great density and the consequent advantage obtained during its flight through the air and to its adaptability to the most convenient methods used to impart rotation, the disadvantage attending its comparative softness being overcome by the addition of a percentage of antimony or tin or a thin casing of some harder metal. The exact form of a projectile is comparatively unimportant. An ogival head or that approximation to it most suitable to the material of which it is made, gives the best results, the accuracy with which the target can be hit depending chiefly on the maintenance of certain relations between the velocity, speed of rotation and proportions of the projectile and on their individual uniformity. This in its turn, provided regularity has been obtained in the explosive charge, is dependent upon the completeness with which the projectile follows the direction of the rifling and fills the barrel from which it is fired and on the uniformity of the resistance therein encountered. A number of methods of arranging the projectile to take the rifling have been used. It has been made a mechanical fit, as in the Whitworth system, or partially so, as in the studded shot used in many muzzle loading guns, or the force of the explosion has been used to drive into the grooves of the rifling a cup, band or coating of soft metal fixed to the projectile. In breech loading small arms, however, the method almost invariably used has been to make the bullet sufficiently yielding to entirely fill the bore through which it has to pass on being driven forward by the explosion of the charge in spite of its irregular shape. No great difficulty was met with for a long time in the use of this system with a lead or lead alloy bullet, but as the muzzle velocities obtained from small bore rifles were raised and the calibers were diminished metallic fouling in the rifling at once increased in quantity, and became more objectionable. In rifles of a caliber as small as 0.4 inch, with a muzzle velocity of upward of 1500 feet per second, the difficulty was met by means of copious lubrication from a beeswax wad behind the bullet and by covering the rear cylindrical part of the bullet with fine paper. The bullet was made of an alloy of lead and tin. But in more modern rifles in which the caliber has been reduced to about 0.3 inch, and even less, and the muzzle velocity has been raised to 2000 feet per second, the difficulties due to fouling have been overcome by using a compound bullet consisting of a lead core pressed into a thin envelope or casing of suitable hard alloy, which, while its use is free from the worst difficulties in the barrel, possesses considerably greater penetration than a bullet of the same size formed of an alloy rich in lead. This bullet is shown in Fig. 25. The opening through which the lead core is inserted is at the rear of the envelope, which is thicker at the nose than elsewhere, and the attachment between the two is completed by turning over the rear edges of the envelope.

Major Rubini, the inventor of the compound bullet, is reported to have successfully used a modification of it consisting of a lead alloy bullet tipped with a steel cap to increase its penetrative power, and covered over its main diameter with specially prepared paper; but experiments in England on these lines have not given good results. Many materials, including almost all ductile alloys and plated iron and steel, have been experimented upon with a view to their use for the manufacture of bullet envelopes; but nothing has been found more suitable than an alloy of copper and nickel in the proportions of about 20 per cent. nickel and 80 per cent. copper, with small quantities of manganese, iron and silicon. This alloy is tough, hard and white, capable of taking a fine polish, only slightly affected by the atmosphere, and giving in rolled sheets a tensile strength of 27 tons per square inch, with an elongation of 25 per cent. in 5 inches.

Preparation of Envelope.

The successful manufacture of this alloy requires the greatest care, extremely small deviation from the established course producing disastrous results. There is at the outset some difficulty in obtaining supplies of nickel of uniform quality, apparently due to the variations in the amount and manner of its reduction from the nickel oxide. The nickel and copper cannot be satisfactorily cast and worked by themselves, and the small percentage of other elements present in the alloy are introduced on this account. The particular methods of their introduction are regarded by some of the manufacturers who use them successfully as trade secrets, but the best effects have been obtained in the Royal Laboratory by the addition to the copper and nickel of a small amount of silico-spiegel, originally obtained for use in steel manufacture. Other physic, including varying quantities of ferromanganese, iron, zinc, aluminum and phosphorus, have been tried with varying results, some of the metal produced having worked well during manufacture, but failed completely in the final and severest test of firing, while some of it has been entirely satisfactory.

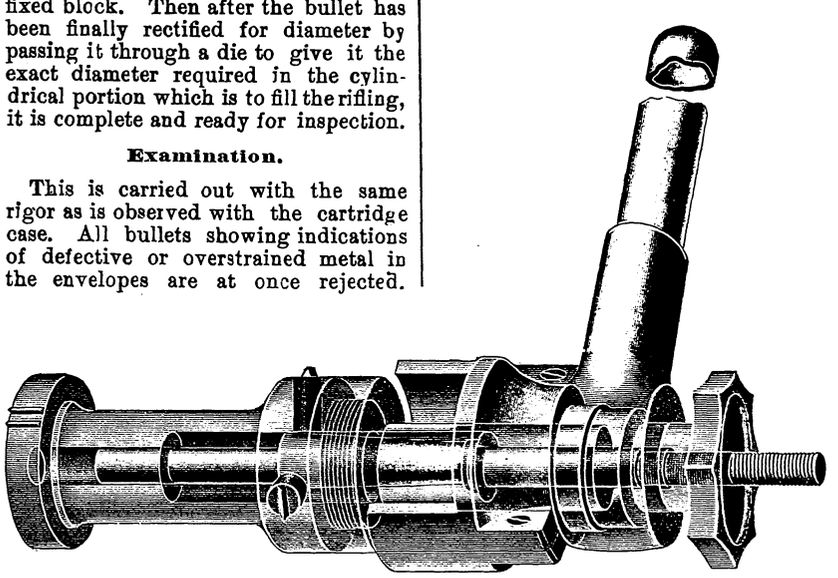
The alloy is cast in chills in the same manner as the metal used for cartridge cases, and is rolled down similarly, although it is not possible to do so much work upon it at each passage through the rolls without injuring it. The thickness to which the cupro-nickel strip is finally reduced is 0.04 inch, and this, after being annealed, cleaned and trimmed to a suitable width, is passed to cupping machines similar to those used in the first operation in the case manufacture, which at once punch out the blanks and form them up into the cups, Fig. 15, from which the envelopes are gradually formed. The cups having been annealed, are passed to drawing machines, which also are similar in design and action to those used for case manufacture. These extend the envelope and thin its walls to the required extent in four operations, which are accompanied by two trimming operations, in which the ragged edge at the mouth of the partially formed envelope is cut off, before and after it is drawn for the fourth time. It is not found necessary to anneal the cupro-nickel after every drawing operation, as is the case in dealing with the brass used for the cartridge cases. Indeed, it is the practice of some manufacturers not to anneal the cupro nickel after any operation subsequent to the formation of the cup. In the Royal Laboratory, however, the metal is found to give the best results if annealed after the fourth drawing operation.

In order to make the envelope with the rounded nose required, the drawing punches are approximate in shape to the final internal form. They cannot be made exactly of this form without being liable to punch out the front of the cups when descending upon them to force them through the drawing dies. Consequently the envelopes leave the drawing and trimming operations as hollow cylinders open at one end and closed by a dome at the other end, the interior cavity being slightly tapered, as shown in Fig. 20. In order to bring them to their finished proportions they are passed to the point forming machines, in which a punch, made exactly of the internal size of the finished envelope, presses them home into a die the exact size of the finished bullet. This tries the metal severely, for, although if good it receives no injury, weak or brittle metal gives way round the punch, which passes through the front of the would be envelope and at once destroys it. After being formed the envelope is completed by having its mouth reamered, and being trimmed to length.

Preparation of Lead Cores.

The lead cores now inserted by hand into the envelopes are made of an alloy of lead with 2 per cent. of antimony. This alloy is squirted into a rod by hydraulic pressure, for which purpose it is cast into a cylindrical chamber in the head of a hydraulic press, which is raised immediately the metal has set. Directly above the cylindrical cavity, and entering it when the ram is raised, is a fixed piston in whose center is placed a hardened steel die, with a central hole through which the semi-plastic metal is squirted as the ram continues to rise. It is curious that the die through which the lead is forced continues to grow smaller for some time

Hosted by Google



after it is first put in, instead of wearing larger, as would naturally be expected. This is due to the high temperature of the lead taking the temper out of the steel, and causing the die to shrink at a greater rate than is compensated for by the wear due to the passage of the lead. To make the cores the lead rod is passed to machines which cut it into short lengths, which are formed to the required shape by pressure in a die or mold.

Assembling, &c.

After the cores have been placed in the envelopes by hand they are pressed home so as to fill them completely. The envelope is held for the time in a die of the size of the finished bullet, and the tool that presses in the core turns in the rear edges of the envelope slightly in readiness for the next operation, which consists in pressing these edges firmly down on the core and consolidat the whole bullet. After this a cannelure or groove to contain lubricant is formed near its base by rolling it between a suitably shaped revolving disk and a fixed block. Then after the bullet has been finally rectified for diameter by passing it through a die to give it the exact diameter required in the cylindrical portion which is to fill the rifling, it is complete and ready for inspection.

Examination.

This is carried out with the same rigor as is observed with the cartridge case. All bullets showing indications of defective or overstrained metal in the envelopes are at once rejected.

THE LE VASSEUR BOILER TUBE CUTTER.

Two-thousandths of an inch are allowed between the high and low diameters of the bullets, but more latitude—viz, 0.032 inch—is allowed in its length. Large numbers of bullets are fired into water or sawdust, and are afterward examined to ascertain whether the envelope has held well together, and neither cracked along the marks made by the rifling nor been torn away at the rear. The weight is an important point, and is allowed to vary between 215 + or — 3 grains. Of this the envelope weighs 57 to from 60 grains.

The machines used in the manufacture of the compound bullet are all made on lines similar to those used for making the cartridge cases; in all, the envelopes or bullets are fed into tables or slides by hand and delivered to the operating tools by mechanical means. Also in the manufacture of the envelope, in which the chief difficulties in making the compound bullet lie, success depends as much on the quality of the tools used as in the manufacture of the solid drawn case, and the qualifications required in them are the same. The cupro-nickel is, however, both harder and stronger than the brass, and consequently wears the tools more rapidly, and causes them to scratch more easily.

As with the case so with the projectiles, more latitude is given in respect of weight, dimensions, quality of material and defects in manufacture in the larger sizes of small arm or quick firing ammunition; but the inspection of all varieties is extremely stringent.

Assembling the Cartridge.

In assembling the several components to form the complete cartridge, the object chiefly sought, after the production of perfectly sound ammunition, is safety while the work is being performed. This is attained by a system of carefully inspected danger buildings in which numerous precautions are taken, and from which all men and materials not actually required are excluded.

The operations here performed being similar for all kinds of ammunition, need only be particularly referred to as applied to the small arm class, the manufacture of bullets and cases for which has already been described. First, the cap, after having been primed, is inserted in the case, and firmly pressed home into the chamber prepared for it. Then after the insertion of the charge the case is bottle necked in the manner described. The internal diameter of the neck is made such as to just admit the bullet, the base of which has previously been coated over with beeswax, and is inserted in the case over wads—the beeswax doing double duty as lubricant for the bullet and water tight packing between the latter and the case. The neck of the case is then finally pinched on to the bullet and indented for cordite and cannelure, when the cartridge is complete. The examination and gauging which follows is chiefly designed for the detection of faults due to the manner of assembling, but also acts as a check on the previous examinations of the components of the cartridge. Every cartridge is tried in a socket gauge, smaller than the chamber in which it is intended that it should be fired, and most of the external dimensions of the cartridge are also gauged separately. The bundles of cartridges, as made up for service, are all weighed to make certain that no cartridge has found its way through the factories with any hidden part missing, such as the whole or portion of the charge or core of the bullet. Proofs are fired for velocity and accuracy, any defects developed in bullets or cases being noticed at the same time, while separate firing proofs specially for the detection of such defects may also be taken.

The accuracy of the shooting obtained from any ammunition, considered apart from the influence of the rifle used, depends on the extent to which uniformity is obtained in the components of the cartridges and in their arrangement on assembling, a principal factor being the hold which the case has upon the bullet; for, although insignificant in comparison with the enormous pressure finally developed by the exploded charge, the pressure required to start the bullet from the case has a considerable effect on the burning of the charge, particularly if it be made of one of the new smokeless explosives.

The tightness with which the bullet fits the mouth of the case has also considerable effect upon the stability of the cartridges under the rough usage to which they may be subsequently subjected. For, although carefully packed, their treatment in transit by sea and land is sufficiently rough to make itself severely felt. In use also they may have to bear considerable violence, for it can easily be imagined that the speed with which 500 or 600 cartridges per minute travel backward from the feeding belt, forward into the firing chamber, and with which the empty cases are extracted, in the Maxim automatic gun, is a severe trial both for the complete cartridge and for the fired case. The safety obtained by the use of the solid drawn case inclosing the charge is remarkable; for experiments have shown that it is impossible to explode any number of such cartridges at once, either by firing one of their number or by firing into the mass. It is for such important qualities that fixed ammunition having the solid drawn case has been preferred to all other varieties, and, indeed, has, owing to the extended use of machine and quick firing guns, become indispensable.

With regard to possible future developments it may be interesting to note that ammunition has been made in which a portion of the duties usually assigned to the case is performed by the charge, which in the form of a durable stick or tube of smokeless explosive is attached at one end to the bullet and at the other end to the rudiments of a solid drawn cartridge case consisting of a short gas check with a strong base containing the detonator. Such cartridges have not as yet, however, come into practical use, and cartridges of the type shown in Figs. 28 and 29 remain for the present the principal form assumed by modern fixed ammunition.

The Le Vasseur Boiler Tube Cutter.

This tool is intended for cutting out old boiler tubes or flues for renewal or otherwise, and for trimming off new flues or cutting pipe. It consists of a mandrel conforming loosely to the size of the tube to be cut, in which are knives or cutters radiating from an inner mandrel of varying diameter and provided with a screw by means of which the knives may be fed out as the cut in the tube progresses. These knives are attached by dovetail grooves in the mandrel.

In operation the tool is placed in the tube with the knives at the point to be cut; the tool is then revolved by means of a ratchet handle and the nut is held stationary, which gradually draws the inner mandrel toward the handle, thus

Hosted by Google

bringing the larger diameter under the heels of the knives and throwing them out against the inner wall of the tube, the operation continuing in this manner until the cut is completed. When the nut is run back to its original position the mandrel may then be pushed from the handle and the knives drawn down into their sockets and the tool removed. This cutter is made by the Gouverneur Machine Company of Gouverneur, N. J.

Management of Men and Manufacturing Industries *

SECOND PAPER.

Engineering the Establishment of Competitive Manufacturing Enterprises.

BY THOMAS D. WEST, SHARPSVILLE, PA.

In days of sharp competition, the starting of new enterprises soon places upon the shoulders of its managers and investors a weight they had not figured on carrying, and all sentimental ideas of self importance and there is "millions in it" vanish long before dividends are declared.

Could the struggles of late enterprises to get a foothold be fully outlined we could not fail to have volume after volume giving recitals of trials. Could the principals in them have foreseen what they had to go through, with the chances to be taken ere they could establish a paying business, there would have been much hesitancy before starting in and a great probability of their not having done so.

The writer having fought through two such undertakings within the past five years, the first being lost by fire, should be in a position to know from experience some of the difficulties attending the establishment of a business open to free competition, an element most all new enterprises have to figure on combating.

Procuring Proficient Employees.

Of the many struggles to be met and mastered there is none more serious than that of getting a works filled with competent, faithful employees having qualifications such as are necessary to fill the many different characteristic lines of work called for in their business.

I know that there are those who do not believe it, but nevertheless such is true. There are industries which it may take from one to three years to procure the character of employees they would like to see filling all posts of duty, and one factor almost all new enterprises should specially figure on at the start is that of not being compelled to rush out work to the full capacity of their plant.

Go Slow the First Year.

The endeavor to do this will often entail serious loss financially. There are few whose character of manufacture will admit of such proceedings without loss, but with almost all it is much the better plan to go easy for the first year and be under as few obligations as possible in matters of manufacturing their product.

In first starting business the quality and quantity of an employee's daily out put is to be considered. A new firm will, by having new appliances, &c., have their own customs and standard they will desire to see adopted and achieved. No matter if the mechanic or employee did do the same character of work in his last place their standard is not yours and you want the benefit of modern arrangement and tools and the work done to your idea.

If your plant is rushed your men will know it and in nine cases out of ten you will find yourself placed in the position to shut up shop or let the employees, to a degree, establish their own notions of the customs and standard to be adopted.

No one but an experienced manager knows how difficult and expensive it is to undertake to change the customs, day's work and standard in a workshop after it is once established.

If in first starting up a firm could be assured of filling all its positions with men having the character and qualifications they would like them to have, and if it were not necessary before procuring one good man to discharge in some cases a dozen, business could be figured different, and the rushing of the plant to its full capacity, turning out the quality and quantity desired profitably, could be much more satisfactorily relied upon.

Taking the employees' side of the subject, it is also better for them that the starting off of a new plant should go slow, for it gives all more room to work, a better chance for the overseer to assist them in systemizing and becoming accustomed to their labors, and should the employee at first not manifest the ability required, business not being rushing the overseer can permit the man hanging on a little longer to see if he can make any success of him, and often eventually thereby making a reliable man that can stay as long as he may desire; otherwise he might be walking the streets looking for work.

Endangering Life and Breaking Machinery.

A factor to be also considered by the employer and employee in starting a new plant is the much lessened risks taken in persons being injured where there is much new machinery with green hands to run it by going slow the first year.

It is much better for the overseer to have ample time to watch and educate employees in the use of tools and machinery than to have them all crowded together with a go-as-you-can principle, injuring themselves and breaking the machinery.

Testing New Machinery.

Another good reason why it is advisable for new firms to figure on going slow the first year is to test their machinery. The plant is yet to be built that for the first year did not discover many weak points in its appliances and machinery that required shut downs and time to strengthen and repair. If rushed with work things will be found to go wrong that would not have given any trouble could there only have been the time spared to humor and nurse them, for new machinery often requires such treatment in order to have it run and act well just as much as a sick child.

Financial Troubles.

As a general thing a plant will be more sure of making money by going slow the first year than by attempting to drive the plant to its utmost capacity, and it is pretty sure to be the case that more money is laid out to put up the buildings and place machinery ready to start than was figured on, and the establishment often finds itself left with a very small working capital. If with such it is attempted to rush business the first year the chances are that the plant goes under, or is involved in difficulties from which several years of profitable work may extricate it.

A firm cannot survive many blunders, and the attempt to rush business the first year is generally to try a risk. "Be sure you are right, then go ahead."

* Read before the Civil Engineers' Club of Cleveland, Ohio, September 12, 1893.

The Classification of Steel Plates.

A prominent manufacturer of steel plates writes to us as follows on the vexed question of this classification:

The classification of steel plates, as set forth by manufacturers generally, is misleading and puzzling to the average customer. There is a wide mark from uniformity, and competition becomes a matter of unequal conditions, so that manufacturers of steel plates are bidding against each other, with quality so far apart and prices of equal difference, placing the consumer in a quandary as to what it all means and creating a distrust as to the fairness of those he purchases from.

As the facts now exist some mills are making two grades of fire box steel, two grades of flange steel and two grades of shell steel.

As a rule, the purchaser of plates will buy the cheapest—if plates are stamped to indicate grades—regardless of what the quality may be, and so it is evident that much of the steel sold in the market is not of first-class quality, because the price is so low it cannot be made first class. However, the consumer wants to get the cheapest, and he buys at the lowest price. The practice is dangerous to consumers of plates and users of boilers, because the fact is that the very best is none too good to put into use where life is at stake.

It is evident that some uniformity of classification of grade should be adhered to and insisted upon by inspection departments, and it would seem that the grades should be simple, and each to carry requirements such as will insure only first-class quality. The following would seem to be clear and well defined:

Fire Box Steel.

Tensile strength	54,000 to 60,000
Elastic limit, per cent	50 to 60
Elongation in 8 inches, per cent	27 to 30
Reduction of area, per cent	55 to 60

Flange Steel.

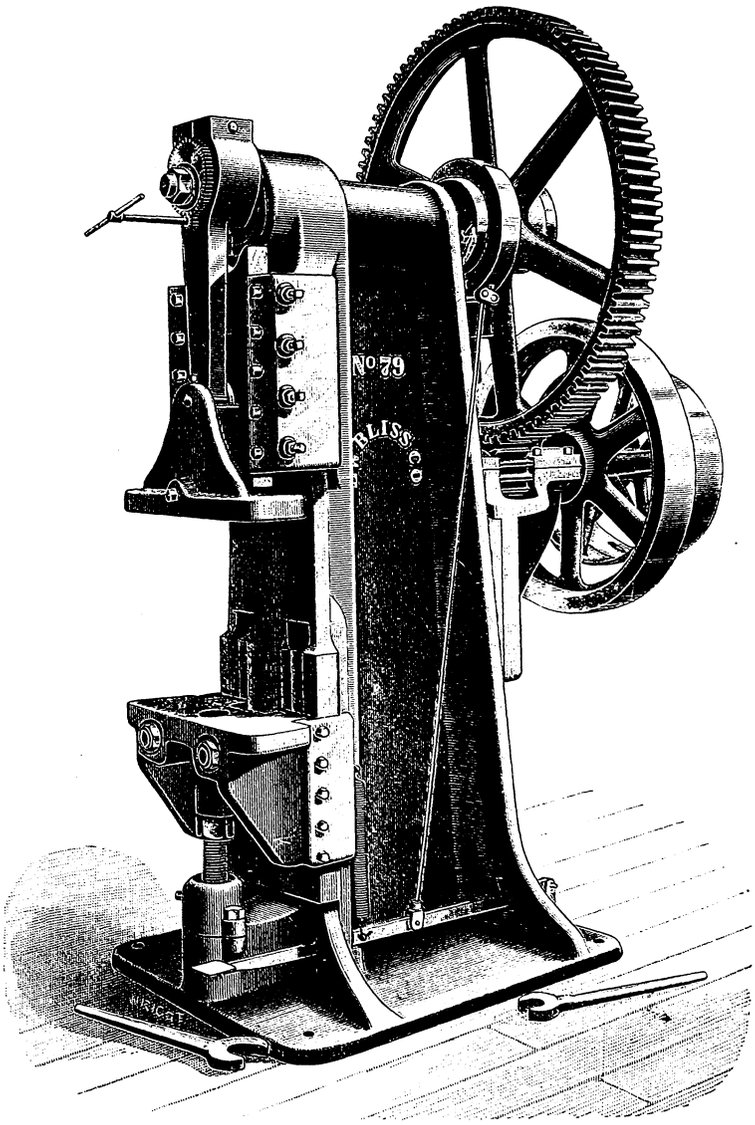
Tensile strength	54,000 to 62,000
Elastic limit, per cent, at least	50
Elongation in 8 inches, per cent	25 to 28
Reduction of area, per cent	50 to 55

Shell Steel.

Tensile strength	56,000 to 64,000

Tank Steel.

Tensile strength, about	60,000



It is the opinion of writer that practically the foregoing list would insure such material as would be suitable for first class work and would place a higher standard of quality before consumers, and command a comparative price, while the present system of "any quality, any price" is disastrous not only to the manufacturer as to sustaining prices, but also in the general use of boilers as to safety of life and property.

It is stated that a large quantity of steel rails have been shipped from London to Vancouver, B. C., by way of Cape Horn, for the British Columbia Pacific Railway.

The Bliss Reducing Power Press.

The engraving shows a long stroke press designed by the E. W. Bliss Company of Brooklyn, N. Y., for redrawing, shaping, trimming and other operations on deep sheet metal articles. It is provided with a screw adjustment for the table, which permits the use of dies varying greatly in hight, and also has an eccentric device in the pitman which facilitates making the finer adjustments required for the tools. The press is provided with an automatic clutch controlled by foot power, so as to have the slide stop automatically at the top of the stroke, unless continuous strokes are wanted, in which case the foot is kept on the treadle. The machine is made with or without gearing. For broaching castings or forgings where a very slow movement is required it is frequently constructed with back gearing of much greater ratio than shown, in which case a friction clutch on the driving shaft is used instead of automatic clutch on the crank shaft. The press, as shown in the cut, weighs about 8200 pounds, has a maximum distance between bed and slide of 15½ inches, an adjustment for this space of 10 inches and a stroke up to 8 inches. The ratio of gearing is one to seven and a half and the number of strokes usually made per minute 40.

THE BLISS REDUCING POWER PRESS.

Tariff Testimony.

A volume has been published which contains the tariff testimony submitted in hearings and in correspondence to the Ways and Means Committee. It contains a full stenographic report of the testimony submitted by the iron manufacturers, to which we referred at the time. The remarks of Joseph Wharton, W. R. Stirling, John Lambert, G. M. Laughlin and Cyrus Elder are full of interest. There are a few statements made by workmen, members of the Amalgamated Iron and Steel Association. John Jarrett, secretary of the Association of Iron and Steel Manufacturers and Tin Plate Manufacturers, presented figures relating to wages in the sheet rolling industry paid in this country and England. A letter is printed from E. H. Sears, president of the Collins Company, urging that the reciprocity features of the present law be retained, that scrap iron be placed on the free list, and that the duty on charcoal iron bars be reduced. Houghton & Richards of Boston plead for a reduction of the duty on high grade iron bars and plates, with a view to helping Low Moor. J. G. Batelle spoke on behalf of the makers of iron and steel sheets, representing 200 finishing trains of rolls, with an aggregate capacity of 400,000 tons. F. G. Niedringhaus of St. Louis, W. C. Cronemeyer of Demmler and W. B. Leeds of Elwood, Ind., were those who presented the views of the tin plate manufacturers during the same hearing.

At another time N. A. Gilbert of Cleveland made a statement on behalf of the Shelby Steel Tube Company of Shelby, Ohio, who ask that the duty be taken off from Swedish hollow billets, which they import for the manufacture of solid drawn tubing. They state that they are the only importers and on 2,505,842 pounds imported, which cost $97,158.74, they paid a duty of $38,-910.94. It is claimed that American steel makers cannot produce a satisfactory article, the analysis of which, by the way, is given as follows: Carbon, 0.13; silicon, 0.035; manganese, 0.155; sulphur, 0.005, and phosphorus, 0.041. In the course of the testimony the statement was made that the demand for bicycles is about 4 000,000 feet of cold drawn tubing per year and that last year the company, whose plant cost $350,000, made 2,000,000 feet.

Henry Disston & Sons of Philadelphia send a brief communication recommending that the duty on band saw plates, wholly or partially manufactured, black or bright, thinner than No. 13 gauge, up to 14 inches wide, be made 7 cents.

The California Wire Works of San Francisco ask that the duty on wire rods be reduced from 0.6 cent to 0.1 cent per pound. The Kidd Steel Wire Company of Sharpsburg, Pa., newly established, manufacturers of watch and needle wire, drill rods, &c., present a letter requesting the retention of the present duty on that class of wire. S. & C. Wardlow, importers, of New York, on the other hand, urge a reduction of the duties on steel and on flat steel wire or strips, on the ground that the present rates of duty are unjust to American makers of pens and producers of watch springs, &c. John A. Roebling's Sons Company point to the large increase in the imports of wire and demand a retention of present rates. The imports, which were 8,072,137 pounds in the fiscal year ending June 30, 1892, rose to 9,305,075 the next year.

The testimony of W. C. Dalgell of South Egemont, Mass., was put in on September 16. He called attention to the fact that the specific duty of 2 cents per pound is inadequate as applied to the higher grades of carriage axles. His testimony was supported by a letter similar in tenor from T. Gray of the Tomlinson Spring Company of Newark, N. J.

A particularly interesting talk is that of Thomas W. Bradley of Walden, N. Y., who with W. F. Rockwell of Meriden, Conn., represented the American pocket cutlery manufacturers. Mr. Bradley related his experience in his negotiations with the promoters of the United States Cutlery Company, his firm being mentioned in connection with it without authority.

George C. Hatch of Bridgeport submits a statement relating to the cost of pocket knives. He figures that the cost of making two dozen knives, which is an average day's work, is 70 cents in Germany and $2.20 in this country. This is the cutler's work. The cost of grinding and finishing is 24 cents in Germany and 56 cents here.

The retention of the present tariff on razors and razor blades is supported by an argument sent by J. R. Torrey of the Torrey Razor Company of Worcester, Mass., who estimates that fully 33 per cent. of the razors consumed in this

Hosted by Google

country to-day are of domestic manufacture.

A highly interesting document is that signed by James D. Foot of Kearney & Foot Company, in relation to files. Mr. Foot urges that files should be put in three classes, viz.: Files for mechanical uses, for jewelers' and silversmiths' uses and rasps for blacksmiths' or farriers' uses. Mr. Foot states that at the time when the Mills bill was being drawn up he urged a reduction of the duty on files. Now, however, he recedes from that position because the advantages once possessed by American manufacturers have disappeared. When he claimed at a former period ability to compete with foreign manufacturers in spite of a lower duty he relied upon the excellence and ingenuity of American machinery. Since that time, however, the foreigners have equipped themselves with machinery of American design, so that they are on equal terms in this respect and continue to enjoy the additional advantages of cheap labor. Mr. Foot presents some general information in regard to the decline in prices and in raw material and data relating to wages. Mr. Foot makes the somewhat surprising statement which follows: "To-day, through home competition, the price (of steel) varies from 4 to 6 cents per pound, and such is the fact that if by an act of Congress should an export business be established in files, by which the steel could be imported into this country and on custom house oath re-exported in files, thereby obtaining for the manufacturer of files a practical remittance of all duties, no manufacturer of files could afford to use this steel in comparison with home prices even with this rebate allowed. Consequently there would be no possibility of reducing the cost of producing files by a corresponding reduction in the cost of raw material in the shape of bar steel through the removal of duties on same." Mr. Foot does not seem to be aware of the fact that under the present law 99 per cent. of the duties are refunded as a drawback on exportation, so that if such a business was feasible, it could have been done for some time. We are inclined to believe, however, that foreign steel could be landed here at prices below that of American steel for a re-export business.

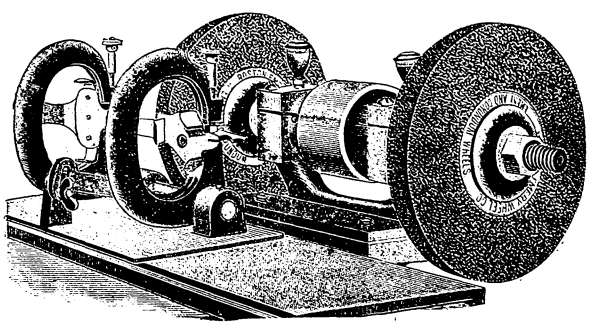
A number of manufacturers of shotguns urged the retention of the present duties.

The Ausable Horse Nail Company, through their president, A. Bussing, point out that the manufacture of horse nails by machinery is an American industry and that the machinery for this purpose is of exclusively American invention. The machinery now being used in Europe is built in this country. The annual production is from 6000 to 7000 tons. Mr. Bussing states that the industry can stand a reduction in the duty of 1 to 1½ cents per pound, making it 2½ to 3 cents per pound.

The interests of wood screw manufacturers are represented by a letter from M. J. Woodruff, president of the Russell & Erwin Mfg. Company of New Britain, Conn. Mr. Woodruff pronounces it a well recognized fact with all wood screw manufacturers that to provide for the daily product of each 1000 gross of screws of average sizes, capital invested in permanent plant, machinery, tools, fixtures and working means to the extent of $100,000 must be provided, and that the most successful manufacturers are unable to manufacture and market at average market prices a quantity of wood screws equal in value to the capital invested in less than two years of time; that is, it requires the market product of two years' time in which to turn the capital over once. Iron and steel wire drawn to required sizes is the raw material of the screw manufacturers. The average cost of this wire in this country to the screw manufacturers is about 3⅛ cents per pound; in England, 1⅞ cents per pound; in Germany, 1¼ cents per pound; in France, 1⅛ cents per pound; in Belgium, 1¼ cents per pound. Other incidental supplies, as oil, fuel, soda, gas, &c., bear about relative proportions.

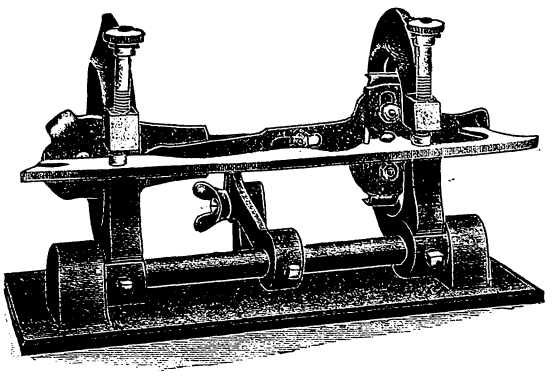
Investigations recently made in the various foreign countries regarding comparative wages paid upon similar processes in manufacture of screws show that where the manufacturers in this country pay $1 in England is paid 52 cents, in Germany is paid 46 cents, in France is paid 47 cents and in Belgium is paid 43 cents. In Norway and Italy wages are still lower. Mr. Woodruff's company, being interested in works near Hamburg, have been able to verify this comparison.

Many foreign makers use the same pattern machinery as is used in this country, and the speed of the machine is governed by the power applied, and controls the rapidity of the product. In this country we are certainly not ahead of our foreign friends in the production or application of power for rapidity of production; consequently, one day's wages of foreign labor will produce as many screws as the same time of American labor.



Mr. Woodruff asks for the continuance of the present classification and specific rates.

The facts relating to aluminum were presented in a paper by Albert E. Hunt, president of the Pittsburgh Reduction Company, who was closely questioned by the committee after its reading had been completed. He urges that a duty of 25 cents per pound be substituted for the present ad valorem duty of 45 per cent. upon rolled, forged or drawn bars, rods, plates, sheets, wire, pipe, tubing or castings of aluminum or of alloys of which aluminum is the component part of chief value.



Very voluminous testimony was taken on the question of the duties on lead ores, L. E Holden, owner of the Cleveland *Plain Dealer*, and Hugh N. Camp of New York, representing the St. Joseph and Doe Run Lead companies of Missouri, being the two witnesses.

Among the other subjects taken up in the metal schedule was quicksilver, by W. B. Buckminster of the Napa Consolidated Quicksilver Mining Company; metallic bedsteads, cotton machinery, by the Knowles Loom Works, and bicycles, by the Pope Mfg. Company.

The testimony is closed by a letter from Henry T. Seymour, secretary of the American Shear Mfg. Association.

Complete Machine.

Skate Holder.

THE KEENEDGE SKATE GRINDER.

The Keenedge Skate Grinder.

The skate holder, shown detached in the right hand view, can be used on any emery grinder by attaching a plate to the grinder at such a hight as will bring the skate nearly opposite the center of the wheel. The holder consists of a flat bed plate upon which is mounted a shaft, carrying at each end a clamp for holding the blade of the skate. This shaft also carries a bar, by means of which the device may be adjusted so that the blade will be at the proper angle to the emery wheel. After the skate has been firmly clamped in the holder the latter is moved to and fro, the skate being held lightly against the wheel to prevent heating the runner. This holder will grind square or high on either edge, as may be desired. This device is made by Charles Perkins of Bridgewater, Mass.

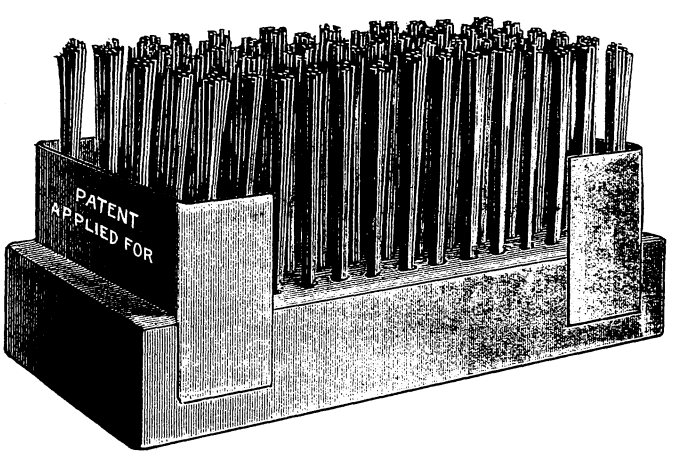
Silicon and the Grading of Pig Iron.

BY A. P. BJERREGAARD, IVANHOE, VA.



Why are there often several grades of iron in the same cast? This question often enters the mind of one having to do with the control of a blast furnace. It is a common opinion among furnacemen that they are caused by a difference in specific gravity. This explanation appears to receive corroboration from the observed fact that the closer grades are the first to leave the furnace and to fill the lower pig beds. But this phenomenon may also be attributed to the partial chilling of the iron in the cold sand runner. The runner soon becomes heated, so that the succeeding iron retains its heat, and therefore forms larger crystals. To determine whether there is any difference in specific gravity upon which the above mentioned opinion could be founded, the author made the following tests of specific gravity:

	Specific gravity.
No. 1X pig iron	6.972
No. 2X pig iron	7.044
No. 3 pig iron	7.109

Silicon Contents of Different Grades of Pig Iron.

No. 1X.	No. 2X.	No. 3.
3.71	3.57	3.29
3.58	3.43	3.24
3.29	3.19	3.06
2.89	2.35	2.12
2.82	2.47	2.21
2.82	2.45	2.12
2.81	2.49	2.16
2.80	2.48	2.36
2.78	2.63	2.33
2.63	2.35	2.02
2.63	2.04	1.79
2.56	2.45	2.37
2.41	2.32	2.23
2.40	2.04	1.83
2.31	2.16	2.07
2.26	2 17	2.02
1.93	1.88	1.60
1.76	1.22	0.87
1.75	1.41	1.32
1.57	1.27	1.18
1.25	1.03	0.89

It is the author's opinion that the variation in the silicon contents of the same cast is the cause of the difference in grade, and not an effect. For it is well known that silicon has the property of causing combined carbon dissolved in pig iron to crystallize out as graphite when the fluid iron solidifies. Since it is by the amount of coarsely crystalline graphite visible to the eye that the iron is graded, it follows that the grade is determined by the relative amount of silicon present.

STEEL WIRE BRUSH.

These figures seem to point to the truth of the opinion that the difference in grade is caused by a difference in specific gravity.

But it might reasonably be expected that these different grades or qualities of iron would become mixed, if not in the furnace at least in the runner. That they do not is proved by the difference in crystallization often observed in different parts of the same pig. It is not rare to see pigs composed of several grades arranged in crude layers, the closest generally at the bottom. However, the author has seen pigs in which the "close spot" was near the top.*

The difference of grade under discussion is not confined entirely to mere physical characteristics, but extends even to the chemical composition. This is illustrated by the following analyses. Several kinds of iron are represented. The table is arranged according to the amount of silicon in the No. 1X grade. In every case it will be seen that the No. 2X has less silicon than the No. 1X, and the No. 3 less than the No. 2X, although in each case the three grades were all produced in the same cast.

*No reference is here made to a chilled crust on the iron, which is sometimes formed. It may be either white, mottled, "close" or a lower grade of foundry iron than the heart of the pig.

The various masses of iron ore passing down through the furnace are associated with different amounts of silica, and different amounts of limestone, so that some particles of iron will have an opportunity to absorb more silicon than others. These various particles of iron, when melted, arrange themselves in layers, the heaviest, containing the least silicon, sinking to the bottom, the lightest, containing the most silicon, floating above.

Still another explanation possible is that the iron first formed lies at the bottom, and since it is for a longer time exposed to various cooling effects, it is not so hot as that above it, hence it will part with some of its silicon to its hotter neighbor above. Both these explanations will also account for the so-called "close spots." In the first case the melted iron will not all have an opportunity to reach its proper level before tapping, hence some of the closer iron will be mixed in the same pig with more open iron. In the second case the iron from next the wall will be as cold as that at the bottom, and it will become mixed with the hotter iron, so causing "spots." It may be that both these explanations are true causes.

Whatever theory may be accepted the fact remains that the most openly crytallized iron in each cast contains the most silicon, and the difference is often very great. We are, therefore, constrained to believe that the method of grading pig iron in vogue is not so arbitrary as is supposed; but that it really rests on a scientific basis.

Another fact noticeable in the table of analyses is that it is not the absolute but the relative amount of silicon that determines the grade. Whether the silicon in the whole cast is high or low, there is always more in the more open iron and less in the closer. If the comparison had been carried further, taking the "close" or gray forge grade into account, the same difference would be observed, but to a greater extent. One curious example that has come under the author's observation was some No. 2X pig iron containing a spot of white iron. The No. 2X iron contained 0.96 per cent. silicon, while the white iron layer near the bottom of the pig (yet entirely surrounded by foundry iron) contained 0.37 per cent.

There is often also a slight variation in the amounts of phosphorus and manganese in the different grades formed in the same cast, but so far no regularly occurring progressive variation has been observed. At best the difference is only a few hundredths of 1 per cent.

The phenomena discussed in this paper are entirely different from segregation. In segregation the impurities in the same pig will tend to collect themselves toward the center of the pig, whither the iron drives them while crystallizing. We have here to do with a more profound cause, one that takes its origin in the blast furnace itself.

Steel Wire Brush.

This steel wire brush for cleaning castings is made by the S. Obermayer Company of Cincinnati, Ohio. It will be noted that there is a sheet metal strip inserted in each end of the block and which by the protection it affords the wires adds to the durability of the brush. It is stated that the wire will not crystallize and break, and that it will wear down to the block.

Official Report on U. S. Cruiser "Columbia."

Rear Admiral Belknap, president of the Trial Board, reports to the Secretary of the Navy in regard to the recent official trial of the United States cruiser "Columbia," that the mean speed of the ship for two runs over the measured course from Cape Ann to Cape Porpoise, under forced draft, with an average air pressure of $\frac{9}{10}$ inch, carefully calculated and corrected for tidal flow, was at the rate of 22.80 knots per hour. The board finds that the "Columbia" fulfills the contract requirements in every respect, and regards the vessel as possessing qualities of steadiness, seaworthiness and ready obedience to helm in a marked degree. Only the best material and most thorough workmanship, says the report, could have produced engines and boilers of such notable performance. In conclusion the board expresses the opinion "that, in the 'Columbia,' the service and the country have a vessel that, as a type of superior construction, advanced enginery and great speed, marks an epoch in modern cruiser design and building." The result of the official speed trial insures a bonus for the "Columbia's" builders, the Cramps of Philadelphia, of about $350,000.

THE WEEK.

Announcement is made that the Republic of Nicaragua is about to bring suit in the United States courts against the embarrassed Nicaragua Canal Construction Company for failure to fulfill their contracts with that Government. The reasons given are that no work has been done on the canal for a year and that the company have gone into the hands of a receiver.

An official report has been received in Washington from the special agent sent by the Government to investigate the gold discoveries in Minnesota. The agent reports that he is firmly convinced that the district in the vicinity of Rainy Lake is distinctively a mineral country. In the quartz of Township 71 the mineral is deemed very rich, and the land has been withdrawn from settlement.

On Wednesday, November 22, the first steel merchant vessel ever built in Maine was launched at Bath. She is the twin screw steamer "City of Lowell," built for the Norwich & New York Transportation Company, and designed by A. Cary Smith of New York. The vessel is a magnificent example of a modern Sound steamer. She is 336 feet long, 49 feet molded beam, or 66 feet from guard to guard amidship; will draw 13 feet of water when loaded and steam 20 knots an hour at the least, with a possible 22 knots. The hull is unusually strong, the frames being steel angle irons covered with steel plates $\frac{12}{16}$ inch thick. The decks are of steel covered with thick pine. The "City of Lowell" is a twin screw boat with triple expansion engines of 26, 40 and 64 inch cylinders, 36 inches stroke and 4500 indicated horse-power. Steamer will be supplied by six Scotch return tubular boilers, built for a working pressure of 165 pounds.

Experiments are being made in Italy with light electric vehicles, somewhat larger that ordinary tricycles. The vehicles are equipped with a battery of ten cells, capable of yielding sufficient energy to propel them for from three to five hours.

In Great Britain the work of connecting all the lightships and lighthouses with the telegraph system of the country has been begun.

The Alps are to be pierced by another railway tunnel. This time it is the Simplon that is to be attacked, by a company recently formed in Switzerland for the purpose. The work is estimated to cost $15,000,000 and to occupy five and a half years.

The Herreshoffs of Bristol, R. I., have received an order from a New York man for a Tobin bronze steam yacht, which, it is said, will be the finest yacht afloat. These famous builders are enthusiastic over the future and efficiency of Tobin bronze in yacht construction.

The present low price of wheat in the United States is not to be wondered at when it is considered that the stocks now held reach the immense aggregate of 67,000,000 bushels. This is double the amount held at this time last year, and is far larger than the stocks in hand at the like period for many years past.

A great pool, or combination, of the lake shipping interests which center at Buffalo and West Superior has, it is rumored, been arranged.

It is understood that the President's message to Congress will include the recommendation of an appropriation for the construction of another new battle ship and four torpedo cruisers for the navy.

Plenty of capital is said to be ready for carrying out a rapid transit system for New York City as soon as the commissioners come to a decision on the plan to be adopted.

Chicago is reported as suffering from a regular fire insurance famine. So many insurance companies have been crippled by large damage claims of late that big business concerns find it impossible to obtain all the insurance they desire to carry.

The Salvation Army in San Francisco recently undertook to sift the truth of the rumors about the large numbers of unemployed workingmen alleged to be in that city. It offered work at $1.40 a week and found no takers. The *Coast Seamen's Journal* does not think the test was a fair one.

The season's export trade of Montreal, Canada, ended on November 22, when navigation was closed. From all reports the season has been an exceptionally poor one. Freights have been remarkably low and prices bad on the other side. The amount of grain shipped from the St. Lawrence was 22,500,000 bushels.

The deplorable waste of natural gas continues. A well drilled recently near Greenfield, Ind., was wrecked by the pressure of gas, and by last accounts a flow of gas estimated at 30,000,000 cubic feet a day was rushing out unrestricted, the owners being totally unable to get it under control.

Certain localities in Ohio, West Virginia and other States are suffering from an acute visitation of the tramp plague.

Japanese trade with the United States, according to a late statement issued by the Japanese Customs Bureau, is increasing more rapidly than it is with England, France or Germany.

A British trade contemporary lays stress upon a noticeable feature that has recently developed in the engineering trades of the English Midlands—namely, the demand from Russia for machinery and plant for iron and steel making. Some important contracts have been lately forwarded and others are now in hand for rolling mill machinery of the most improved kind, showing the growth of enterprise in the direction of the manufacture of steel and iron in the dominions of the Czar.

A most curious dinner, so far as regards the place in which it was consumed, was given in Brooklyn last week, when 108 persons, guests of the Brooklyn City Railroad Company, were entertained inside the big chimney of that company's newly constructed power house. The chimney, which is 300 feet high, is the loftiest in New York State and one of the highest in the world, and forms a very conspicuous feature of the Williamsburg district of the city of Brooklyn.

A vessel sailed from San Francisco for Havre, France, last week, carrying the first full cargo of tallow ever shipped from the Pacific Coast.

October net earnings of the Reading Coal & Iron Company were $358,358, being the largest net earning for any month in the history of the corporation. It is nearly $50,000 in excess of that of October, 1892, although the ruling prices of coal at that time were 10 to 15 cents per ton higher. The company's collieries produced in October, 1893, 860,928 tons of coal, an amount only once before exceeded.

Coal fishing is a curious industry prevailing at the town of Northumberland, on the Susquehanna River. The bed of the stream in this vicinity is thickly lined with coal, washed down from various colliery centers and prevented from going beyond Northumberland by a large dam. The fuel thus recovered from the river last year amounted to 4000 tons, which was sold at an average price of $2.20 per ton.

Plans are afoot for a consolidation of the surface street railroads of Brooklyn, N. Y., with an aggregate stock of $55,000,000.

A British Torpedo Boat Destroyer.

The British torpedo boat destroyer "Havock," recently built by Yarrow & Co. for the British Government, has, on her official trial, proved herself the fastest vessel in the British Navy, having maintained during three hours a mean speed of 26¼ knots per hour. This speed was the more remarkable on account of the trial having taken place in a very heavy sea, the water finding its way even into the engine room. The "Havock" is the first of 12 similar vessels of an entirely new and distinctive type, which are being built for the British Admiralty by private contract, after the design of the Director of Naval Construction, W. H. White. They are intended, as their name indicates, to act against torpedo boats, and to exceed those boats in speed. The "Havock" is 180 feet long by 18½ feet beam, and about 200 tons displacement. She has two sets of triple expansion engines, with cylinders 18, 26 and 39½ inches in diameter, by 26 inches stroke, designed to give 3500 horse-power at 400 revolutions per minute. They drive twin screws, having three manganese bronze blades, 6 feet 2 inches in diameter. Her boilers are two in number and of the locomotive type, one to each set of engines, in separate stokeholds, forced draft being supplied to them by two fans by Allen & Co., and are designed for a working pressure of 180 pounds per square inch. The armament of the "Havock" consists of one 12-pounder and three 6 pounder rapid fire guns, as well as one fixed bow torpedo and two revolving deck tubes, 18 inches in diameter. She carries an electric search light. Yarrow & Co. are building a sister ship, the "Hornet," from which they expect to obtain a speed of 27 knots.

At a fully attended meeting of the iron trade of Boston held November 20, noon, at the Chamber of Commerce, to take action on the death of Charles T. Richardson, who for more than 30 years has been identified with the iron trade of this city, the following resolutions were passed: "Called together by the event of the death of one of their number, Charles Tyng Richardson, who passed away November 18, 1893, the members of the iron and steel trade of Boston desire to express their appreciation of his integrity and honorable career as a merchant, and his kind and upright character as a friend and associate, and their sorrow at his death. They offer to his surviving family their tender and heartfelt sympathy in their great sorrow and affliction, and it is resolved, that a copy of the above be sent to the family and the trade be represented at the funeral."

RICHARD R. WILLIAMS, - HARDWARE EDITOR.
JOHN S. KING, - - - BUSINESS MANAGER.

Time to Look for Better Business.

It is a queer sort of philosophy that does not recognize conditions as they exist. It is more singular still that credit should be expected for the profound act of shutting one's eyes and refusing to look. Yet this is being done by persons connected with the iron trade who fancy that they possess some influence as leaders of opinion. For many weary months, so many that we dislike to count them, trade has been so bad that it could hardly be worse, and yet there are individuals to be found, and of some pretensions to leadership, who persistently ignore the distress into which manufacturers and merchants have been plunged and tell them in effect that matters are not really bad, but to keep up their spirits, as times will surely be better by and by. This is a Micawber like spirit, merely waiting for something to turn up. It is not the spirit of an alert business man keenly alive to the influences prevailing at the moment and studying how he can best take advantage of them and rise above them. When business is poor such a man realizes it, acknowledges the fact and endeavors to put himself in shape to endure it. There is nothing to be gained by his being falsely told that he is mistaken in his views, that he will soon find affairs very much improved, and that then he will laugh at his apprehensions of trouble.

We believe that manufacturers are to-day not much in need of advice how to act. Those who hardly knew what to do when hard times so suddenly chilled them have been driven by the force of circumstances into the only course possible. They have retrenched in every way and in directions which at one time would not have been deemed open for such action. Expenses have been curtailed which seemed to be rigidly fixed. Arguments as to costs by sellers of materials have been wholly ignored, and prices have ruthlessly been beaten down, making such producers in their turn grapple with their own difficult problems. Without concerted action, and with no preconceived theories as to a permanent lowering of values, the whole country has nevertheless proceeded in that direction, and to day we find ourselves to have been participants in a revolution. It is possible that a reaction may be inspired by causes now wholly invisible which will again force prices on a higher plane, but it seems to us the part of wisdom to base no hopes on such a change.

Accepting values as they exist to-day, that manufacturer or merchant who is able to adjust his views most quickly to the new order of things will reap the greatest benefits. In many lines possible tariff changes have already been anticipated. Perhaps most commodities have fallen in price as low as, if not lower than, prospective reductions in duties might have forced them to go if a new tariff had been put into effect over night. If this is the case, there is no reason why business men generally should not feel confidence in existing values and purchase freely to cover their known requirements. The worst having been prepared for, the general interests of the country are just so much better off, as the reductions in duty when made are found to fall short of what had been expected.

With the revision of the tariff discounted, so that it is no longer a bugaboo, and with the currency question happily settled on a sound basis, thus checking the flow of gold abroad, there is nothing to prevent a revival of trade except the lack of confidence, which was so rudely shaken during the past spring and summer. If the philosophers of optimism and cheerfulness can stimulate the growth of confidence, now is the time for them to come forward, but the people have probably lost faith in such blind leaders who did not recognize calamity when brought face to face with it.

The Wilson Tariff.

We believe that iron manufacturers generally had settled down to the belief, during the past few weeks, that the rates of duty which would be proposed by the Ways and Means Committee would not be very radical. Apparently reliable forecasts of the principal features of the measure had agreed pretty well. None of them had prepared the metal industries for the heavy blow which is now aimed at them. At first sight the figures may not look alarming, because a comparison is difficult. A closer study is well calculated to bring consternation and dismay to the manufacturers and wage earners in the great American industries involved. That study presupposes familiarity with foreign values, to which the American iron trade has given little attention for some time, since domestic competition has crowded prices to a level at which foreign material has been practically out of the race, under the present rates of duty.

The plea made by Mr. Wilson that ad valorem rates of duty offer less opportunity for fraud than specific rates, because cheap weighers can be more readily bribed, will be brushed aside contemptuously by every business man, be he importer or manufacturer. The ad valorem rates have been adopted because they disguise the heavy cut made, and because with ignorant people they leave the impression that the iron industry has been generously dealt with. We shall not now deal with the inconsistencies of a measure which puts cotton ties on the free list as a raw material. We shall return later on to that grave defect in the bill which puts goods of the highest finish on the same basis as the cruder forms of the same group. We propose now merely to present some figures which will enable the trade to appreciate how sweeping the measure is.

Let it be fully understood at the outset that ad valorem duties are assessed on the market value at foreign works, so that it may happen that it is cheaper to buy from an inland plant abroad than from one which from its location at tidewater would be the natural seller. The apparently generous percentages are not measured upon American values, but upon the lowest foreign prices, often made to clear the home markets of European producers of an uncomfortable surplus. In our computations we have calculated the pound sterling at $4.88, and the mark per metric ton at 25 cents per gross ton.

Pig Iron.—Beginning with pig iron, we find that makers' brands of Cumberland Bessemer pig have sold as low as 42 shillings, or $10.25, f.o.b. With a duty of 22½ per cent. the rate would be $2.31, against $6.72 at present, a cut of $4.40. No. 1 Coltness Scotch foundry iron has sold down to 50 shillings, which would make the duty $2.75, or a cut of $4. The lowest price at which Scotch warrants have sold, so far as our records go, is 37 shillings, in June, 1888, which is $9.03. At this valuation the duty would be $1.99. A good deal has been said lately about the low prices at which Alabama warrants have been placed. The recent transactions referred to by us were at $7.50. Now, the cost of hauling the iron to tidewater at Savannah is $2, and it takes $2 more to bring it to New York. In other words, Alabama in the days of its greatest distress cannot get to tidewater as cheaply as Scotch iron on board ship at Glasgow, American duty paid, and cannot reach New York as cheaply as can the Scotch warrant iron.

Middlesborough warrants sold down, in July, 1886, to 29 shillings, equal to $7.07. On this valuation the duty would be $1.58 only. We do not know what could be done in freights from the East Coast, but a liberal allowance would put this warrant iron, if its lowest price were repeated, at $10.50, ex-ship New York.

Steel Rails.—The steel rail manufacturers have been led to believe that even the extremists would not venture to place the duty on that product at less than $5 per ton. But the rate has been put at 25 per cent. With rails at £3. 10/ at English works this figures out $4.25, as against $13.44, the present duty. Steel rails can be laid down under the proposed duty at $24, New York, figuring $1.75 for land and ocean freight and 50 cents for insurance and unloading. This would give foreign makers the Gulf markets, and surrender to them the Pacific Coast. Inci-

Hosted by Google

dentally it may be remarked that the latter market will be completely controlled by foreign producers in the whole line of iron and steel manufacture from one end to the other.

Lest the statement that the Gulf markets would be lost be held to be too sweeping, we are in a position to state on the authority of a leading firm of importers that negotiations for the sale of a block of 5000 tons of English steel rails fell through recently because a 5-shilling freight could not be secured. The buyer was willing to pay $30 at New Orleans. The English maker was anxious to sell at that figure, paying even $13.44 per ton duty.

Steel Billets.—In soft steel billets the Germans are by far the lowest sellers. At the present time 60 marks at works could be done, say $16. At the 25 per cent. rate of duty this would figure $4, or a cut of nearly $5 per ton, so that foreign billets could be landed at New York at $22.75 to $23. In this, as in other articles, the present domestic price could be low enough to keep out the foreign product. But it must be remembered that present domestic prices represent panic values, at which profits are squeezed out of everything, even to the best located and best equipped plants, and at which wages have been cut down to a level never attained during the last 20 years, and let it be hoped not to be reached again after the coming recovery.

Beams.—On structural shapes the proposed duty is 35 per cent. ad valorem. This article is sold, for American sections, at interior German mills at 75 marks per ton, or, say, $18.75, which would make the duty $6.56 per gross ton, as compared with the present rate of $20.16, or only one-third. Land and water freights and charges would put the German steel beams into this market at, say, 1.50 cents, when the lowest at which Western beams have sold in this market is 1.60 cents per pound. At this price confessedly the Eastern works cannot compete. The New England market would be lost to the domestic mills. Belgian beams at 110 francs, f.o.b. Antwerp, figure close to the German article. It may be of interest to note that a representative of a Belgian steel works began offerings of its material on the day following the announcement of the Wilson tariff.

Bars and Plates.—Welsh bars can be bought at £4. 10/, which at 30 per cent. could make the duty $6.59 and would enable the foreign makers to put them down at 1.40 cents, New York, coming close to our quotations for common iron. Marked Staffordshire bars are quoted at £6, on which the duty would be $8.78 per gross ton, allowing them to reach our shores at, say, 1.80 cents. In steel plates our mills could probably hold their own.

Tin Plates.—Recent quotations in Wales are 10 shillings and 6 pence for Bessemer plates, or, say, $2.56 per box of 108 pounds. At 40 per cent. the duty would amount to $1.03 per box, against $2.38 at the present time. In other words, the present duty would be reduced more than one-half on common plates, and about that amount on the better grades.

Metals.—The transfer of copper and its ores to the free list is a matter of indifference to American producers, as one of the foremost champions of their cause in former years acknowledged to the writer. We have become such great exporters that we have long been practically on the basis of the world's markets. Our nickel production is limited to one mine, which probably is unable to compete under any circumstances against the great deposits of Sudbury. We have never been able to establish a satisfactory antimony industry, while the producers of pig tin have forfeited all claims to consideration. The most serious proposal is that relating to lead. The duty is cut down one-half and the doors are opened wide to the importation of Mexican and Canadian ores. The latter particularly will develop into a very formidable competitor during the next few years. With silver down to present prices, and lead cut down to an importation point of 3 cents, New York, mining in the Rocky Mountains will suffer frightfully. Justice has not been done to the growing aluminum industry.

We believe that we have afforded an opportunity to appreciate how radical are the reductions proposed. The articles which we have touched cover only the coarser forms, which are relatively better able to resist the shock. Those goods into which labor enters to a much greater extent are in a much worse condition. Analysis is more difficult, but very striking facts will be presented.

Even when apparently our industries are safe, there is real and imminent danger. We are selling at panic prices now, and wages and profits are below a living level. Those who framed the Wilson bill now declare that we shall not rise above that level, that the plants and men now idle shall remain unemployed, and that our producers shall surrender the Pacific Coast and a part of the Gulf and New England markets.

We join with the majority in the trade in believing that the Wilson bill, in its present form, cannot pass, chiefly because it is so radical that it antagonizes sections of the country without whose active support it cannot hope to pull through both Houses of Congress.

Although the majority of the Ways and Means Committee has overshot its mark, all our industries must for months to come suffer from uncertainty and dread. The winter threatens to be an unprecedentedly poor one in the iron trade, for which the blame will rest with the majority of the Ways and Means Committee.

THE TARIFF BILL.

The bill to reduce taxation, to provide revenue for the Government and for other purposes has at length come forth from the Committee on Ways and Means.

The following is the complete text of the metal schedule, with the rates for the corresponding articles under the act of 1890. The difference can therefore be readily computed. The free list is also given, so far as it concerns raw materials of metals:

Schedule C.—Metals and Manufactures of.

IRON AND STEEL.

108. Iron in pigs, iron kentledge, spiegeleisen, ferromanganese, ferrosilicon, wrought and cast scrap iron, and scrap steel, twenty-two and one-half per centum ad valorem; but nothing shall be deemed scrap iron or scrap steel except waste or refuse iron or steel fit only to be remanufactured; Act 1890, three-tenths cent a pound.

109. All iron in slabs, blooms, loops, or other forms more advanced than pig iron, and less finished than iron in bars, twenty-five per centum ad valorem.

110. Bar iron, rolled or hammered round iron, in coils or rods, and bars or shapes of rolled iron, thirty per centum ad valorem; 1890, bar iron, eight-tenths, nine-tenths, one cent per pound; round iron, one and one-tenth cent a pound, with provisos. The act of 1883, respective rates were eight-tenths, one, one and one-tenth cents per pound, and round iron, one and two-tenths cents a pound.

111. Beams, girders, joists, angles, channels, car-truck channels, T T, columns and posts or parts or sections of columns and posts, deck and bulb beams, and building forms, together with all other structural shapes of iron or steel, whether plain or punched, or fitted for use, thirty-five per centum ad valorem; 1890, nine-tenths cent per pound; 1883, one and one-quarter cents per pound.

112. Boiler or other plate iron or steel, except saw plates hereinafter provided for, not thinner than number ten wire gauge, sheared or unsheared, and skelp iron or steel sheared or rolled in grooves, thirty per centum ad valorem; 1890, five-tenths, one and four-tenths, sixty-five-one-hundredths cent per pound; eight-tenths, one and one-tenth, one and five-tenths, two, two and eight-tenths, three and one-half cents per pound according to value; above thirteen cents per pound, forty-five per centum ad valorem.

113. Forgings of iron or steel, or forged iron or steel combined, of whatever shape, or in whatever stage of manufacture, not specially provided for in this act, thirty per centum ad valorem; 1890, two and three-tenth cents per pound.

114. Hoop, band, or scroll iron or steel, except as otherwise provided for in this act, thirty per centum ad valorem; 1890, one, one and one-tenth and one and three-tenths cents per pound.

115. Railway bars, made of iron or steel, and railway bars made in part of steel, T rails, and punched iron or steel flat rails, twenty-five per centum ad valorem; 1890, six-tenths cent per pound.

116. Sheets of iron or steel, common or black, including all iron or steel commercially known as common or black taggers' iron or steel, and skelp iron or steel, thirty-five per centum ad valorem; 1890, one, one and one-tenth and one and four-tenths cents per pound.

117. All iron or steel sheets or plates, and all hoop, band, or scroll iron or steel, excepting what are known commercially as tin plates, terne plates, and taggers tin, and hereinafter provided for, when galvanized or coated with zinc or spelter, or other metals, or any alloy of those metals, thirty-five per centum ad valorem; 1890, three-quarter cent per pound more than corresponding gauges black sheets.

118. Sheet iron or sheet steel, polished, planished, or glanced, by whatever name designated, thirty-five per centum ad valorem: 1890, two and one-half cents per pound.

119. Sheets or plates of iron or steel, or taggers' iron or steel, coated with tin or lead, or with a mixture of which these metals, or either of them, is a component part, by the dipping or any other process, and commercially known as tin plates, terne plates, and taggers' tin, forty per centum ad valorem; 1890, two and two-tenths cents per pound.

120. Steel ingots, cogged ingots, blooms and slabs, by whatever process made; die blocks or blanks; billets and bars, and tapered or beveled bars; steamer, crank and other shafts; shafting; wrist or crank pins; connecting rods and piston rods; pressed, sheared, or stamped shapes; saw plates, wholly or partially manufactured; hammer molds or swaged steel; gun-barrel molds not in bars; alloys used as substitutes for steel tools; all descriptions and shapes of dry sand, loam, or iron-molded steel castings; sheets and plates not specially provided for in this act; and steel in all forms and shapes not specially provided for in this act, twenty-five per centum ad valorem; 1890, four-tenths, five-tenths, eight-tenths, nine-tenths, one and two-tenths, one and six-tenths, two, two and eight-tenths, three and one-half, four and two-tenths and seven cents per pound, according to value.

WIRE.

121. Wire rods: Rivet, screw, fence, and other iron or steel wire rods, and nail rods, whether round, oval, flat, square, or in any other shape, in coils or otherwise, thirty per centum ad valorem; 1890, six-tenths cent per pound.

122. Wire: Iron or steel wire, and wire or strip steel, commonly known as crinoline wire, corset wire, and hat wire, flat steel wire, or sheet steel in strips, uncovered or covered with cotton, silk or other material, iron or steel wire cloths, and iron or steel wire nettings made in meshes of any form, iron or steel wire coated with zinc or tin,

Hosted by Google

or any other metal, wire rope and wire strand, thirty per centum ad valorem; 1890, one and one-quarter, one and three-quarters, two and one quarters and three cents per pound, according to gauge.

GENERAL PROVISIONS.

123. No allowance or reduction of duties for partial loss or damage in consequence of rust or of discoloration shall be made upon any description of iron or steel, or upon any article wholly or partly manufactured of iron or steel.

MANUFACTURES OF IRON AND STEEL.

124. Anchors, or parts thereof, of iron or steel, mill irons and mill cranks of wrought iron, and wrought iron for ships, and forgings of iron or steel, or of combined iron and steel, for vessels, steam engines and locomotives, or parts thereof, twenty-five per centum ad valorem; 1890, one and eight-tenths cents per pound.

125. Axles, or parts thereof, axle bars, axle blanks, or forgings for axles, whether of iron or steel, without reference to the stage or state of manufacture, twenty-five per centum ad valorem; 1890, two cents per pound.

126. Anvils of iron or steel, or of iron and steel combined, by whatever process made, or in whatever stage of manufacture, twenty-five per centum ad valorem; 1890, two and one half cents per pound.

127. Blacksmiths' hammers and sledges, track tools, wedges, and crowbars, whether of iron or steel, twenty-five per centum ad valorem; 1890, two and one-quarter cents per pound.

128. Boiler or other tubes, pipes, flues, or stays of wrought iron or steel, twenty-five per centum ad valorem; 1890, two and one-half cents per pound.

129. Bolts, with or without threads or nuts, or bolt blanks, and finished hinges or hinge blanks, whether of iron or steel, twenty-five per centum ad valorem; 1890, two and one-half cents per pound.

130. Card clothing, thirty per centum ad valorem.

131. Cast iron pipe of every description, twenty-five per centum ad valorem; 1890, nine-tenths cent per pound.

132. Cast iron vessels, plates, stove plates, and irons, sad irons, tailors' irons, hatters' irons, and castings of iron, not specially provided for in this act, twenty-five per centum ad valorem; 1890, one and two-tenths cents per pound.

133. Castings of malleable iron not specially provided for in this act, twenty-five per centum ad valorem; 1890, one and three-quarters cents per pound.

134. Cast hollow ware, coated, glazed, or tinned, thirty per centum ad valorem; 1890, three cents per pound.

135. Chains of all kinds, made of iron or steel, thirty per centum ad valorem; 1890, one and six-tenths, one and eight-tenths and two and one-half cents per pound.

CUTLERY.

136. Penknives or pocket knives of all kinds, or parts thereof, and erasers, or parts thereof, wholly or partly manufactured, razors and razor blades, finished or unfinished, valued at not more than sixty cents per dozen, thirty-five per centum ad valorem; valued above that, forty-five per centum ad valorem; 1890, twelve cents, fifty cents, one dollar, two dollars, and fifty per cent. per dozen.

137. Swords, sword blades, and side arms, thirty-five per centum ad valorem; 1890, thirty-five per centum.

138. Table knives, forks, steels, and all hunting, kitchen, bread, butter, vegetable, fruit, cheese, plumbers', painters', palette, and artists' knives; also all carving, cooks', and butchers' knives, forks, and steels. All sizes of all of the above, finished or unfinished, thirty-five per centum ad valorem; 1890, ten cents to five dollars, and thirty per cent. per dozen.

139. Files, file blanks, rasps, and floats, of all cuts and kinds, thirty-five per centum ad valorem; 1890, thirty-five cents to two dollars per dozen.

FIREARMS.

140. Muskets, muzzle loading shotguns, and sporting rifles, and parts thereof, twenty-five per centum ad valorem; 1890, twenty-five per centum.

141. Sporting, breech loading shotguns and pistols, and parts thereof, thirty per centum ad valorem; 1890, one dollar and fifty cents to six dollars, and thirty-five per centum; one dollar, and thirty-five per centum; and forty cents and one dollar, and thirty-five per centum.

142. Sheets, plates, wares, or articles of iron, steel, or other metal, enameled or glazed with vitreous glasses, thirty-five per centum ad valorem; 1890, forty-five per centum. and fifty per centum.

NAILS, SPIKES, TACKS, AND NEEDLES.

143. Cut nails and cut spikes of iron or steel, twenty five per centum ad valorem; 1890, one cent per pound.

144. Horseshoe nails, hob nails, and all other wrought iron or steel nails not specially provided for in this act, twenty-five per centum ad valorem; 1890, four cents per pound.

145. Wire nails made of wrought iron or steel, twenty-five per centum ad valorem; 1890, two cents to four cents per pound.

146. Spikes, nuts, and washers, and horse, mule, or ox shoes, of wrought iron or steel, twenty-five per centum ad valorem; 1890, one and eight-tenths cents per pound.

147. Cut tacks, brads, or sprigs of all kinds, twenty-five per centum ad valorem; 1890, two and one-quarter cents per thousand, two and three-quarters cents per pound.

148. Needles for knitting or sewing machines, crochet needles and tape needles and bodkins of metal, twenty-five per centum ad valorem; 1890, thirty-five per centum and twenty-five cents per pound.

PLATES.

149. Steel plates engraved, stereotype plates, electrotype plates, and plates of other materials, engraved or lithographed, for printing, twenty-five per centum ad valorem; 1890, twenty-five per centum.

150. Railway fish-plates or splice bars, made of iron or steel, twenty-five per centum ad valorem; 1890, one cent per pound.

151. Rivets of iron or steel, thirty per centum ad valorem; 1890, two and one half cents per pound.

SAWS.

152. Crosscut saws, mill, pit, and drag saws, circular saws, hand, back, and all other saws, twenty-five per centum ad valorem; 1890, eight cents to fifteen cents per linear foot; circular, thirty and forty per centum

153. Screws, commonly called wood screws, thirty per centum ad valorem; 1890, five cents to fourteen cents per pound, according to length.

154. Wheels, or parts thereof, made of iron or steel, and steel-tired wheels for railway purposes, whether wholly or partly finished, and iron or steel locomotive, car, or other railway tires or parts thereof, wholly or partly manufactured, 1890, two and one-half cents per pound; and ingots, cogged ingots, blooms, or blanks for the same without regard to the degree of manufacture, thirty-five per centum ad valorem; 1890, one and three-quarter cents per pound.

MISCELLANEOUS METALS AND MANUFACTURES OF.

155. Aluminium or aluminum, in crude form, alloys of any kind in which aluminum is the component material of chief value, fifteen per centum ad valorem; 1890, fifteen cents per pound.

156. Argentine, albata or German silver unmanufactured, fifteen per centum ad valorem; 1890, twenty-five per centum.

157. Brass, in bars or pigs, old brass, clippings from brass or Dutch metal, and old sheathing, or yellow metal, fit only for remanufacture, ten per centum ad valorem; 1890, one and one-half cents per pound.

158. Bronze powder, 1890, twelve cents per pound; metallics or flitters, bronze or Dutch metal, or aluminum, in leaf, thirty per centum ad valorem; 1890, eight cents package one hundred leaves.

COPPER.

159. Copper in rolled plates, called braziers' copper, sheets, rods, pipes, and copper bottoms, also sheathing or yellow metal of which copper is the component material of chief value, and not composed wholly or in part of iron ungalvanized, twenty per centum ad valorem; 1890, thirty-five per centum.

GOLD AND SILVER.

160. Bullions and metal thread of gold, silver, or other metals, not specially provided for in this act, twenty-five per centum ad valorem; 1890, thirty per centum.

161. Gold leaf, thirty-five per centum ad valorem; 1890, two dollars per package five hundred leaves.

162. Silver leaf, thirty-five per centum ad valorem; 1890, seventy-five cents per package five hundred leaves.

LEAD.

163. Lead ore and lead dross, fifteen per centum ad valorem upon the lead contained therein, according to the sample and assay at the port of entry: *Provided*, That all ores containing silver and lead, in which the value of the silver contents shall be greater than the value of lead contents, according to sample and assay at the port of entry, shall be considered silver ores; 1890, one and one-half cents per pound.

164. Lead in pigs and bars, molten and old refuse lead run into blocks and bars, and old scrap lead fit only to be remanufactured, one cent per pound; 1890, two cents per pound: *Provided*, That in case any foreign country shall impose an export duty upon lead ore or lead dross or silver ores containing lead, exported to the United States from such country, then the duty upon lead in pigs and bars, molten and old refuse lead run into blocks and bars, and old scrap lead fit only to be remanufactured, herein provided for, when imported from such country, shall remain the same as fixed by the law in force prior to the passage of this act.

165. Lead in sheets, pipes, shot, glaziers' lead, and lead wire, one cent per pound; 1890, two and one-half cents per pound.

166. Pens, metallic, except gold pens, thirty-five per centum ad valorem; 1890, twelve cents per gross.

167. Penholder tips, penholders or parts thereof, and gold pens, twenty-five per centum ad valorem; 1890, thirty per centum.

168. Pins, metallic, including hair pins, safety pins, and hat, bonnet, shawl and belt pins, not commercially known as jewelry, twenty per centum ad valorem; 1890, thirty per centum.

169. Type-metal, and new types, fifteen per centum ad valorem; 1890, one and one-half cents per pound for lead, twenty-five per centum new types.

WATCHES.

170. Chronometers, box or ship's, and parts thereof, ten per centum ad valorem; 1890, ten per centum.

171. Watches and clocks, or parts thereof, whether separately packed or otherwise, twenty-five per centum ad valorem; 1890, twenty-five per centum.

ZINC OR SPELTER.

172. Zinc in blocks or pigs, twenty per centum ad valorem; 1890, one and three-quarters cents per pound.

173. Zinc in sheets, twenty-five per centum ad valorem; 1890, two and one-half cents per pound.

174. Zinc, old and worn-out, fit only to be remanufactured, fifteen per centum ad valorem; 1890, one and one-quarter cents per pound.

175. Manufactured articles or wares, not specially provided for in this act, composed wholly or in part of any metal, and whether partly or wholly manufactured, thirty-five per centum ad valorem; 1890, 45 per centum.

THE FOLLOWING IS THE FREE LIST:

Antimony ore.
Bells, broken, and metal.
Bullion gold and silver.
Coal, anthracite, bituminous and shale, and coal slack or culm.
Coke.
Copper in ores.
Old copper.
Regulus of copper, and black and coarse copper and copper cement.
Copper in plates, bars, ingots or pigs or other forms not manufactured.
Cotton ties of iron or steel, cut to length and with or without buckles for baling cotton.
Iron ore, including manganiferous iron ore, also the dross or residium from burnt pyrites, and sulphur ore as pyrites or sulphuret of iron in its natural state.
Models of inventions.
Needles.
Nickel, nickel oxide, alloy of any kind in which nickel is the component material of chief value.
Ores of gold, silver and nickel, and nickel matte.
Pewter and Britannia metal,
Platina in ingots, &c.
Platinum, unmanufactured, &c.
Plows, tooth and disk harrows, harvesters, reapers and other agricultural implements.
Quicksilver.
Shotgun barrels.
Tin ore, &c., cassiterite or black oxide of tin, and tin in bars, &c.

A Comparison of the Present and Proposed Duties.

Articles.	Present Duties.	Proposed Duties.
Iron ore	75 cents per ton.	Free.
Pig iron	$6.72 per ton.	22½ % ad valorem.
Wrought scrap iron, cast scrap iron and scrap steel	$6.72 per ton.	
Iron rails over 25 pounds	$13.44 per ton.	30 % ad valorem.
Steel rails over 25 pounds		
Iron or steel rails not over 25 pounds		
Iron or steel flat rails, punched		
Flat bar iron not less than 1 inch wide nor less than ⅜ inch thick	8-10 cent per pound.	30 % ad valorem.
Round bar iron not less than ¾ inch in diameter, and square bar iron not less than ¾ inch square	9-10 cent per pound.	
Flat bar iron less than 1 inch wide or ⅜ inch thick, round bar iron from 7-16 to ¾ inch in diameter, and square bar iron less than ¾ inch square	1 cent per pound.	
Round iron less than 7-16 inch in diameter	1 1-10 cents per pound.	
Rolled iron not specially enumerated	1 1-10 cents per pound.	
All iron bars, blooms, billets or sizes or shapes of any kind, in the manufacture of which charcoal is used as fuel	$22 per ton.	
Iron or steel, with longitudinal ribs for the manufacture of fencing	6-10 cent per pound.	
Beams and structural shapes	8-10 cent per pound.	35 % ad valorem.
Plate iron or steel not thinner than No. 10 wire gauge:		
Valued at 1 cent per pound or less	5-10 cent per pound.	30 % ad valorem.
" above 1 cent and not above 1.4 cents per pound	65-100 cent per pound.	
" " 1.4 " " " 2 " "	8-10 cent per pound.	
" " 2 " " " 3 " "	1.1 cents per pound.	
" " 3 " " " 4 " "	1.5 cents per pound.	
" " 4 " " " 7 " "	2.0 cents per pound.	
" " 7 " " " 10 " "	2.8 cents per pound.	
" " 10 " " " 13 " "	3.5 cents per pound.	
" " 13 " per pound	45 per cent.	
Galvanized plates and sheets:		
Thinner than No. 10 and not thinner than No. 20 wire gauge	1.75 cents per pound.	35 % ad valorem.
" " 20 " " " 25 "	1.85 cents per pound.	
" " 25 wire gauge	2.15 cents per pound.	
Polished, planished or glanced sheet iron or sheet steel	2½ cents per pound.	
Plate or sheet or taggers iron or steel, pickled	1.35 cents per pound.	
Sheet iron:		
Thinner than No. 10 and not thinner than No. 20 wire gauge	1 cent per pound.	
" " 20 " " " 25 "	1.10 cents per pound.	
" " 20 wire gauge	1.40 cents per pound.	
Taggers iron	1 cent per pound until after July 1, 1891; after that date 2.2 cents per pound.	40 % ad valorem.
Tin plates		
Cotton ties	2-10 cent per pound additional on hoop, &c., from which they are made = 1 3-10 cents per pound.	
Hoop iron:		
Valued at 3 cents per pound or less, 8 inches or less in width and less than ⅜ inch thick, and not thinner than No. 10 wire gauge	1 cent per pound.	35 % ad valorem.
Thinner than No. 10 and not thinner than No. 20 wire gauge	1 1-10 cents per pound.	
Thinner than No. 20 wire gauge	1 3-10 cents per pound.	
Cast iron pipe	9-10 cent per pound.	25 % ad valorem.
Cast iron stove plates, &c.	1 2-10 cents per pound.	
Iron castings not specially enumerated	1¾ cents per pound.	
Cut nails and spikes (iron or steel)	1 cent per pound.	
Wire nails	2¼ cents per 1000.	
Cut tacks not exceeding 16 ounces to the 1000	2¾ cents per 1000.	
" exceeeding 16 ounces to the 1000

OBITUARY.

STEPHEN WILCOX.

Stephen Wilcox, vice president of the Babcock & Wilcox Company, New York and Glasgow, died November 27 at his residence, 298 Washington avenue, Brooklyn, N. Y., aged 63 years. The cause of his death was pneumonia. Mr. Wilcox was one of the founders of the Babcock & Wilcox Company, whose business was established in 1868.

SYLVESTER PHINEAS PIERCE.

Sylvester Phineas Pierce, president of the Pierce, Butler & Pierce Mfg. Company and S. P. Pierce, Sons & Co., Syracuse, N. Y., died on November 5, aged 79 years. Mr. Pierce was born in the little hamlet of Sanquoit, Oneida County, N. Y., on September 19, 1814. The success and position in the trade of the concerns with which he was so long connected were largely due to Mr. Pierce's exceptional business sagacity and steadfast integrity.

F. J. V. Skiff, chief of the Mines and Mining Department of the World's Fair, is conspicuously mentioned in connection with the directorship of the Columbian Museum, now being put in shape by the citizens of Chicago. Mr. Skiff's eminent fitness for such a position seems to be firmly established by his achievements in the Mines and Mining Department of the late exposition. He not only carved out a new field hitherto unknown in universal expositions, but made it a shining success, showing great ability as an organizer and decided executive force.

The Ste. Etienne Steel Works Company, Ste. Etienne, France, have taken up the manufacture of armor plates by the Harvey process.

Hosted by Google

MANUFACTURING.

Iron and Steel.

The appraisers of the Wellman Iron & Steel Company, who are now in the hands of a receiver, made their final report on November 22. The appraisers find that the assets of the company reach the total of $1,216,052.13, which is divided as follows: Real estate, including permanent machinery, $940,111.43; personal property and chattels, $163,559.46; book accounts receivable, $107,213.74; bills receivable, $5067.50; stock, $100.

The Sanders & Thompson magnetic ore separator is undergoing trial at the Lebanon Valley furnace plant of J. & R. Meily, Lebanon, Pa.

The blast furnace of Isaac McHose & Sons, at Norristown, Pa., will shut down for an indefinite period, it is stated, after working up the stock now on hand.

The Irondale Rolling Mills, at Anderson, Ind., which burned recently, will probably not be rebuilt there. Indiana papers report that the offer made by Middletown, Ind., in the next county to that in which Anderson is located, has been accepted. The rolling mill company are to take $10,000 in lots, and get in addition to this $40,000. They agree to erect a plant that will employ 400 men. Thirty days will be given in which the money is to be paid over.

Kirkpatrick & Co., Limited, proprietors of the Leechburg, Pa., Iron Works, obtained an injunction restraining members of the Amalgamated Association from trespassing on or tampering with their property at the iron works there, or molesting non-union employees in their mills.

The Shenango Valley Steel Company have leased the Raney & Berger Furnace, at New Castle, Pa., for a limited period, and will, it is stated, start it up at an early date. The stack is now being put in working shape.

The puddling department of the Elmira, N. Y., Rolling Mills completed its first week since reopening on November 18. The iron which has been turned out is pronounced to be first class. Two more furnaces were fired November 20, which makes six furnaces in operation, all of which are manned by puddlers who were engaged in the mill before the strike of three years ago. It is quite probable that from present indications a large majority of the furnaces in the puddling mill will be working before the holidays.

The Linden Steel Company of Pittsburgh, Pa., are attracting special attention to their Linden patent steel floor plate, and particularly for its use for runner boards on locomotives, for which purpose it is being largely adopted, and for engine and fire rooms and steps of steam vessels. The plates are said to be very much superior to cast plates for general use wherever roughened surfaces are required on walks or places likely to be slippery or subject to much wear. Should they bend they can be easily straightened, and are, moreover, much easier to fit and lay down. The plates are made in weights from 10 to 22½ pounds per square foot, and in size as large as 40 x 96 inches.

The Excelsior Furnace, at Ishpeming, Mich., is to be put in blast as soon as the plant can be repaired. It is a charcoal furnace.

William Chambers, superintendent of the Anderson Steel Casting Company, Anderson, Ind., has asked the court to appoint a receiver for that company.

Blast furnace No. 6 of the Cambria Iron Company, Johnstown, Pa., has resumed.

In a circular letter which they are issuing to the trade, the Carbon Steel Company of Pittsburgh, Pa., call attention to the fact that they are the largest producers in this country of acid open hearth steel boiler, ship, bridge and tank plates. The standard of quality of this material is well testified to by the large amounts consumed annually in the construction of United States war ships, including the boilers for the same. The circular letter in question is accompanied by a reference card showing the different sizes of sheets and plates manufactured by the company, and by a neat nickel steel paper cutter, stamped with the name of the company.

A statement has at last been made of the indebtedness of Forsyth, Hyde & Co., the Chicago pig iron merchants, who failed early in the summer. It was filed in the County Court of Cook County last week, by E. Louis Kuhns, assignee of the firm, and shows liabilities of $529,804.41. Of this amount, $297,922 is for general or direct indebtedness, $231,120 for indorsements, $761 for labor performed. The heaviest holder is the Chemical National Bank of Chicago, with $134,311 general and $96,237 contingent. The First National Bank of Fond du Lac, Wis., holds a contingent claim of $55,149.39 and William Deering & Co. a direct claim of $30,488. These are largely on notes. The York Iron Company hold an account of $34,543 against the insolvents, while the Commercial National Bank of Milwaukee wants $20,478 on a note. The assets in sight are sufficient to realize probably 30 cents on the dollar, but they are clouded by other claims which may practically wipe them out.

The Milwaukee works of the Illinois Steel Company were on Monday put in full operation in all departments except the blast furnaces. This is the first time since last June that the entire rolling mill plant has been in operation. There is much rejoicing among the workmen who have so long been idle.

The Clark & Windsor Wire & Spring Company of Joliet, Ill., have gone into bankruptcy after an ineffectual struggle to maintain an existence. An execution was filed against the company on the 18th inst. for $23,800 by the Illinois Steel Company, and another for $15,100 by H. S. Smith. These claims do not cover the entire indebtedness, other creditors being interested. The Clark & Windsor Company were drawers of wire and makers of springs of various kinds. The business interests of Joliet have been hard hit during the depression now prevailing.

The Muncie Nail Works, at Muncie, Ind., have been leased by the Muncie Muck Bar Iron Company, a new corporation. The officers of the company are T. F. Rose, president; Joseph Porter, secretary and treasurer, and Michael Hanley, John Rockaway and W. J. Bowen, directors. The nail factory, it will be remembered, was burned down some time since and not rebuilt. Since then the mill has made muck bar exclusively.

The Globe Tin Plate Company have been incorporated at Chicago for the manufacture of tinned and terne plates. The incorporators are James Spruce, William Killmer and Henry C. Gager. A manufacturing plant will, it is stated, be erected at Hammond, Ind., at a cost of $32,000.

The assignee of the Linden Steel Company, Pittsburgh, Pa., has been discharged by order of court, and the plant is now in operation. The assignment, as generally known at the time, was made necessary to avoid attachment of foreign accounts while an extension was being arranged, which has been satisfactorily done. How full the works will run will depend on the condition of trade; at present only the blooming mill, one 10-inch mill, hammers and sheet mill making Linden patent steel floor plate are running.

Machinery.

The Caldwell water tube boiler is now being manufactured for the West by the Link Belt Machinery Company, Chicago, with sales agencies in the principal cities.

Riehlé Bros. Testing Machine Company of Philadelphia have just closed a contract with Chas. F. McKenna of New York for an outfit of testing machinery for a new physical testing laboratory he is equipping at 221 Pearl street, New York City. The outfit will consist of a vertical screw power testing machine, with electric automatic beam and card appliance, and United States standard cement testing machine of 2000 pounds capacity, with worm gear attachment and all necessary appliances for exhaustive tests of cement. Riehlé Bros. Testing Machine Company have also furnished to the Department of Public Works of the city of Peoria, Ill., testing machines for a physical laboratory they are establishing for the purpose of testing all materials used by the city in its public improvements.

The compressors furnished to the Brazilian Government for furnishing air at 3000 pounds pressure for the dynamite gun on the steamer "El Cid," or "Nictheroy," were built by the Rand Drill Company.

The Reeves Pulley Company, Columbus, Ind., have perfected arrangements with the management of the Columbian Exposition Museum whereby their mammoth pulley will be removed from Machinery Hall and placed on permanent exposition in the museum.

A. D. Quint of Hartford, Conn., sold his entire collection of turret drills exhibited at the World's Fair to the Danville Foundry & Machine Company of Danville, Ill. He recently shipped a drill arranged for tapping, with cone countershaft, to Russia, and also one to Sweden.

It is reported that capitalists have purchased ground near Rockford, Ill., on which they propose to erect buildings for the manufacture of Corliss engines.

The Walburn-Swenson Company of Chicago Heights, Ill., have received a large order for machinery from Claus Spreckels to be used in the manufacture of sugar in the Hawaiian Islands. Since then other orders for machinery have come to hand from Mexico and Java. They have also received an order for paper machinery from Massachusetts. They have recently been obliged to add 75 men to their force. This report is in agreeable contrast to the gloomy reports coming from so many industrial establishments.

The Indiana Car & Foundry Company of Indianapolis, Ind., have secured some contracts for cars, and will put their works in operation in December after several months' idleness The foundry will start up at once. It is hoped that other orders can be obtained to keep the plant running steadily from this time.

Berghaefer & Lupinski, machinists, 967 to 973 North Water street, Milwaukee, made an assignment on the 24th inst. to J. Roemer. Liabilities are $33,000 and assets are put at $55,000. The assignee believes the assignment will be but temporary.

The Thomson Electric Welding Company have issued a circular announcing that their Boston offices have been removed to their works at Lynn, Mass., where all correspondence should hereafter be sent.

A fire originating in the casting room of the Ohio Brass & Iron Mfg. Company, Cleveland, Ohio, caused the complete destruction of the plant. It was insured for $23,500.

F. A. Thomas & Co.'s foundry, at Woonsocket, R. I., has been burned. Loss, $3000; insured.

W. G. & G. W. Lavers, steel die manufacturers of Boston, have decided to erect a factory at Brockton, Mass.

The Lever Engine Company, capitalized at $18,000, have filed articles of incorporation in New Jersey. The concern will build engines at Newark, N. J., and Corry, Pa.

The Bell Bearing Car Wheel & Mfg. Company of Cleveland, Ohio, capital stock, $50,000, have been organized for manufacturing car wheels, rolling stock, machinery and conveying apparatus.

The Hagerstown, Md., Steam Engine & Machine Company have closed their works for an indefinite period.

A temporary lessening of the force at the works of the Altoona Mfg. Company, Altoona, Pa., gave rise to the rumor that the plant had closed down.

Hardware.

Owing to the growth of their business the Wyeth Hardware & Mfg. Company, St. Joseph, Mo., will consolidate their manufacturing departments at 302 to 308 North Second street, using the old premises on Third street for storage purposes.

The nail factory of the Pottstown Iron Company, Pottstown, Pa., which has been lying idle for some months past, resumed work on the 13th inst., 20 machines being put in running order A few more machines have since been put in operation.

The handle finishers employed in the Goodell Company's works, at Antrim, N. H., refused to accept a reduction in wages and struck on the 16th inst.

At a meeting of the stockholders of the Stover Mfg. Company, Freeport, Ill., on the 21st inst., the capital stock was increased from $100,000 to $250,000, $50,000 of which will be preferred stock and will be put on the market. The plant has been greatly enlarged during the past few years, as has also been the territory covered by the products of the company, and it was therefore thought desirable to also increase the capital stock. The company were started 12 years ago with a capital of $20,000. With the increase in capital the company will manufacture on a more extensive scale, and new buildings will soon be added to their already large plant.

Hosted by Google

The plant of the Birmingham Hardware Specialty Company of Birmingham, Ala., which has been idle for four or five months, will soon start up again, giving employment to 25 or 30 men.

The Grand Rapids Refrigerator Company, Grand Rapids, Mich., in a neatly gotten up circular to the trade state that their factory is and has been running full time, ten hours a day, six days a week. The company suggest that the trade send in their orders early so that they can make up the identical sizes desired. Last season, they explain, they were caught with a large stock of the wrong sizes on hand, which they refer to as having been unsatisfactory to themselves and their customers. Reference is also made to the fact that the company were awarded three medals and a special diploma at the World's Fair for the excellence of their refrigerators.

S. B. Husselman of Worcester, Ohio, has purchased the entire interests of J. H. Logan, Geo. B. Logan and Edward P. Logan of Pittsburgh in the Logan & Strobridge Iron Company, New Brighton, Pa., and also the interest of J. H. Logan in the old New Brighton Cutlery Building Association, the building of the latter being now occupied by the Robinson Mfg. Company. The interests purchased by Mr. Husselman are thought to be worth $50,000. With the advent of Mr. Husselman the Logan & Strobridge Iron Company will in addition to coffee, corn and spice mills, builders' and house furnishing hardware, light gray iron castings, &c., manufacture railroad, farm and yard fencing under the Husselman patents. The company at present employ about 100 men, which force will be increased when the fence trade opens in the spring. There will be no change in the management of the company except that Mr. Husselman will take the place of J. H. Logan as director.

The Union Mfg. & Plating Company, Freeport, Ill., manufacturers of hardware specialties, &c., now have their new factory under cover, and will be in running order again about December 1.

The Everett Nail Works, at Everett, Wash., are to resume operations on December 1.

M. V. Root of Maquoketa, Iowa, is organizing a stock company for the manufacture of hardware specialties.

The Vienna Stamping & Enamel Works, at Porter, Ind., whose proprietors failed during the summer, have been sold to new parties. Arrangements are being made to resume manufacturing operations.

The Alaska Refrigerator Company of Muskegon, Mich., started work in their factory on the 23d inst., after an idleness of four months. This is claimed to be the largest plant of its kind in the world, and the resumption of work gives employment to a great many hands.

The New England Screw Company, Boston, Mass., advise us that they are running to their full capacity with good orders ahead. The company will soon engage in the manufacture of a line of brass work, including socket and lamp base shells, &c.

The Arcade File Works of Anderson, Ind., have recently closed a contract for an electric light plant with a capacity of 500 16 candle-power incandescent lights. They are still engaged in adding to their plant a large number of the improved machines invented recently by Alfred Weed, vice president and general manager of the works.

At the works of the H. M. Myers Company, Beaver Falls, Pa., manufacturers of shovels, spades and scoops, copies of the following notice were posted last week: "Owing to a lack of orders and the uncertainty as to the future, we have decided to pay all our employees in full to December 1, and set them free to make the best arrangements or change in any direction they can for themselves. When we start again on steady run, whether it be sooner or later, necessity compels us to revise our prices now paid for labor, on account of the extremely low prices at which shovels are now being offered and sold in the market; consequently, when we resume work it will be necessary for all who wish employment to call at the office."

The plant of the Consolidated Steel & Wire Company, at Braddock, Pa., with offices in the Westinghouse Building, Pittsburgh, is now being operated double turn in every department.

TRADE REPORT

The shock which the Iron trade has received through the publication of the Wilson tariff bill has staggered even those who were ready to admit that the industry could stand a conservative readjustment of rates. It has startled them out of their fancied security. We print editorially figures which illustrate the savage cuts made.

The belief is gaining ground, however, that the bill has no chance of passing as at present framed, because it attacks indiscriminately interests in sections of the country whose loyalty to the framers of the bill must be retained to carry it through.

The immediate effect upon business cannot help being bad. The early date named for its going into effect must act to deter buyers from covering spring and summer requirements. It seems likely to confirm purchasers all along the line in a policy of keeping supplies down to the minimum.

In spite of denials made it is true that a new combination of the Rail mills has been formed, the arrangement being that the Maryland and Pennsylvania companies shall not make Rails for steam roads. We should state, however, that the former company will not discontinue making Steel Billets, as stated by us, and that the latter go on making all their specialties, contrary to the interpretation put upon our report by writers in the daily press. A well informed writer in the New York *Sun* intimates that it was the Pittsburgh mill which sued for peace after the short but sharp war. It is reported that the Eastern campaign of the Western mill led to the capture of only one small order, and that a flank movement was made into its own territory. The report quietly circulated that two of the Eastern mills are not in the new arrangement is without foundation.

A heroic effort is being made on the part of some of the Southern furnaces to advance the price of Pig Iron. The chief basis for this standing out for more money seems to be that considerable sales have been made lately, and that they include speculative purchases. Whether this advance will be actually secured depends upon whether other producers in the South and in Northern districts will see fit to cover the current demand at old prices. As yet no serious disposition has been shown to follow the leadership of the large companies in question.

Some very low sales of Bessemer Pig have taken place in the valleys, the Iron having been carried for some time past.

Good lots of Steel Billets are openly selling in Pittsburgh at $17, and the announcement that Edgar Thomson has started on this class of material is giving rise to some uneasiness. Eastern Pennsylvania makers are meeting Western prices, but are confronted with a market swept pretty bare of orders. Some good orders have been placed in the Chicago district.

Chicago.

(By Telegraph.)

Office of *The Iron Age*, 59 Dearborn street, CHICAGO, November 29, 1893.

The local Iron market continues in the same condition of hesitancy that has characterized it for some time. It is true that in some lines there has been a gradual progress toward a large volume of business, but this has by no means brought the trade up to its usual standard. The promulgation of the new tariff bill has projected another uncertain element into the situation, and general apprehension is felt of a decline in values all along the line. The reductions proposed are greater than had been anticipated, and all calculations are at sea. Even at this early day cancellations of orders have begun by buyers, who now fear the future.

Pig Iron.—The most important occurrence during the week is the effort of some large Southern companies to put a check to the demoralization in prices by actually asking an advance, which amounts to about 50¢ ℔ ton on the grades most sold in this market. They decided to take the bull by the horns and see if it was not possible to put the market in better condition by such action. The consequence is that for the past few days some search has been required to find sellers willing to make the low prices heretofore current. On Southern Iron the general situation has been improving for several weeks past. Quite a number of foundries making specialties are getting ready to start in December, while general jobbing foundries are almost all again in operation, although working only part time or with part of their force. Nothing new is reported in local Coke, but taking a survey of the month, sales agents find that there has been a steady improvement in the demand from the beginning to the close. It is hoped that this will continue, although some fear is expressed that December and January, which are usually dull months, may cause something of a relapse. Quotations are now as follows for cash:

Lake Superior Charcoal.....	$15.50 @	$16.00
Local Coke Foundry, No. 1...	13.50 @	14.00

Other Ohio Silvery.....	15.00 @	15.50

Bars.—While a number of manufacturers report their trade somewhat smaller than it has been, a number of others make statements of a much more encouraging character, having had better trade and received more inquiries during the past week than in any week for the previous two months. So many more mills are now running, however, that even if business is greater it is spread over more ground, and may therefore seem less active to some manufacturers who were steadily running during September and October. The movement toward the substitution of Steel for Iron is more pronounced than ever. Consumers who were prejudiced in favor of Iron have now abandoned it, and are taking Steel. Some who had placed large season contracts with the option to make Steel or Iron are taking Steel exclusively. Mill shipments of Bar Iron are quoted at 1.35¢ @ 1.40¢ Chicago, from near by mills, while the

Hosted by Google

Valley mills are endeavoring to maintain 1.45¢, and report some business at that figure. Soft Steel Bars are selling at 1.45¢ @ 1.55¢, Chicago, according to the character of the order. Jobbers are in receipt of continued good business from both large and small consumers, and report prices for small lots from stock 1.60¢ @ 1.70¢ for Bar Iron and 1.65¢ @ 1.75¢ for Soft Steel Bars.

Structural Material.—The Milwaukee viaduct on which bids are to be opened on December 1 will show where prices are in this section. Some other good contracts for bridge material have recently been placed, among which was one for 1500 to 2000 tons, all of Iron, which is an unusual thing. The building trade is quiet. Quotations are as follows, Chicago delivery: Beams, 1.65¢ @ 1.75¢; Tees, 1.90¢ @ 2¢; Angles and Universal Plates, 1.60¢ @ 1.65¢. Small lots are sold from stock at an advance of 10¢ @ 15¢ ℔ 100 above these prices.

Plates.—The demand for mill shipments has been very light. Dealers also report a very quiet business on orders from stock. Mill shipments, Chicago delivery, are quoted as follows: Tank Steel, 1.60¢ @ 1.70¢; Shell Steel, 1.80¢ @ 1 90¢; Flange Steel, 2¢ @ 2.10¢; Fire Box, 2.75¢ @ 5¢. Store prices now prevail as follows: Iron or Steel Sheets, Nos. 10 to 14, 2.25¢ @ 2.40¢; Tank Steel, 2.10¢ @ 2.20¢; Shell Steel, 2 20¢ @ 2 40¢; Flange Steel, 2 50¢ @ 2.65¢; Boiler Tubes, 70 and 5 % off.

Sheets.—Black Sheets are almost entirely neglected, jobbers and consumers evidently having secured sufficient stock for some time to come. Carload lots of No. 27 Common are quoted at 2.70¢ @ 2 75¢, Chicago, while small lots are selling at 2.90¢ @ 3¢ from stock. Galvanized Iron is in exceptionally good demand at about 75 % off for Juniata on mill shipments; small lots are selling at 70 % @ 70 and 7½ %, according to quantity. Sheet Copper is unchanged at 30 % @ 35 % off, according to the size of the order.

Merchant Steel.—Quite a spurt has been observed in the increased number of specifications sent on season contracts. New business has also been fairly active. Prices are remarkably steady on this class of material. Mill shipments, Chicago delivery, are quoted as follows: Smooth Finished Machinery, Tire and Open Hearth Spring Steel, 1.90¢ @ 2¢; Ordinary Bessemer Machinery, 1 60¢ @ 1.65¢; Ordinary Bessemer Tire, 1.55¢ @ 1.60¢; Ordinary Tool Steel, 6¢ @ 7¢; Specials, 12¢ and upward.

Billets.—The sales for the past week have aggregated about 7000 tons. Quotations are continued at $19.25 @ $19.50, Joliet.

Rails and Track Supplies.—The railroads have not yet come into the market for their next year's tonnage of Steel Rails, and it is not definitely known when they will begin to place contracts, hence the past week has been very quiet; the price ranges from $25 upward, according to quantity. Very little business is reported in Fastenings, with quotations at 1.50¢ @ 1.60¢ for Splice Bars; 2.55¢ @ 2 60¢ for Track Bolts with Hexagon Nuts, and 1.90¢ @ 1.95¢ for Spikes.

Old Rails and Car Wheels.—Nothing has been done lately in Old Iron Rails, and quotations are nominally at $14; Old Steel Rails are held at $7.50 @ $10, according to length. Speculative interest in Old Car Wheels continues, with buyers naming $10.50 @ $11 as the price at which they would take in good sized lots. Nothing is doing with consumers.

Scrap.—The inquiry for Old Material is somewhat better and sales are reported of good quantities of Cast, Wrought and Malleable; even Steel is beinning to move again. Prices appear to have touched a point from which only slight fluctuations are made, and dealers think that present values are likely to hold for some time in the future. Quotations are maintained at old figures: No. 1 Forge, $10; No. 1 Mill, $8; Sheet Iron, $4.50; Pipes and Flues, $8; Axles, $16; Horseshoes, $11; Fish Plates, $12; Spikes and Bolts, $10; Cast Borings, $4.50; Wrought Turnings, $6.50; Axle Turnings, $8; Heavy Cast, $9 50; Stove Plate, $7.75; Malleable Cast, $8; Mixed Steel, $7, gross ton; Leaf Steel, $14 50.

Metals.—Copper is moving upward in consequence of the very heavy demand for export, which is now affecting the home market. Carload lots of Lake are quoted at 10⅝¢. A large inquiry is reported for casting brands, but manufacturers are not disposed to sell for forward delivery. The price for leading brands is unchanged at 9¾¢, but an advance is looked for at an early day. Spelter is unchanged at 3.55¢ for carload lots, with a good demand.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St., PHILADELPHIA, Pa., November 28, 1893.

At the risk of being thought pessimistic or monotonous, it must be again stated that the situation in this vicinity shows no improvement. Repair work is beginning to be of some importance, but new contracts for large work are conspicuous by their absence. Taking everything into account, it may be said that there is no more work on hand today than there was a month ago, or two or three months ago, the incoming of new orders from week to week being fully offset by current deliveries; nevertheless there is a general feeling that the outlook is vastly improved. Liquidation has been pretty well completed, prices and stocks are at the lowest point possible, and as money is accumulating in large amounts, there appears to be absolutely nothing to prevent a return to normal conditions. This will come gradually, however, and there may yet be some delay in getting started; but there is an intuitive feeling that the acute stage has been passed, and that complete recovery is merely a question of time. Still, it is hardly to be supposed that anything important will be entered upon until the tariff agitation is settled, so that under the circumstances it will probably be well on toward spring before there is any very decided change from the conditions now ruling.

Pig Iron.—The demand is not specially urgent, but consumers are evidently so nearly out of stock that orders are frequent, if not large. It begins to look as though there will be a pretty active business after the turn of the year: 1, Because stocks are unusually low; 2, because requirements will probably be larger than they have been during the past six or eight months, and, 3, because if the two former theories are correct, prices will seem more attractive than they were when money was close and when consumers had some stock on hand, but very few orders coming in. Everything seems to shape for ultimate improvement, although at the moment there is no trouble in placing orders at the lowest figures of the entire year. There is no pressure to sell, however, and less chance for concessions than there was some time ago. General quotations for Philadelphia or near by deliveries are about as follows:

No. 1 Foundry	$13.75 @ $14.25
No. 2 Foundry	13.00 @ 13.25
Standard Gray Forge	12.00 @ 12.50
Ordinary Gray Forge	11.50 @ 11.75

Steel Billets.—There is very little demand, and such as there is can be supplied at the lowest figures ever quoted. First-class buyers have placed orders for 1000-ton lots at $19 30, delivered, and can easily duplicate their purchases to-day, but there is nothing but small lots asked for, on which $19 75 @ $20 is asked and paid for a few carloads, or for 100 to 200 ton lots.

Finished Material. — Business has not attained anything like the proportions which after so many weeks of depression might reasonably be expected. In spots there is a little improvement, but it is so faint and so irregular that for all practical purposes mills are just about in the same condition as they have been for three months past. Under such circumstances it goes without saying that prices are weak and uncertain, and, in fact, hardly quotable, unless on specifications actually in hand. Western mills are competing at the low figures which they established some days ago, and some business is being taken, although those who look to quality and the permanency of their business are inclined to stick to their regular sources of supply rather than take risks elsewhere for the sake of a possible saving of a few cents ℔ 100 ℔ on a few temporary transactions. The demand is not large, however, small lots being the rule, and chiefly at prices about as follows:

Grooved Skelp, delivered	1.45¢	@	1.50¢
Best Refined Bars	1.45¢	@	1.55¢
At interior points	1.35¢	@	1.40¢
Tank Steel	1.45¢	@	1.55¢
Heavy Plates	1.50¢	@	1.60¢
Shell	1.60¢	@	1.75¢
Flange	1.90¢	@	2.00¢
Angles	1.60¢	@	1.70¢
Beams and Channels	1.75¢	@	1.90¢

Old Material.—There is no special change in this department. The supply is large enough for all demands, so that prices are unchanged—a trifle higher, perhaps, on choice lots, but in ordinary cases buyers can get all the material they want within the following range of prices:

No. 1 Wrought Scrap, delivered	$12.00	@	$13.00
Machinery Cast, delivered	10.00	@	11.00
Heavy Steel Scrap, delivered	12.00	@	13.00
Old Iron Rails, delivered	14.00	@	14.50
Old Street Rails, delivered	15.50	@	16.00
Wrought Turnings, delivered	10.00	@	11.00
Cast Borings, delivered	6.00	@	7.00
No. 2 Light Scrap	6.00	@	7.00

Messrs. J. W. Hoffman & Co. of Philadelphia have removed their offices from Walnut street to the Bullitt Building, on Fourth street. Messrs. Hoffman & Co. have secured a ground floor front, and have one of the most prominent as well as one of the most central locations in the city for the interests with which this firm have been identified during the past 25 years. Messrs. Hoffman & Co. extend a cordial invitation to their friends to call and see them at their new address, Bullitt Building, Philadelphia.

Hosted by Google

St. Louis.

(*By Telegraph.*)

Office of *The Iron Age*, Bank of Commerce Building, St. Louis, November 29, 1893.

Pig Iron. — There is no material change to note, either as regards price or the volume of trade. The general tone of the market is dull, occasioned somewhat by the position taken by consumers, in holding off shipments of Iron due. There are no "job lots" being offered just now, and sales are made on the basis of the following quotations, which are for cash, f.o.b. cars St. Louis:

Southern Coke, No. 1 Foundry	$13.25 @ $13.50
Southern Coke, No. 2 Foundry	11.50 @ 11.75
Southern Coke, No. 3 Foundry	10.75 @ 11.00
Southern Gray Forge	10.25 @ 11.50
Southern Car Wheel	17.25 @ 18.25
Lake Superior Car Wheel	16.50 @ 17.00
Ohio Softeners	16.00 @ 16.50

Bar Iron —A fair trade is reported from store at 1.75¢. Mills are not busy, however, and inducements in the way of low prices fail to influence trade. Mills quote 1.45¢ for carload lots, half extras, f.o.b. cars East St. Louis.

Barb Wire.—There is only a moderate demand for Barb Wire. Mills quote Painted $2 @ $2.05, and Galvanized $2.40 @ $2.45. Jobbers ask $2.10 @ $2.15 for Painted, with 40¢ ℔ hundredweight additional for Galvanized.

Wire Nails.—Trade is light in this department, and rumors of extremely low prices are current. The usual mill price for carload lots to jobbers is $1.40, but this would doubtless be shaded for large quantities. Jobbers quote $1.45 @ $1.55, according to quantity.

Rails and Track Supplies.—Track Supplies continue in good demand, as follows: Splice Bars, 1.65¢ @ 1.70¢; Spikes, 2¢ @ 2.05¢; Bolts, Square Nuts, 2.50¢; with Hexagon Nuts, 2.60¢. Old Rails are offered at $14, but buyers are scarce and bids of $13.50 are the best that can be secured. Steel Rails are firmer in consequence of the new agreement making the price at Western works $25. Locally they are quoted at from $27 to $27.50.

Pig Lead.—There are no large offerings of this metal, and sales are limited to carload lots. At the close of the market to-day 3.15¢ was bid, while sellers ask 3.17½¢; the result is a narrow and uninteresting market.

Spelter.—This metal remains unchanged. The selling price is 3.40¢, but consumers refuse to pay this price.

Cincinnati.

(*By Telegraph.*)

Office of *The Iron Age*, Fifth and Main Sts, Cincinnati, November 29, 1893.

The increase in the volume of business in Pig Iron keeps up well, and during the past week it was much larger than the preceding week, although the sales were smaller than three weeks ago; but what is more encouraging, an advance of 25¢ ℔ ton is asked and obtained for spot and early future delivery, and a still further advance would have to be paid for delivery next spring. The furnaces have recently sold more Pig Iron than they have made and there is a scarcity of the three grades most in demand. The prices current now for Gray Forge are $7.25; Mottled, $7; No. 3 Foundry, $7.75, and No. 2 Foundry, $8.25, f.o.b. Birmingham, and the tendency seems to be strongly upward. There is nothing doing in No. 1 Foundry, so it is merely nominal at the old rate. The sales the past week aggregate upward of 30,000 tons and embrace more liberal quantities for Eastern shipment, as well as fair quantities for consumption in this district. The better monetary outlook has evidently infused a feeling of confidence into the Iron trade in all of its branches. Money is easy for all business in good credit, and collections are again satisfactory. There is scareely any movement in Charcoal Iron. Quotations are as follows:

Foundry.

Southern Coke, No. 1	$12.25 @ $12.50
Southern Coke, No. 2	11.00 @ 11.25
Southern Coke, No. 3	10.50 @ 10.75
Ohio Soft Stone Coal, No. 1	15.50 @ 16.00
Ohio Soft Stone Coal, No. 2	14.50 @ 14.75
Lake Superior Coke, No. 1	15.00 @ 15.25
Lake Superior Coke, No. 2	14.00 @ 14.25
Hanging Rock Charcoal, No. 1	18.50 @ 19.00
Hanging Rock Charcoal, No. 2	17.50 @ 18.00
Tennessee Charcoal, No. 1	14.00 @ 14.25
Tennessee Charcoal, No. 2	13.00 @ 13.25

Car Wheel and Malleable Irons.

Standard Southern Car Wheel	17.75 @ 18.00
Lake Superior Car Wheel and Malleable	17.00 @ 17.25

Forge.

Gray Forge	10.00 @ 10.50
Mottled Coke	9.75 @ 10.00

Pittsburgh.

(*By Mail.*)

Office of *The Iron Age*, Hamilton Building, Pittsburgh, November 28, 1893.

Within the past week two events have occurred, both of which are expected to add to the demoralization which has prevailed in the Iron and Steel trades for so long. The first of these was the announcement that the Rail makers had made a new agreement by which the Rail making industry would be controlled by five concerns. The second was the making public of the new Tariff bill by the Ways and Means Committee. The radical reductions in the tariff proposed by this bill will undoubtedly be contested by manufacturers whose interests it affects, and while this contest is being waged business must suffer, and undoubtedly will suffer, by reason of the uncertainty existing as to what reductions will finally be made. Interviews with a few of the leading Pittsburgh manufacturers would indicate that they do not expect the bill to go through as originally drafted. A hard fight will be made against it, which will probably be prolonged for some months. Considerable criticism is expressed over the action of the committee in putting duties on an advalorem basis entirely, the claim being made that it opens the way for frauds upon the Government, which will be brought about by false invoicing, which specific duties make impossible. After sufficient time has elapsed to allow thorough consideration of the bill, we shall doubtless have expressions of opinions from affected industries, which will be difficult for those who will finally vote on the bill to ignore. It has been figured that 40% ad valorem duty on Tin Plates means about 1¢ ℔ lb, as Coke Plates can be bought in Swansea to-day for $2.50 ℔ box of 108 lb. Rails at 25 % ad valorem duty means about $4.25, based on the present selling price abroad, and if put through will allow foreign Rails to come in unless home makers establish a lower price. The placing of Cotton Ties on the free list will seriously affect some Pittsburgh and Mahoning Valley manufacturers, who are large makers of this product. After all, as one maker puts it, if the tariff is finally reduced to any great extent further reductions in wages sufficient to place us on a level with foreign manufacturers will have to be speedily made. We can compete in everything but labor, and if necessary to preserve our interests we can compete in that as well. The Iron and Steel trades present no new features this week. Business is no better, perhaps a little worse, while prices seem to be getting lower right along, particularly in Finished Materials. The expected revival in the demand for Rails has not come, and any improvement in the demand for Ore and Pig Iron from this source seems as far off as ever.

Pig Iron.—There has been no improvement in the market since our last report. Indeed, it would seem that prices are a shade weaker, due largely to recent sales of Valley Iron, owned by a Pittsburgh interest, at prices said to be much lower than any of the other makers here are willing to accept. Much of this Iron was bought when prices were from $2 to $3 per ton higher than at present, and the forcing of it on the market was accompanied by a heavy loss to the seller. An Ohio Valley concern is said to have bought a large block of this Iron. While it is true that more Pig Iron is being consumed now than at any time since July, it is also true that there has been a large increase in production, owing to the blowing in of stacks here and in the two valleys. The second furnace of the Monongahela Furnace Company, at McKeesport, Pa., has gone in and is making Bessemer for the new Steel plant. The Raney & Berger Iron Company, at New Castle, started up their furnace last week. As to prices, it can be said that Gray Forge is being held at $10.50, Pittsburgh, while Bessemer is offered at $11 for prompt shipment, although a number of furnaces, both here and in the Valley, are refusing to meet this price and are holding their Iron at $11.25 @ $11.50. We quote as follows:

Neutral Gray Forge	$10.50 @	cash
All-Ore Mill	10.50 @ $10.75	"
Bessemer	11.00 @ 11.25	"
No. 1 Foundry	12.50 @ 13.00	"
No. 2 Foundry	11.50 @ 12.00	"

We note a sale of 1000 tons of Bessemer for December delivery at $11, Pittsburgh, and one of 1500 tons for December and January at $11.25, Pittsburgh. Also a sale of 1000 tons of Gray Forge for December and January at $10.50, delivered.

Billets.—The Steel market has shown no marked change during the week. There is a moderate amount of Steel changing hands, but as near as can be learned no contracts calling for large tonnage have recently been closed. However, it can be stated that as we get nearer the close of the year there is more disposition shown on the part of makers to sell into next year at present prices. For ordinary business mills continue to quote $17.25 @ $17.50, the first named being the ruling price. For desirable orders, with payments and deliveries satisfactory to makers, it is probable that such business could be placed at $17 at maker's mill. We note a sale of 5000 tons for delivery into March of next year at a price equal to about $17 at maker's mill; also a sale of 3000 tons for December, January and February at $17 at maker's mill; also a sale of 1000 tons for December and January at $17.25 at maker's mill. The new Bessemer plant of the National Tube Works Company, at McKeeaport, Pa., was started up this week. Every-

Hosted by Google

thing worked smoothly and in a manner highly satisfactory to both the builders and owners of the plant.

Ferromanganese. — We quote at $52 @ $52.50 for 80 % domestic and note a sale of 50 tons at a prices equal to about $52, delivered at buyer' mill.

Muck Bars.—There is little doing, owing to the low price at which Billets can be obtained. We quote best grades Muck Bars at $20.75 @ $21, delivered at buyer's mill. We note a sale of 250 tons for delivery at the first named price.

Plates. — The slightly improved demand noted last week continues. Prices are no better, but on the contrary are weak and lower. We quote: Tank Steel at 1.35¢ @ 1.40¢, and for round lots the lower quotation would be shaded. Flange Steel we quote at 1.65¢ @ 1.75¢; Shell, 1.55¢ @ 1 60¢; Fire Box, medium quality, 2½¢ @ 3¢, best quality, 3½¢ @ 4¢.

Steel Rails.—The Edgar Thomson mill was off last week, but will start up again in a few days on Rails. Reports that the local mill had captured a number of large orders, one of them amounting to 40,000 tons, for the Lake Shore Railroad, have not been confirmed. It is understood during this week the final papers of the new agreement between the Rail makers will be adjusted.

Structural Material.—The demand for Beams has kept up remarkably well this month, due, no doubt, to the mild weather, which has permitted building operations to go on without interruption. Pittsburgh has recently taken two Government contracts which called for a good sized tonnage of Beams. For ordinary lots we quote Beams up to 15 inches, 1.50¢ @ 1.60¢. For desirable orders our lower quotation would be shaded. We quote Angles and Universal Plates, 1.50¢ @ 1.60¢; Tees, 1.70¢ @ 1.75¢. Makers here are looking for a very heavy demand for Structural Material next year should a revival of business come in spring, which is confidently anticipated.

Bars.—A general resumption of operations among the valley mills has taken place, and this will highten the struggle for work which has been going on for some time. As a direct consequence of the starting up of additional mills prices have shown a weaker tendency, although no material decline has taken place. We continute to quote Soft Steel Bars at 1.35¢ @ 1.40¢, with Bar Iron extras, Pittsburgh. For good round lots it is probable that a lower price than we have named would be accepted. The valley mills are holding Bars at 1.30¢, and it is claimed it is exceedingly hard to shade this price even to slight extent.

Barb Wire.—There is no improvement in demand, and prices have recently shown a weaker tendency. We quote Four-Point Galvanized at $2.20 in carload lots at mill, with the usual advance for less quantities. For round lots this price would probably be slightly shaded. Plain Wire is in moderate demand, and we quote at $1.45 in carload lots for Nos. 6 to 9. For a fair sized order this price would be shaded.

Wire Nails.—Although there is an active demand for Wire Nails, the fact that all the mills are in operation causes considerable competition for business, and as a result prices are slightly weaker. We quote Wire Nails in carload lots at $1.15 @ $1.20. Small lots are held at $1.30 @ $1.35. There is also a good demand for Cut Nails, but in sympathy with Wire Nails prices have shown a weaker tendency. We quote at 95¢ @ $1, at mill, for the usual averages.

Wire Rods.—There has been an active demand for Rods for some time and some of the mills have their entire output for the balance of the year under contract. On account of the low price of Steel, Rods for delivery during the first quarter of next year are offered at $24.75 @ $25, at maker's mill. Under very desirable conditions it is possible that our first named quotation would be slightly shaded.

Merchant Steel.—There is nothing of interest to report this week. The demand continues only fair, and considerable disappointment is being expressed by mills on account of the slow manner in which new business is developing. A part of the plant of the Linden Steel Company, in this city, has been put in operation, the firm having made satisfactory arrangements with their creditors and secured an extension of five years. Prices are unchanged, and we continue to quote Open Hearth Tire Steel at 1.90¢ @ 2¢; Bessemer Machinery at 1.55¢ @ 1.65¢; Toe Calk, 2¢ @ 2.10¢; Tool Steel, from 5½¢ upward, according to quality.

Skelp Iron.—The demand for Skelp Iron is slightly better, owing to the starting up of some two or three plants that had practically done nothing for some months. Prices continue very low, and we quote Grooved Skelp at 1.37¢ @ 1.50¢, and Sheared at 1.50¢ @ 1.60¢, the price depending largely on the nature of the order.

Pipes and Tubes.—There is nothing of interest to report this week. The demand is only moderate, and the prospects for an improvement in this direction before next year are not very promising. No attention has been paid to the official discount list for some months.

Coke.—Within the past week or so a number of contracts for Furnace Coke for delivery up to July 1, 1894, have been closed, these contracts being based on $1.10 in tons of 2000 lb on board cars in Connellsville region. As near as can be learned this price has not been shaded, and there is a disposition among Coke makers not to make contracts for their entire output, for the reason that better prices for Coke are expected after the first of the year on account of the increased demand brought about by the blowing in of a number of furnaces. For the week ending November 18 there were 7180 ovens in the Connellsville region in blast and 10,339 idle, with a total estimated production of 66,090 tons. Compared with the previous week there was a net gain of 695 active ovens and an increase in production of 8235 tons. We continue to quote Furnace Coke at $1.10 in tons of 2000 lb, f.o.b. cars in Connellsville region, and Foundry Coke is held at $1.50 to dealers and $1.65 to consumers.

The collieries of British India produced, in 1892, 2,537,696 tons of coal, or almost exactly double the amount put out in 1883. During the interval the number of collieries has increased from 61 to 88. The industry is stated to have received quite a decided impetus of late from the widespread demand that India should be self supporting in her fuel supplies, as well as from recent railroad extensions which have brought some of the coal mines into easier communication with the cities.

Metal Market.

Copper.—No large sales of Lake Superior Ingot have been reported or even rumored, but brokers have been supplied with orders to bid stiff prices, not only on Exchange contracts, but on actual Copper for near future delivery. In some quarters it was claimed that 5,000,000 lb or any part would have been taken at 10¢. Elsewhere *bona fide* bids of 10⅛¢ for moderate quantities were turned down. On the Metal Exchange a trade was recorded involving 50,000 lb, for delivery during the latter part of December, at 10⅛¢, but reliable information went to show that several prominent producers were willing and ready sellers at that rate for delivery during the first quarter of next year. There is some suggestion of manipulation, or at least a tendency to make the most of all the best features prevailing, but enough legitimate demand prevails to give the market good tone. In the cheaper varieties hardly the same degree of interest is manifested, but sales are sufficient to keep the market in quite good form. The range of prices quoted is 9⅛¢ @ 9¾¢ for Electrolytic and 9¼¢ @ 9½¢ for casting stock, according to brand and quantity.

Pig Tin.—For spot stock and on deliveries running during the balance of the year, prices have been well maintained on the basis of about 20.65¢. Speculation has remained almost at a standstill, and regular operators, as well as outside interest, seem to have virtually withdrawn pending the fate of the new tariff bill. The jobbing and consumptive demand has also been on a moderate scale, but the best information on the subject goes to show that steady inroads have been made upon spot stocks, and that the distribution exceeds the combined total quantity afloat and the importations since the McKinley duty went into effect. Along with the fact that stocks in Europe have been steadily increasing this would suggest more than a bare possibility of some lively speculative movement in the event of the present duty being removed. At the close the market was apparently steady in tone but very quiet.

Pig Lead —There has been somewhat freer offering, due partly to slow condition of trade latterly and partly to some uneasiness over the provisions of the new tariff bill. Under the weight of the two circumstances selling price has dropped to 3.40¢. Carload and larger lots have been offered at that rate for delivery up to the balance of the year. At the present there seem to be no buyers at above 3.35¢, and few at over 3.30¢. The market thus has a weak as well as a dull appearance in the face of all the bullish speculative manipulation and argument that has been brought into play during the past two weeks.

Spelter.—Under the influence of good demand from Western consumers, along with about average buying in this city and vicinity, the market shows better form and closes quite firm. Single carload lots of ordinary Western went at 3.75¢ @ 3.85¢ for prompt and near future shipment. The latest sales were at the higher price. That is now bid, and in remote instances offers were

Hosted by Google

made as high as 3.87½¢ for ordinary delivery by speculative operators.

Antimony.—The jobbing demand is fair, but little, if anything, is doing in round lots. Prices remain quite steady, however, with 9⅝¢ @ 9¾¢ quoted for Hallett's and 10⅛¢ @ 10¼¢ for Cookson's.

Tin Plate.—Business has been slow, and the market is bare of really encouraging features. Spot goods are taken in small quantities only, as immediate wants may dictate, and the aggregate outturn is hardly up to the average. Interest in forward shipments is exceedingly tame, although prices have been quite freely quoted that range from 5¢ to 10¢ below current selling prices for spot goods. Spot quotations are as follows: Coke Tins—Penlan grade, IC, 14 x 20, $5.30; J. B. grade, do., $5.35; Bessemer full weight, $5.35; light weights, $4.95 for 100 lb, $4.85 for 95 lb, $4.70 @ $4.75 for 90 lb. Siemens Steel scarce. Stamping Plates—Bessemer Steel, Coke finish, IC basis, $5.60; Siemens Steel, IC basis, $5.65; IX basis, $6.75 @ $7. Charcoals—Melyn grade, IC, $6.37½ @ $6.50; Crosses, $8; Allaway grade, IC, $5.60; Crosses, $6.75; Grange grade, IC, $5.75; Crosses, $6.85. Charcoal Ternes—Worcester, 14 x 20, scarce; do., 20 x 28, $11.35; M. F., 14 x 20, $7.35 @ $7.37½; do., 20 x 28, $14.75; Dean grade, 14 x 20, $5.35; do., 20 x 28, $10.50 @ $10.60; D. R. D. grade, 14 x 20, $5.15; do., 20 x 28, $10.10; Alyn, 14 x 20, $5.32½ @ $5.35; do., 20 x 28, $10.50; Wasters—S. T. P. grade, 14 x 20, $4.75; do., 20 x 28, $9; Abercarne grade, 14 x 20, $4.60; do., 20 x 28, $8.87½.

New York.

Office of *The Iron Age*, 96-102 Reade street, NEW YORK, November 29, 1893.

Pig Iron.—Reports of additional sales of Southern warrants to speculative buyers are current. Some of the leading Southern producers are making an effort to secure better prices, but in this market no advance has yet taken place, since a good deal of cheap Iron is still offering. We quote: Northern brands, $14 @ $15 for No. 1; $13 @ $14.25 for No. 2; $12.25 @ $12.50 for Gray Forge, at tidewater. Southern Iron, same delivery, $13 @ $14 for No. 1; $12 @ $13 for No. 2; $11.50 @ $12.25 for No. 3; $11.75 @ $12.25 for No. 2 Soft, and $12.25 @ $12.50 for No. 1 Soft. Gray Forge is $11.25 @ $12.

Spiegeleisen and Ferromanganese.—In the absence of business we quote: Foreign Spiegeleisen, 10 % @ 12 %, $21.50 @ $22, and 20 %, $25.50 @ $26, on cars, Jersey City, and Ferromanganese, $55 @ $55.50.

Billets and Rods.—The market is very dull and is a shade weaker. We quote nominally: Domestic Billets, $20 @ $22, and foreign Billets $28 @ $28.50, tidewater; domestic Wire Rods, $28 @ $29, and foreign Rods, $39.50 @ $40, tidewater.

Steel Rails.—The new combination is a fact, all reports to the contrary notwithstanding. The tidewater price has been fixed for 1894 delivery at $24.80, while the price at Pittsburgh is $24 and at Chicago $25. The market has been altogether too unsettled to allow of any business being done, nor is it likely that any large tonnage will be placed in this market in the near future. Some of the leading roads appear to have covered their requirements. Old Steel Rails, fit to relay, in which there was quite a business, dropped down to $15.

Track Material.—We quote as follows for small lots: Spikes, 1.75¢ @ 1.90¢; Fish Plates, 1.30¢ @ 1.50¢; Track Bolts, Square Nuts, 2.10¢ @ 2.40¢, and Hexagon Nuts, 2.30¢ @ 2.50¢, delivered. Concessions would be made for round lots.

Manufactured Iron and Steel.—New business is very small in volume and there is very little new work in prospect in the near future. Prices continue very low under the leadership of the Western mills. A very large block of Hoops has been placed. We quote nominally: Beams up to 15-inch, 1.65¢ @ 2¢, 20-inch, 2¢ @ 2.25¢, for round lots; Angles, 1.65¢ @ 1.80¢; Universal Mill Plates, 1.60¢ @ 1.75¢; Tees, 2¢ @ 2.15¢; Channels, 1.70¢ @ 2¢, on dock. Steel Plates are 1.55¢ @ 1.70¢ for Tank; 1.75¢ @ 1.90¢ for Shell; 2¢ @ 2.15¢ for Flange, and 2.50¢ @ 2.80¢ for Fire Box, on dock; Refined Bars are 1.50¢ @ 1.9¢, on dock, and Common, 1.40¢ @ 1.50¢; Soft Steel Bars are 1.50¢ @ 1.70¢; Scrap Axles are quotable at 1.70¢ @ 2¢, delivered; Steel Axles, 1.70¢ @ 1.90¢, and Links and Pins, 1.70¢ @ 1.80¢; Steel Hoops, 1.75¢ @ 1.90¢, delivered; Cotton Ties, 70¢ @ 72½¢ ℔ 45-lb bundle, at mill.

Old Material.—We note a sale of a few hundred tons of Old Iron Rails at $12.50, which represents a further decline. Old Steel Rails have sold during the week at $9.

George B. Douglas, who has been for many years representative of David Colville & Sons, Dalzell Steel Works, Scotland, has assumed as partner his brother, John B. B. Douglas, the new firm being Geo. B. Douglas & Bro. The office has been removed from the Boreel Building to Room 1005 Havemeyer Building.

British Iron and Metal Markets.

[*Special Cable Dispatch to The Iron Age.*]

LONDON, WEDNESDAY, November 29, 1893.

There has been very little movement in prices of Pig Tin the past week. Sales of prompts were made at as low as £75. 2/6 a few days ago, the steadiness in silver having no pronounced effect. A slight improvement in home demand and better inquiry from America brought a bouta reaction to £75. 10/ but there is complete absence of outside speculative interest and regular traders have been influenced very little by the propositions in the new American tariff bill.

Copper has been fairly active at intervals during the week, with more active home trade demand and better reports from America regarding the market there. It is stated that Merchant Bars sold for American account recently have been covered, and that some firms have been rebuying American Copper recently sold to Europe, but yet unshipped, at a profit to original purchasers. There is quite a good demand also for cash metal to cover old forward sales that also helps to improve the market. There is somewhat better outside speculative interest. Merchant Bars are now quoted at about £43. 2/6 for prompt and £43. 12/6 for three months' futures. Best selected English is now £46 upward.

Tin Plate prices are weak and irregular. Orders are scarce. The outlook is uncertain, owing to dearth of buyers in the face of lowness of prices. Over 20 works are idle, and many others are working to only part of their capacity, owing to prevailing dullness. This is attributed partly to "bear" operations directed against dealers in London and Liverpool who hold immense stocks. Last returns show total stock of 258,000 boxes in Swansea. Liverpool quotations for Plates are as follows:

IC Charcoal, Alloway grade	12/6 @ 13/
IC Bessemer Steel, Coke finish	11/3 @ 11/6
IC Siemens " " "	11/6 @ 11/9
IC Coke, B. V. grade, 14 x 20	11/3 @ 11/6
Charcoal Terne, Dean grade	11/ @ 11/3

Pig Lead is a trifle weaker, with sellers at £9. 10/ for soft Spanish and the demand slow.

There is hardly anything more than routine demand for Spelter, but prices are quite steady at £17. 2/6 for ordinary Silesian.

In the market for Iron and Steel there has been hardly any change aside from ordinary fluctuation in prices of warrants. Business has been moderate in all departments and the demand is only fair. Makers' prices of Pig Iron were advanced somewhat, owing to higher quotations on warrants, but are now rather weaker. Last dealings in warrants were at 43/ @ 43/2 for Scotch. 34/9 @ 35/ for Cleveland, and 45/ for Hematite.

The New Sheet Scale.

As announced in these columns last week, an agreement has been reached between the Association of Iron and Steel Manufacturers and the Amalgamated Association, by which a straight reduction of 10 per cent. on the sheet mill scale has been granted the manufacturers. It will be remembered that at the first meeting of the two committees representing the employees and the sheet mill owners, a settlement was prevented on account of the Amalgamated Association refusing to reduce wages of roughers and catchers, which they claimed were already low enough. The manufacturers insisted that a straight reduction of 10 per cent. must be granted, and the matter was finally settled by the rollers agreeing to accept that part of the reduction which would fall upon the roughers and catchers. Below we print the new scale governing sheet mills, which became effective on Monday, November 20, and is as follows:

SHEET MILL.

Western scale of prices agreed upon between the Association of Iron and Steel Manufacturers and the Amalgamated Association of Iron and Steel Workers, at Pittsburgh, Pa., on November 22, 1893, to be in force for the year ending June 30, 1894. It is agreed that at a 2-cent Western Iron Association's card, the prices for rolling on a sheet and jobbing mill shall be as follows, with 2 per cent. additional for each one-tenth advance of said card, and 2 per

Hosted by Google

cent. decline for each deduction of one-tenth from said card:

Gauges.	Price for rolling on a 2-cent card, per ton, 2240 lb.
No. 8 and heavier	$3.24
Nos. 9 to 11	3.60
Nos. 12 to 14	4.32
Nos. 15 to 17	5.00
Nos. 18 to 21	6.07
Nos. 22 to 24	7.20
Nos. 25 and 26	8.28
No. 27	9.00
No. 28	9.59
No. 29	10 34
No. 30	10.80

Gauges.	Price for rolling on a 2-cent card, per ton, 2240 lb.
No. 8 and heavier	$2.70
Nos. 9 and 10	3.15
No. 11	3.60

Balance of scale to remain as at present. This to apply only to two-high jobbing mills rolling No. 10 and heavier over 48 inches in width.

TIN AND BLACK PLATE MILLS.

It is agreed that at a 2-cent Western Iron Association card the prices for rolling, shearing, doubling and heating on a tin and black plate mill shall be as follows, with 3 per cent. additional for each one-tenth advance of said card, and 3 per cent. decline for each deduction of one-tenth from said card:

Gauges.	Rolling steel, 2240 pounds.	Doubling.	Heating.	Shearing on jaw or crocodile shears, and job work on squaring shears.
Nos. 8 to 11	2.04	.93	.85	.99
Nos. 12 and 13	2.14	.96	.90	
Nos. 14 and 15	2.45	1.10	1.07	
Nos. 16 and 17	3 24	1.46	1.32	1.59
Nos. 18 to 20	3.62	1.63	1.48	
Nos. 21 to 24	4.07	1.86	1.63	
Nos. 25 and 26	4.57	2.07	1.88	1.71
Nos. 27 and 28	4.63	2.21	2.05	
Nos. 29 and 30	5.30	2.70	2.48	1.76
No. 31	5.40	2.84	2.68	1.78
No. 32	5 65	2.97	2.79	1.88
No. 33	5.99	3.13	2.88	1.98
No 34	6.64	3.33	3.15	2.21
No. 35	6.98	3.52	3.34	2.30
No. 36	7.43	3.60	3.47	2.46
No. 37	7.52	3.65	3.52	2.49
No. 38	7.61	3.72	3.58	2.52

1. Fifteen per cent. less than above prices for iron, except shearman.
2. Shearman on modern squaring shears to receive $1 per turn. This clause only applies for shearing tin plate.

EXTRAS.

1. Twenty per cent. added for changed steel and 20 per cent. on net price of iron.
2. Seventeen per cent. added for pickle finished iron and steel, except shearman.
3. For all sheets sheared into circles on tin and black plate mills where the loss exceeds 10 per cent., 20 per cent. extra shall be paid.
4. That all sheets cut down to smaller sizes on tin and black plate mills be paid for at scale prices.

The heating system adopted at the new works of the Bucyrus Steam Shovel & Dredge Company, South Milwaukee, Wis., described in a recent issue of *The Iron Age*, was that of the Huyett & Smith Mfg. Company, Detroit, Mich.

Frank S. Witherbee of Witherbee, Sherman & Co., Port Henry, sails for Algiers to-day.

The Effect of a Perpetual Wages Scale for Iron Workers.

If the proprietors of rolling mills and the Amalgamated Association of Iron and Steel Workers should finally agree that the existing scale of wages be made perpetual, only to be changed by three months' notice from either side, the beneficial effect will be so far reaching that the subject is worthy of notice in advance, and all interested should make earnest efforts to bring about such a state of affairs. The present result of negotiations has given great satisfaction in the industrial parts of the central States, but there will be still greater cause for gratification if the perpetual scale is adjusted.

The prevailing opinion among manufacturers and others whose interests are allied to the iron and steel industries is that greater stability in business will result; that there will be less fluctuation in values and an absence of that speculation in stocks of material which the present arrangement encourages. Under existing conditions, the annual July scare in regard to the probable outcome of wage conferences produces an unnecessary agitation in commercial circles, and everything runs at high pressure during several months before the time approaches, only to be followed by a distressing calm and policy of retrenchment on the part of buyers in case an amicable settlement is reached.

Consumers of rolling mill products are anxious to make certain that their orders will be filled to cover a few months' requirements in case of a lockout, and they place specifications early with jobbers or dealers, who in turn crowd the mills to their utmost capacity; but if the lockout does not take place cancellation of orders usually follows and business is thrown into a generally unsatisfactory state.

Under the new arrangement there will be a greater certainty that operations of rolling mills will continue with regularity during the year. The manufacturer will know that his stock of bar iron, sheet iron or other material which he uses can be replenished by giving a week's or ten days' notice to his jobber, and he will not have to borrow money to lay in stocks as a safeguard against July strikes. Jobbers of Chicago and the Northwest will not be compelled to place contracts for spring and summer delivery for material which they expect to sell in the fall, the quantity of which they can only guess at, as the sales throughout that territory depend, in their extent, very much upon the weather. During past years this scare has reached even small consumers in isolated territory, and cases are common where a tinner or blacksmith has placed his order for a few bundles of iron many months ahead for the sole purpose of being prepared against labor troubles. From these rivulets of commerce rivers grow, and the effect grows with the increasing volume of business. The jobbers speculate on the number of small consumers who are holding back their orders, and thus the ups and downs are caused.

Under the proposed changed conditions orders will be distributed over longer periods, and more stability to business will result. All concerned will be benefited, not omitting the iron worker, for he himself will soon concede that he is far better off if he only works four days of a week the year around than if he made full time for six months and was idle the balance of the year.

While discussing this subject the writer would ask, Why cannot the arrangement be made still more secure by making the scale perpetual and sliding? The 1½-cent card rate may soon be as absurd as the 2-cent card rate has been in the past. Now is the time for a permanent adjustment. The scale is settled until April 1, 1894; when the average selling price of bar iron or sheet iron is known for the intervening period let that price govern the ensuing three months' scale of wages, and so during the year, and, for that matter, for all time. A committee of workmen could meet a committee of manufacturers every quarter, and there would be little trouble in reaching a satisfactory agreement.

HARDWARE.

Condition of Trade.

BUSINESS during the past week has been without material variation in volume except the falling off which is expected at this season and during the last days of the month. The market has been characterized by a somewhat more hopeful tone, and manufacturers and merchants have been making their plans for a more vigorous conduct of their business. While the volume of trade has not increased, inquiries in regard to future shipments and the placing of orders for spring delivery have been more frequent, which was regarded as an indication that things were resuming their normal course. The announcement of the new Tariff bill, however, with its large reductions in the duties on the many lines of Hardware and related goods, will, it is apprehended, have the effect of unsettling business and checking the improvement which was beginning to make itself apparent in trade circles.

Chicago.

(*By Telegraph.*)

Shelf Hardware jobbers report a somewhat better condition of business. Not only are orders a little more numerous, but collections are also improving considerably. Shelf goods are going out in larger volume, as well as seasonable goods. The demand for Snow Shovels and other winter supplies, Skates, Sleds and holiday goods generally has been very fair during the week. There is also increased movement in Sheet Iron and Tinners' Stock. Owing to the sustained winter weather, no material change is reported in the price of Shelf goods. Manufacturers seem to have produced in sufficient quantities only to meet the regular demand, and are, therefore, not pressing sales of accumulated stock, as in some other lines. Heavy Hardware keeps up fairly well, owing to the demand for Iron and Steel coming in from both large and small consumers. There are indications of an improvement in the Carriage trade, and a few orders have already been entered for Carriage material for spring delivery.

St. Louis.

(*By Telegraph.*)

There is a partial falling off in trade since our last report. Retailers will not stock up, and only order as their needs require. Jobbers are preparing for renewed activity after the turn of the year. That they do not anticipate to equal their spring trade of last year is evidenced by the fact that one of the largest jobbing houses here is only ordering sufficient goods to do 75 per cent. of the business they did last spring. This is not encouraging, but it is the truth, and it is to be hoped that the house referred to will be disappointed in their low estimate. Remittances are received regularly, and a number of concerns are now discounting their bills, showing that a better financial feeling exists. The demand runs largely to seasonable goods, and prices as a rule are well maintained.

Notes on Prices.

Wire Nails.—The market has developed no special features of importance since our last review. The demand is only moderate, but the aggregate is considerable, as the low prices which are ruling induce many dealers to purchase such Nails as they require in the near future. Quotations continue on a basis of $1.15 to $1.20 for round lots at mill, the former figure being usually obtainable on good orders. Carload lots delivered in New York are quoted at $1.35.

Chicago, by Telegraph.—The heavy purchases of Wire Nails continued during the past week, but as navigation on the lakes has now closed, the movement will probably be light from this time. There are, however, inquiries for delivery in January, February and March, but manufacturers hesitate to quote so far ahead. Prices dropped to a little lower level during the active trade of the past week, but with the change to all rail delivery an effort is being made to keep prices at the equivalent of $1.30, Chicago. Small lots are now selling at $1.40 to $1.45 from stock.

Cut Nails. The condition of the Cut Nail market is unsatisfactory, but prices are not quotably lower than last week. The market is represented by the quotation of 95 cents for carload lots at mill, though this figure is shaded and orders can be placed at 90 cents. Small lots from store in New York are quoted regularly at $1.20.

Chicago, by Telegraph.—A fair trade is in progress in Cut Steel Nails, with continued good shipments to the Southwest. Wheeling Nails are again being quoted in this market quite freely, but thus far little business has resulted, as the local makers appear to have a firm grip on the trade. Prices on factory lots are quoted at $1.15 to $1.20, according to the character of the order, while small lots from stock are selling at $1.25.

Barb Wire.—In view of the unsatisfactory condition of the market and the extremely low prices which are ruling, some of the manufacturers are practically withdrawing from the market for the time being, refusing to meet the prevalent figures. The competition, however, continues active and prices are low and weak. We continue to quote $2.15 to $2.20 for car lots of Four-Point Galvanized at mill.

Chicago, by Telegraph.—The demand for Barb Wire is of a light character throughout the Northwest and manufacturers appear to be getting most of their business from the South and Southwest. Competition for this business has been keen, but so far it has not affected the local trade. Carload lots of Galvanized are quoted to purchasers in this vicinity at $2.40, while jobbers quote small lots from stock at the old rate of $2.55. Heavy transactions have taken place in Plain Wire at lower prices than ever before made in this vicinity.

Skate Sharpener.—The Union Skate Sharpener, manufactured by the Union Hardware Company, Torrington, Conn., an illustration of which appeared in our issue of November 16, 1893, is listed at $3 per dozen, subject to a discount of 30 per cent. to the retail trade.

Climax Lamp Stove.—The Climax Lamp Stove, which was illustrated in *The Iron Age* of November 23, 1893, is manufactured by Clarence M. Kemp, 101 North Frederick street, Baltimore, Md. The stove is sold to the trade, without the lamp, at $48 per dozen, net.

Brass Nails.—The Just Enough Brass Nails, manufactured by the Grand Crossing Tack Company, Grand Crossing, Chicago, and illustrated in *The Iron Age* of November 2, 1892, are sold at 50 cents per carton of 20 papers.

Novelty Scraper.—Smith's Novelty Scraper, an illustration of which was given in our issue of November 16, 1893, is manufactured by Fernando B. Smith, Canton, Ohio, and is sold at 75 cents per dozen, or $7.20 per gross, net, f.o.b. Canton.

Sliding Door Latch.—The Sliding Door Latch illustrated in *The Iron Age* November 23, 1893, and manufactured by Lane Brothers, Poughkeepsie, N. Y., John H. Graham & Co., 113 Chambers street New York, agents, is sold at $4 per dozen, subject to a discount of 25 per cent.

Universal Brace.—The Universal Brace, manufactured by the National

Hosted by Google

Mfg. Company, Wilkesbarre, Pa., and illustrated in *The Iron Age* of November 16, 1893, is sold at a discount of 20 per cent. from the following list:

	Sweep		
	6-inch.	7-inch.	8-inch.
Nickel plated, per doz..	$33.00	$36.00	$39.00
Black enameled, nickel plated trimmings, per doz.....	30.00	33.00	36.00

Glass.—The dissolution of the Plate Glass Manufacturers' Association, to which reference was made in our last issue, has resulted in an open market, and manufacturers of American Plate Glass are in a position to accept orders at any price they may individually choose. There is a reported decline in prices from factory of 20 per cent. American Window Glass is being sold from factory at 85 and 20 per cent. discount for Single Strength and 85 and 20 and 5 per cent. discount for Double Strength. In face of a declining market something like 200 additional pots are reported as having gone into operation since our last report. French Window Glass is still quoted at 75 and 10 and 5 to 80 and 5 per cent. discount. It is too early to surmise what reduction the proposed tariff would make in the selling price of imported Glass, or to what extent it would affect American Glass manufacturers.

New Members of the Hardware Club.

THE following gentlemen have recently been elected members of the Hardware Club of New York:

GEORGE H. BARTLETT,
Bethlehem, Pa.

J. H. CAMPBELL,
Deputy City Chamberlain,
New York.

L. C. DAWES,
Editor *The Metal Worker*,
New York.

R. W. SHAPLEIGH,
St. Louis, Mo.

THEODORE H. SILKMAN,
41 Park row, New York.

E. OSBORN THOMPSON, JR.,
245 Broadway, New York.

European Imitations of American Arms.

WE HAVE already referred to the fact that of late the Continental manufacturers of Firearms have been imitating American patterns and in some cases counterfeiting brands and trade-marks. This has for some time been done in connection with the Arms of Smith & Wesson, Springfield, Mass., which have been imitated in Belgium, and in many cases their marks have been counterfeited on both barrels and stocks of an inferior class of Revolvers, thus injuring the firm's reputation and business. With a view to preventing this they have recently had their marks registered in all the principal countries of the world, including Belgium, and have instituted proceedings against the makers of and dealers in these imitations with a view to putting a stop to this piracy. Within a short time their attorneys in Liege have seized a large quantity of these spurious Arms and brought action in the courts against the makers and dealers, and an early and favorable decision is expected. Smith & Wesson advise us that they propose to push the matter strenuously, and are confident of the successful termination of their efforts to protect their name and business interests.

The Van Wagoner & Williams Company.

A PLAN for reorganizing the Van Wagoner & Williams Company, under the name of the Van Wagoner & Williams Hardware Company, who have their plant in Cleveland, Ohio, and their Eastern office at 14 Warren street, New York, is being submitted to the creditors. The Committee on Reorganization, composed of Messrs. Austin B. Fletcher of 29 Broadway and Edward P. Lyon of 34 Nassau street, in connection with some of the largest creditors and the receivers, found that the plant was very valuable and well worth being continued as a going concern, and therefore have prepared a plan which has already been approved by about three-fourths of the creditors. The main features are to have the creditors accept for their claims a 7 per cent. cumulative guaranteed stock; and as there is a large amount of property and the earning capacity of the company is great, it gives value immediately to this guaranteed stock, while doing justice to all other interests. In this way it is expected that the creditors will be able to realize their claims in full and the company will be relieved from all indebtedness. C. S. Van Wagoner and Wm. H. Williams will retain their respective positions in charge of manufacturing and marketing the product of the company. The new company will be capitalized at about $750,000, $600,000 of which will be fully paid in, provision being made for gradually retiring the guaranteed stock, upon the accomplishment of which the control of the company will pass to the original stockholders. It is expected that the plan determined upon will place this popular concern upon a sound financial basis and promises a successful future for the business.

It Is Reported—

That the storage warehouse of George M. Steinman & Co., Hardware dealers, Lancaster, Pa., was destroyed by fire on the 14th inst. The warehouse was 60 feet long by 25 feet wide. The stock was valued at $4500, partly insured.

That T. Covert has sold out his Hardware business at Byron, Neb.

That the Hardware store of Sawyers & Havens, Bellevue, Mich., was recently burglarized.

That Treat & Son, Le Mars, Iowa, have sold out their Hardware business to C. W. Waldeck of Cedar Rapids.

That Libby & Stiles have recently entered the Hardware business at Denmark, Maine.

That the Hardware stock of Turner & Kirch, Chanute, Kan., was destroyed by fire on the 14th inst.

That E. S. Fonda has disposed of his Hardware business at Little Cedar, Iowa.

That Ambrose Bros., Hardware merchants, Gallatin, Mo., have sold out their stock to J. T. Gough and S. J. Dice.

That A. S. Hovey of Lake City, Mich., will in the spring open a Hardware and furniture store at McBain, Mich.

That the Hardware store of John Waeldin, Johnstown, Pa., was robbed on the 15th inst.

That A. L. Winder, Hardware merchant, Berkley, Va., has moved into new quarters.

That the stock of Tinware in the Stanton Hardware store at Oneonta, N. Y., has been purchased by J. M. Roney, who will remove it to Arena, Delaware County.

That Moses Crosley of Farina, Wis., has purchased H. C. Saunders' interest in the Hardware firm of Saunders & Naxon, Milton Junction, Wis.

That the Hardware stores of Byers & Woodward and C. B. Moss, at Grand Ridge, Ill., were destroyed by fire on the 17th inst. The former firm's loss was $5000, with insurance of $3000; Mr. Moss's loss was $3500, with insurance of $2000.

That the warehouse of the Texarkana Hardware Company, Texarkana, Ark., was destroyed by fire on the 17th inst. Loss, $4000; insurance, $1500.

That thieves recently broke into the Hardware store of Sheldon & Hande, Spring Valley, Minn., and got away with $200 worth of Cutlery and Revolvers.

That the Hardware store of J. K. Aldridge, Chestertown, Md., was robbed on the morning of the 13th inst. The plate glass front, $\frac{5}{16}$ inch thick, was smashed in with a brick, the crash being heard nearly two squares away. A hole was broken scarcely large enough to admit the body of a large sized man, and through this the robber entered. The safe, in which a small amount of money had been left and which was not locked, was then rifled of about $20. Some pistols and cartridges were also stolen, together with about $10 from the money drawer.

That George Ripley will soon open a new Hardware store at W. Stewartstown, N. H.

That Neuman & Fechner's Hardware store, at Stanton, Neb., was robbed of Revolvers, Razors and Pocket Cutlery on November 16.

That $50 worth of goods were taken from the Hardware store of Levi Baker, Lincoln, Neb., on November 13. This is the third or fourth time that the store has been robbed.

That Fred. Howlett, Gregory, Mich., contemplates putting in a stock of Hardware in the store recently vacated by N. E. Moore.

That Paris McKenzie has purchased a half interest in his father's, H. F. McKenzie's, Hardware store, at Chesaning, Mich.

Hosted by Google

John P. Chatillon.

JOHN P. CHATILLON, the subject of this sketch, was born in New York, April 7, 1845, and died in Paris, France, November 17, 1893, of Bright's disease. Just one year from the day of his decease he left New York by steamer, accompanied by two sisters, two of his older children and a trained nurse. His plan contemplated spending the winter and spring along the Mediterranean with a view to a restoration of his health. The party went direct to Naples, and eventually visited the leading cities of the Continent. Since the death of his wife, about eight years ago, those who knew Mr. Chatillon intimately perceived a change in him, although generally among his associates and business acquaintances he has been known as an invalid for but a comparatively short time.

The concern now so widely known and of which he was a part was inaugurated by an uncle, George H. Chatillon, in Cherry street in 1835. In 1842, upon the death of the founder, the enterprise was taken by a brother, John Chatillon, father of the deceased. John P. Chatillon began his education in a public school in this city and eventually graduated from the College of the City of New York. Soon after leaving college he was employed by the old Hardware establishment of Clark, Wilson & Co., at 81 Beekman street. He remained there until 1868, when he was taken into his father's business.

In 1872, before the death of his father, which occurred that year, he and his brother, George H. Chatillon, were admitted to a partnership. Since that time the management of the concern has been solely in their hands.

John P. Chatillon was long a director in the American Institute of New York and for years chairman of its Fair Committee. He was also a member of the Arion Society. He leaves a son and three daughters. While it was known that he was in impaired health, the tidings of his death were a surprise to his friends, and were received with sorrow by all who knew him, by whom he was held in high regard for his business abilities and personal worth.

IN A FIRE at Concord, N. H., on the 11th inst., the Hardware stock of Thompson & Hoague in their Main street store was badly damaged by water. The loss is estimated at $8000 or $10,000, which is fully covered by insurance. Their wholesale building in Railroad square was, however, uninjured, and as their stock carried therein is very complete they will be able to fill orders as usual. The catalogue cupboard of the firm having been thoroughly wet new copies of catalogues, circulars, &c., from manufacturers will be thankfully received by them.

The Business Depression.

AN ADDRESS BY WILLIAM W. SUPPLEE.

THE FOLLOWING ADDRESS was made by William W. Supplee, president of the Supplee Hardware Company, before the HARDWARE MERCHANTS AND MANUFACTURERS' ASSOCIATION OF PHILADELPHIA, at their meeting, November 23, by whom its publication was requested. We take pleasure in laying it before a larger audience than the influential body to which it was originally presented:

JOHN P. CHATILLON.

Mr. President and Members of the Hardware Merchants and Manufacturers' Association:

I am before you in compliance with a request made at the last meeting of the association that I read a paper on: "Our present business depression. To what extent has the fear of tariff reduction been responsible?"

There has been sufficient discussion in Congress on our business depression and the causes of the same to fill hundreds of pages of the *Congressional Record*, and editors of papers have aired their opinions daily for the last eight months.

The renowned novelist, Walter Besant, while recently traveling in this country, remarked: "The American people are a nation of readers. You see them reading eyerywhere; on the railway cars you will see men with two to four daily papers, eagerly devouring their contents."

In this he is unquestionably correct. The great majority of these readers, however, confine their reading to papers which represent their political views. These readers must naturally become biased in their opinions and prejudiced in forming their conclusions on important subjects under discussion.

One finds it an easy matter to say the fear of tariff reduction is largely reponsible for certain conditions; equally easy to deny it has been in any way responsible; quite as easy to attribute the conditions solely to the Sherman silver purchasing clause.

Therefore, I may be expected to illustrate why and how I arrive at the conclusions. The three years preceding the year 1893 were years of exceeding prosperity. Labor had never been more fully employed, and wages were never so high.

Reference to Aldrich's report, sustained by the Bureau of Statistics and by the present Secretary of the Treasury, showed the wage earners enjoyed the largest proportion of that which they produced than any other class of labor ever enjoyed in the history of the world. The wage earners were never so well paid, and the masses never earned so much.

Reports of the deposits in savings banks in the United States showed that the wage earner had upon deposit a larger amount than ever before known.

Foreign commerce exceeded any previous experience; manufacturers had orders upon their books that would require months to execute; mercantile houses showed an excess of trade over any previous years; money was plenty, and, owing to the prosperous times, banking houses extended credit freely. Indeed, we were in the midst of unparalleled prosperity; nor was there any visible evidence of overproduction, and almost in a day, as if by a magic wand, the scene was entirely transformed.

The cause or causes that produced this change were, I believe, as stated in an article written for *The Iron Age*, under date of August 17, and I have no reason since for changing the then expressed opinion:

FIRST (and greatest).—The mistaken theory of surplus reduction.

SECOND.—Partisan insincerity.

THIRD.—Government's experimental financial policy.

FOURTH.—The silver law existing prior to July, 1890, supplemented by the Sherman silver purchasing clause July 14, 1890.

Referring to the first and second of these four, in the year 1879, when the Secretary of the Treasury, John Sherman, resumed specie payments, the cash in the United States Treasury was over $380,000,000, and the Government receipts beyond expenditures for the fiscal year were about $20,000,000, and the demand indebtedness was then as many millions less than at present.

At that time many questioned the ability of successful resumption. Years

Hosted by Google

later the same element astounded the country by advocating the reduction of our Government surplus (then between $200,000,000 and $300,000,000) to $100,000,000, giving as their reason for reduction the saving of a few millions in interest.

This theory touched the masses, largely unacquainted with financial results, and it became a party factor, which eventually both parties adopted; even the framers of the present McKinley bill so regulated it as to insure a reduction in our revenue receipts, and as we are all aware, $100,000,000 was adopted as a gold redemption reserve, not to be encroached upon. Fortunately, owing to a favorable trade balance, we were able to retain a sum in excess of this amount until the spring of 1893, when trade balances ran largely against us.

This Government surplus reduction was one of those vagaries founded upon theory, which could not be sustained from precedent or experience, and placed us at the mercy of foreign countries in search of gold, and equally disadvantageously when any scarcity of gold existed in our own country.

In February, 1893, the reserve gold in the United States Treasury ran from $104,000,000 to $106,000,000, slightly in excess of the amount which the law required, but with this small sum we were liable to be called upon to redeem over $1,000,000,000 of redeemable gold notes, silver and silver Treasury notes.

In the meantime, balance of trade became largely against us; besides, Europe had been drawing largely on us for gold in exchange for bonds, and partisan editorials had for two months flamingly stated that when our gold went below the $100,000,000 mark, as a nation we were bankrupt. It had now about reached that mark.

Partisan insincerity (please do not construe partisan as political) had inflamed the public mind, as well as the minds of foreign investors, who plainly saw that we had less than 10 per cent. of available gold to redeem our entire demand indebtedness, and naturally feared the result.

At this state of the public mind the change of administration came, quite unprepared from recent experience to meet the emergency, and a policy of inaction temporarily controlled the Government's financial policy and our gold reserve had gone below the mark.

Financial leaders of our country discussed the situation, and, fearing the results, offered the United States Treasurer assistance which unfortunately was rejected. Had it been accepted I very much doubt whether the object lesson would have occurred. As it was, heads of financial institutions became uneasy, and perhaps some of them unnecessarily aggressive. Europe looked with distrust not only on what might seem our inability, but at the uncertainty of what might perhaps follow.

At this juncture the Secretary of the Treasury, doubtless with good intentions, to prevent further drawing of gold, stated that, according to law, he did not consider it necessary to redeem silver certificates in gold, and he would redeem them in silver.

Here came the crisis, it being a well-known fact that the Secretary had voted for free coinage in the Senate, and the intimation that silver, worth about 70 cents on the dollar, would be paid in the place of gold startled not only this country but foreign nations.

Soon after this England intensified the panic by closing the mints in India. The situation became serious and perplexing. A dark cloud overcast our entire financial sky. In order to quiet the unrest, President Cleveland was called upon to reverse the decision. He stated we would redeem all the Government's indebtedness, including silver certificates, in gold; but there had been vacillation. No one supposed the Secretary of the Treasury had given his opinion without consultation. Therefore, nothing more than an experimental financial policy could be inferred.

In addition to this, visions of State bank notes were seen in the distance. Our revenue receipts were now running less than our expenditures, and we were paying out about $3,000,000 per month for silver, which amount, however, in prosperous times, had neither affected our credit or finances.

We all remember the condition of the country at the time the President's special message called Congress together, from which message I quote as follows:

"The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together, in extra session, the people's representatives in Congress.

"The distrust and apprehension concerning the financial situation which pervade all business circles have already caused great loss and damage to our people, and threaten to cripple our merchants, stop the wheels of manufacture, bring distress and privation to our farmers, and withhold from our workmen the wages of labor."

Referring to the above extracts, one would naturally ask had the silver purchasing clause been the sole cause of the panic upon us at that date, would it not at least have gradually shown itself to some extent during the three preceding years?

Congress, however, met under the gravest situation of industrial and financial convulsion. Deposits were withdrawn from banks and hoarded by individual owners; hundreds of banks failed or temporarily suspended; trust companies refused to make payments other than under the 30 or 60 day rule; both currency and gold commanded a premium, and hundreds of manufacturers were obliged to close their works, failures were being recorded at the rate of 400 to 500 per week; mercantile houses kept their forces employed at a loss to themselves, and wage earners were daily being thrown out of employment, until the number reached some 2,000,000.

I am not a believer in the notion that the purchasing of the comparatively small amount of silver, $3,000,000 per month, which sum, according to a construction placed upon the law by Mr. Carlisle, was reduced to a trifle over half (by buying silver on London quotations only), could alone be the cause of our financial troubles, and I think it folly to suppose that President Cleveland saw no other cause. It doubtless became apparent to him that we could no longer sustain our financial credit other than by paying our obligations in coin that had an equal par value in all parts of the world.

I believe he also saw the mistake in the attempt to sustain our credit upon our present small surplus, but was too shrewd a politician to state it in his message.

It was about this date that an English publication, known as the London *Commerce* wrote as follows: "The proportion of gold held by the Government of the United States to its liabilities in respect to the amount of notes and currency certificates issued has diminished to a corresponding degree, with the result that foreign capital has ceased to flow into the States."

I do believe, however, that had Congress acted sagaciously, promptly and effectively in correcting a law which was drawing even a small amount from our already depleted Treasury, and then have strengthened our gold reserve by, say, an additional $150,000,000 to $200,000,000, the gathering clouds which collected themselves in Europe, and were wafted to this country, would never have penetrated over all our financial and industrial enterprises and reached the households, to more or less extent, thoughout our entire land.

It would, therefore, naturally appear that had it been believed by the Representatives in Congress that the silver purchasing clause was the sole cause of our trouble, the strain would have been at once relieved; but the leader in the United States Senate, Mr. Voorhees, had opposed a bill repealing this same law in February, 1893, and it was not accepted as the sole cause of the trouble; hence, hesitancy, which proved so destructive to the country, and the verdict of some 1500 commercial bodies had but an indifferent effect to urge action.

Fortunately, in time conditions changed. The financial situation was relieved in a measure from large to small importations from abroad, and by being able to dispose of a large amount of grain, even at a low price, the balance of trade became favorable to us.

A large amount of money was borrowed in Europe on hypothecated securities, and a large amount of stocks which had been materially reduced in value was bought up by foreign investors, which repaid the debt, so that the deposits in our banks became normal, and even several millions in excess of the usual surplus.

But the money taken from the banks and temporarily hoarded by individual depositors, when unlocked, was to be used cautiously; fear of a return stared people in the face.

The bell that sounded the alarm was not the only sound. Chimes of bells ringing caution, economize and retrench were heard.

A well clothed and well housed nation could pass one year with but little expenditure in their outfit; well equipped railroads could economize for a year; anticipated and projected improvements could be postponed, but all at the expense of a lesson to trade.

The reduction of the purchasing power, through enforced idleness and its correlatives, will, in itself, extend into billions of dollars.

The reduction in the purchasing power, through the decline in wheat, cotton, wool and corn, has had a surprising effect, and the fearful liquidation of stocks of 30 to 50 per cent. from their former value caused further contraction in the volume of trade. Let us consider, therefore, what the loss of some $2,000,000,000 of trade from the above causes involves. Besides, both wholesale and retail merchants restricted their purchases to immediate wants, and manufacturers who had closed their doors found no immediate inducement to resume, preferring to await a certain revival in trade.

One would naturally suppose that the prospect of a tariff revision, with its uncertainties, would have had an aggravating effect upon the situation, but I am unwilling to believe that either manufacturer or merchant would refuse present trade offered fearing the results of what might occur one year hence.

It is also worthy of notice in this connection that out of several hundred manufacturers who had from various causes closed their doors not 5 per cent. of the number who were asked for information have been willing to admit they were affected by expected tariff reduction.

It is quite probable that many manfacturers have been induced to start their works only on conditions which

Hosted by Google

have involved the wage earners sharing a portion of the uncertainty and responsibility by a decline in wages.

But public opinion has undergone considerable change regarding tariff legislation within the last few months. The fact of our present revenue being insufficient has had its effect upon those who have the matter in charge at Washington, and the pulse of public opinion has been felt at various times in a suggested advance in sugar duties and the advisability of an income tax, neither of which have met with popular approval. Local representatives from various sections of the country have shown a desire to modify or suppress a reduction affecting their own immediate industries, and we think that it is generally conceded that a general decline in duties upon goods suicidal to our domestic manufacture is impracticable and will be touched upon cautiously.

I can therefore see nothing which indicates that the fear of tariff reduction has thus far had any material influence upon the present business depression. Whatever may be the effect of the proposed tariff legislation during the coming winter remains in the dim future, and need not now be discussed. I have not been called upon to express an opinion on the future.

The reasons which I believe have been the cause of the present panic have not all been removed. I believe the first is essential before recuperation is complete. At the present time we have less than 8½ per cent. reserve gold to pay our demand indebtedness. When this is corrected, then if we could be assured that the proceedings in Congress on the Tariff during the coming winter would not disastrously affect trade, men who have money invested at the risk of business and commerce, and our banks that now hold almost an unprecedentedly large surplus reserve, would feel more secure in extending credits; manufacturers would then be disposed to anticipate a revival of trade, and the services of the wage earner would naturally be called for.

It may be well to call to mind, however, that a cyclone may destroy an entire town in a night, but it may require years to rebuild.

An Abnormal Demand.

THE CHICAGO Hardware merchants have experienced an unusual demand the past two or three weeks for Bolts, Sash Locks and Revolvers. There has been an alarming increase in house breaking and in highway robbery, and the natural result is that the citizens are endeavoring to protect themselves as thoroughly as possible. Bolts are being put on doors which hitherto have been deemed sufficiently secure when locked in the ordinary manner, and peaceful citizens who never fired a pistol in their lives have suddenly transformed themselves into walking arsenals. Hardware merchants say that the demand for the articles referred to is greater than they have known for a long time. It is, of course, only temporary, but for the time it has amounted to a small sized boom. Extraordinary police precautions are now being taken to suppress the people who are committing depredations, and perhaps by this time the scare is over. It is ascribed by the authorities to the scarcity of employment, and the sudden advent of cold weather has also made many desperate who were in absolute need. It is not a condition of things which makes Chicago Hardwaremen happy, even if they do receive some profit thereby.

The Hardware Club of New York.

I. DESCRIPTION OF PREMISES.

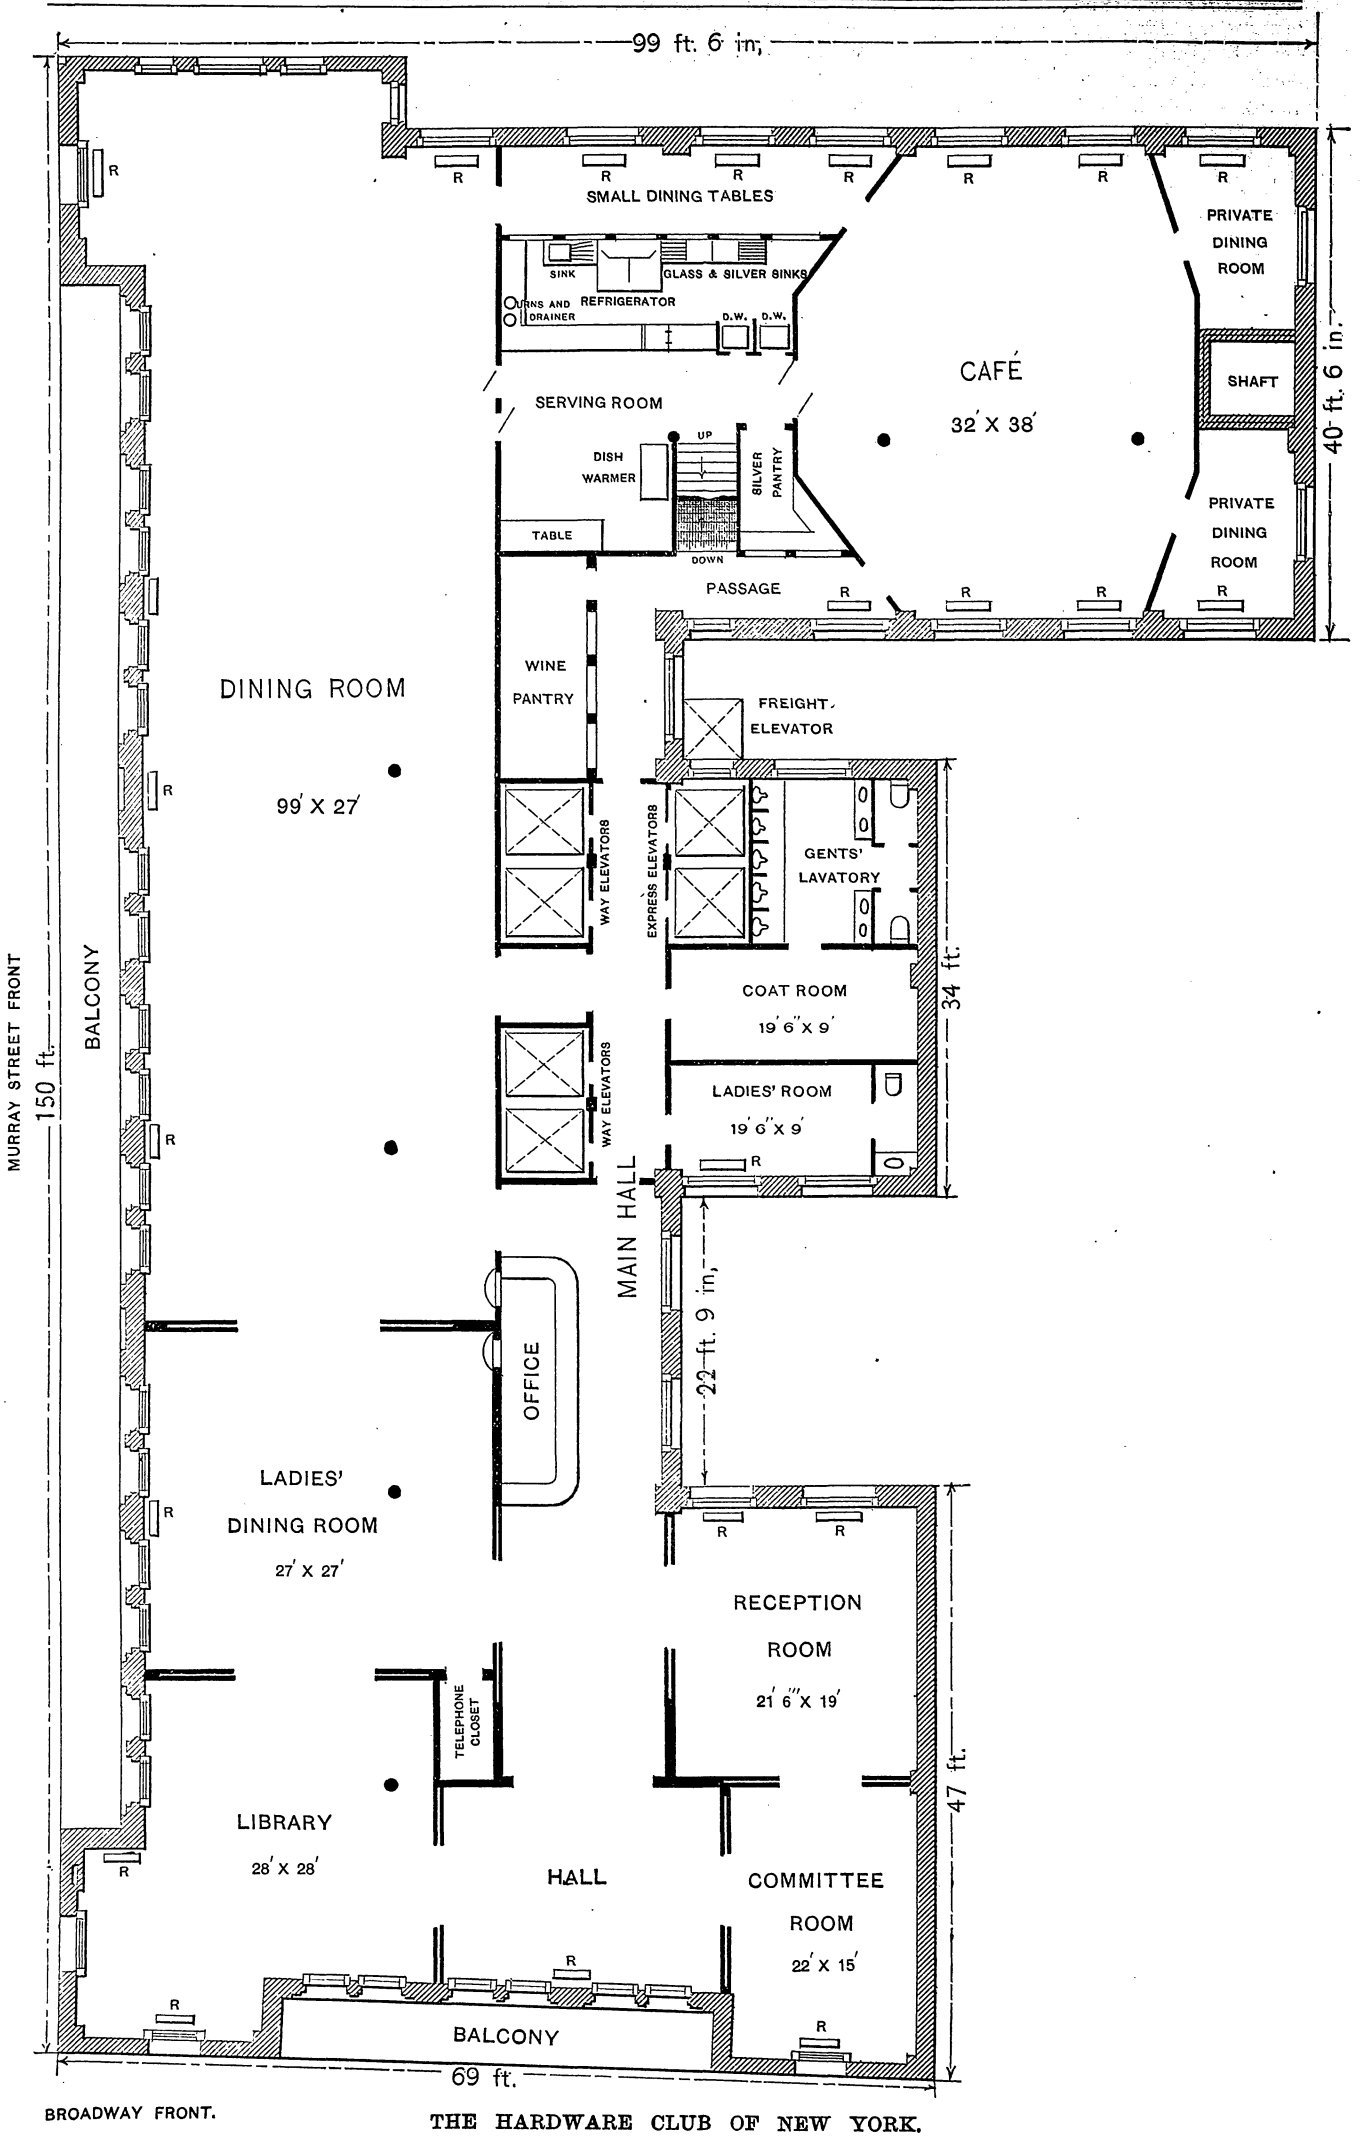
WE GIVE HEREWITH detailed drawings, engraved from the architect's drawings, showing the ground plans of the premises which the Hardware Club will occupy in the near future. They are located in the upper portion of the noble Postal Telegraph Building, at the corner of Broadway and Murray streets, and were arranged specially with a view to their accommodation. Owing to law suits, fires, strikes and other delays the completion of this structure has been interfered with, but February 1 is now named as the time when the club authorities can take possession and prepare the apartments for occupation.

THE BUILDING.

As originally intended the edifice was to be 13 stories high, but as the result of negotiations between the governors of the club and the Postal Telegraph Company, a fourteenth story has been added for the use of the club, and above it a mezzanine floor for storage, and above this an extensive addition on the roof for culinary purposes, the help's dining rooms, &c. The proprietors of the building have taken pleasure in meeting the views of the club in a most liberal spirit, arranging the rooms as desired, and giving the whole an elegant finish, thus adapting the premises perfectly to the purposes of the club. In view of this fact the club would practically be no better off if they had projected and erected the building themselves, renting that part of it for which they have no use. Outside of the portion reserved for telegraph and club purposes the remainder of the building will be divided into offices.

If our readers will refer to *The Iron Age*, October 6, 1892, and compare the floor plan there given with those which are presented herewith, they will obtain an excellent idea of the manner in which the project has grown, as the result of the indefatigable efforts of the gentlemen who have had the matter in charge, who have been endeavoring to provide suitable quarters for what has been gradually developing into an association of much dignity and character. Many of the members of the club probably do not fully realize the measure of solidity, prominence and character represented by the names already on the roll, standing as they do for men well known to the trade and throughout the country as leading merchants and manufacturers, with not a few eminent in finance, law and other dignified vocations.

When the club is installed in its new home it is safe to say that the members will feel amply repaid for the delay in carrying out the project in the completeness, luxury and extent of the provisions for their comfort. The conditions of the club are such also that no re-establishing of themselves in larger quarters will be necessary in consequence of subsequent growth and expansion for a long time to come. The governors and committees, under the advice of accepted authorities in positions of responsibility in the best dining clubs of the metropolis, have very sagaciously provided for the present and anticipated future needs.



It will be remembered by those familiar with the subject that when the decision was made to enlarge the scope of the membership, reserving to the Hardware and related trades the government of the club, the direction of its policy and the control of its action, gentlemen connected with other lines of business were made eligible for membership. This step was taken with a view to providing better facilities than would have been possible except with a large revenue. It was believed that very many desirable persons could thus be secured as members, and the correctness of this view has since been demonstrated by the applications which have been received for membership from many gentlemen unconnected with the Hardware and kindred lines. The great majority of the members are, however, connected with the special branches of trade for which the club is specially intended.

The building itself is centrally located in the territory in which the Hardware and Metal trades are mainly concentrated, and is also conveniently accessible to a large number of the members of the club who are bankers, financiers, lawyers and merchants identified with other lines, city officials and prominent professional men in different walks of life. Situated as the club is on Broadway opposite the City Hall, it is easily reached by surface lines and elevated railroads, and is conveniently accessible to ferries, and is also but a few minutes' walk from the terminus of the New York and Brooklyn Bridge.

From the roof of the structure, which is covered with cement walks similar to those on the street, is afforded an inspiring view of both the North and East rivers, with their enormous commerce, of the harbor and lower bay, of the Narrows, forts, islands, &c. Following the course of the East River the Long Island Sound can be distinctly seen, while the famous Palisades of the Hudson are equally near. The building itself has been constructed of the best materials in the most substantial manner, and is a splendid example of modern architecture and improved appliances for the comfort and convenience of those who are especially concerned.

The opinion is expressed by an official of one of the best known dining clubs in the city that when the plans determined on and now in course of execu-

Hosted by Google

THE HARDWARE CLUB OF NEW YORK.

Hosted by Google

tion are consummated, the appointments and facilities of the club's quarters will be excelled by none in New York. While essentially a dining club, it will be possible to obtain a meal there at any time during the day from 7 a.m. until 7 p.m.

Entering the building from the street one will have a choice of six luxurious elevators which run to the top of the structure. Two of these will be express elevators, making their first stop at the eleventh story. Stepping from any of the elevators one finds himself in the main hall, which is 94 feet long, and one end of which opens out into a fine balcony on the Broadway front of the building.

MAIN HALL.

It is intended to make the main hall a leading feature of the club's quarters. For a considerable distance it is 14 feet wide, but near the front at the Broadway end, as shown in the plan herewith, it becomes 22 feet. It may be said here that the entire floor will be of stone of a reddish color. The hall will be carpeted or strewn with rugs. Settees, chairs, &c., will be distributed at intervals, the walls will be hung with pictures, and the whole court made very inviting and effective. Near the entrance to the hall proper on the Murray street side will be the office, with an official in charge.

COMMITTEE AND RECEPTION ROOMS.

At the left of the hall is what may be termed a reception room, 21½ by 19 feet in dimensions, while beyond it is another room, 22 by 15 feet in size, which can be used as a committee room. Both rooms are suitable for a number of uses, among which may be mentioned their adaptability for trade meetings, such as are often held in places of business, hotel parlors &c. On proper notice it will no doubt be feasible to obtain one of these rooms for such purposes, and should the meeting be protracted luncheon, dinner and supper can be expeditiously served there. Merchants will thus be free from interruption and can satisfactorily attend to the matters for the adjustment of which the meeting was called.

LIBRARY.

To the right of the hall, as shown in the plan, is the library, the greatest dimensions of which are 28 x 28 feet. This will be luxuriously fitted up with easy chairs, rockers, lounges, &c. The leading commercial, news and trade papers will be kept on file, and facilities given for correspondence or other use of the members. Here, also, it would be desirable to have for reference as complete a line of catalogues, price-lists and other trade literature as it may be feasible to collect. This room, overlooking the City Hall Park and having a southern exposure, with a view down Broadway, is not likely to prove unattractive.

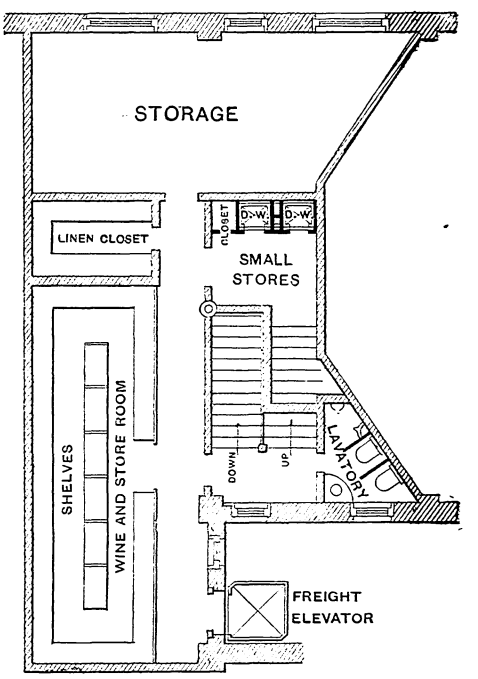
LADIES' DINING ROOM.

Between the library and the main dining room is the ladies' dining room, the size of which is 27 x 27 feet. The principal entrance to this room will be from the large hall. It will be remembered that the original plan in regard to these premises did not contemplate having such a room, as the amount of space available did not permit it. The enlargement of the project, however, by which the kitchen and other apartments connected with the preparation of food were put in the structure on the roof, permits this important addition to the outfit of the club, the members of which will thus have a suitable place in which to entertain the lady members of their families when in the vicinity. It is needless to say that this will supply a long felt want, owing to the scarcity of such conveniences in a purely business district.

TELEPHONE.

It will be observed that between the ladies' dining room and the main hall the telephone closet is located. The importance of this adjunct will be appreciated, and with the long distance telephone members of the club will be in communication not only with houses in the city and vicinity, but with places out of town within a constantly enlarging circle.

THE DINING ROOM.



The main dining room will have an ample capacity, being about 99 feet long and 27 feet wide. It has been estimated that this room will comfortably accommodate about 300 persons at one sitting. There are four principal entrances to this room, not to mention those leading to the serving and similar rooms. The office, it will be seen, also opens into it. In this spacious room the annual club dinner will probably be served. With the floor richly carpeted and the furniture harmonizing with the mahogany cabinet work with which the whole premises will be trimmed, and with the extensive outlook to the South, there will be little to desire in the way of comfort and elegance. Light will be furnished from electric incandescent burners, and heat through radiators, the location of which is indicated on the diagram. Above the ceilings will be a spacious air chamber, through which air will be forced to counteract the superfluous heat during the summer months. All meal orders will be written and instantaneously transmitted through pneumatic tube service to the *chef* in charge of the preparing room. This will save much valuable time to the waiters. A glance at the diagram will discover how close contact with the serving room, silver, glass and wine pantries is secured. The table furniture will be in keeping with the character of the club as regards china, silver, glassware, linen, &c. The order for the linen, which will be of special design and will contain the club's monogram, has already been given.

BALCONIES.

Before leaving this part of the building the balconies on both the Murray street and Broadway sides should not be ignored. The aggregate length of both is 156 feet; the depth 4½ and 5 feet, respectively. They are easy of access, and in suitable weather will prove an excellent place in which to sit and chat. In the summer the windows will be equipped with awnings to afford protection from the sun's rays.

CAFÉ.

Continuing the circuit, the *café* is reached from the large dining room through the passage beyond the serving room, which is 7 x 28 feet. Presumably the majority of *café* patrons will go directly to that room on reaching the club floor through the main hall, which will be the principal thoroughfare for that purpose, but the hall or court above alluded to adds to the convenience and accessibility of its location. It has been suggested that in this passage one or more tables can be

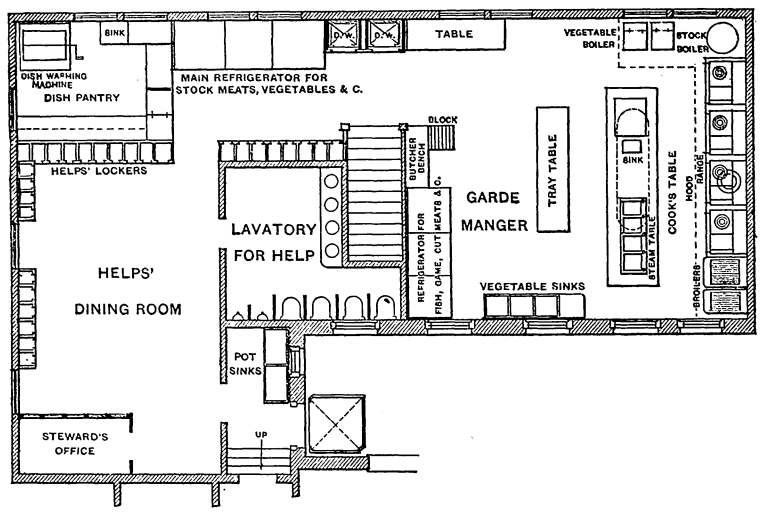
The Hardware Club.—Mezzanine Floor.

placed at any time for an overflow from dining room or *café*, or for any who may prefer the isolation and seclusion thus obtained. Being near the western windows, the outlook, with a view of the North River, is an admirable one. The *café* itself is an eight-sided room, the greatest dimensions of which are 32 x 38 feet. Here a hurried or an informal meal can be enjoyed with greater freedom than would in the nature of things be expected in the main dining room.

PRIVATE DINING ROOMS.

It is about settled that the two irregular shaped rooms seen in the diagram beyond the *café* can be best utilized for private parties. Each is about 16 feet long and 8 feet wide, and if they are much sought after it is suggested that it may be necessary to charge a small amount for their use, with the purpose solely of insuring an equitable distribution of the privilege, unless some more satisfactory method can be devised.

Hosted by Google



The coat, cloak and retiring rooms occupy the whole central wing of the building in which the two express elevators are. Here also are the lavatories, closets, &c. These conveniences are, it will be observed, ample. A freight elevator adjoining this wing will be devoted exclusively to the transportation of stores, packages, &c.

SERVING ROOM.

This room, it will be observed from an inspection of the diagram, is well situated for the uses for which it is intended. There are several means of ingress and egress, and a number of pantries for silver, glass, wine, &c. Two dumb waiters also will connect these rooms with the mezzanine floor and kitchen above.

MEZZANINE FLOOR.

The mezzanine floor is located just above the serving room and under the kitchen, but isolated from both except as reached by the staircase, by which access to the roof is also gained. This floor, as indicated, will be used mainly for storage.

The Hardware Club.—Kitchen.

KITCHEN.

The diagram of the kitchen practically explains itself. In a dining club the kitchen is, of course, of prime importance. An inspection of either the plan or the room itself will convince our readers that it is exceptionally complete. If things do not run smoothly in that department it will not be owing to the lack of modern labor saving devices and the requisite paraphernalia.

II. THE MANAGEMENT OF THE CLUB.

The foregoing description and the accompanying illustrations will make it evident that the premises of the club are a fitting home and center for the trade of New York and vicinity, as well as for manufacturers and merchants in other parts of the country. In this connection it is pleasant to report the hearty support which is given to the project not only by Hardwaremen doing business in the city, but also by many representative manufacturing and jobbing houses in other parts of the country and by not a few retailers. Manufacturers and jobbers of New England, Pennsylvania, New Jersey, and adjacent States are well represented, as are also some of the largest jobbing houses in the West. Among the members are also many identified with the extensive exporting interests which center in New York, and it is expected that this class of trade will be largely represented in the club. This membership is regarded as especially desirable, as it will tend to bring manufacturers directly into contact with the many resident buyers of foreign houses and with the great export commission houses who have so influential a part in the distribution of American products to all parts of the world. The presence in the club of representative bankers, lawyers, city officials and others in various branches of trade more or less closely related to Metal interests will give the club character and strength. While the number of members already exceeds 300, it should be remembered that comparatively little effort has been made to induce persons to join the club, and the limit which has been assigned to the membership will no doubt soon be reached.

FURNISHING THE CLUB.

The matter of furnishing the apartments of the club is now receiving the careful attention of the House Committee, which consists of Messrs. McCARTEE, VARICK, BISSELL, VAN GLAHN and W. H. WILLIAMS, *ex-officio*. This work will be recognized as one calling for exceptionally good judgment and taste and for which the committee is well qualified. The plans contemplate furnishing the club with an elegant and complete outfit. In the meantime the Finance Committee, consisting of Messrs. WALKLEY, OGDEN and HAYDEN, is giving attention to the financial side of the matter with a view to providing the ways and means for the carrying out of the project.

CLUB FACILITIES.

Many of the members connected with the trades to which the club is especially devoted unquestionably regard it with favor in good measure because of the opportunity it will afford for acquaintance with other persons in the trade, as it will bring them together in a very pleasant way. This, however, is only one of the advantages which the club will possess, and besides the very useful purposes which it will thus serve there are more substantial ways in which it will be of advantage to those connected with it. Many of the members will undoubtedly find their business interests promoted by the opportunity which the club will afford for meeting with the trade in the city and many outside of it who will make the club their headquarters while in town. Merchants in the city will also find the club a very convenient and pleasant place to take their customers and others with whom they may have business relations, who by their introduction may be made at home in the club and given the privileges of membership for a time. The rules relating to this matter have not been formally determined, but it is safe to assume that they will give the members all reasonable facilities in this direction, and thus make the club supply a want which has for a long time been felt. A similar privilege extended to non-resident members will enable them to introduce other members of their firm to the club, thus giving them an opportunity to enjoy its conveniences while they may be in the city. The carrying out of the plans which have been formed will render the club more and more a rendezvous for non-resident manufacturers and merchants who desire to keep in touch with the trade and appreciate the advantages offered by the organization. At the club can be received letters, telegrams, packages, samples, &c., appointments made and interviews had, with a certainty of always meeting at a common center a large number of persons who otherwise would have to be sought in their places of business. Arriving in town, hand packages, wraps and baggage can be left if desired, the soil of travel removed, and a meal partaken of at any time during the day. This may occupy much or little time at the convenience of the member, while pending the preparation of the meal the intervening time can be occupied in various ways not possible at hotel or restaurant. It has, indeed, been suggested by one who looks at the thing in a very practical way that the saving to those visiting the city frequently in their hotel bills will soon more than cover the amount of the dues. Those in charge of the interests of the club recognize the desirability of having as large a non-resident membership as possible with a view to making the club as thoroughly representative of Hardware and Metal interests as possible. The more adequately and fully the trade is thus represented in the membership the more attractive and useful the club will be made.

Hosted by Google

THE DINING ROOM AND CAFÉ.

While the club will serve social purposes in a very pleasant way and be of practical business advantage, it must be remembered that it is primarily a dining club, and that it is at the noon lunch or dinner that the members will principally be brought together. Very much of the success of the club will unquestionably depend on the attention which is given to this matter and the practical way in which the views of the members in this regard are met. It is obviously desirable that the bill of fare should be sufficiently comprehensive to enable those who desire an elaborate dinner to obtain it of the very best quality and at reasonable charges, and that others who are accustomed to take a much less formal meal shall be able to obtain it as at least as moderate a price as elsewhere and amid all the comfort and elegance of the surroundings of the club. There is undoubtedly a wide difference in the practice of merchants in this regard, some devoting a considerable time and making a substantial meal at noon, while others prefer a very simple lunch, which is not infrequently hurried. Organized as the club is for the convenience of its members, it will be necessary for it to be conducted in such a way that these diverse views may be met and all be enabled to enjoy the privileges of the club without expending more than the usual amount for lunch or dinner.

If the plans of those in charge of the interests of the organization are carried out with the wisdom and success with which they have been elaborated, it is safe to say that after the club has been in operation for a time, the trade will wonder how they ever got along without it.

III. VIEWS OF WILLIAM H. WILLIAMS.

A representative of *The Iron Age* called on William H. Williams, the efficient president of the Hardware Club, and was favored with the following remarks in regard to the scope of the club and the position it will assume in the trade:

It is pretty good evidence of the desirability and utility of the scheme for having here in New York a representative Hardware club that your journal, which has never encouraged visionary or impracticable enterprises, has given to the club a consistent and unwavering support since the idea was first suggested. There are many reasons for the existence of such a club which will occur to your readers, a few only of which I will mention. Many of the great industries centered here in New York have their boards of trade or exchanges where those interested meet daily either for the transaction of business or for the exchange of useful information; but the Hardware trade, which certainly is a most important industry not only in New York, but throughout the country, has never enjoyed such advantages. For obvious reasons the products and commodities in which it deals cannot well be marketed through the medium of an exchange of the character of the Produce, Cotton or Stock exchanges, but those who conceived the idea of having a Hardware club were at the time deeply impressed with the desirability of having a common and daily place of meeting, where we could get better acquainted with each other, where information affecting the various interests relating to the trade might be exchanged, and members might meet their local customers or those with whom they have business relations who are temporarily stopping in the city; where, in fact, mutual interests might be organized effectively for the common benefit of all. The most practicable means of accomplishing this seemed to be through the medium of a lunch or dining club, and the more the idea has been considered, the more confidence those who have originated it have in its feasibility. At the outset two things became apparent: 1, That such a club would be useless, or nearly so, if conducted on any other than a first-class basis, and, 2, that as the center of our trade here in New York is in close contiguity to other departments of business it would be advisable to associate with us such of the leading bankers, professional and business men in our vicinity as would be willing to join our club for the purpose of having a comfortable and satisfactory place to lunch, at the same time retaining for the club in its name and purpose the essential characteristics of a trade organization. These objects, we confidently believe, we shall attain in the really palatial home which the club has secured for itself in the new Postal Telegraph Building. A competent and well qualified House Committee has given much attention to the details pertaining to all the appointments of the club, and I am sure the membership will be proud of their club when it is fairly settled in its permanent domicile. I am very glad to see that so many gentlemen connected with our trade who only visit the city occasionally are associating themselves with the club as non-resident members. They will certainly find it a convenient place for meeting their New York friends and acquaintances, while the advantages in other respects that it will afford them during their sojourn here will, I am sure, be keenly appreciated. As an evidence of how firm a hold the idea of having such a club has upon the Hardware trade I need only refer to the fact that during the trying season through which we have just passed, which has scarcely been paralleled in the history of the country, we have not only held, but have increased our membership, and that, too, without having any regular meetings or any place for holding such meetings. In common with all the members of the club, I feel grateful to *The Iron Age* for its hearty co-operation, and am pleased to think it will find its reward in the abundant success of the enterprise which it has so generously fostered.

Trade Items.

WILLIAM G. HIBBARD, president of Hibbard, Spencer, Bartlett & Co. of Chicago, sailed from San Francisco on the 17th inst., bound for a tour round the world. On his way across the Pacific Ocean he will make a brief stay at the Sandwich Islands. He is accompanied by his two sons. Mr. Hibbard has been closely confined to his desk for years, looking after the multifarious details of his great establishment, and has richly earned the recreation which he is now enjoying. His many friends in the Hardware trade wish him a most enjoyable trip and a safe return.

PARKHURST & WILKINSON of Chicago, jobbers of Heavy Hardware, have at length secured the discharge of their assignees, and state that all accounts made in the name of the latter will be settled by the firm. They have put in the hands of a trustee sufficient real estate and other outside property to meet all deferred payments, so that they have their stock of merchandise and accounts receivable clear, as a working capital. They will continue business in their old lines of staple Heavy Hardware, Iron, Steel, Carriage and Sleigh Goods, Bicycle Makers' Supplies, Miners' and Smelters' Goods and Railroad Supplies. The firm have had the sympathy of the trade in their financial misfortunes, and the news of their settlement will be received with pleasure.

THE PENNSYLVANIA BOLT & NUT COMPANY, Lebanon, Pa., are now making a specialty of refined Bar Iron, also of Electrical and Structural Forgings, in addition to their former lines. The line of Forgings include Arch Bars and Body Bolsters, Car Forgings, Anchor Bolts, Stirrups, Brake Levers, Link Pins, Punched and Bent Plates, Tie Rods for cable and electric roads, Forgings for electric railways, Arm Braces for telegraph poles, Bridle Irons and the various forgings incidental to structural work. Their product of Cold Punched Chamfered and Trimmed Nuts has also been largely increased during the past year.

E. C. STEARNS & Co., Syracuse N. Y., announce in their circular that customers can obtain Stearns' bicycles of 1894 models for the holiday trade. Reference is also made to the achievements of John S. Johnson on a Stearns wheel at Independence, Iowa, and letters are given from riders using these machines. In this connection the manufacturers remark that while Johnson rides a racer its model is not for his exclusive use, and that as many of a like pattern as are ordered will be promptly supplied at the regulation price.

GEORGE W. GRAHAM, 88 Chambers street, New York, is sole agent for Robinson's Cement, manufactured by the Robinson Cement Company, New York. This is a preparation for mending china, glass, crockery, stone, marble, ivory, wood, &c. It is said to be made according to the same formula used orignally 40 years ago. It is put up in glass bottles, packed one dozen in a suitable box. It is intended largely for family use, as a handy composition for repairing the numberless fractures incidental to housekeeping.

AMONG CYCLING CIRCLES it is expected that the six day race to be held at Madison Square, New York, during the holiday week, will be the greatest cycling contest ever held. It is understood that the programme for the short distance races has not yet been arranged, but that substantial prizes will be offered, and that there will be a number of races run each evening.

Hosted by Google

KINSLEY IRON & MACHINE COMPANY, Canton, Mass., issue a circular which illustrates two patterns of Calking Vises, Kinsley and Skiff, which, it is stated, are made from best Iron and are furnished with one beveled and two plain jaws of a high grade of Steel, carefully tempered. The rocker bolt is of Steel, held in place by a Steel set screw. It is claimed that the Vises throughout are made in the best possible manner.

G. & H. BARNETT, Philadelphia, Pa., proprietors of the Black Diamond File Works, are sending, with their compliments, Aluminum Cigar Cases for pocket use. On both sides of the Case is a reproduction of their trade-mark —a File in a diamond of black enamel —together with name, address, &c. The Case holds four cigars and is a pleasant reminder of Black Diamond Files.

THE BILLINGS & SPENCER COMPANY, of Hartford, Conn., have opened a Chicago branch at 59 South Canal street, with W. A. Davis in charge as Western manager. This is in the same store with the Prentiss Tool & Supply Company, and the latter will attend to retail city orders, while Mr. Davis will devote himself to handling the business of the trade in general. They show a full line of samples of their specialties, including Machinists' Hammers, Pipe Wrenches, Ratchet Drills, Combination Pliers, Wire Cutters, Beam Calipers, Surface Gauges, Dies and Die Stocks, Machinists' Clamps, Screw Drivers, &c.

WILLIAM BAILEY, who had the distinction of being the oldest maker of Nails in the world, died at his home in Melrose, Mass., November 21, 1893. He was over 92 years of age, having been born in 1801, at Newburyport, Mass. When 12 years of age he apprenticed himself to a blacksmith and learned to make Nails by hand. This line of business he followed all his life, and at the time of his death was largely interested in the manufacture of Nails and Iron. He was the inventor of many improved machines for use in the manufacture of Nails.

IN THEIR ADVERTISEMENT in this issue the Clement Silver Flatware Company, Unionville, Conn., illustrate their ware, which is referred to as a substitute for solid silver. It is explained that there is no plating to wear off and no rusty edges, while the cost is no more than similar goods. A sample dozen will be sent on approval to any house in the United States with prices and discounts.

ANNOUNCEMENT IS MADE that the interest of F. M. Woolworth in the firm of Kelly & Woolworth, Niagara Falls, N. Y., has been purchased by H. W. McBean. The business will be continued by Kelly & McBean on an enlarged scale and with increased manufacturing facilities. It is intimated that a special effort will be made to fill orders promptly and at the lowest prices.

S. S. SURDAM of Oyster Bay, N. Y., has purchased of H. D. Heath, Candor, N. Y., his interest in the Hardware part of his business. Mr. Heath will continue the sale of Agricultural Implements, Phosphates, Lime, Cement, &c.

THE FIRM of Beato & Calle, agents for the sale of Hardware and Machinery, Matanzas, Cuba, were recently dissolved by mutual consent. Victoriano de la Calle is now carrying on the business under his own name.

THE NATIONAL MFG. COMPANY, Wilkesbarre, Pa., have opened an office and warehouse at 87 Liberty street, New York, which will promote the convenience of the trade in this vicinity.

S. R. DROESCHER, 58 Warren street, New York, quarrier and importer of Razor Hones, Oil Stones, &c., announces he has opened a new establishment at the above address. He alludes to the fact that he carries in stock a full and complete assortment of Razor Hones and Oil and Scythe Stones. He adds that through European connections he is able to bring out on importation orders any special articles of this nature at lowest rates.

Price-Lists, Circulars, &c.

BLAIR MFG. COMPANY, Springfield, Mass.: Lawn Mowers, &c. A handsomely printed catalogue illustrates with descriptions and prices the Easy, Archimedean high wheel, Hercules high wheel, Bay State, style B, Lawn Razor, style B, Leader, style B, Archimedean horse-power and the Mohawk, style B, Lawn Mowers; California Lawn Sprinkler, Revolving Turf Edger, Lawn Rakes, Model Lawn and Garden Roller and Lawn Sweepers. The manufacturers remark that for the first time during the 15 years they have been engaged in the manufacture of Lawn Mowers and Lawn specialties they now present under one cover a complete list of the different styles of Lawn Mowers, &c., of their production; and that their line of Mowers includes both front cut roller and rear cut side wheel machines of varying hight of wheels and number of revolving knives. The point is emphasized by the makers that in the manufacture of Mowers they apply the principle of exact duplication of different parts of the finished product, by tools and fixtures specially designed and adapted to the work to be done; and that as a result they are able to produce Mowers of superior mechanical construction at the lowest possible cost. It is further stated that they make but one quality—the best—and that any product of their works is warranted to be the highest grade of its kind; also that no order is too large or too small to receive their careful attention. Their European agents are Markt & Co., New York, London and Hamburg.

SILVER & CO., 20 Warren street, New York, and 304-310 Hewes street, Brooklyn: Household Inventions. Large illustrated circulars show Fruit Strainers, Egg Beaters, Soap Cups, Measuring Glasses, Flour Bin and Sifter, Gas Burner Stoves, Spirit Stoves, Steam Cookers, Cooking Crock, Display Stands, Yankee Roach and Beetle Trap, Coffee and Tea Pots, Novelty Gas Heaters, Royal Roasting and Baking Pans, &c.

GEORGE CHASE, 107th street and First avenue, New York: A reduced price-list, under date December 1, 1893, relates to best White Washita, Washita mounted in polished cases, Green Paper grade, and Arkansas Stone. In addition are Arkansas, Scotch and Hindostan Dental Wheels, Regarding Chase's Green Paper brand of Washita Stone, it is remarked that the Stone is carefully selected as to its cutting qualities, being of a soft, even, fast cutting grain.

FLORENCE DISPLAY FIXTURE COMPANY, Geo. H. Bennett, proprietor, 204 Lake street, Chicago, Ill.: Store Display Fixtures. One catalogue illustrates their regular line of standard fixtures, which are always carried in stock. These include Stands, Cutlery and Plate Glass Brackets, Post Bands for iron columns, over counter fixtures, fixtures in shape of letters, &c. Another catalogue shows new and accurate designs of fixtures, the leaves being secured by silken cords to allow the addition of extra leaves. The manufacturers state that their work is all first class and absolutely original. They are prepared to make designs for any style of window or display. The plates in this catalogue show elaborate and handsome designs of fixtures, many with electric lights in them.

THE COLUMBIAN SILVER FLAT WARE COMPANY, Unionville, Conn.: Solid Columbian Silver Flat Ware. The goods made of this substitute for solid silver include Knives, Forks and Spoons. The ware is described as being nearly as white as sterling silver and it is stated that with as careful use as sterling silver it will outlast any flat ware on the market. It is claimed that the knives are as good cutters as solid steel Knives, and that they never show any rust, and that they can be sharpened at any time. The manufacturers warrant the goods manufactured from the metal 25 years to wear as white as sterling silver, to hold a temper equal to silver, and never to show any signs of rust. Illustrations of the goods are shown in various patterns.

LUDLOW-SAYLOR WIRE COMPANY, St. Louis, Mo.: United States Wire Mats and Matting. The Mats are made in regular, circular and irregular shapes. The Matting is made in 50 and 100 feet rolls, 16 to 48 inches wide, or wider if desired. It is explained that rolls can be cut to any required lengths by cutting one wire in two places; that it rolls up close, is elastic, flexible, cleanly, of heavy wire, and that it is so woven as to form a good scraping surface in any position. The point is made that remnants can be worked into regular sizes of domestic Mats.

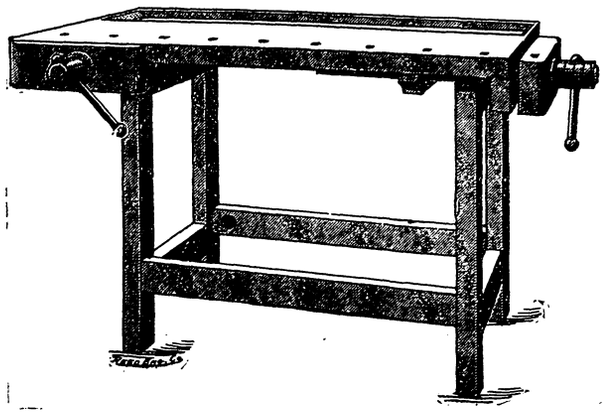
GRAND CROSSING TACK COMPANY, Grand Crossing, Chicago: New goods. An illustrated pamphlet is devoted to 5-cent goods put up by this company, including Hammer Carpet Tacks, Claw Handle Carpet Tacks, Bonnie Blue Tacks, Bill Nye Brad Box, Just Enough Brass Nails, Double Enough Cobblers' Nails, Wood Keg Carpet Tacks, Gilt Nails, Centum Carpet Tacks, Austral Steel Tacks and House Tacks.

HOLMES, BOOTH & HAYDENS, 25 Park place, New York: McGill's Patent Fasteners. Illustrated circulars show flat head, fancy capped shade and split shank Fasteners; Fastener and Staple Presses, Pin Fasteners, assorted Fasteners in caskets, card and calendar Suspending Rings, Adhesive Suspending Hooks and Eyes, round head, adhesive, H flat head and capped Fasteners, &c., also solid headed embossed Fasteners, gilt, silvered, bronzed and japanned. Over 200 patterns and sizes of these goods are made, designed for fastening and binding papers of all descriptions, sampling goods, &c., making paper and light wooden boxes, baskets and all descriptions of light binding.

Trade in Pittsburgh.

FROM Logan, Gregg & Co., Pittsburgh, Pa., we have the following advices in regard to the condition of the Hardware trade in that market:

There is a better feeling among the trade since the emphatic expression of popular opinion in favor of a protective tariff at our recent elections.



Gradually more men are finding employment as our mills and factories resume operations, and this is having a favorable effect on the purchasing power of the retail storekeepers, many of whom have had to carry their customers through the stoppage.

There is, however, a very conservative feeling, and orders, though more frequent, are for immediate wants. So far there have been very few failures among the Hardware trade in this vicinity.

Hosted by Google

Youths' Bench.

The Grand Rapids Hand Screw Company, Grand Rapids, Mich., are offering a youths' bench, as shown in the

Youths' Bench.

accompanying illustration. The bench is 20 inches wide, with 13-inch glued up maple top, and is 4 feet 6 inches long over all. It has both front and tail vise and holes for stops. Its hardwood frame is securely put together with joint bolts. The bench is made in two hights—30 and 32 inches. The bench is specially designed for use in manual training schools, but we are advised by the makers that quite a number have been sold to hardware dealers, some of them intending to sell them for the holiday trade.

Pittsburgh Mammoth Lamp Fount.

The Pittsburgh Brass Company, Pittsburgh, Pa., with New York office 36 Park place, are offering the Mammoth lamp fount herewith shown. The lamps are made in three sizes, the largest size, known as No. 3, being shown in the cut. This fount, it is stated, holds over 8 pints of oil, sufficient to yield a brilliant white flame for over ten hours. All sizes of founts are furnished with an indicator, represented by the dial in Fig. 2. The pointer of the dial is attached to a spiral brass ribbon, incased within a brass tube. A float on the tube engages with the ribbon and turns the

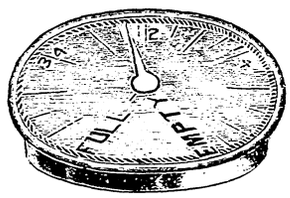


Fig. 2.—Indicator Dial.

pointer as it rises or falls with the oil. It is explained that the dial shows at a glance not only when the fount is full, thus removing danger of overflowing when filling, but also indicates the exact quantity of oil in the fount at all times. The founts may be stood on the base or used in connection with a harp. It is claimed by the makers that the lamp gives a large amount of light, that it is clean and easy to manage, that it does not break chimneys, and that it burns a long time without refilling.

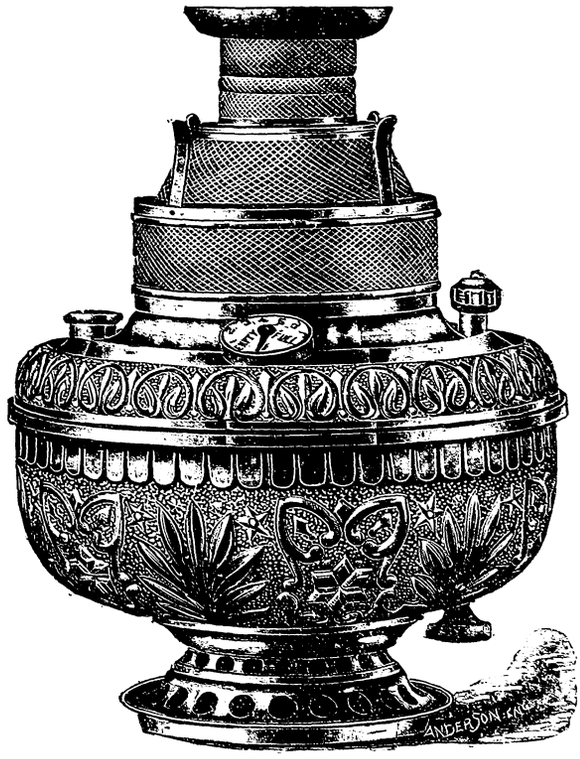

Fig. 1.—Pittsburgh Mammoth Lamp Fount.

The Willer Sash Lift.

Willer Mfg. Company, Fourth and Cedar streets, Milwaukee, Wis., are introducing the sash lift, a full size cut of which is shown in Fig. 1. Two lifts are screwed to the stiles of both the

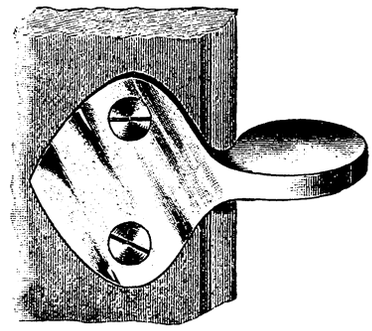

Fig. 1.—The Willer Sash Lift.

lower and upper sash in the positions shown in Fig. 2. The lower sash can be raised and moved as desired, while especial emphasis is placed upon the fact that by the aid of the lifts on the upper sash it can be lowered and raised up so as to shut tightly against the top jamb of the window, thus allowing the sash lock to be easily closed. The lifts

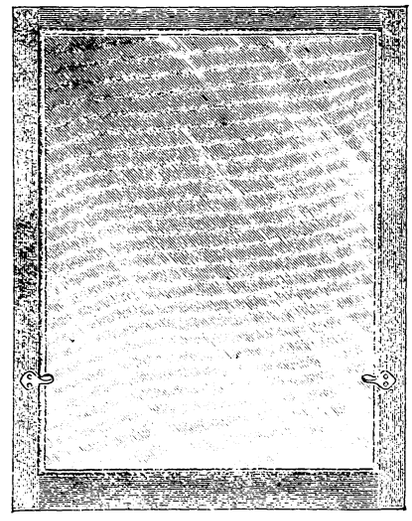

Fig. 2.—The Willer Lifts on Sash.

are furnished in Berlin bronze, brass, genuine bronze, old copper finish and nickel plated.

The value of real estate in New York City shows no signs of declension. A downtown surety company last week paid the enormous price of $387,500, or $273 per square foot, for a small lot at the corner of Broadway and Pine street. It should be stated, however, that special circumstances governed this transaction.

The Secretary of Agriculture in his report just submitted to the President states that there are in the United States 6,000,000 farms, upon which dwell more than 30,000,000 people, who furnish 74 per cent. of the value of exports of this country.

Riding Horse Tricycle.

The cut herewith shown represents a riding horse tricycle, being introduced by the Riding Horse Tricycle Company, rooms 10 and 11 Grand Opera Block, Canton, Ohio. The body is stamped from sheet metal, and is mounted on rubber tired wheels. The rider, seated in the saddle 2 feet from the ground, guides the tricycle by means of the reins and propels the vehicle as he would a bicycle, the legs of the horse responding to each revolution of the pedals, giving, it is explained, an exact reproduction of the horse's action in trotting. The horse in described as being 36 inches high, painted in desirable colors, with neat saddle, bridle rein and neck collar, and as having natural mane and tail. The horse is designed for the use of children from three to ten years of age.

Riding Horse Tricycle.

Expansion Bolts.

The Steward & Romaine Mfg. Company of 123 North Sixth street, Philadelphia, have added to their line the new double and single expansion bolts herewith illustrated. Cut No. 1 shows a double parallel expansion bolt, consisting of an ordinary square headed bolt with upper and lower nuts and expansion cases. The nuts are round, with V-shaped ends. The upper nut is loose and without thread, while the lower nut is threaded. Each nut is provided with two small lugs which fit into holes of corresponding size in the casings. In use the article to be fastened is placed in position and the bolt inserted in the hole in the masonry or other material. By turning the head of the bolt the nuts are drawn toward each other with a parallel movement and expansion thereby effected. The nuts being locked to the expansion cases by means of the lugs, it is claimed there can be no slipping, and a perfectly firm and reliable fastening is obtained.

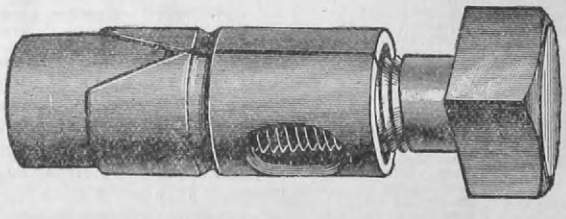

Fig. 2.—Single Expansion Bolt.

Cut No. 2 shows a single expansion bolt. In this bolt a threaded nut only is used. The casing is locked to the nut as in the double bolt, and expansion is effected at the bottom of the hole only.

Exhibit Stand.

Silver & Co. of 20 Warren street, New York, and 304-310 Hewes street, Brooklyn, are putting on the market wrought iron stands for the exhibition of whatever goods a tradesman may have for sale. The illustration presented shows one of the exhibition stands displaying their Royal roaster. The stands are made with three or four uprights and with different number of shelves. They are japanned in different colors and ornamented. The stands are adapted for the display of crockery, hardware, household goods, and, shown with a line of Britannia tea pots, present a handsome appearance. They are made in standard sizes, and are given to the trade in consideration of orders for an assortment of the Royal roasters and bakers. Special sizes can be furnished if ordered in sufficient quantity.

Current Hardware Prices.

NOVEMBER 29, 1893.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers prices and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers at the figures named.

The character @ is used to indicate a range of price; thus discount 50&10@50&10&5 % signifies that the goods in question are sold at prices ranging from discount 50 and 10 % to discount 50 and 10 and 5 %.

THE IRON AGE

THURSDAY, DECEMBER 7, 1893.

The Pearson Car Wheel Forging Machine.

The accompanying engravings show a new car wheel forging machine invented and recently patented by W. A. Pearson, formerly of Scranton, Pa., and now mechanical engineer of the General Electric Company, Schenectady Works. This machinery is now in successful operation at the works of the Boies Steel Wheel Company, Scranton, Pa. The hammer was built by the Morgan Engineering Company, Alliance, Ohio. It is double acting and has a stroke of 8 feet. The cylinder is 40 inches in diameter and weighs 15 tons. The entablature weighs 12 tons,

THE PEARSON CAR WHEEL FORGING MACHINE.

Hosted by Google

the housings 56 tons, the bed plates 30 tons. The piston head and rod are made in one forging and this was made by the Bethlehem Iron Company. It was made of steel similar to gun jackets, has a 6 inch hole through it, and was oil tempered and annealed. It is 22 inches in diameter and weighs 12 tons. The tup is also a steel forging and weighs 3 tons. There are some 20 tons of steel bolts. This hammer is constructed on the long bolt principle, all set up to a tension of 20,000 pounds per square inch. The hammer weighs, in round numbers, 150 tons. The anvil block weighs 250 tons, 50 tons of which is steel and 200 tons cast iron. Each block fits snugly over the projection on the top side of them. Both the top and bottom sides of all are planed accurate and then bolted together with four 6-inch steel bolts. The whole mass rests on three layers of oak timber, 12 x 12 inches, as shown in Fig. 5. These timbers were planed on the sides before being bolted together and then faced off on a boring mill. The bottom plate that rests on the concrete foundation was planed on the top side, making the whole thing mechanically correct. All corners of the under side of bottom plate were made round, so that it would not allow the foundation to crack from the corners. The size of the bottom plate is 11 x 13 feet and the base of foundation 26 x 32 feet.

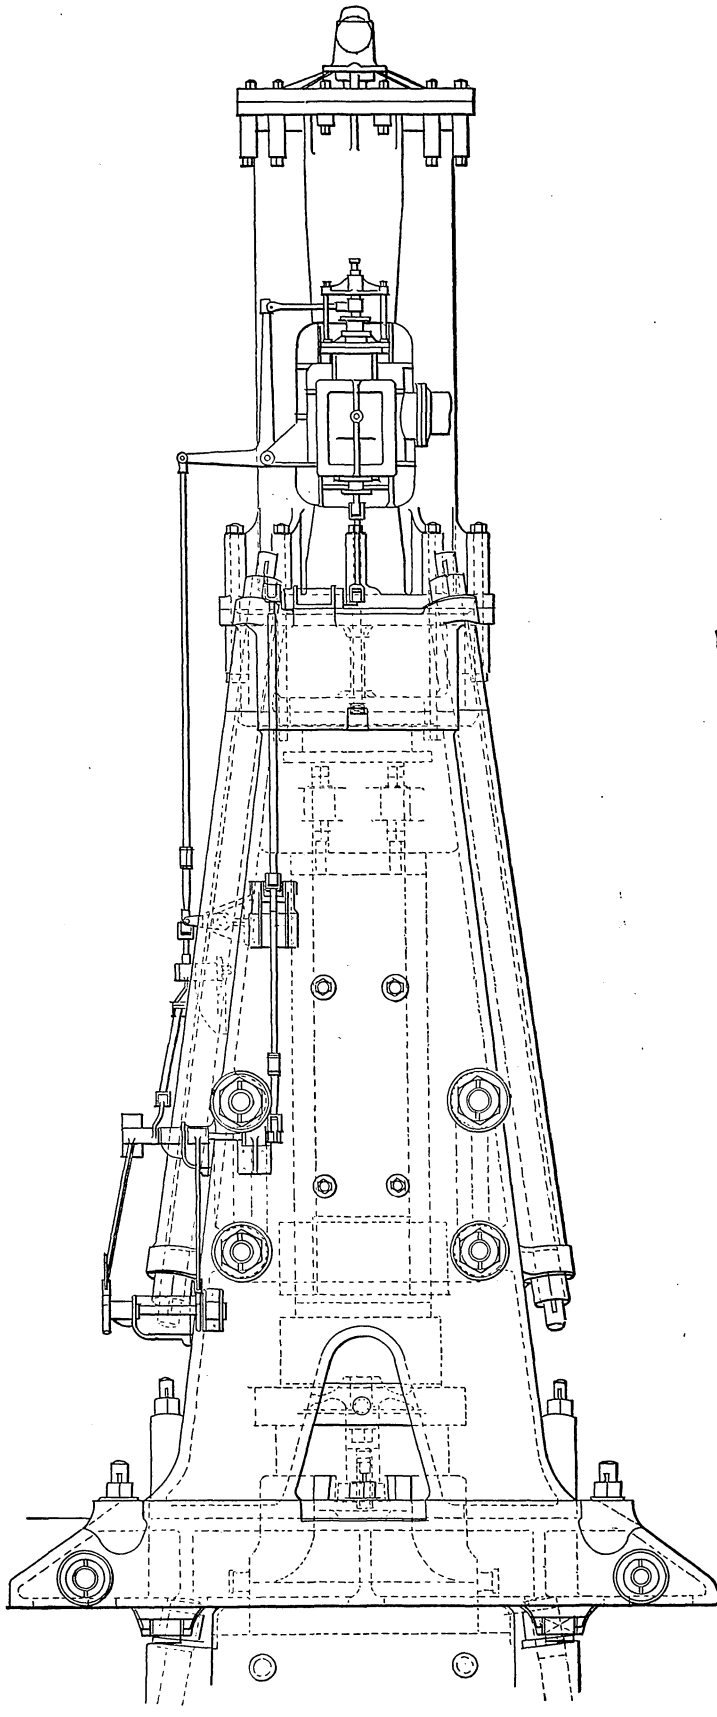

Fig. 2.—Side Elevation.

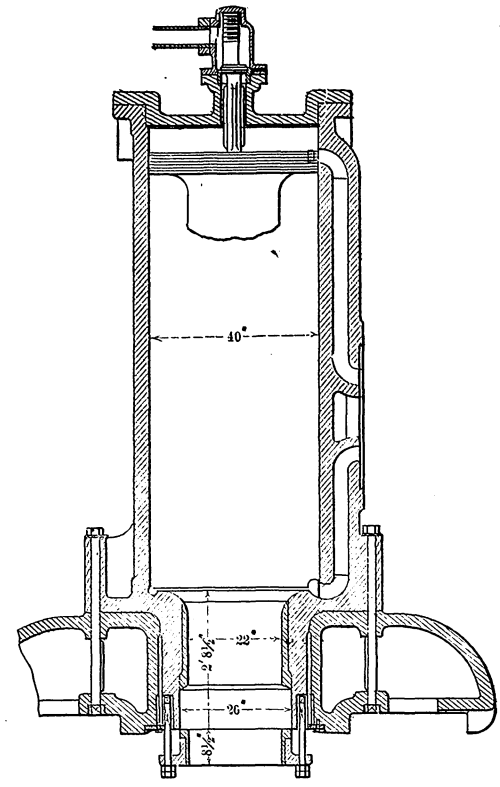

Fig. 3 —Vertical Section of Cylinder.

Fig. 1 is a front elevation of the machine. Fig. 2 is a side elevation of the same. Fig. 3 is a vertical section of cylinder. Fig. 4, horizontal sections of Fig. 1. Fig. 5, vertical sections of foundation. Fig. 6, vertical section of dies and wheel blank. Fig. 7, vertical section of dies, punch and wheel. Fig. 8, vertical section of hydraulic lift for removing the portion punched from the hub of the wheel.

This machine is adapted for forging articles which require considerable force and great accuracy. It has been common in steam hammers, steam forges, &c., to use a light piston rod and concentrate the necessary weight in the tup or the end of the piston rod which carries the die, or in the hammer head, the tup or hammer head being guided throughout the stroke. It has been found in practice that such an arrangement is both costly and inconvenient, for the reason that every stroke of the hammer or die imparts a shock and a quivering motion to the piston rod, causing it to crystallize and finally to break, thus entailing heavy expense for renewal, besides considerable delay to the works.

Another old construction is that in which the necessary weight for strik-

THE PEARSON CAR WHEEL FORGING MACHINE.

Hosted by Google

ing the blow is in the piston rod, which is made of large diameter, and the hammer head or tup and the piston are made comparatively light. In this variety of hammer the piston rod is relied upon to guide the hammer or die to the proper point. For the purpose of making correct wheel centers and other forms requiring great accuracy in the application of the die it has been found that such a piston cannot be depended upon unaided by guides. This hammer has a comparatively light piston and tup or die holder with a strong and heavy piston rod, and guides are provided for the tup or die, which guide it during its entire stroke, so that the blow of the die is delivered with the utmost accuracy, while at the same time the piston rod is practically indestructible, and the blow is more effective because the weight is concentrated directly above the blank in the piston instead of overhanging the blank, as is the case where the weight is in the tup.

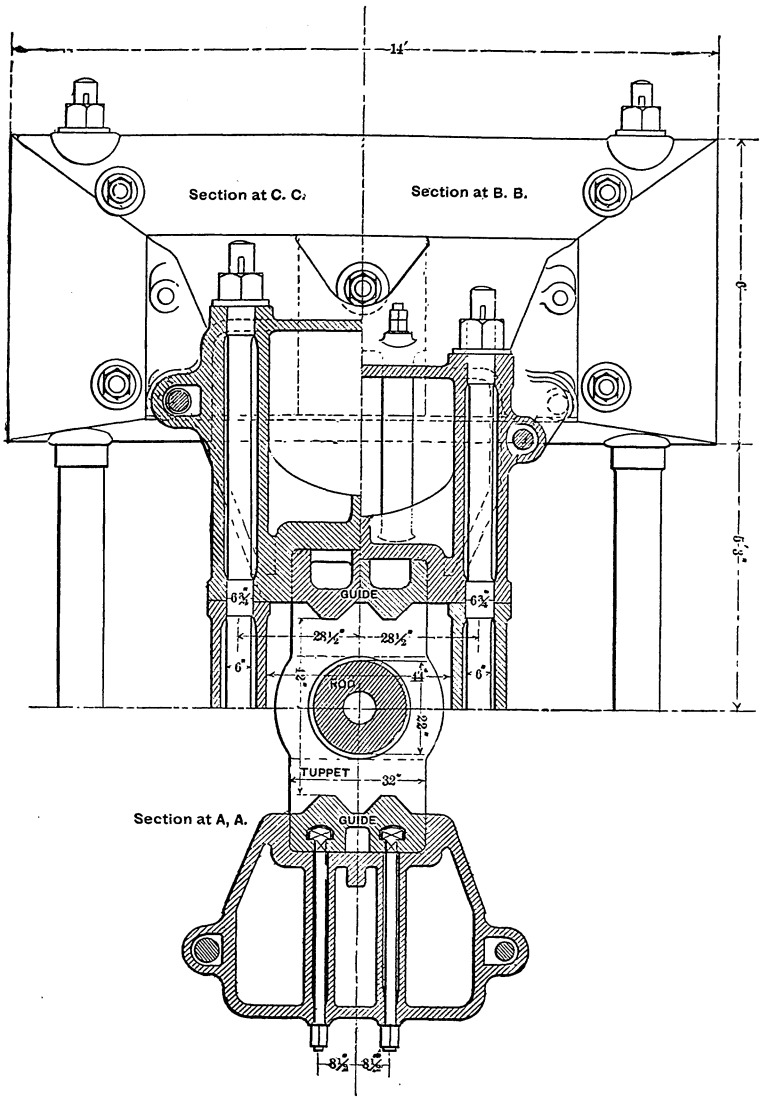

Fig. 4.—Horizontal Sections, Fig. 1, as Indicated.

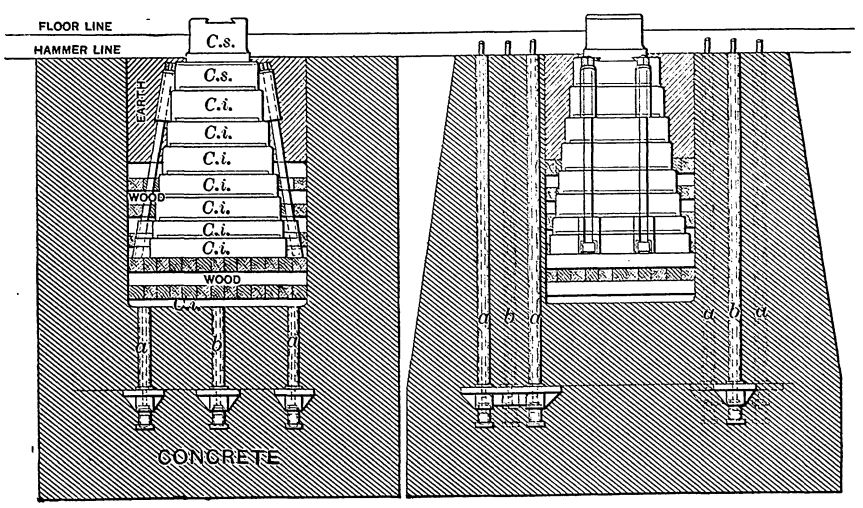

Fig. 5.—Vertical Sections of Foundations.

THE PEARSON CAR WHEEL FORGING MACHINE.

A novel feature of the upper die is a central teat or projection upon the face of the die, which forms a corresponding depression in the hub of the blank, adapted to center and hold the punch, which is afterward used to form the hole through the hub. The wheel center is formed within an annular matrix, the inner face of which is tapered and conforms exactly to the peripheral surface of the finished wheel center. This matrix rests upon the shoulders of the lower die. The lower die has a vertical well directly beneath the hub of the blank and about equal in diameter to the hub, as indicated in Figs. 6 and 7. Within the well and suitably supported is a solid disk, upon which the hub of the wheel center is formed and which really forms a part of the lower die when in place. The disk rests upon a second cup shaped disk, which in turn rests upon a cylindrical support having a broader base, which rests upon the anvil block. The solid and cup shaped disks fit closely within the well, but are removable therefrom. The other parts in the well are not designed to be removable except for repairs. The upper end of the cup shaped disk has a peripheral flange and the lower end of the punch die and solid disk are reduced so as to fit within the flange and accurately center the die and disk. Beneath the cup shaped disk and within the cylindrical support is a hydraulic lift, shown enlarged in Fig. 8, of peculiar construction. The piston of the lift is stationary and supported by a hollow piston rod which rests upon the anvil block. The opening in the piston rod extends nearly to the lower end of the rod and at its lower end it is connected with a pipe which conveys water under pressure to operate the lift. The piston follower is screwed into the threaded recess in the upper surface of the piston and a packing ring of asbestos is confined between the flange and piston proper. Fitting loosely within the cylindrical support and surrounding the piston is a cylinder closed at the upper end. Upon the lower end of the cylinder is a nut screwed on or otherwise attached thereto, having an inwardly projecting flange or shoulder adapted to engage the under side of the piston when the cylinder is forced upward, and this limits its motion and prevents it from being forced off of the piston. The cylinder at the lower end of the travel rests upon the follower.

The Howe Scale Company of Rutland, Vt., have purchased the entire stock of the Harrison Conveyor Company of Chicago, who for the past seven or eight years have been doing business throughout the West to a large extent and to a more limited degree in the East. The manufacture of the Harrison conveyer will now be prosecuted at the works at Rutland. The company have already completed three large contracts and have several others in view. The Harrison conveyor is a device for the transferring of coal, grain, ice, &c. In connection with the transferring of grain it is stated that it can handle different kinds of grain without cleaning out the trough or mixing the grain; and the grain can be

Hosted by Google

conveyed in opposite directions at the same time, all with the same conveyor. It is especially adapted to use in connection with breweries, in transferring barley, and has been used for the icing of trains or refrigerator cars and for the loading of gravel trains from gravel pits. It is also adapted for use in tanneries, paper mills, sewer pipe manufactories and in foundries.

Mechanical Engineering the Basis for the Electrical Engineer.

In a recent issue of the *Stevens Indicator* we find an article by C. J. Field on the electrical engineer and his relation to mechanical engineering. The question confronts the young student who desires to take up the study of electrical engineering as to which course is best suited for his requirements. Stevens Institute has tried to answer this by taking the stand that her course of mechanical engineering qualified and equipped the student to enter the ranks of electrical engineers, this stand being taken on the assumption that three-fourths of electrical engineering is mechanical engineering. From his own experience, Mr. Field indorses these views in every respect. This is explained in the following way:

Electrical science to-day is in a more active stage of development and progress than the older and more established branches of engineering—civil, mining, marine and mechanical. The electrical engineer, therefore requires, in order to fully enter the lists with his co-workers in this line and make that progress which all young engineers are desirous of doing, to be qualified to take part in the designing and construction of apparatus and works which are going on now the world over in connection with his profession. This we consider to be the real basis for what has proved to be the requirements in this line. There is hardly any department of the profession of electrical engineering in which questions are not continually arising in a day's work which can only be answered by a knowledge of mechanical engineering; that is, in the designing of all the apparatus which is now being manufactured in the different branches and departments of this profession, in their working, and in the building and equipment of the works, plants, roads and machinery in which this apparatus is entering so largely and playing such an important part. The young engineer who is not prepared and ready to take it up in this sense will find his field of progress and development restricted to a much narrower channel, and to be much slower in every respect; and he will be compelled, as we have seen many of them do, to qualify himself more fully as a mechanical engineer in order to keep up with others who have started along with him.

We will take, for instance, a few examples which come more prominently before us of what the electrical engineer may be called upon to do in this line on some of the few things which he is liable to encounter. For instance, in the designing and building of electric power generators and motors, experience has shown, in every apparatus of this kind which has been built by the different companies, that the calculation and determination of the electrical quantities and parts of the apparatus have, in the few short years in which they have been in a stage of development, become so perfected that they show to-day in this part a higher efficiency than any other generator or transformer of power.

It is, however, in the designing of the apparatus that the greatest difficulty has been experienced, to secure their proper working from a mechanical standpoint, and we have had in this line a number of examples of the brilliant electrical design of apparatus, which has failed utterly in its working caused by a lack of proper knowledge and experience in the designing of its mechanical parts.

We may take as another example the building of an electric railway plant. Let us look for a moment into the different qualifications which an electrical engineer must have, and the difficulties he has to encounter, to properly qualify himself and meet the requirements and expectations which are placed on him in many works of this kind. They cover not only a full knowledge and experience with all classes of generators and motors, but also of cars, their framing, equipment, trucks, wheels, rails, steam plant of the best and most efficient type to meet the varied requirements and conditions found in different cases, capacity to design power stations and car houses complete in every respect, with a knowledge of foundations required for the machinery and its operation, the building of road bed complete, and the paving of the streets in connection with the same, installation of underground conduits and feeder wires in connection therewith, and erection of overhead structures.

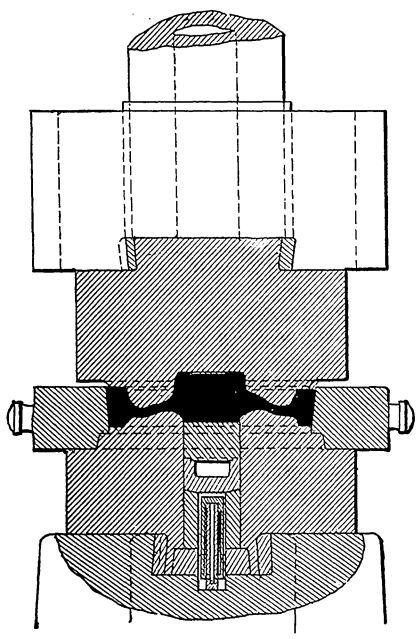

Fig. 6.—*Vertical Section of Dies and Wheel Blank.*

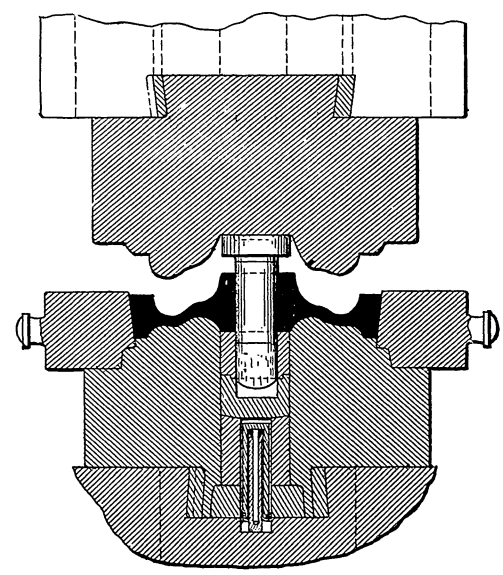

Fig 7.—*Vertical Section of Dies, Punch and Wheel.*

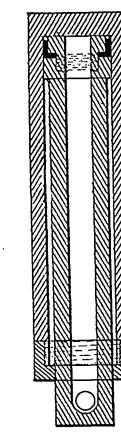

Fig. 8.—*Vertical Section of Hydraulic Lift.*

THE PEARSON CAR WHEEL FORGING MACHINE.

Transferring orders from the recently burned sheet mills of Wheeling to the mills at near by points in Ohio has made business lively in that line. The demand for galvanized sheets continues to hold good, the orders received being from all parts of the United States. This is regarded as a sure indication that building is going on at a lively rate. The use of this material for cornices and furnishings of buildings shows a steady increase.

California's Midwinter Fair, to be opened at San Francisco on January 1, gives promise of being a highly successful venture. Twenty-five nations have appointed commissioners and will be represented by important exhibits, and many of the most striking objects from the Chicago World's Fair are being transferred to Golden Gate Park. So many applications for space have been received that the directors are hard put to it to find accommodation for all who desire to exhibit there.

Notes on the Machinery of the New Vessels of the U. S. N. *

BY GEO. W. MELVILLE, ENGINEER-IN-CHIEF, U. S. N.

The earliest of our ships were gunboats and protected cruisers, and in order to get the machinery below the protective deck the engines were of the horizontal type. When vertical armor around the cylinders was introduced vertical engines were used.

One of the most important considerations for high power ships is the matter of economy at ordinary cruising speeds. In the old days, where the maximum speed was perhaps 12 knots, it was a very easy matter to run at 8 knots with at least the same and probably greater economy than at full power, but in our modern ships, built to make 18 and 20 knots, it is a very different thing to reduce the speed to 10 knots. The friction alone of moving the immense pistons and other moving parts of the 16,000 horse-power engine when it is developing perhaps only 1500 deducts a very large amount from the gross horse power and leaves the net a very small fraction. Besides the matter of friction, there is to be taken account of the immense cylinder condensation in these large engines running at greatly reduced power and with high grades of expansion. This would reduce the economy very decidedly.

One of the earliest attempts to solve this problem was to have two sets of engines on the same shaft, one of which could be thrown out at reduced powers.

Another method, which naturally suggested itself when the number of cylinders was multiplied in the adoption of the triple expansion engine, was the cutting out of the low pressure cylinder at reduced powers and running as a compound engine with the two smaller cylinders of the original triple expansion engines. This would then work up to somewhere near the full power of the cylinders of that size with a reduced pressure, so that, while not nearly as economical as well designed triple expansion engines for the power which was actually being used, it would, nevertheless, be more economical than the large triple expansion engines working at very much reduced power. This method we have adopted on our armored cruiser, the "Maine."

The next method was in subdividing the very large power among three engines instead of two, giving us the triple screw ship, so that at very low speeds only the central engine need be used, the propellers of the side engines being disconnected and allowed to revolve freely. In this case we have a single engine working up to pretty nearly its full power, when the steam economy would be good, while in the case of the two large engines working at very reduced powers the steam economy reduced by condensation would be very low. The first of our triple screw cruisers, the "Columbia," has just had her official trials, which have been a great success as far as working at maximum power is concerned.

Another method of combining an engine which shall be fairly economical at full power with one having good economy at moderate powers is the engine assigned for the gunboat No. 7. In this case more than two-thirds the boiler power is in the shape of tubulous boilers, whose weight is only about one-half that of the ordinary cylindrical boiler. The special novelty in the design consists in having the engine designed as a quadruple expansion engine for full power, taking steam to the high pressure cylinders from the coil boilers, while the remainder of the boiler power, which consists of two cylindrical boilers, will furnish steam to the first receiver, a reducing valve being fitted so that the pressure in the receiver will be just equal to the pressure of the steam discharged from the high pressure cylinder. Of course, while this is entirely novel, it is really an extension of the idea which has obtained for some time of exhausting from the auxiliaries into the receivers. This provides for full power. At reduced powers the engines will be made triple expansion by disconnecting the large low pressure cylinders, leaving the triple expansion engines composed of the three smaller ones, and the cylinders have been designed so that they have good proportions for economical working as a triple expansion engine with steam at 160 pounds. The cylindrical boilers are designed to furnish steam at this pressure, while the coil boilers will furnish to the high pressure cylinders of the quadruple expansion engine steam at 250 pounds pressure.

Auxiliaries.

Doubtless we have all thought of the fact that the multiplication of auxiliaries, independently of the main engine on board ship, has involved considerable steam consumption which was not applied directly to propulsion, but, so far as I am aware, the matter had never been considered in great detail until Professor Hollis, then a passed assistant engineer in the navy, discussed it about a year ago in some lectures he delivered at the Naval War College. I have inserted a table which he gives, based on the performance of machinery with which he had had personal experience, showing the percentage of steam developed by the boilers applied to propulsion and to auxiliaries at various speeds, and you will notice at a glance that at low powers the proportion expended in auxiliaries is very large.

Taking one case from this table, we find that the "Charleston" when steaming 4 knots required 107 horse-power and her air pumps 23.7 horse-power. At 18 knots her main engines developed 6120 horse-power, while air pumps only required 43.7 horse-power. The paper referred to the air pumps designed by Passed Assistant Engineer Frank H. Bailey, U. S. N., which we illustrated and described in our last issue.

Forced Draft.

The boilers have always been the heaviest part of the machinery, and here naturally the greatest efforts have been made to reduce weight. The one with which we have all become so familiar in the last 10 or 15 years has been forced draft.

I am a firm believer in the benefits of forced draft when intelligently applied, and have no patience with the people who blow hot and blow cold on the subject (as I have unfortunately been compelled to experience during the last ten years), who, because an accident occasionally happens with forced draft, immediately say that it is an invention of the evil one and that it ought to be abolished altogether. The same line of argument would probably prevent our using any modern methods in any line of work.

As between the two methods of forced draft in most common use, that by closed fire rooms and by closed ash pits, I am decidely in favor of the latter when it can be applied. I make this proviso for the reason that some may at once ask why, if I am a believer in ash pit forced draft, nearly all of our large vessels recently designed have forced draft on the closed fire room system. It is simply because in a war vessel with a protective deck and minute water tight subdivision it is extremely difficult where there are a number of large boilers to so arrange the blowers for closed ash pit forced draft as to ventilate the fire room thoroughly. This is a point which is sometimes forgotten, but if it is the fire room would simply become intolerably hot, and while the boilers themselves will work admirably the men will simply be killed by the heat. The "San Francisco" of our navy has ash pit forced draft, and all who have had experience on her and on other vessels speak in the highest terms of praise of the greater facility, convenience and comfort which attends this method.

With this method of forced draft leaky tubes in the combustion chamber are unknown, while with the closed fire room forced draft they are not at all uncommon.

There is another method of forced draft which is very old, but which has only been used on board ship within the last year or two—that of high smoke pipes. Tall chimneys are the most common method on shore for getting a strong draft, but prejudice or conservatism has until recently prevented the application of this practice to use on board ship. When we were designing the "Brooklyn" and "Iowa" I asked to have the smoke pipes made 100 feet high, in which I was heartily seconded by the Chief Constructor of the Navy; but a gentleman in the Navy Department who was entirely ignorant of technical affairs so represented the matter to the Secretary that the latter asked me to submit the reasons why I desired to use these high smoke pipes. These reasons Mr. Melville embodied in an appendix to his paper. They may be summarized as follows: The high pipe increases the speed without injury to anything. Increases the life of the boiler. Increases the economy of combustion at moderate powers. Saves coal lost by radiation from extra boilers used with short pipes. Saves in repairs to boilers. Saves in repairs to blowers. Saves extra coal needed to run blowers.

Induced Draft.

Another method of forced draft now coming into vogue is that known as induced draft, where, instead of closing in the fire room or the ash pit and forcing air in, the products of combustion are exhausted from the chimney by large fans. Of course this is only another way of getting the same effect that we get by the use of the steam jet and with which we have all been familiar for many years, the advantages in this case being that there is no loss of fresh water, which is a precious commodity on board ship. At a hasty glance one would not be prepared to expect very much from this method, but the experiments which have been making for some years past in England by John Brown & Co. seem to show that this method is very promising, and I understand it is to be fitted to some or all of the large vessels which are now building for the International Navigation Company.

Boilers.

The discussion thus far of reduction of weight assumes that the boilers them-

* Abstract of paper presented at the first session of the Society of Naval Architects and Marine Engineers.

Hosted by Google

selves are not changed materially otherwise than for the fitting of the forced draft appliances, but the question has been a very vital one for some time past and is now of extreme importance whether we shall not entirely abandon the present types of boilers and adopt a very much lighter one by using what are called coil or tubulous boilers. This matter has been discussed so much by so many able minds that it is unnecessary for me to go into the matter at length here. We all know the great advantages of these boilers in the way of immense reduction of weight, safety against disastrous explosions, rapidity with which steam can be raised, absolute safety against injury from any amount of forcing, and the ease with which, if necessary, a boiler can be removed and replaced. Almost the only objection appears to be the fear that they will not be durable because of the fact that they are composed almost entirely of very thin tubes, and our experience with these tubes in ordinary boilers has not been such as to lead us to expect a very long life from the coil boilers. However, some coil boilers have been in use for five or six years without showing appreciable deterioration, and a few have been used with fresh water entirely for more than ten years.

The Decrease in Weight of the Engines

themselves has been due to three causes: An increase of steam pressure, an increase of piston speed, and the use of stronger materials. Piston speeds have more than doubled in the last 15 years, and our larger vessels are now running with piston speeds of about 950 feet per minute, while some of the smaller ones, like the torpedo boats, are designed for a piston speed of over 1000 feet. If materials should go on improving so that we can reduce the weight of our reciprocating parts, I see no reason why piston speeds should not be increased still more, which, of course, would result in still further reducing weights. If we adopt the coil boiler generally we shall also carry very much higher steam pressures, because we already are carrying pressures of 250 pounds in some of our torpedo boats with great success. We have greatly reduced the weight of most of the engines by the use of forged steel for piston and connecting rods, valve stems and shafting, and cast steel for pistons, valves, bed plates and frames, but there does not at present seem to be much prospect of displacing cast iron as the metal for cylinders. If this should come about, we could still further reduce our weights, and if nickel steel should within the next ten years become as commonly used as mild steel is now we would have a big reduction in weight all around.

Trials of Vessels.

The early vessels for our navy were contracted for with the understanding that they were to develop a certain horse power. The contractors felt that with an agreed steam pressure to start with, and known sizes of cylinders, they could confidently guarantee that they would develop a certain horsepower; but we had at that time no reliable data on which to base our speeds, all our information being of foreign ships, and while I do not for a moment pretend to say that their trials are not conducted with every effort to secure fairness, we, of course, did not know all the circumstances, as we have since about our own ships, and so might be pardoned for feeling a little uncertain. In connection with the contract it was provided that for each horse-power in excess of the guarantee there should be a certain premium, usually $100, and for every horse-power below the contract requirement there should be a fine of the same amount. This made it very important that the horse-power should be determined accurately.

All the indicators used are tested at the New York Navy Yard, where there is the most elaborate and accurate testing apparatus in the world.

It may possibly not seem strictly germane to the title of this article to bring in the matter of speed trials, but I do so merely to call attention to a methed which I had the honor to bring to the attention of the Navy Department, and which was unanimously approved by the Board of Construction of that department, and was used with great success in the trial of the "Bancroft" early in this year. It consisted in a series of progressive trials for the purpose of standardizing the screw and determining accurately the number of revolutions corresponding to a particular speed. Then having laid a curve to show the relation of speed to revolutions, the vessel could be taken to sea anywhere and the continuous endurance trial run off and the speed at once determined as soon as the average revolutions for the entire period were known. Doubtless many of you are aware that the fast Argentine cruiser, the "Ninth of July," was tested in this way, and I believe several other foreign vessels also have been. This method enabled the speed to be accurately determined with less difficulty than any other which had been suggested.

Gas Engines in Germany.

The last report of Frank H. Mason, Consul-General at Frankfort, Germany, contains the following:

Prominent among the economies which have been introduced during recent years in Germany is the use of gas motors in place of steam engines in all the smaller forms of manufacture where the motive force required does not exceed 75 to 100 horse-power. At the Frankfort electrical exposition of 1891 most of the dynamos were driven by gas and caloric engines, and the display of these motors at that time was almost as varied and interesting to the general public as that of the electrical apparatus to which they were technically subsidiary.

The statement is made that there were in operation in Germany at the time referred to, about 18,000 gas motors, aggregating a motive force of about 60,000 horse-power, since which time, by the gradual cheapening of gas as a result of careful saving of tar, ammonia, and other subsidiary products of coal distillation, the number has increased to about 25,000. The improvement in economy in these motors has been remarkable. The Lenoir machine, the best known as late as 1861, used 1235 cubic feet of gas per horse-power per hour, while at the present time small motors only consume 28 feet, and large motors as little as 23.75 feet. As the cost of gas ranges from 95 cents to $1.36 per 1000 feet, and 21.2 feet of gas will run a 16 candle incandescent lamp an hour, which figure is reduced to 17.6 feet in large plants, it readily appears that this motive power is very economical for the smaller forms of manufacture, and especially for electric lighting by isolated plants.

Duluth News.

Iron ore shipments from Lake Superior were over at the close of last week at all the ore ports except Duluth, and there they have since ceased. For the season the record is about as follows:

	Tons.
Escanaba	2,000,000
Marquette and vicinity	1,200,000
Ashland	1,117,000
Two Harbors	894,000
Duluth	545,000
Total	5,756,000

These figures are estimates for Escanaba and Gladstone, Marquette and L'Anse. The total production for 1892 was 9,047,000 tons, nor has it been so low as now since 1888.

Early last June *The Iron Age* estimated the Mesaba range shipments for the year at 700,000 tons, which was a middle ground between the figures of those who expected to see the leases that had been made all carried out, with a good deal of ore from the mines, meaning an output of over 1,500,000 tons, and the ultra pessimists in Cleveland who talked 300,000 or 400,000 tons. As a matter of fact the range has shipped 630,000 tons; all but 20,000 tons by lake.

Late developments indicate that the new range will be able to mine, if its railroads can handle, a third of the Lake Superior output in 1894. There is mining equipment in the Lake Superior region for the production of 12,000,000 tons, could any such quantity be used in the market, and of the 7,000,000 to 9,000,000 that will likely be mined, if the year is any way favorable, the new range can easily mine 2,500,000 to 3,000,000 tons. There is, of course, a very serious question as to whether any such quantity could be handled by the two roads now reaching this range, but as both talk of large increase in track facilities they may do it. Still any speculation at this time is mere idle gossip.

The Mesaba, as a range, has not only beaten the world's record for a first year, but it has three mines which have never been equaled as first season producers. These are the Biwabik, which produced 153,500 tons, the Missabe Mountain, 130,000 tons, and the Commodore, 67,000 tons. The Mountain Iron, with a production of 125,000 tons, was the only mine on the range in 1892, sending out 4240 tons that season.

The Minnesota Iron Company, at Tower, has put a large force of men at work and is stock piling at the rate of 50,000 tons monthly for next season. The Chandler put 200 men on this week and is expected to mine nearly 500,000 tons in the year. On this range, the Vermilion, little else will be done.

At the Biwabik mine stripping contracts aggregating 600,000 yards of earth have been let and are begun; the largest of them requires the removal of 300,000 yards, 80,000 of it this winter. Six locomotives, four steam shovels and 300 men are stripping at the Mountain Iron.

The Marquette, Menominee and Gogebic ranges are gradually resuming work, the latest mines to start being the Norrie and Carey, on the Gogebic. These ranges are looked on for a possible production of 1,200,000 tons, 1,000,000 tons and 1,700,000 tons for 1894.

An important deal on the Mesaba has just been closed in the lease to the Thomas Iron Company of the Pennsylvania anthracite regions of the Hale mine, out of which it is to take some 250,000 tons in the next two years. The Hale is a high grade non-Bessemer mine and is stripped for surface mining.

Work in Hot Pressed Steel.

In *The Iron Age* of May 26, 1892, we described and illustrated very fully the method of making solid drawn steel projectiles for the Government as practiced by the United States Projectile Company, Fifty-third street and First avenue, Brooklyn, N. Y. We now have the privilege, through the courtesy of Arthur T. Porter, manager of the company, of describing work of an unusual character which is now being performed at the same establishment in the shape of hot pressed steel work. The steel bottle shown in Fig. 1 and work of similar character, such as heavy U-shaped cups, heads and disks, are made from plate steel up to 1 inch or more in thickness, and are handled with surprising facility. The heads for the Whitehead torpedoes, of which a large quantity have been furnished for the Government, were made by this company. Intricate shapes used for centrifugal machines are also made from this material by hydraulic pressure.

The pressure vessels shown in Fig. 2 are made by a process very similar to that used in the manufacture of projectiles, the solid billet being first heated, and then by successive passes through powerful machines being brought to the form shown. They are made in one piece without any seam or weld. Fig. 2 shows: 1, The billet; 2, the vessel before closing the end; 3, the vessel after closing the end; and, 4, section of the vessel cut in half. These vessels are used for holding gases, air, &c., under pressure, their small compass and great strength making them superior to every other method of manufacture. A large quantity of these have been furnished to the Navy Department to be used as air accummulators for charging the Whitehead torpedoes on the naval vessels, and stand a working pressure of air of 100 atmospheres. Tests of these vessels have shown that the metal has been increased in strength to a marked degree; that it is free from imperfections of any kind, and that it will stand an enormous pressure before showing even a slight degree of expansion. For instance, a vessel 40 inches long, 6½ inches in diameter and having a thickness of side wall of $\frac{3}{16}$ inch has been tested up to 5000 pounds per square inch, and would probably stand double this amount without undue straining of the material.

As a knowledge gained in the handling of steel in making cylindrical articles, the idea was still further extended in the formation of hot pressed pinions, as shown in Figs. 3 and 4, for which letters patent have been granted. The billet shown in Fig. 3 is at one operation pressed into the form of the pinion shown alongside of it. The billet is 7½ inches in length and 3⅝ inches in diameter. The pinion is 4½ inches pitch diameter, 4½ inches in length, and has 13 teeth. The machine used for this work is a press having a pressure of over 1,000,000 pounds. The above size is one that is largely used in street railway service. These sizes can, of course, be modified when other types of gears are required; the only limit is the power of the machine to make the article. In actual service on electric motors in street railway service these pinions have shown a life far exceeding that of the best cut steel pinions. It is very evident that the process of manufacture compresses the metal, imparts to it an exceedingly fine and tough texture, and as the pinion leaves the mold in so perfect a condition as to require no machining whatever beyond the facing of each end, boring the hole and key seating, the surface left on the teeth is extremely hard and well adapted to withstand the severe usage it receives in electric motor service. These pinions have been tested on the Brooklyn electric roads for several months, and they have made a record for durability beyond any ever attained by other processes.

The device shown in Fig. 4 is intended for testing the accuracy of the

WORK IN HOT PRESSED STEEL.

Hosted by Google

pinions after they have been finished. It consists of a spindle mounted on a base and adapted to carry the pinion. A large cut steel gear is so mounted as to engage with this pinion, and provided with a handle by means of which it can be rotated. Pinions direct from the press, and the teeth of which have received no attention whatever, are placed upon this machine and tested. It has been found that they mesh perfectly with the large gear, and if in a few instances they do not mesh, it is but the work of a few minutes to remove any slight swell that might be caused by the wear of the die.

The field for this class of work is widening year by year, as it is impossible to do under the drop hammer what can be done by hydraulic pressure. The decrease in the wear and tear of dies and tools and the ease with which steel can be handled give great promise for the future.

Steel Plate Rolling in Great Britain.

At a recent meeting of the British Iron and Steel Institute a paper was read on "Suggested Improvements in the Manufacture of Steel Plates." The author does not state what kind of steel is to be used in his proposed process, but as the scene of his experiments was Scotland it may be assumed that whenever ingots or blooms are mentioned the quality is soft open hearth.

From an American point of view, the paper presents many amusing features, the principal one being the earnestness and gravity with which a process of rolling steel plates is discussed, which has been a success, to the writer's knowledge, since 1881 in the United States, was tried in Scotland in 1884 and abandoned as a failure. It is now, in the year 1893, brought up for discussion before the most celebrated body of iron and steel manufacturers.

Plainly stated, the paper discusses at considerable length, and in a manner difficult to thoroughly understand at first reading, whether or not it is possible to roll a perfect ship or boiler plate direct from a steel ingot without first rolling the ingot into slabs or blooms and reheating them. In his introduction, the writer of the paper says that he expects to be told that there is nothing new in the idea or suggestion which he offers, so far as a direct process is concerned, but he does claim novelty in his manner of doing the work. In the absence of drawings it is difficult to understand the details of the proposed process, but with all due respect to the author it may be truly stated that to Americans there is nothing new in the method, which has, under slightly different conditions, long been a success in this country. The new method discussed by the British ironmasters consists in rolling the ingot into a bloom, and after shearing to specified lengths to make plates of a required weight, complete the process of rolling without reheating. This, it is claimed, reduces the loss from waste in trimming the plates to a point below the loss incurred when the ingot is rolled direct into a large plate without being cogged and afterward sheared to specified dimensions. This method makes it necessary to use both a blooming mill and a finishing mill, and it is herein that the difference lies between the proposed British plant and the already established and successful American method. In American practice only one stand of rolls is used. The plate mill seen in operation by the writer in 1881 contained one stand of rolls 30 inches diameter, 120 inches long. The mill was equipped with hydraulic cranes on both sides of the rolls and automatic carriers. Ingots weighing 3000 to 6000 pounds were started down the carrying table to the rolls, which were operated by a reversing engine coupled direct, and passed through the rolls forward and backward with such rapidity that plates when finished and thrown off to the leveling floor were often cherry red. In shearing the utmost care was used to consume as much as possible of the plates in rectangular shapes, and in marking, the sizes of small plates were added together in such a careful manner that very little scrap was left. If it did happen that there was a long end or side piece left over they were cut to specified sizes from 5 to 14 inches in width and used for rolling into light sheets. Upon this point the saving in scrap was greater than in the proposed British method, for the reason that in the British plan it would be necessary to trim the four sides of a number of small sized plates and lose the scrap, while in the American method the scrap from the four sides of one large plate only is lost. It is very seldom that a piece of plate is left over having a superficial area of more than 8 feet, while the complete area of a single plate is often 400 feet. This being the case, the blooming mill and vertical bloom shear suggested for the British mill are not necessary. In the United States the much discussed result is accomplished with a plant half the size, employing less than half as many men and at only half the cost. In regard to quality, the American plan has been so successful that the reputation of a brand of steel made in this manner grew to such an extent that it was not an uncommon thing, a few years ago, to mention in specifications that the quality of plate used should be that special brand or something equal to it. The ingots were carefully chipped before being rolled and plates were seldom found to have an imperfect surface. The custom of stipulating that a special brand of steel shall be used has since died out and almost any make of American plates made either in the manner described or with the intermediate process of hammering or slabbing would successfully pass the tests of Lloyd's or the Admiralty.

To further illustrate how far behind some Britishers are in their ideas regarding progressive rolling mill practice, the writer of the paper under discussion states, in effect, that it was not without some little hesitation that he departed from old lines and ruts and adopted the method of coupling engines direct, instead of using gears. There was no need for any hesitation; Americans have long ago proved that coupling a roll train direct to the engine shaft and operating at a high speed is not only perfectly safe, but much more effective in rolling blooms, billets or other heavy sections and plates than if gear wheels were used. It can be quickly demonstrated that on the point of tonnage from a given power or financial outlay Americans are far in the lead. The results are mainly due to the efforts of engineers and rolling mill builders who have taken the place of the old school of managers and they tell a wonderful story of progress, but the author of the paper under criticism warns his British brethren in the following words: "I consider it a mistake to give too unlimited scope to the purely engineering element, with its invariably good spending capacity." It is such extreme conservatism as this that retards progress in British practice. For instance, in the paper referred to, the following words are printed: "It will be observed, on looking at the plan, that the arrangement consists of a train of cogging rolls and the usual roughing down and finishing rolls, which could be driven by one pair of engines, but by preference by two pairs of engines." This complicated mass of machinery is what is proposed to produce a result—viz., rolling ship plate direct from ingots at one heat—which has been accomplished in the United States for at least 12 years past with one stand of rolls and one engine.

In conclusion, the British writer on the subject says: "I have attempted to lay before you some views which at least, I trust, have a little freshness about them, if nothing else." It is the lack of freshness and the extreme differences between British and American practice that have caused this article to be written. American iron and steel men always extend the utmost courtesy to foreign visitors and free access is afforded to plants where these differences are forcibly illustrated whenever Britishers desire to avail themselves of such opportunities and thus avoid the possibility of publicly discussing as new ideas matters already grown old on this side of the Atlantic.

Two of the great German steel works have just made their annual reports. Phœnix of Laar, near Ruhrort, made a gross profit of 2,578,443.69 marks. After writing off 1,160,600.29 marks, there was paid out in dividends 1,296,000 marks, or 8 per cent. on one series of stock, 6 per cent. on another and 2 per cent. on old coupons. It is interesting to note that the company paid 218,250.46 marks as their contribution for the funds for accidents to workmen and providing for their old age. Besides, the concern disbursed 177,737.18 marks for state and local taxes. These figures indicate what heavy burdens German ironmasters must bear. The concern employed 4201 men and foremen, who received in wages 5,041,097.07 marks, or an annual average of 1199 97 marks, equal to $292. The second establishment is Union of Dortmund, which made a net profit of 1,884,363.92 marks, of which 409,519.56 marks was available for dividends. These were paid to the holders of stock series A, the amount being 1 per cent., or 388,647 marks. The company paid into workmen's relief funds 342,930.90 marks, or nearly as much as they distributed in dividends. The total wages paid to 7585 men was 7,735,307.01 marks, or an annual average of 1019 82 marks, equal to $247.82 per annum.

Fried. Krupp of Essen has issued an exceedingly handsome souvenir of the great exhibit at the World's Columbian Exposition. It consists of a series of beautifully finished engravings of the Krupp pavilion and the principal exhibits it contained.

As the result of a stormy series of meetings of the General Assembly of the Knights of Labor, held in Philadelphia, Grand Master Workman Powderly has resigned the position which he has held for so long at the head of that decaying organization. J. R Sovereign of Iowa was elected as his successor.

Canadian Notes.

In this country, as in the United States, a national insolvency law is being agitated, and also, as in the United States, the legislative fates have been unkind. A bill has been presented for Government sanction and adoption on the eve of three successive sessions of Parliament, but has never got before the House.

The development of electric railroads in Canadian cities has been altogether subsequent to our last tariff revision, and a duty of $6 a ton on steel rails tends to check that development. This duty is not imposed on steam road rails. Delegations have waited on the Government to ask the removal of the duty, which was intended only for horse-car lines. The matter is under consideration, but it is expected the duty will be removed.

Proceedings have been begun to wind up the business of the Polson Linders Company, Toronto and Owen Sound, who succeeded the Polson Iron Works Company in 1892. The assets of the company amount to $150,000.

Wood, Vallance & Co., Hamilton, one of the largest wholesale hardware houses in Ontario, now occupy two spacious new buildings, very elegantly ppointed.

Burrow, Stewart & Milne, Hamilton, foundrymen, have moved into their new premises.

The Thos. McDonald Mfg. Company, Montreal, manufacturers of tinware, &c., narrowly escaped the total loss of their factories and contents by fire. As it was, they suffered a loss of about $20,000, which was covered by insurance.

The directors of the Hamilton Iron & Steel Company have elected the following officers: President, W. Foster, Jr., New York; vice-president, J. H. Tilden; treasurer and general manager, J. J. Morehouse, New York; secretary, H. N. Curtis, New York.

The style of the Doty Engine Works, Toronto, has been changed to that of The Bertram Engine Works Company. A steel conduit, 7 feet in diameter and 60 feet long, has recently been turned out from the works for the new Sault Ste. Marie Canal.

The Canada Tool Works, Dundas, have turned out for the Nova Scotia Steel Company, New Glasgow, N. S., what is said to be the largest turning lathe ever built in Canada, to be used for turning heavy steamboat shafts and forgings. It weighs 34 net tons.

T. D. Graham of the Graham Nail Works, Toronto, suddenly left his place of business some time ago and has not turned up since. He was supposed to be doing a flourishing business. His departure appears to have been premeditated, judged by the precautions he took to dispose of movable property and secure what money he could. H. S. Howland & Co., the chief creditors, took possession of the works.

The Ontario Malleable Iron Company, Oshawa, Ont., have made considerable extensions to their premises and plant.

At their annual meeting in Toronto the Canadian Brass Manufacturers' Association re-elected Robert Mitchell, Montreal, as president, James Morrison, Toronto, first vice-president, and A. W. Glassford, Montreal, secretary. The annual agreement was renewed. It was decided to ask the Government to withdraw the present 10 per cent. duty on raw material, as that is deemed a hindrance to an export trade.

Of Ontario's manufacturers who received awards at the World's Fair may be mentioned John Bertram & Sons, Dundas, for drilling, planing and shaping machines; the Central Bridge Works, Peterborough, for power hammer; Stevens, Hamilton & Co., Galt, for attachment for drilling machine and shaping machine; the McClary Mfg. Company, London, for tinware.

The Minnesota Moline Plow Company are credited with the intention of erecting a large warehouse in Winnipeg, from which they purpose to distribute their implements through our Northwest.

Alex. Rankine is now in possession of the St. John Bolt Works, St. John, N. B. He is making some improving alterations.

New machinery, notably several of Miller's torpedo nail pickers, is being introduced into the works of S. R. Foster & Son, St. John, N. B., manufacturers of wire and steel nails, tacks, &c.

The Trottier Axe & Edge Tool Company, Three Rivers, Quebec, have rebuilt their factory, which was burned down some time ago. At the company's annual meeting the other day the following officers were elected: R. W. Williams, president; N. L. Denoncourt, vice president; A. T. Pothier, secretary and manager; N. Carignon, treasurer.

For the three months beginning August 1, the shipments of ore from Kaslo, B. C., amounts to $133,325.

The anthracite coal mines near Calgary are now putting out about 1000 tons daily and shipping it chiefly to the East.

The increased production of pig iron in Canada has had the good effect of lowering prices from $3 to $4 a ton in recent years. Formerly the prices of imported pig were a matter of competition between British and American brands, in which both were on equal terms in respect to duty, but in which the American had an advantage in regard to the interior demand in the matter of freight. But the product of Nova Scotia furnaces has been forcing these outside competitors down to still lower prices. The Londonderry, the New Glasgow and the Ferrona works in Nova Scotia produce a very acceptable iron, and the last named in particular having pushed business very actively this season as far west as Montreal. Foundrymen and importers have for some time been expecting a lowering of the duty on pig iron, and in anticipation of such change have been keeping reserve imports in bond for the last six weeks. That check to importation has benefited domestic producers of pig.

The Drury Nickel Company, in Algoma, after expending about $150,000 for the development of their nickel property, have not kept up with the demands upon them on liability account and are to be wound up.

The collection of minerals which filled the Ontario section of mines and minerals at the World's Fair is to be preserved, but divided up. Part goes to the Toronto School of Practical Science and part to the Toronto School of Technology. Selections have been made for the International Fair at Antwerp. The exhibit carried off 35 awards at Chicago.

Is Crude Oil a Cheap Fuel?

The use of crude oil as a fuel for manufacturing purposes has claimed a great deal of attention for many years past. It has been used extensively on the Continent of Europe, particularly on steamers plying the trade of the Black Sea. Experiments without number have been made both in Europe and America and the practical application of the fluid for generating heat has been demonstrated a success beyond doubt. Methods of burning and styles of burners are counted by hundreds, but there is a lack of data for the use of beginners in making their estimates of probable cost of the fuel after the plant is properly installed as compared with coal.

It has been the privilege of a correspondent of *The Iron Age* to visit and inspect many plants where crude oil is extensively used. The various methods of its application are an interesting study, but figures regarding cost vary to such an extent that it is found to be a difficult matter to ascertain the actual value of the fuel in various localities. If a plant is carefully designed and properly attended to its convenience and cleanliness soon become apparent. There is no residue to remove and the oil is inexpensively conveyed to the burner. Repairs are slight and much less labor is required than if coal were used, but there are no records available showing the quantity of oil consumed under varying conditions from one year to another. Statements can be found showing the consumption during one to six months, but what is wanted by those who would become users of oil as fuel is a record for at least one year. The reason for this is that during warm weather the oil will keep at a temperature in the storage tanks which makes it fluid enough to pass freely through the pipes without being heated, consequently the cost of conveying oil to the burners is less than during winter, when a pipe containing live steam must be placed alongside the pipe containing oil so as to keep it in a fluid state; a coil of steam pipe must also be placed in the storage tank, and, further than this, steam must be passed through the tank car before the oil can be pumped to the storage tank. There are bursting pipes and general repairs to be contended with during the winter which the plant is exempt from during hot weather, and the items of cost vary materially during the year. For these reasons none but figures of a year's consumption should be accepted to establish the relative cost of the fuel as compared with coal. For instance, if good coal for use in a heating furnace or for generating steam in a boiler is worth $1.75 per ton at a given point, at what price is oil equal to it in economy as a fuel? This is a question which interests many readers of *The Iron Age*, and the person who can and will satisfactorily answer it will render a valuable service.

The Tennessee Coal, Iron & Railroad Company have authorized the construction of an experimental concentrating works of 125 tons daily capacity. The plan is to calcine the lean ore of the district and concentrate it by magnetic concentration.

Bolling & Lowe of 2 Laurence Pountney Hill, London, the well known iron merchants and contractors, have issued a very interesting table of foreign weights and prices based on the English ton.

The Coxe Furnace.

Eckley B. Coxe of Drifton, Pa., described in a paper read at the Chicago congress, before the American Institute of Mining Engineers, a furnace designed by him, with automatic stoker, traveling grate and variable blast, intended especially for burning small anthracite coal. We quote as follows from the paper in question :

Having determined, in a general way, what seemed to me the proper conditions for burning small anthracite economically, I started to design a furnace which would, as far as possible, fulfill the required conditions, which were :

1. To ignite the coal and burn it up without mixing it with fresh fuel; that is, that fresh fuel would not be added to the already partially consumed coal.

2. To have the furnace so arranged that the combustion should be continuous and uniform; that is to say, that when the furnace was in use the condition of the fire would be practically the same at any hour of any day of any week of the year.

3. To make the work of firing as easy as possible, so that a minimum number of firemen would be employed, and that the whole operation of the furnace would be controlled by an intelligent man, who would have more use for his brains than for his muscles. The idea being that in a large and complete plant the coal would be brought from the source of supply by elevators or drags, and fed to the furnace without hand labor, and that the ashes would be carried to or dumped into a pocket, where they could be easily loaded into cars in the same way. No pokers, slice bars or other similar tools should be needed.

The illustrations which will be referred to in the description of the process are as follows:

Fig. 1.—Diagram illustrating the process and furnace for burning the small sizes of anthracite coal.

Figs. 2 and 3 —A reduction of the working drawing from which the iron work of the automatic stoker furnace for the Stirling boilers at No. 3 Colliery, Oneida, Schuylkill County, Pa., was built.

Figs. 4 and 5.—Side and transverse elevation of the Stirling boiler plant at No. 3 Colliery, Oneida, Pa., showing the manner in which the grate is placed under the boilers; also the arrangement for moving the grate and supplying air to the furnace.

The furnace consists essentially of a traveling grate moving from the right toward the left. The coal, which is brought to the hopper 20, Fig. 1, by a drag, spout or any other convenient method, feeds down by gravity over the fire brick 14 on to the traveling grate. The coal is carried slowly at the rate of from 3½ to 5 feet per hour toward the other end. In the beginning of the operation the coal on the right hand side of the furnace is ignited, the other part being covered with ashes or partially consumed coal After the furnace is heated, the fire brick 14, which we call the "ignition brick," becomes hot, and the coal, passing down under the regulating gate 21, becomes gradually heated, and by the time it reaches the foot of the ignition brick is incandescent. In some cases the coal becomes hot enough to ignite soon after it passes the regulating gate 21. Under the grate there are a number of chambers made of sheet iron which are closed on all sides except on top. The blast from the fan which is used to furnish the air is blown into the large air chamber, which is the second one from the right. These air chambers are open on top, but the partitions are covered by plates 27, 28, 29 and 30. These plates are of such width that no matter what may be the position of the grate bars 18, there is always one resting upon this plate, so that the air cannot pass from one chamber to another except by leakage along the bar. The result of this arrangement is that if we are blowing into the large air chamber with a pressure, say, of 1 inch water gauge, the pressure in the next air chamber to the left would be about ¾ inch, the next to that ½ inch, and the next to that ¼ inch. Of course, these figures are not strictly correct, and are used merely for the purpose of illustrating. The pressure in the air chamber to the right would be, say, ¾ inch. The result of this state of affairs is that the coal when it arrives on the grate is subjected to a pressure of blast sufficient to ignite it, but not too strong to impede ignition.

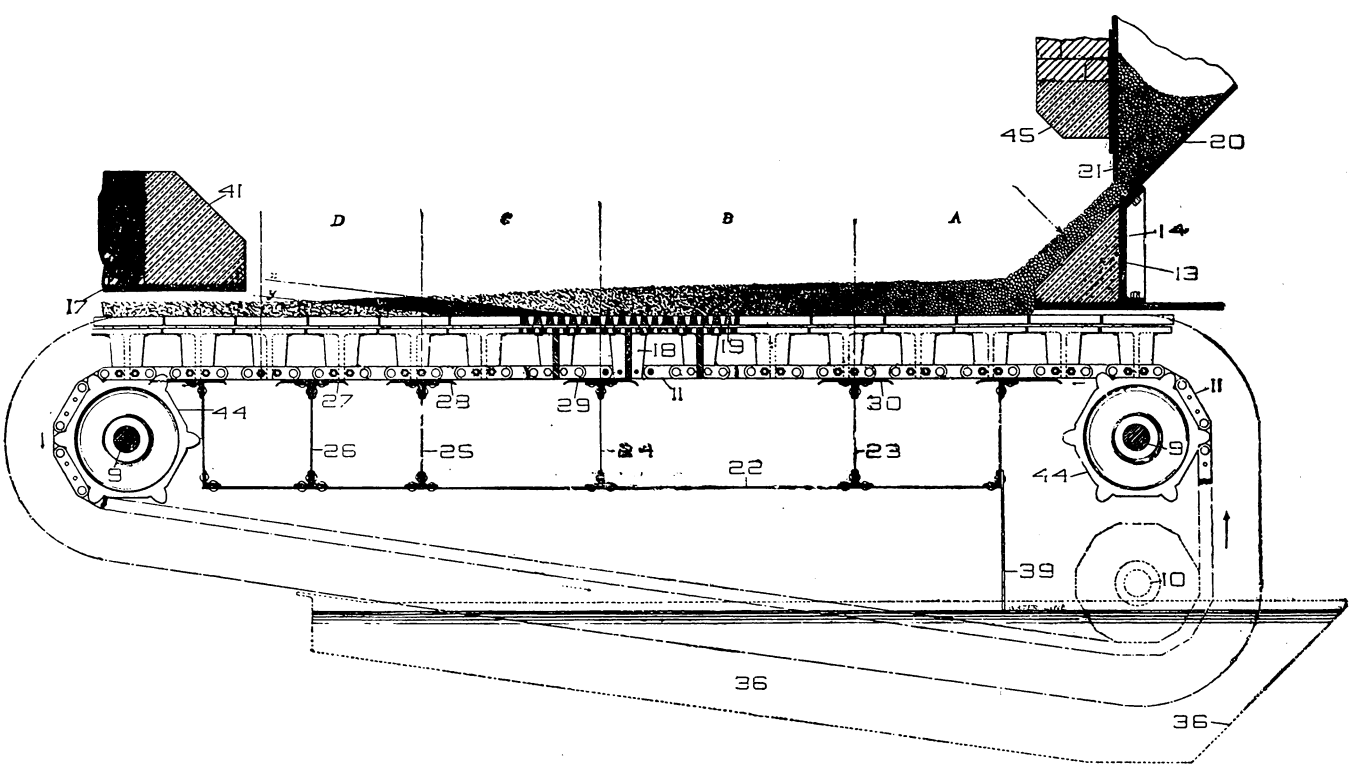

Fig. 1.—Furnace for Burning Small Size Anthracite Coal.

THE COXE FURNACE.

In order to regulate exactly the pressure of the air in each of the compartments the partitions are provided with registers, by the simple opening and closing of which the pressure in the air chambers can be varied to suit the conditions.

As the thoroughly ignited coal passes slowly over the second compartment (where the air pressure is a maximum), it burns briskly, and then slowly passes over the third compartment, where the air pressure is less and better suited to the combustion of the thinner layer of partly consumed coal. The bed continues to diminish in carbon, and to be subjected to less blast, until, finally, the hot ashes are cooled off (before being dumped) by a very gentle current of air, which is heated and mingles with the carbonic oxide produced in the zone of intense combustion B and converts it into carbonic acid, the object being to subject the coal as soon as it arrives on the grate to a pressure of blast which is

Hosted by Google

the proper one to ignite it; then burn it with a blast as strong as will produce good combustion, and as the carbon is eliminated and the thickness of the bed becomes smaller, to diminish the blast to correspond to these conditions. The mass of coal remains all the time in practically the same position and condition in which it was placed on the grate, except so far as altered by the combustion. It is evident that there would be a tendency of the air to pass out between the brick rest 13 and the top of the grate bars 19, which have no coal on them, and if no provision was made to prevent it the air would pass under the air chamber along the line of travel of the grate and enter the furnace through the ash exit at 17, thus forcing a large excess of air into the space under the boiler and causing a loss in two ways: 1, In the power necessary to furnish the air, and 2, in the heat carried off by the surplus of air going out the stack. This is avoided by having the returning line of grate pass into a water pan, 36. By means of the partition 39, which passes down below the surface of the water, a water seal is obtained which absolutely cuts off all connection between the front and back ends of the lower portion of the furnace along the line of travel of the grate. The ash pit, which is practically the part to the left of the plate 39, is closed by a door out of which the ashes are taken and the front end of the boiler is closed by a sheet iron casing, which passes down into the water in the water pan, thereby preventing the air from passing out between the brick rest 13 and the grate bars into the free air. There is space enough between the extreme right hand end of the water pan and the vertical wall of the casing to allow any ashes or dirt that may accumulate in the water pan to be taken out very easily.

From this brief description the continuous action of the furnace can be easily understood. The coal passing continuously down from the ignition brick is ignited gradually, burned out, and the ashes are carried off or dumped by the grate bars as they descend.

The coal burns out from the bottom; that is, the first thin layer of complete ash forms on the bottom and gradually becomes thicker until it reaches to the top. At first the ash is very hot, but the gentle current of air passing through it gradually cools it off, and when it is dumped into the ash pit it is not very hot. Ths shaded portion beginning in C and extending into D represents the gradual formation of the ash, and the part to the left of that shows the ash practically cooled or cooling.

A certain portion of air from which the oxygen is not removed passes through and cools the ash, but in the first sections of the bed of fuel near A a certain amount of carbonic oxide is formed, due to the fact that the amount of air blown through is not sufficient to properly consume all the carbon and the incandescent carbon decomposes the carbonic acid, forming carbonic oxide, very much as in gas producers. This carbonic oxide is burned in the furnace by the air which has passed through the ash. Our experiments have shown us that if we allow the gases to pass through the furnaces with a velocity that will permit the carbonic oxide to burn completely before reaching the parts of the furnace too cool for the combustion to take place, we get a better result, and in one of our plants we have found an increase in efficiency and economy by putting a damper in the stack and checking the flow of gases. Of course, there is a velocity for each furnace above or below which you have less economy and less efficiency, provided you are burning a certain number of pounds of coal per hour. Having thus briefly described the process, I will now give some details as to the construction of the grate and the method of placing it under the boilers.

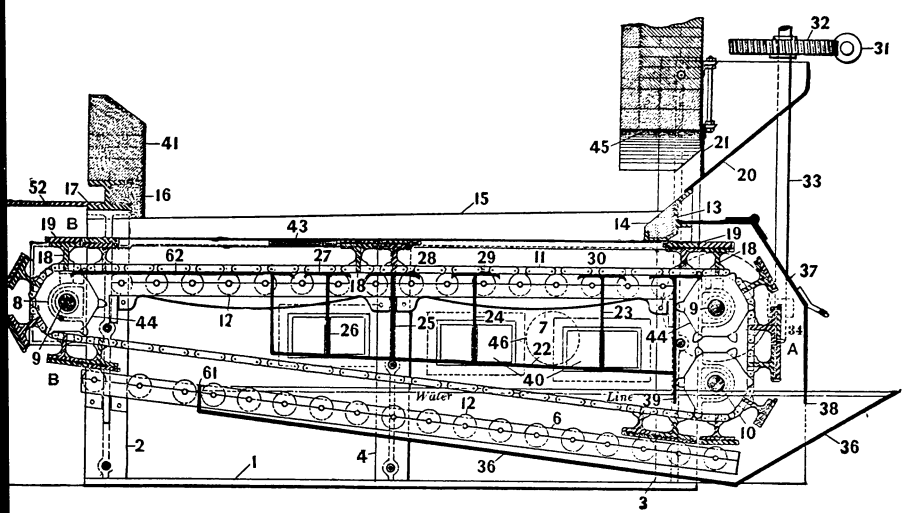

Fig. 2.—Section of Automatic Stoker.

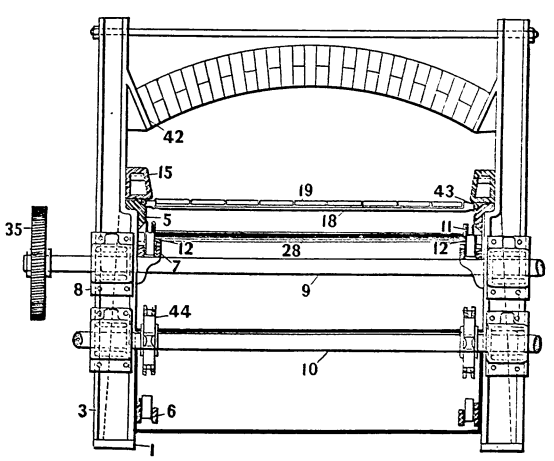

Fig. 3.—Cross Section Automatic Stoker.

One of the first difficulties we encountered in our experiments with the traveling grate was the fact that if we had a fire brick side wall there would be a tendency to form clinker along it. This clinker would retard the coal that should be carried forward, and have a tendency to break up the fire near the walls and allow the air to escape, giving considerable trouble. This has been avoided by making the sides of a hollow cast iron bar, called the water back. This bar is horizontal on the bottom, but the upper part rises at the rate of $\frac{1}{4}$ inch to the foot toward the front end, which is also the hottest end. The water is fed in at the back end and flows out at the top at the front.

Our experiments with the Stirling boilers show us that if we pass the feed water which is necessary to supply the boilers through this water back on each side the water leaves the water back at a temperature of 110° to 120°. This goes directly to the feed pump, and the heat is all utilized. We also found that the coal had a tendency to burn a little more rapidly along the water backs, so that the layer of partially consumed coal became thinner there more quickly than in the center, thus allowing a too free passage to the air at that point. This has been avoided in two ways: 1, By having no holes in the grate bar at that point; 2, by making the water back narrower at the top than at the bottom, which gives a larger quantity of coal to be consumed along the water back, so that, if anything, the tendency is to have the layer of ashes there a little thicker than in the center. It is also important that there should be practically a tight joint between the end of the bar and the side along which it slides. This is accomplished by having a casting, 5, a portion of which, forming an inclined plane, makes the fixed side. The joint is made by round bars of iron cut in sections about 1 foot long. This bar of iron rests on the inclined plane and rolls against the end of the bar 18. If one bar, 18, protrudes more than another it simply pushes this iron bar, 43, back; if it recedes the iron bar follows it down. If the bars 43 were all cut off square at their ends, the moving grate bars, if not exactly of the same length, might catch upon them if one projected a little beyond the other; the bars 43 are, therefore, rounded off at the end. Since we have adopted this plan we have had no trouble whatever with the leakage of air.

The grate is formed of two parts; the

THE COXE FURNACE.

Hosted by Google

lower, 18, which is T-shaped, consisting of the vertical rib and the horizontal plate. The horizontal plate is perforated with a number of conical shaped holes, wider at the bottom than at the top, as shown in the drawing. At each end is a lug, which fits into the chain 11. There are two holes cast in the bar, and two holes drilled in the alternate or long links of the chain, and by means of two bolts each end of the bar is fastened to the chains. The upper part of the bar 19 consists of square plates, which are about 7⅛ inches square. The holes in these are wider at the top than at the bottom. They are simply placed upon 18, being separated ¼ inch from it by three little stops, 55, which makes an air space about ¼ inch high between the plates. The holes are so arranged that the lower ones are immediately under the center of the solid parts of 19. In this way it is impossible for the coal, no matter how fine, to roll through, as the natural slope of the coal will not reach the openings in 18. In order to hold them in their places two clinch pins, 54, of soft iron are cast into 19. The plates 19 are simply placed in position over 18, and, with a couple of strokes of the hammer, the soft iron cinch pins are bent, as shown, thus holding the upper part of the bar firmly in its place and allowing it to be removed easily when necessary. It will be observed that 19 projects a little over 18 on the left hand side and that 18 projects beyond 19 on the right hand side, so that when two complete bars are together they overlap and close the joints so that no coal can fall through. By constructing the grate in this way the only parts exposed to the hot fire are the small square plates 19 on top. The main or carrying bar 18 is pretty well protected from the intense heat, does not warp or twist, and shows, so far, no sign of giving out; this is very important. The expansion is also taken care of.

Figs. 4 and 5 show the plant at Oneida No. 3. It consists of two 150 horse-power Stirling boilers of the ordinary type to which this grate has been applied. In this case the fire brick arch 60 covers almost the whole of the grate, and the gases from the entire grate mingle at the outlet. The result of having this fire brick arch is to keep up an intense heat over the grate, giving a chance for most of the carbonic oxide to unite with the oxygen of the free air before the gases become cold by contact with the heated surface of the boiler. It appears probable that it will be an advantage to remove the heating surface of the boiler from the combustion chamber, so that the gases will not come in contact with the cooler iron surface until the carbonic oxide has been entirely burned and a thorough mingling of all the gases has taken place. In this case the plant, which will consist eventually of several batteries of boilers, is so arranged that a drag will carry the coal into a coal hopper in front of each boiler, and that the ashes will drop into an ash pit, 50, in each battery, from which they will be loaded into a car when the pit is full by simply opening the gate at the end of the pit and scraping them out.

This drawing also shows the method by which the engine drives the fan 59 and the shaft upon which the cone pulleys 49 are situated. These cone pulleys drive the cone pulleys 48 by which the worm gearing is actuated. They enable us to change the speed of the grate without changing that of the fan, and to change the speed of the fan without that of the grate, as the relation between these two speeds varies with the character and size of the coal.

The main shaft of the engine by means of worm gearing drives the drag that is to carry the coal into the coal hopper.

The method by which the air is carried from the fan into the middle compartment of each grate is also shown on this plate. In this case the coal is fed in front and the ashes taken out at the back of the boilers.

We have been running successfully the oldest plant about eight months. We have made many improvements, principally in the line of simplification and elimination of unnecessary parts.

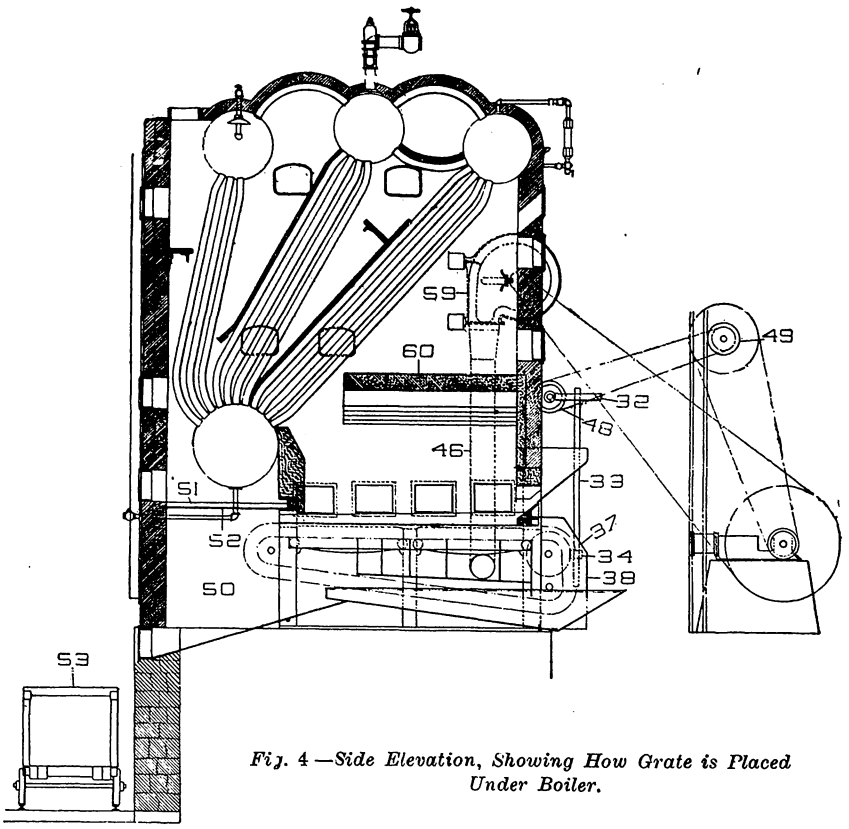

Fig. 4.—Side Elevation, Showing How Grate is Placed Under Boiler.

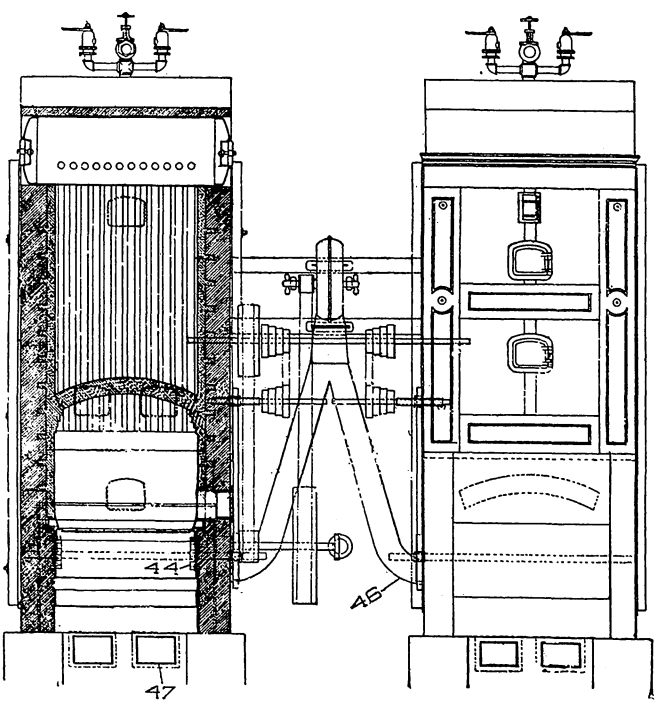

Fig. 5.—Cross Section of Fig. 4.

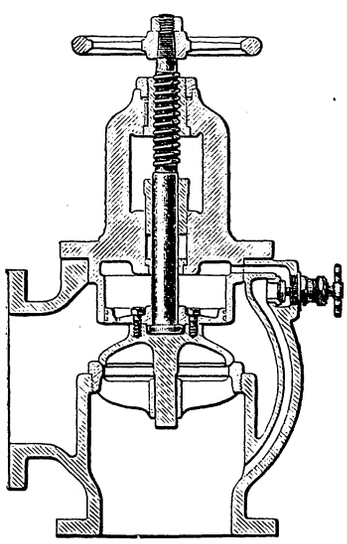
THE COXE FURNACE.

Since we erected the Stirling boilers, some six weeks ago, we have been making experiments with them, using different sizes of coal. We do not claim that these results are complete and absolutely accurate. They are correct as far as they could be under the circumstances. We have not as yet arranged



Hosted by Google

to analyze our stack gases or determine to our own satisfaction the moisture in our steam. We are engaged in this at present, but we do not wish to give the results until we have verified them by repeated experiments and checked up the calorimeter. The moisture is about 2 per cent. We have, we think, established one fact, and that is that the size of the coal does not materially affect the number of pounds of water evaporated per pound of combustible. It does affect the number of pounds of water evaporated per square foot of heating surface.

In the course of these tests it has been shown to our satisfaction that the best results would probably be obtained by extending the air chambers to as near the dumping end of the grate as possible, and regulating by the registers the pressure (which may be very slight) in the last air chamber, so that a small amount of air may pass through the ash as near to the dump as possible. The amount of carbon in the ash can, we think, be diminished materially by attention to this point. In the new plants now under construction we are extending the air chambers further toward the dump than we did with those with which the experiments were made.

The Schutte Balanced Steam Valve.

This valve, made by L. Schutte of Philadelphia, is here shown in section. The balancing feature in heavy valves

The Schutte Balanced Valve.

is designed to facilitate the operations of opening and closing them while under heavy steam pressure, and to relieve the strain or friction on the screw spindle. The balance in the Schutte valve is obtained by means of a small auxiliary valve inserted in the body of the main valve, having a separate steam way leading to the piston plate above the valve, which plate is made to fit loosely. By opening this side valve the pressure below the valve and above the plate will be even, no matter whether live steam is exerted below or above the valve. The valve and piston plate being of even diameter, the valve becomes practically balanced and the main valve is opened or closed with little effort. The small auxiliary valve is sometimes placed on top of the main valve, with a passage through it, in which case the valve forms part of the spindle, with sufficient lost motion, and is operated by the spindle. This arrangement, however, is practicable and desirable only when the steam pressure is on the top of the valve, leaving a small overpressure downward. The valves are made in both globe and angle patterns.

THE WEEK.

The Manchester Ship Canal will be formally opened for traffic on December 7.

By a recent decision of the Supreme Court of the United States the great lakes are comprehended within the term "high seas." Justice Field, in delivering this opinion, stated that there has been an advance and development as respects the doctrine of high seas, and that as used in the act of Congress it means water over which no particular State has jurisdiction.

The growth of the shipping interests of the great lakes during the past six years has been of a very striking character. From the annual report of the Commissioner of Navigation just issued it is shown that the tonnage which passed through the Detroit River during the year 1892 amounted to 34,785,000 tons, whereas the tonnage which passed through the Suez Canal during the same year amounted to only 7,712,028 tons. The Lake Superior tonnage, which passes through the St. Mary's Falls Canal, increased from 5,130,659 tons in 1888 to 10,647,203 tons in 1893. The cost of transporting grain from Chicago to New York by lake, canal and Hudson River fell from 28¼ cents in 1862 to 7¼ cents in 1893.

The total strength of the United States army on September 30, 1893, was 2144 officers and 25,778 enlisted men. For various causes the army lost 9456 enlisted men during the year and gained 9074 recruits.

The Commercial Cable Company have signed a contract with Siemens Bros. for a new Atlantic cable, to be laid next spring, between Ireland and Nova Scotia. It will be 2200 miles in length and will have the greatest known carrying capacity.

The Bishop of Urgel, in the European republic of Andorra, recently prohibited and anathematized the installation of telephonic apparatus and other supernatural and diabolical electrical necromancy.

Work was begun last week on a new steel bridge to be erected over the Monongahela River at Brown's Station, near Pittsburgh, Pa. The bridge is being built in order to afford facilities for connecting Pittsburgh and Homestead by means of two electric railroads.

Lord Charles Beresford claims that England needs to expend at least $100,000,000 on her navy within the next three or four years in order to bring it up to an equality with that of any other two powers. The naval force of France, his Lordship asserts, is already superior to Great Britain in some directions, notably in the matter of torpedo vessels.

Sir Edward Watkin, the English railway magnate and promoter of the English Channel tunnel, the great Watkin tower—now rising near London—and other gigantic schemes, is now actively engaged in pushing a project for cutting a canal across Ireland, from Dublin to Galway Bay, in order to shorten the route from England to the United States.

Idle miners in Northern Michigan are said to be becoming desperate. Thousands of them, who have had no work since spring, are, with their families, in a state of destitution; cold and disease having lately added to their sufferings. Governor Rich has invited the mayors of the principal cities in Michigan to meet in Detroit with the view of taking action to relieve the distress. From indications it is believed that 10,000 to 15,000 will have to be fed and clothed until spring, as none of the mines can start much before that time.

An interesting feature of the International Exhibition to be opened at Antwerp in May, 1894, will be the exposition, or competition for prizes, of the packing of goods in cases. It is intended to bring out the best methods of packing for various kinds of merchandise.

A San Francisco firm have just ordered 25,000 tons of coal from Tonquin for use by California railroads. Tonquinese coal has for some time been in use in the French navy with excellent results.

Dispatches from the Pacific Coast report that the new United States cruiser "Olympia" in her official run, November 27, made for 30 miles an average speed of 22.25 knots an hour, while for 13 miles of the distance a speed of 25.59 knots per hour was recorded by the patent log. The "Olympia" will evidently be a worthy mate for her Eastern built sister the "Columbia."

November's fire losses show a continuation of the enormous figures recorded for each month of this year. The total fire waste of this country will probably pass the $150,000,000 mark before the end of the year; a state of things unparalleled since the big Chicago conflagration.

Destitution among negroes, which is so marked in many parts of the country, discloses the fact that, owing to the general distress, white men are this winter doing work that only negroes did a year ago.

The Colorado Irrigating Company have projected a canal to irrigate 1,200,000 acres of land in the Salton Desert of that State. The water will be conveyed from the Colorado River, the total length of the canal being about 400 miles, and the estimated cost $5,000,000. Should water be placed on the tract in question, its value would be raised to about $20,000,000.

Sudden cold in the West has caused great suffering, owing to the scarcity of coal which exists in nearly every part of the interior. In many parts of Kansas and Oklahoma coal is entirely unobtainable.

The California Midwinter Fair will have a Ferris Wheel of its own, the necessary castings for which have been made at the Fulton Engineering & Shipbuilding Works, San Francisco. The wheel will be 120 feet in diameter, and will form one of the attractive features of the Golden Gate Park this winter.

A circumstance, which is quoted as an illustration of the effects of hard times, is that the sales of postage stamps in New York in November were less by nearly $50,000 than those in November, 1892.

Western Freight Discrimination.

Adverse discrimination by local railroads has been a long standing complaint of Northern producers. Some of the Eastern railroad systems have yielded to the pressure steadily applied by their local patrons and have made equable rates on commodities manufactured along those lines, but Western managers have been stubborn, and such concessions as they have made up to this time have only been aggravations. There are signs now, however, of a radical change in this policy. Intimations have been given from influential quarters that on at least important business originating at Chicago the interests of the local producers are to be more carefully regarded than has thus far been the case. Whether the policy thus to be changed will have a wider bearing and will characterize Western roads generally cannot now be foretold, but there is good reason to expect a movement of this kind to be somewhat general within the limits of the great traffic associations having their headquarters at Chicago. A change in this respect may bear heavily on the distant producers who are now favored with disproportionately low freight rates on through shipments, but they will have no real ground of complaint if the change is made, especially if local producers are merely put on a perfect equality with themselves.

The persistent refusal of Western managers to put local producers on an even footing with outside competitors in reaching markets further west or northwest shows how deep seated a certain practice can become in railroad management. The growth of manufactures has been very rapid at Chicago and other Western points within the past five years. Commodities are now manufactured in abundance which at that time were largely supplied from other sections of the country. Having supplied local requirements, these commodities seek a market for the surplus, which is naturally further west and northwest. They are confronted, however, with the fact that under certain moss-grown arrangements their own local roads prorate with lines from competing producing districts on such terms as to give their competitors a much lower rate than they can secure to the same points. This is particularly true in pig iron, but also applies to bar iron, nails. and in fact to iron and steel commodities generally. To reach Western or Northwestern markets manufacturers at Chicago or other points in that vicinity must pay from 25 to 50 per cent. more freight than their competitors on such business pay for that part of their haul over the same track and, perhaps, in the same train, drawn by the same engine. This policy is a relic of the days when manufactures in Indiana and Illinois were confined to the local demands of the community and those States were almost exclusively consumers of staple goods. Freight rates were then devised to meet the conditions existing in the local jobbing trade and, perhaps, were satisfactory at the time. Now, however, both jobbing and manufacturing interests have outgrown the arrangements then made and have long since been ripe for a change.

The plea for fair treatment made by these interests is one that appeals to everybody's sense of justice. There are territorial advantages which ought to inure to the benefit of those located in that territory. A distant producer must expect to be handicapped to some extent in endeavoring to secure business in competition with them. Perhaps he may have compensating advantages in cheaper materials or labor, so that he can overcome the natural difference in freight and offer his product at an even or lower rate at the very door of the local manufacturers. Surely he ought not to complain if he is obliged to pay the same freight rates as those manufacturers when he goes further on and competes with them in territory beyond. This is the point for which many Northern manufacturers have been long contending. The day may come when they will expect their local roads to go further and give them special rates so as to exclude outside manufacturers. Their attitude would then be indefensible from a rational standpoint. But their present demand to be placed on merely an even footing with distant competitors is just and reasonable.

A good deal of serious thought is being given to the very grave question of how to take care of the unemployed during the coming winter. In every community there are many men who are initiating measures looking toward relief. Naturally the different boards of trade are taking the matter into their hands. While, of course, local circumstances must govern the action of such bodies, it would seem that some interchange of opinions ought to take place between their representatives. A good many very important questions of common interest might be very profitably discussed. Delegates of the boards of trade of the great divisions of the country should assemble at such convenient points as Philadelphia, Chicago, Denver and Nashville, to exchange estimates of the magnitude of the misfortunes which they must soon alleviate, and discuss the best and safest methods of reducing distress among the worthy to a minimum. It needs only the invitation of a few leading chambers of commerce or boards of trade to bring about such gatherings, which might do so much good.

The Mesaba Range and Next Year's Prices.

One of the most important factors which will shape the course of prices for steel during the next year will be the Mesaba ore range. The situation is so complicated and is so largely influenced by purely personal considerations that the probable course of events cannot be readily foreseen. Large buyers of ore argue that next year must be one of exceptionally low values. The ore miners, on the other hand, insist that they do not propose to throw away money and that they will be in a position to demand fair prices.

There can be no doubt concerning the ability of the leading Mesaba range mines to put good Bessemer ore into lower lake ports at very low prices, say $2.75 per ton. It is well known that some of the large mines can do even better than that. In fact, with a 65-cent rate from the mines to Duluth, which will be next year's figure, and a $1 lake rate, which may be attained, there is at least one mine which can lay down ore at $2.10, lower lake ports. for standard Bessemer. The mine in question is the Mountain Iron, a fee mine, which has no royalty to pay. It is understood that the Rockefeller interest has purchased next season's output of this mine at 50 cents on cars, which would place the cost at, say, $2.35 delivered. The Rockefeller interest is identified with the syndicate which controls the Mountain Iron mine, the Duluth, Mesaba & Northern Railroad and the fee in a number of other large properties originally held by the Merritts. The syndicate, as such, makes a profit on the haul on the Mountain Iron ore. The Standard Oil party can set the market pace with its block of ore, if it be thought desirable to crowd the other Mesaba mines, which have to pay a royalty of 25 to 65 cents per ton. In some instances the leases of those who now control some of the big mines call for the extraction of a minimum quantity of ore. In one conspicuous case it is 300,000 tons, at 65 cents per ton.

There is a good deal of diversity of opinion on the point to what extent minimum tonnage under the leases prevails. Some authorities estimate it at 2,000,000 and over. Leon Merritt puts it at only 1,000,000 tons. He states that many of the State land leases allow seven years before the payment on a minimum quantity becomes peremptory. In the case of the oldest of these leases there is still two years leeway before the provision in question is in force. Others still have five years of grace. It is claimed that therefore the pressure upon producers will not be as great as is claimed. The point is made that the same mines had the same obligation this year and did

Hosted by Google

not go under. While this is true, it cannot be denied that the Mesaba mine owners were in very sorry financial straits during the past depression. They may be in possession of great prospective wealth, but were then, and partly are now, closely squeezed. Very little cash was in circulation, the only currency being labor checks, which are now being paid off gradually.

A considerable part of the Mesaba ore brought down this season is still unsold, going to swell the very large quantity of ore at lower lake ports which must still find a purchaser, and which is even to-day a heavy load for the Cleveland banks. These accumulations are a menace to prices for the next season.

On the other side of the question are the following considerations: The capacity of the Mesaba range for production is limited by the ability of the existing roads to handle the tonnage, It is not believed that the two roads will have all the tonnage they can handle, with what one of them does in the way of hauling Vermillion, if they are called upon to carry 2,500,000 tons of Mesaba ore. Such an amount is inadequate, even with the stocks at lower lake ports, to cover the requirements of the Western market, even though consumption be much restricted. The new road which the Minnesota Iron Company propose to build into the Mesaba, in order to avoid the heavy grades on their present branch, cannot be completed in time to relieve the situation in 1894. Therefore, it is argued, prices will not be as low for the next season as they have been during this year's financial panic.

Some of the Mesaba interests talk of going a good deal further than the mere mining, transportation and marketing of iron ore. They hint that they are perfectly able financially to take care of all the profits until the finished steel goes into the hands of the consumer. In other words they are considering the plan of putting up blast furnaces and following that up with steel works and rolling mills. With the very latest appliances, and a very cheap ore to start with, they claim to be able to meet any competitor.

That, of course, is a still somewhat distant contingency. What interests the iron trade more at the present moment is what will be the basis of values next year. The principal interests in the Mesaba range are undoubtedly in a position to dictate low prices if that should happen to suit them. It is certain, however, that the producers of the older ranges are not going to stand aside without striking a blow for their share of the markets. If low prices for ore prevail, the pressure which the Western rolling mills and steel works have exerted on the Eastern markets during the present year will continue unabated.

If there be one article upon which a specific duty is absolutely necessary, it is scrap iron. We believe that even Mr. Wilson himself will recognize that it is as difficult to value this article as it would be to perform a similar operation with the accumulations in a Yankee garret. Scrap iron is collected in all quarters of the globe, and in markets distant from rolling mills or steel works is very low in value. A proper appraisal would be a matter of the greatest difficulty and there might be a very wide difference of opinion among honest men. But if any effort to defraud by undervaluations were made the Goverment would be practically helpless. Unless a change is made we expect to witness an approach, in the Eastern iron trade, to the condition of affairs in the Dominion, where the finished iron trade is based almost entirely on the rerolling of scrap.

Taking Stock.

The usual time for taking stock and making up the final balance sheet for the year in many kinds of business is fast approaching. With its approach, a growing anxiety to know just what the year has brought forth of prosperity or adversity will possess the minds of men to whom the memorable commercial events of the year have already brought anxiety enough. Some of these will undoubtedly have to face a very unsatisfactory result in the aggregate of the year's trade, and very few will be able to congratulate themselves upon large profits gained in 1893. The majority will esteem themselves worthy of congratulation if they have paid all expenses and come out even. All who have been able to do this may feel sure that, with improved conditions of trade certain to come, they can compensate themselves for the trials from which the business of the country is emerging.

Nothing exceeds the annual inventory in importance as related to good business methods. But with oversanguine or timorous men it often is made the source of gross self deception. A man who deceives himself about anything is the most complete of dupes. The man of true courage and commercial ability, however much he may be willing that others may deceive themselves as to what he may be worth financially, is most reluctant to hide from himself the exact condition of his affairs. Therefore, in estimating the value of his assets, if any uncertainty exists as to what any particular asset may be worth he rather estimates it at its lower than its higher possible value.

In manufacturing business where iron founding is a prominent element, assets frequently much overrated are the patterns, flasks, core boxes, &c. These things often cost a great deal of money in the aggregate, and in valuing them from year to year there is a tendency to put down patterns in particular at their original cost, even after they have ceased to be of that value either on account of deterioration, or because the goods they were made for have become more or less unsalable. An element in the value of a pattern is its present utility as one of the appliances for conducting business. It may, and often does, become merely so much lumber, and, as such, of no value whatever as an asset. As to core boxes and flasks, especially if these be of wood, they deteriorate rapidly in use, and an underestimate of wear and tear may lead to erroneous conclusions in the profit and loss account. An exaggerated valuation of assets has often proved a rock upon which commercial enterprises have been wrecked.

The Cost of Billets.

A rough estimate of the items of cost of converting $11 pig iron into 4 x 4 soft steel billets is given in the following, on the authority of an experienced steel maker:

Cost of Ingots.

Pig iron	$11.00
Waste, deducting value of scrap	1.65
Labor	1.00
Ferromanganese	.30
Refractories	.30
Molds and stools	.30
Fuel	.25
Repairs	.50
Total ingots	$15.30

The cost of rolling ingots to billets is figured as follows:

Ingots	$15.30
Waste, deducting value of scrap	.75
Labor	.50
Fuel	.25
Repairs	.25
Total	$17.05

It will be observed that this covers only the bare cost of conversion, without any allowance for general expenses and interest on plant. The figures seem to justify those who claim that the cost of conversion is close to $6 per ton.

It may be well in this connection to call attention to the fact how large a share of the cost is the item of waste. In the figures quoted it aggregates $2.40. This figure, of course, varies with the first cost of the raw material, so that every statement bearing on the cost of conversion should always be coupled with a report on the price at which the pig iron has been put in. We need hardly state that $17 billets can only leave the most moderate margin to those who produce their own pig iron at a cost below the market price now ruling, say $11. The very closest figuring which we have observed lately brings down the cost of pig to the most favored producers to a shade over $10. When it is considered that this is based on Mesaba ore at $2.75, lake port, on coke at $1.10 and on all items down to the lowest point it will be clear that such values have not in them the elements of permanency. Profits all along the line cannot be utterly squeezed out indefinitely. When they do begin to creep back into the accounts their cumulative effect at the end of the line may be easily reflected in jumps of dollars.

Some time since we had the privilege of examining two machines built to special design and intended to do practically the same work. They differed widely, both in design and

Hosted by Google

construction, and especially in the workmanship. One machine, A, was pronounced by the foreman of the shop to be of most excellent design, to be easily understood and requiring little or no attention—in fact, as he expressed it, he could put any man in the shop in charge of the machine without instruction. The other machine, B, was more complicated in design, required more time in the adjustment of the work and called for the services of one of the best men in the shop and considerable study on his part to run it. The workmanship on this machine was of the highest grade. The cost of the two machines was about as 1 to 2, machine B being the costlier, and the output was in favor of the latter machine in the proportion of about 2 to 3. The point to be brought out is that had the makers of machine B made machine A it would have been, in the opinion of the foreman, perfect, the workmanship on machine A being decidedly inferior; but had machine B been constructed by the builders and designers of machine A, it in all probability would not have worked at all. The whole thing shows that machines of excellent design may originate in shops incapable of doing first-class work, while at the same time establishments noted for accuracy in their workmanship may fail once in a while in the design.

One of the most extraordinary features of the Wilson tariff bill, which is claimed to be the perfection of scientific balancing, is the lack of gradation of duties from the raw to the finished article. Steel billets have a 30 per cent. rate. Wire rods, a step further in manufacture, are the same. Wire, with all its many intricate products, and highest class of material for some purposes, rests on the same basis, although manufactures not otherwise specified take the 35 per cent. rate. Wire nails, which are made from wire, duty 30 per cent., drawn from rods, 30 per cent., rolled from billets, 30 per cent., are put down to 25 per cent., or lower than the whole line of intermediate products from the pig iron, on which the duty is 22½ per cent. Steel billets and slabs, the raw material for a long line of products, have a higher rate of duty than the latter, including cut nails and tacks, fish plates and horseshoe nails, which are put down at 25 per cent. Yet common bars and plates are to carry a duty of 30 per cent. The saw makers have apparently roused the particular ire of the tariff experts. Their product, which requires so much judgment, skill and labor, is supposed to stand up against a 25 per cent. rate, while Mr. Wilson's idea of a proper adjustment gives machine cut files 35 per cent. ad valorem.

A curiosity in corporate literature is the following announcement in a recent list of applications for corporation licenses in Illinois: "Towaxystwo Porzyczkowe I Budowincize M. Kopernika, at Chicago; capital stock, $1,000,000; incorporators, John Bank, Frank J. Karch, Bernard Makiowicz, Adam Piasczynski, Frank Marcankowski, Frank Sowadzki and Kaziwinski Zychlinski." The population of Chicago is so cosmopolitan that foreign names appear very frequently in applications for licenses to incorporate, but this is, perhaps, the most striking specimen of an unfamiliar dialect to American readers that has thus far graced the official papers of the State of Illinois.

OBITUARY.

JOSEPH D. POTTS.

Joseph D. Potts, who died at Milton, Pa., on the 3d inst., was born at Springton Forge, Chester County, December 4, 1829, and his early life was spent at Pottstown and at Isabella Furnace, Chester County. He drifted away, however, from the occupation of his ancestors and became a civil engineer, as such being connected with various railroads, beginning in May, 1852, upon the Sunbury & Erie. There are two sons living, William M. and Francis L. Potts, each married. Subsequently he was made vice-president of the Steubenville and Indiana Railroad, superintendent of the Western Division of the Pennsylvania Railroad and president of the Western Transportation Company. Upon the breaking out of the civil war Governor Curtin appointed him lieutenant-colonel upon his active staff and chief of the Transportation and Telegraph Department of the State. He held this position from May to December, 1861, at which time the labor of this department was transferred by the State to the Federal Government. Colonel Potts, while serving in 1862 with the militia of the State, called out in consequence of Lee's Antietam expedition, was detailed by General Reynolds as military superintendent of the Franklin Railroad, and performed prompt and valuable service in that capacity.

The next few years constituted the most active and responsible period of an ever busy career. During 1862–65 Colonel Potts served as general manager of the Philadelphia & Erie Railroad for its lessee, the Pennsylvania Railroad Company. From 1865 to 1877 he was president of the Empire Transportation Company, and on February 20, 1871, was elected president of the Erie & Western Transportation Company, the latter still owning and operating a fleet of propellers upon the Great Lakes.

In 1874 he became a managing director in the National Storage Company, and in 1879 president of the National Docks Railway Company, both corporations under the laws of New Jersey. He held these positions until 1884, when he resigned them both. He was elected president of the Enterprise Transit Company in 1871, which position he held until his death. For some years prior to 1885 he was president of the Girard Point Storage Company. He was from their establishment a large owner and a director in the International Navigation Company, who operate the Red Star Line, the Inman and International Line and American Line of ocean steamers.

Of late years Colonel Potts, with the old time family predilection, became interested in the production of iron, he becoming part owner of the Potts Brothers' Iron Company, Limited, of Pottstown, who own and operate a rolling mill in that place. In 1890 he purchased the Chester Pipe & Tube Works, at Chester. In 1880 he bought the Isabella Furnace property, in the northern part of Chester County, formerly owned by his father.

COL. JOHN L. BROWN.

Col. John L. Brown died at Charlotte, N. C., on the 25th ult., the immediate cause of his death being pneumonia. He had, however, for several years been in feeble health, but was able to be up and about until six weeks before his death. From that time his decline was rapid, and for a week his death was hourly expected. John L. Brown was born in Rowan County, N. C., January 8, 1829. His parents, both of whom were of German lineage, came to Charlotte when Colonel Brown was yet an infant, and he was thus reared in that place. Early in life he began the mercantile career in which he eventually amassed a handsome estate. He established himself in business in 1852, conducting a general merchandise establishment. In 1874 he entered into partnership with the late Col. T. H. Brem, J. H. Weddington and John Van Landingham in the hardware business, the firm name being Brem, Brown & Co. In 1875 this partnership was dissolved and another formed, consisting of Col. Brown and Mr. Weddington, who conducted the business for several years under the style of Brown & Weddington. P. M. Brown, the Colonel's son, was subsequently admitted to the firm, and the style became Brown, Weddington & Co., as at the present time. As a business man, Colonel Brown had the full confidence of his fellow men, and he was in every way regarded as one of the representative business men of Charlotte. As an evidence of the esteem in which he was held, he was thrice called on to represent his county in the State Legislature. Colonel Brown was also a member of the city's Board of Aldermen for 18 years, being also a member of the Board of County Commissioners for several years. He was president of the Mutual Building and Loan Association, a director of the First National Bank, and when the Chamber of Commerce was organized was made its first president. He was appointed by Governor Scales a delegate to the commercial convention held in Atlanta in 1885, and was elected vice-president. In June, 1887, he was elected president of the Board of Trustees of Davidson College, which institution in him always had a warm supporter and friend.

At the new mill of Hughes & Patterson, Philadelphia, the Ridgway steam-hydraulic system is largely used and the latest application of it, which is now being put in place, is one of interest to all owners of bar mills. A section of floor, or hot bed, about 6 x 4 feet is taken out and a Ridgway steam-hydraulic elevator is set in the ground. The elevator is of the direct acting type, and on the ram is placed a platform scale in which the beam is below the platform. The elevator has a lift of about 4 feet. The cast frame on top of the ram of the elevator which supports the scale is rigged with a latch and is made to swing round in any direction. When the iron is rolled it lies upon the hot bed until cold, when it is dragged upon that part of the hot bed over the scale. The elevator is then put in operation and the scale rises, carrying the iron with it. It is but a few seconds' work to read the weight, and the iron being 3 to 4 feet above the floor level is easily and quickly rolled off on to trucks or wagons.

American Society of Mechanical Engineers.

The fourteenth annual convention of this society began last Monday evening at the house of the society, 12 West Thirty-first street, New York. Among those in attendance were the following:

Archer, Edward R., Chief Engineer Tredegar Company, Richmond, Va.
Baker, Charles F., Boston, Mass.
Baker, Chas. Whiting, Associate Editor *Engineering News*, New York City.
Baldwin, Stephen W., New York Agent Pennsylvania and Maryland Steel Companies, New York City.
Ball, Frank H., Vice-President and General Manager Ball & Wood Company, Elizabeth, N, J.
Barnaby, Charles W., Superintendent Phœnix Iron Works, Meadville, Pa.
Barr, John H., Assistant Professor Mechanical Engineering, Sibley College, Cornell University, Ithaca, N. Y.
Bates, Edward P., Manufacturer Heating Apparatus, Syracuse, N. Y.
Bayles, Robert Nelson, New York City.
Bowen, Ernest S., Assistant Superintendent McIntosh, Seymour & Co., Auburn, N. Y.
Bristol, W. H., Assistant Professor Mathematics Stevens Institute Technology, Hoboken, N. J.
Brown, Robert A., President and Treasurer New Haven Mfg. Company, New Haven, Conn.
Burden, James A., President Burden Iron Company, Woodside, Troy, N. Y.
Camp, Geo. E., Washburn & Moen Mfg. Company, Worcester, Mass.
Capen, Thomas W., Chief Engineer Fraser & Chalmers, Chicago, Ill.
Cartwright, Robert, Constructing Engineer, Rochester, N. Y.
Cary, Albert A., Civil and Mechanical Engineer Abendroth & Root Mfg. Company, New York City.
Cheney, Walter L., Secretary Meriden Machine Tool Company, Meriden, Conn.
Christensen, August C., Superintendent Snow Steel Plate Works, Buffalo, N.Y.
Christie, W. Wallace, Consulting Engineer, Paterson, N. J.
Clarke, Samuel J., Superintending Engineer Providence & Stonington Steamship Company, New York City.
Cremer, James M., Brooklyn, N. Y.
Cruikshank, Barton, Superintendent Roberts Cash Register Company, Harriman, Tenn.
Darling, Edward A., Superintendent Buildings and Grounds Columbia College, New York City.
Davis, Lewis Ketcham, M. E. National Lead Company, New York City.
Davis, Isaac H., Westinghouse, Church Kerr & Co., New York City.
Dodge, James M., President Link Belt Engineering Company and Chief Engineer Dodge Coal Storage Company, Nicetown, Philadelphia, Pa.
Durfee, W. F., Consulting Engineer, West New Brighton, N. Y.
Fladd, Frederick C., Mechanical Inspector E. W. Bliss Company, Limited, Brooklyn, N. Y.
Gobeille, Jos. Leon, General Manager and Treasurer the Gobeille Pattern Company, Cleveland, Ohio.
Gould, W. V., Secretary C. B Rogers & Co., New York City.
Granger, Albert Sanford, Foreman Machinery Department C. W. Hunt & Co., West New Brighton, S. I., N. Y.
Hamilton, James V., Krajewski & Pesant, Brooklyn, N. Y.
Hartness, James, Assistant Manager and Superintendent Jones & Lamson Machine Company, Springfield, Vt.
Henderson, Alexander, Chief Engineer United States Navy, Navy Yard, Boston, Mass.
Henning, Gustavus C., Consulting Engineer, New York City.
Hill, George, Chief Engineer and Manager Carrere & Hastings, New Brunswick, N. J.
Hillmann, Gustav, Naval Architect, Brooklyn, N. Y.
Hoffecker, W. L., Superintendent M. P. Central Railroad of New Jersey, Elizabethport, N. J.
Holloway, J. F., New York City.
Hunt, Chas. Wallace, New York City,
Hutton, Frederic R., Professor Mechanical Engineering School of Mines, Columbia College, and Secretary of the Society, New York City.
Idell, Frank E., Mechanical Engineer, New York City.
Jacobus, D. S., Assistant Professor Experimental Mechanics and Shop Work Stevens Institute, Hobokon, N. J.
Kafer, John C., Passed Assistant Engineer United States Navy, Superintendent, Morgan Iron Works, New York City.
Kent, William, Consulting Engineer, New York City.
Kerr, Walter C., Westinghouse, Church, Kerr & Co., New York City.
Kirchhoff, C., Editor *The Iron Age*, New York.
Klein, J. F., Professor Mechanical Engineering Lehigh University, Bethlehem, Pa.
Laforge, Frederick Henry, Chief Inspector Connecticut Mutual S. B. Inspection & Insurance Company, Waterbury, Conn.
Lyal, William L., Mechanical Engineer and Superintendent J. W. Lyal Mfg. Company, New York City.
Meatz, John T., Superintendent Mason Machine Works, Taunton, Mass.
Metcalf, Wm., Pittsburgh, Pa.
Miller, Alexander, Brown & Miller, Jersey City, N. J.
Miller, Fred J., Associate Editor *American Machinist*.
Mitchell, Albert E., Superintendent Motive Power N. Y., L. E. & W. Railway, New York City.
Montgomery. H. M., Chief Draftsman the Babcock & Wilcox Company, New York City.
Morse, Chas. M., Mechanical Engineer, Buffalo, N Y.
Mumford, Edgar Huidekoper, Henry R. Worthington, Foundry Department, Elizabethport, N. J.
Nason, Carleton W., President Nason Mfg. Company, New York City.
Odell, Wm. H., Mechanical Engineer, Yonkers, N. Y.
Parsons, Frederick W., Superintendent B. W. Payne & Sons, Elmira, N. Y.
Pentz, Albert D., Elizabeth, N. J.
Platt, Jos. C., Consulting Engineer, Waterford, N. Y.
Pusey, Chas W., President the Pusey & Jones Company, Wilmington, Del.
Rankin, Thomas L., Engineer De La Vergne Refrigerating Company, New York City.
Raqué, Philip E., Vice-President and Engineer Atlas Iron Construction Company, New York City.
Raynal, Alfred H., Superintendent Sam. L. Moore & Sons Company, Elizabeth, N. J.
Richards, Frank, New York City.
Roberts, William, Paper Manufacturer, Waltham, Mass.
Rockwood, Geo. I., Consulting Engineer, Worcester, Mass.
Roelker, H. B., Mechanical Engineer, New York City.
Rogers, Winfield S, Mechanical Engineer, Troy, N. Y.
Scheffler, Theo. Francis, Chief Draftsman Erie City Iron Works, Erie, Pa.
Sewall, M. W., Superintendent Engineering Department Babcock & Wilcox Company, New York City.
Sinclair, Geo. M., Midvale Steel Company, Philadelphia, Pa.
Smith, Chas. F., Mechanical Engineer, Brooklyn, N. Y.
Spies, Albert, Associate Editor *Cassier's Magazine*, New York City.
Strangland, B. F., Superintendent Machine Ventilation Howard & Morse, New York City.
Stillman, Francis Hill, New York City.
Suplee, Henry Harrison, Mechanical Engineer Yale & Towne Mfg. Company, Stamford, Conn.
Taylor, John T., Superintending Engineer W. & J. Sloane, New York City.
Thomson, John, President Neptune Meter Company and John Thomson Press Company, New York City.
Thorne, Wm. H., Wm. Sellers & Co., Incorporated, Philadelphia, Pa.
Thurston, Robert H., Director Sibley College, Cornell University, Ithaca, N. Y.
Tremaine, E. G., Assistant Superintendent Machinery Department P. Lorillard & Co., Jersey City, N. J.
Wagner, John R., Coxe Bros. & Co., Drifton, Luzerne County, Pa.
Watson, Wm., Secretary American Academy Arts and Sciences, Boston, Mass.
Webster, John H., Superintending Engineer American Sugar Refining Company, Boston, Mass.
Weickel, Henry, Chief Draftsman Yale & Towne Mfg. Company, Stamford, Conn.
Wellman, Samuel T., President Wellman S. & I. Company, Thurlow, Pa.
West, W. Frank, Morris Heights, New York City.
Winship, J. G., Mechanical Engineer Geo. F. Blake Mfg. Company, New York City.
Wolff, Alfred R., Consulting Engineer, New York City.
Zehnder, Chas. H., President Jackson & Woodin Mfg. Company, Berwick, Pa.

The election of officers for the ensuing year resulted as follows:

President, Eckley B. Coxe.

Vice-presidents, C. E. Billings, Percival Roberts and H. J. Small.

Treasurer, Wm. H. Wiley.

The annual report of the council showed the society to be in a most flourishing condition in every way. The receipts for the year were $35,663, and the expenditures $23,019.

The president, Eckley B. Coxe, chose for his address the subject:

The Use of Small Sizes of Anthracite Coal for Generating Steam.

Elsewhere in this issue we give a portion of a paper by Mr. Coxe, presented at the Chicago convention, in which will be found a description of the method of burning small coal. We quote from the address as follows:

When I first remember the anthracite coal business all the sizes below stove coal were considered of little or no value. Chestnut coal was used to a greater or less extent about the collieries for making steam, but much of it was thrown away. It gradually became a domestic fuel, and pea coal took its place for generating steam. This size is gradually coming into use for domestic purposes, and buckwheat coal is taking its place for steam. Two smaller sizes, known as rice and barley, are already being used to a large extent for the same purpose. The value or cost of these coals decreases very rapidly with the size. I append herewith a table showing the size and approximate cost at mines, and the sizes of mesh over which or through which they are made.

Table 1.

Size.	Made through.	Made over.	Approximate price at mines.
	Inch.	Inch.	
Chestnut.....	1½	⅞	$2.75
Pea.	7-8	9-16	1.25
Buckwheat....	9-16	⅜	.75
Rice	3-8	3-16	.25
Barley..... .. .	3-10	3-32	.10

NOTE.—The above meshes are all round punched, and are the standards adopted by Coxe Bros. & Co. at the Cross Creek Collieries.

Another important point to be noted is that the cost of transportation of the small sizes is less than that of the large. From the mines to tide, pea coal is charged 30 cents and buckwheat, rice and barley 50 cents less per ton than the domestic sizes.

One great difficulty encountered in the introduction of these smaller sizes was the fact that, as they were of comparatively little value, but little attention was paid to their preparation, and parties who began to use them did not erect furnaces specially constructed for the purpose, but generally burned them in their old plants, sometimes changing the construction of their grate bars a little.

Hosted by Google

While the size of the domestic coals made by the different companies are practically the same, there has been a great difference in that of the small coals and in the amount of impurities contained in them. Formerly a large amount of culm was employed where it could be obtained cheaply, but its use is diminishing for the following reason: What was formerly known as culm contained the buckwheat, rice, barley, and in some cases the pea coal. Now, however, the pea, buckwheat, rice, and in some cases the barley, are taken out; and the dust that remains, which forms what is now called culm, although it may still be used by mixing with bituminous coal, or in a special furnace in which it is burned as dust after being thoroughly pulverized, or by making briquettes or compressed fuel, yet it is at present of no value alone and in its natural state for generating steam.

As is well known to all those who burn anthracite, sizing is of great importance. The coal burns only on the surface, and therefore, if the size is not uniform, the smaller particles clog the passages between the larger and thereby prevent a sufficient quantity of air from passing through the furnace. Some of those who have attempted to use buckwheat, rice and barley have given them up, because of the great want of uniformity in the results obtained. The difficulty may be due to one of two causes, or both: 1, To bad sizing, and, 2, to the presence of a large quantity of impurities. Experiments we have made have proved that the percentage of carbon when small anthracites are burned under proper conditions, and not the size, is what determines the amount of water evaporated per pound of coal, but the amount of water evaporated per square foot of heating surface decreases with the size of coal.

Of course it is not practically possible to have the size of the coal absolutely uniform, but the producer should at least guarantee that a certain percentage of the coal sold as rice should be of such size that it would pass through a mesh of a specified diameter and over a mesh of another specified diameter. In other words, with the present light I have upon the subject, if I was in charge of a large steam plant burning, say, 100,000 tons of rice coal per year, I would try to make a contract which would require the coal to contain not over a certain percentage of water and not less than a certain percentage of carbon, or, what is practically the same thing for anthracite, not over a certain percentage of ash, and that a certain percentage of the average daily sample of the coal would pass through a mesh of a certain size and over a mesh of another size, and that the coal should not contain more than a certain percentage of dust—dust being what would pass through a mesh of, say, $\frac{1}{16}$ inch in diameter.

Having reached these conclusions some time ago, I have with my assistant, John R. Wagner, been studying the question of how to determine in a rapid, simple and effective manner, by methods which do not require scientific work except for the analysis of the coal, the actual commercial value of any shipment of these small sizes.

I shall now proceed to describe our methods for doing this work.

As we are producers to a much larger extent than we are consumers of the small anthracites, although we burn between 100,000 and 150,000 tons per year at our collieries and works for generating steam, we have taken up the subject with the view of controlling our production as well as controlling our consumption, and I shall describe our methods of doing the work, which can easily be adapted by any one receiving coal in cars or boats to their special case.

The foundation of all such work is the obtaining of fair average samples. This is done as follows:

At each of the collieries where the pea, buckwheat, rice and barley are shipped samples of each size are taken several times a day from the loading lips as the coal is running into the cars. These are put into four separate bins, one for each size. At the end of the week the coal in each bin is thoroughly mixed, and is then sampled by quartering down until we obtain about 30 pounds, which is sent in a strong canvas bag to the laboratory, thus obtaining from each breaker an average sample of each of the four sizes each week.

The work of taking samples is under the direction of the coal inspector (one being stationed at each colliery), who inspect all the coal shipped. When cars of small capacity are loaded, of which there are not many now, the samples are sometimes taken from the top of the cars instead of taking them from the lips as the coal runs into the cars. With cars of larger capacity the samples are always taken as the coal runs from the lips, getting in each case a very fair average. In taking samples from the top of the smaller cars, eight or ten ordinary buckets of coal are taken from different parts of the car without paying any special attention to character of the coal at the place it is taken. The coal from the buckets is placed on a platform and quartered down until about one bucketful is obtained, which is put in the bin. In the other case, where the samples are taken as the coal runs from the lips, they are also put in a bucket and carried to the proper bin. Each of the samples obtained may be used for any of the five following operations:

1. Determination of size.
2. Determination of the slate.
3. Determination of the ash, involving in some cases an analysis of the ash.
4. Determination of the water.
5. Rapid commercial determination of the specific gravity of the coal.

Determination of Size.—The object of this operation is to determine the exact size of coal which makes up the sample, as distinguished from its nominal size. The apparatus consists essentially of a cubical box, the top and one side of which are open and into which slides a series of drawers. We generally use five or six. These drawers are wooden frames $1\frac{1}{4}$ inches deep, about 12 inches wide and 14 inches long.

The bottom is a sheet of perforated metal. The box rests upon a circular base of wood, which is coned at the bottom and has in its center a pin with a spherical head, which works in a spherical hole in the center of the wood base. When the pin is placed in the center hole the box can be revolved easily, and in such a way that the axis of the box describes a cone. This shakes the coal and causes it to move from one side of the screen to the other, and, as it can be moved very rapidly, soon sizes the coal. When the drawers have been placed in the box a stick of wood is inserted to prevent the drawers from sliding out. The sizes of the perforations which we usually employ are:

For the upper screen, $\frac{7}{8}$ inch round.
For the next lower, 9-16 inch round.
For the next lower, $\frac{3}{8}$ inch round.
For the next lower, 3-16 inch round.
For the next lower, 3-32 or 1-16 inch round.

This makes with the dust six sizes. Of course the number of drawers and the size of the perforations can be varied to suit each special case. If the coal is of the ordinary character we can screen about 15 pounds, or about one-half the regular sample brought to laboratory, which is quartered down to obtain the amount necessary to make the determination. It is not necessary to weigh the part to be tested; it is, however, necessary that the entire sample obtained by quartering down should be screened, otherwise you would not have an average sample.

The coal is gradually poured upon the screen while it is revolving. When the operator is satisfied that the coal is thoroughly screened, each drawer is taken out and the quantity in each drawer is weighed, and by simply adding together these weights, the total weight of the sample is obtained. In this way the average percentage of each size is easily found.

Determination of Slate.—While in large coal the percentage of slate can easily be determined by taking the average sample, weighing out, say, 100 pounds of it, picking it over by hand and weighing the amount of slate and bone found, it becomes very difficult to do this with the smaller sizes of coal, as a magnifying glass must be used. This is very trying on the eyes and requires a great deal of time. We sometimes resort to it, but only for the purpose of checking our other process. The method adopted depends upon the difference in the specific gravity of the coal and slate. The specific gravity of a piece of coal increases with the amount of ash that the coal proper contains, and also with the amount of bone or slate attached to it.

We first determine by analysis the composition of the coal, bone and slate from the mine we wish to study, and also find in the usual way the specific gravity of the specimens analyzed. We thus fix a limiting specific gravity, the particles lighter than which may be considered coal, and those heavier, slate or bone; and we make a solution of chloride of zinc of the same specific gravity. This limiting specific gravity, of course, varies with the nature of the coal and the nature of the impurities. The coal from the Lehigh region and some parts of the Schuykill region is much heavier than that of the other parts of the anthracite field, and the specific gravities of the bone and slate also vary with the locality and vein. We use for our mines a solution with a specific gravity varying from 1.70 to 1.72.

The simplest form of the operation would be to take a large beaker glass nearly filled with the solution of chloride of zinc, and pour slowly into the coal to be examined, stirring it from time to time. The coal floats and the slate goes to the bottom. When the floating coal, which is generally much greater in quantity than the slate, begins to cover the top of the vessel, a portion of it is skimmed off and put in a dish; and this is continued until all the coal to be tested has been poured into the vessel. The remaining coal which is floating is skimmed off with a great deal of care, the chloride of zine solution poured off, and the slate placed in another vessel. The coal and slate are then washed and dried and weighed, and the percentage of each calculated. This, of course, does very well if only a few determinations are to be made, but where it is necessary, as with us, to make a large number of tests, an apparatus devised to simplify the work may be used with advantage.

Hosted by Google

As we have constantly occasion to dry coal, which in the ordinary way takes considerable time, a simple apparatus was erected to do the work. It consists essentially of a rectangular iron case about 4 feet long, 26 inches wide and 4 inches high, cast hollow and as thin as possible. This is kept filled with steam; on top of this is placed a box made of wood, in the bottom of which there are two drawers 18 inches long and 16 inches wide. The sides of these drawers are of wood and the bottom of 24-mesh wire gauze. The bottom of the box, which is about 1 inch thick, covers the whole iron plate, and extends about 1½ inches beyond the edge all around. From the outer edge of the cover a canvas curtain about 8 inches long is hung. The drawer is about 1 inch above the iron plate, leaving space for the hot air to pass through. The bottom of the case is cut out where the bottom of the drawer is covered with the gauze, and the whole box rests upon the plate, so that air passes around and over the plate and up through the gauze. The top of the box is closed, with exception of one hole, in which is inserted a sheet iron pipe, which connects with a suction fan. The result is that a constant supply of air passes around the iron plate, through the holes in the wood cover, and then through the gauze to the suction fan; by means of which a very rapid drying at a comparatively low temperature is brought about. In order to dry the coal and slate from the chloride of zinc apparatus, the pipe between the drying apparatus and the fan is enlarged, so that, by removing the cap on the upper part of the enlarged portion of the pipe, the cylinders can be inserted in the enlarged portion, the cover put on, and the drying of this coal and slate carried on without interfering with the drying in the other part of the apparatus. This apparatus is very simple and inexpensive, and is very satisfactory and thorough in its work.

Analysis of the Ash.—The sample which comes from the colliery in the canvas bag, on reaching the sample room of the laboratory is divided into two parts, one of which is dried (should it be wet) in the apparatus already described, and then goes to the pulverizer. The pulverizer consists of a cast iron cylindrical shell, 12 inches long and 16 inches in diameter (both inside), through the center of which passes an iron shaft, and inside of it are 16 chilled cast iron balls 3 inches in diameter. The cylinder makes from 70 to 150 revolutions per minute, according to the number of samples to be prepared. Along the surface of the cylinder, and parallel to the axis, runs a slot which is ¼ inch wide on the inside and 1½ inches wide on the outside. This is closed by a wrought iron wedge, which is held by two clamps placed near each end. The coal is introduced by bringing the slot to the top and pouring it in, and is removed by bringing the slot to the bottom and allowing it to run out, the cylinder being oscillated backward and forward in order to remove all the stuff, which is received in a Russia iron pan 24 inches long and 18 inches wide. In this way practically the whole of the pulverized product can be rapidly removed. We generally put about 15 pounds into the pulverizer at once. Running at a moderate speed it takes about 1½ hours to pulverize 15 pounds of pea coal thoroughly; but, by crushing it in a mortar so that the coal will pass through a $\frac{9}{16}$ round mesh, this time can be very materially reduced. Buckwheat, rice and barley are pulverized without any previous hand crushing. Rice and barley require only about three-quarters of an hour.

The pulverizer is a very simple, cheap and effective machine. The surfaces of the slot are planed, as is also the wedge, making a perfectly tight joint, and not allowing any dust to escape.

The pulverized coal received in the pan is quartered down to about 1 pint, which is screened on a No. 60 mesh sieve; 90 per cent. generally passing through; and that which does not pass through is crushed finer by hand on a rubbing plate, requiring but a few minutes.

But attention having been called to the discrepancies in analysis where we attempted rapid crushing, we made a series of careful experiments (the results of which are given in the following table) to satisfy ourselves as to the facts. The first column gives the sizes of coal, the second column gives the percentage of ash when the proper method of sampling is adopted, the third column gives the results when the rapid method of sampling was adopted, and the fourth column gives the difference in each case:

Results of Comparison of Two Methods of Obtaining the Powdered Samples, for Analysis.

Size.	Method "A." Per cent. of ash.	Method "B." Per cent. of ash.	Difference. Per cent.
Lump coal	5.00	6.65	1.65
Broken coal	7.52	9.97	2.47
Egg coal	8.50	11.12	2.62
Stove coal	8.39	10.15	1.76
Chestnut coal	9.50	12.87	3.37
Pea	11.45	14.95	3.50
Buckwheat	9.87	11.27	1.40
Rice	13.85	17.95	4.10
Barley	13.05	23.95	10.90

It will be observed that the difference was as much as 84 per cent. in the last case. The reason of this is probably that a large portion of the impurities in coal, such as iron pyrites, silica and substances of a clayey nature, occur in very light incrustations upon the surfaces of fracture of the coal.

Proximate Analysis of the Coal.—For commercial purposes, which is the point of view from which I am treating this subject, only a proximate analysis of the coal is generally necessary—that is, an analysis by which the moisture, volatile combustible matter and ash are determined, the carbon being determined by difference. It is necessary only occasionally to determine the sulphur, and more rarely the composition of the ash, as the sulphur and the composition of the ash do not vary in the coal from one colliery as much as the percentage of ash. It would not be necessary to determine very often the moisture and volatile combustible matter were it not that without them the amount of fixed carbon cannot be arrived at.

The sample, which has been pulverized and quartered down until it will about fill a pint measure, is sent to the analytical room, where it is subjected to the following operations:

1. Determination of ash.
2. Determination of moisture.
3. Determination of volatile combustible matter.
4. Determination of sulphur.
5. Analysis of ash.

Moisture Determination. — This is done in a very simple apparatus constructed as follows:

Two 1-inch boards, 12 inches wide and about 8 inches high, with the upper corners rounded off, form the back and front. In each of these boards there is cut an opening 10 inches wide and 4½ inches high, also rounded, in which there is placed a copper muffle made of sheet copper $\frac{1}{16}$-inch thick, simply bent in the form desired and riveted at the joint, and open at both ends. This is tacked to the two boards. Both the front and back of this muffle are closed by a piece of asbestos board supported on two tacks. Another piece of asbestos board is bent around so as to form the sides and top, leaving a space between it and the muffle about 1 inch wide. Underneath the muffle are three very small gas jets formed by making three small perforations in ⅛-inch gas pipe. These give the heat which keeps the muffle hot. A thermometer passes through the top of the muffle and the asbestos board top, and shows the heat in the muffle. The piece of asbestos board at the back is not taken off; that in front is removable in order to allow the sample to be put in. By means of these gas gets the temperature is kept at about 225° F., and remains remarkably constant with but very little attention. Any ordinary mechanic can construct this apparatus in a few hours.

The sample when weighed out is placed in the muffle, and remains at a temperature of 225° for about one hour, experience having shown us that this time and this temperature are best suited for determining the moisture in our anthracites. Notwithstanding the extreme simplicity and low cost of the apparatus, it gives results which are very satisfactory.

Determination of Volatile Combustible Matter.—For this determination, the method usually adopted is to heat the sample in a covered platinum crucible for 3½ minutes by an ordinary Bunsen burner, and then, without cooling, for 3½ minutes more with a blast burner. We find it very convenient to adopt a crucible of special shape provided with a flanged sleeve. The crucible is 1 inch in diameter, 2¼ inches deep, and cylindrical for the length of 1⅞ inches. It has a wire rim at the top, and fits loosely into a sleeve which bears against the rim. The sleeve is beaded on top to keep it cylindrical, and ⅛ inch below the top of the sleeve there is a thin annular disk of platinum, which is fused to the other part of the sleeve. The crucible, with this thin sleeve, is supported by a platinum wire triangle placed over a clay cylinder, and which in its turn is supported by a ring of the filter stand at a hight suitable to the hight of the burner. The clay cylinder is 3½ inches high, with a hole 2 inches in diameter at the top, and tapering down to $1\frac{3}{16}$ inches at 1 inch from the bottom, and from there down widening out again to 1⅛ inches. The sleeve prevents the crucible from slipping through the wire triangle or the holes in the desiccator and from tilting over on the wires. It also helps in heating it to the highest possible temperature for the full length, as it baffles the flame. This sleeve is also very convenient for lifting the crucible from the cylinder into the desiccator, and from thence into the scale pan, as the operator simply grasps the disk of the sleeve with an ordinary pair of forceps. It weighs 9 grams. We also use the same crucible and sleeve for fusions when making complete analyses of the ash.

Hosted by Google

Determination of Sulphur.—This is done by Eschka's method, with one exception; that is, we use a different form of crucible, in the shape of a small lipped and wire rimmed beaker of platinum, holding about three and one-third times as much as the ones usually employed. It is 2¼ inches high, 2 inches in diameter, and tapering slightly toward the bottom. By using a larger crucible all the operations of oxidation, acidulating, oxidizing with bromine, and driving off excess of the latter, &c., can be performed without transferring or washing the beaker, this saving considerable time.

Analysis of the Ash.—This, of course, is a comparatively long operation, and is done in the ordinary way.

Rough Determination of Specific Gravity.—This, though a comparatively simple and to all appearances rough operation, promises to be of value to producers and users of anthracite coals. The apparatus we employ is constructed as follows:

It consists of four parts, an ordinary sheet iron bucket such as is used about the works for sand or ashes, and holding about 25 pounds, an ordinary washtub, a Fairbank's market beam scale and a cylindrical tin pan about 14 inches in diameter and 7 inches deep.

The weighing beam is attached to the post by means of a small crane, which throws it out from the post. The ordinary hook used for suspending material to be weighed carries a yoke, from which the tin pan is suspended by two wires. The bucket is also hung on the same hook.

The tub is then filled with water until the tin pan is covered, and the whole is then balanced by means of a weight hung on the outer end of the beam, which weight remains constant. The poise used for weighing moves along the beam in the ordinary way. The beam is divided into pounds and quarter pounds, each notch representing ¼ pound when the ordinary poise is used. In order to weigh to $\frac{1}{100}$ pound, a little rider made of sheet metal, and of such a weight that each notch represents $\frac{1}{100}$ pound, is used; so that by placing the poise in the notch corresponding to the even pound, which is just less than the actual weight, and then moving the rider until the beam balances, and reading off the number of notches, the actual weight in pounds and $\frac{1}{100}$ pounds is obtained. If, for example, the rider is in the second notch to the right hand of the 10-pound notch, it would read $\frac{42}{100}$ pounds; that is, the 10 pounds would represent 40 notches, which with the other two would make 42.

When the average specific gravity of a shipment of coal is to be determined specimens are taken from all parts until a fair average sample is obtained. This is spread on a platform and quartered down until the material is reduced to about 20 pounds, which is then put into the bucket.

If we know the average specific gravity of the sizes below egg coal from a certain colliery, and their average percentage of ash, by merely getting the specific gravity of the coal in a number of cars we can determine satisfactorily (we are inclined to think) the percentage of ash by the following formula:

$$y' = y + (x' - x) \times a;$$

in which

x = the standard specific gravity,

y = the standard percentage of ash,

x' = the specific gravity of coal determined by our apparatus,

y' = the percentage of ash to be determined,

a = a constant for coal from same mine.

We have become so thoroughly impressed with the importance of having the specific gravity of all samples of coal which we analyze that, whenever the sample sent to the office is large enough, we obtain the specific gravity in the rough way given above, and find that it adds very materially to the value of the data obtained by analysis.

It seems to me that in all important boiler tests not only the coal used should be analyzed, and a special determination made of the amount of moisture in the coal when it is actually fired, but also that the ashes should be carefully analyzed. The sample for both the analyses should be obtained by quartering down all the coal to be used, and quartering down all the ashes made.

There is another question of very great importance to users of coal, on which I am not, however, ready to say much—that is, the clinkering. It depends undoubtedly upon two points: the temperature at which the coal burns, and the composition of the ash. The fact that a coal does not clinker may be due to its impurity; that is to say, the coal may be so impure that it will not make a fire hot enough to melt the ash, although the composition of the ash may be such that were it contained in a pure coal it would melt easily. On the other hand, the coal may clinker because it is very pure and burns at a very high temperature.

The first paper read Tuesday morning was by Albert K. Mansfield, of Salem, Ohio, on "The Buckeye Valve Gear." As we described this engine in our issue of October 5, 1893, it is not necessary to reprint the paper.

Professor R. H. Thurston of Cornell University read a paper

On the Maximum Contemporary Economy of the High Pressure Multiple Expansion Steam Engine.

We quote as follows:

With improving thermo-dynamic conditions and decreasing wastes in the engine, starting from the 5,000,000 duty of the Savery engines still existing in the time of Watt, the 12,000,000 of Smeaton's Newcomen engine of the same period, and the first figures of Watt, perhaps averaging 20,000,000 foot pounds per pound of fuel, and tracing the improvement through the most flourishing period of Watt's work, when he attained about 30,000,000, and his final perfection of the later Cornish engines, which, still later, attained in ordinary operation 60,000,000 to 80,000,000, we come to the period of successful introduction of the modern forms of the high pressure multiple expansion pumping engine, from 1860, giving duties ranging up to about 100,000,000 to 110,000,000, and to 120,000,000 in the succeeding generation and to date.

The improving thermo-dynamic conditions which have made these results possible have been, first, the gradual elevation of the steam pressure from 5 pounds per square inch in 1800, to 20 pounds in 1840, to 50 at the middle of the century, 75 a quarter of a century later, to 120 and to 150 and 175 in contemporary stationary and marine practice, and even to above 15 atmospheres in some instances. The second and no less essential element of this progress has been the simultaneous rise in the ratio of expansion from the time of Watt to the present, and from unity in his earliest practice to 4 for the late Cornish form of the Watt engine, to 6 and 8 a generation ago and to 15 and even 20 and more in the latest multiple expansion machines. A terminal absolute pressure of about one-third of an atmosphere probably represents the limit to which expansion has been successfully carried. A higher rather than a lower terminal pressure is usual in the best practice of the day. The third element of improvement has been the increase of speed of piston and of rotation; although this has been less observable in steam pumping engines than in other types. Beginning with 200 to 300 feet per minute speed of piston, the figure has gradually risen to 500 and 600 in later years, and to above 1000 in many cases to-day. These three have been the essential elements of improvement in the real engine; the latter supplementing the two others, which give thermo-dynamic gain. Improvements in design and construction have completed the advances thus made possible.

The latest and highest record of efficiency and duty, one which may very possibly long stand as the highest record—the passage of the date at which the quantity of steam used per hour and per horse-power below 12 pounds (5.5 kg.), constituting an important era in the history of the steam engine—is, on the customary American basis of 100 pounds of fuel, 143,306,470 foot pounds. On the old British basis of 112 pounds (1 hundredweight) it becomes 152,630,000, and on the proposed bases of 1000 pounds feed water converted into dry steam, and of 1,000,000 B. T. U., is 152,448,000 and 137,656,000, respectively. For kilogrammeters of work per kilogram of fuel, the figure becomes 429,110. These figures, compared with those of the preceding paragraph, will complete the record of progress to date, and perhaps indicate practically the limit of advance for the nineteenth century in this department of human achievement. It still leaves us a margin of nearly 20 per cent. between the ideal and the real case for further gain; the thermo-dynamic case, assuming similar pressures and ratio of expansion, demanding nearly 10 pounds of steam per horse-power per hour and giving a duty of close upon 175,000 on the first named basis and about 200,000,000 on the highest standard. The ideal and the real efficiencies correspond, respectively, to fuel consumptions of 1.1 and 1.8 pounds per horse-power per hour with good boilers.

Our "real case," the Milwaukee pumping engine, built for that city by the E. P. Allis Company, from the designs of Mr. Reynolds, has been in operation since August, 1891, doing continuously so high a duty as to place it among the most remarkable constructions of its class and time, and probably to make its record the highest on record to date. It draws water from Lake Michigan and forces it into the city mains under a head of about 160 feet, into a reservoir, from which other engines raise it into a still higher level, so far as needed for consumption at greater elevations. The engine here under consideration is at the North Point station, at the level of the lake, very nearly. The station contains also a pair of compound engines, built in 1874, which gave a duty, originally, without cut off on the low pressure cylinder of 77,000,000 on 100 pounds of coal. After fitting this cylinder with cut off gear, the duty rose to above 85,000,000. The pump-

Hosted by Google

raises about 900 gallons per minute, with a slip of 2 per cent. There is also, besides these, a compound engine by Allis & Co., built in 1884, delivering 12,000,000 gallons per day against a head of 150 feet, and with a duty reported by Mr. Benzenberg, the city engineer, from test, of 104,820,431 foot pounds per 100 pounds of best coal. The latest of the collection is that here to be examined—a triple expansion engine built to raise 18,000,000 gallons per day of 24 hours, guaranteed by its builders to perform a duty of not less than 125,000,000 per 1000 pounds of dry steam.

The design of the engine embodies some special features regarded by the designer and builder as important, and as contributing effectively to the attainment of this exceptional economy. According to the statement given by Irving Reynolds, to whom the writer is indebted for many facts of interest and useful information, the designer was guided to a certain extent by these considerations:

"Starting with the proposition that an outside packed plunger pump is the simplest, and under most conditions the best form of pump, the next step is to use the least number that will give a uniform flow of water—viz., three, set at equal angles (120°). Having three plungers, they can as well be single as double acting, as the flow of water is practically constant and the single acting is much the simpler form of pump."

The Milwaukee engine was designed by Irving Reynolds, under the general supervision of the superintendent of the Allis Works, Edwin Reynolds.

The engine is of the vertical triple expansion type, with steam cylinders and parts above the bed plate arranged somewhat similar to those of the modern marine engine. The capacity of the engine is 18,000,000 gallons in 24 hours, raised 160 feet, and the speed is 20 revolutions per minute, or 200 feet piston speed. The cylinders are three in number, one high pressure, 28 inches diameter, one intermediate, 48 inches, and one low pressure, 74 inches diameter, all having a stroke of 60 inches. The cylinders are mounted on cast iron A-frames, which rest on heavy bed plates carrying the main shaft journals. The cylinders are steam jacketed, having the working barrels inserted as separate pieces. The steam and exhaust valves are located in the cylinder heads, their chests thus jacketing the latter.

The pumps are entirely below the floor. The fly wheels perform the office simply of aiding in the regulation of the engine. Between each two cylinders is a receiver, heated by high pressure steam. The volumes are, respectively, high pressure, 101.3 cubic feet, intermediate, 151 cubic feet. In the high pressure and intermediate cylinders the jackets are supplied with live steam at boiler pressure; but on the low pressure cylinder the jacket is supplied with steam which passes through a reducing valve, and which has a constant pressure of 34 pounds. The steam is supplied to the high pressure jacket by a pipe leading directly from the main steam pipe; the exhaust from this jacket supplies the jacket of the intermediate cylinder, and this is led into a trap, the overflow of which ordinarily passes into the suction of the feed pump for supplying the boilers. The exhaust steam from the low pressure cylinder jacket is similarly received into a steam trap and discharged into a feed pipe.

The exhaust valves of the low pressure cylinders, when closed, are flush on the inside of the cylinder head, thus eliminating clearance due to exhaust ports. All the valve ports are located in the cylinder heads.

The valve gear is of the Corliss type on the high and intermediate cylinders, and a combination of Corliss steam valves and poppet exhaust valves on the low pressure cylinder. The clearances in the cylinders and ports are: High pressure, $1\frac{4}{10}$ per cent.; intermediate pressure, $1\frac{1}{10}$ per cent.; low pressure, $\frac{77}{100}$ of 1 per cent.

The cut offs of the high pressure cylinder are under the control of a speed governor combined with an adjustable hand cut off. The cut offs of the intermediate and low pressure are controlled by a hand gear only, the point of cut off in these cylinders being set usually in the inverse ratio of the cylinder volumes. Each steam piston has two rods connecting to a forged steel cross head; from this cross head extend four tie rods to the head of the pump plunger, thus transmitting the motion direct from the steam pistons to the pump plungers, without passing through links or beams of any kind, making the machine direct acting in the best sense of the term.

The upper ends of the connecting rods take hold of the cross head in the space between the two piston rods, the lower end connecting to its crank pin. There are three cranks set at angles of 120°, and the motion of each pump plunger being controlled by its own crank, tends to secure uniform flow of water through the pumps.

The center crank—intermediate—is considerably larger than the others, and is fitted with drag boxes, to prevent the breaking of the shaft in case it gets out of alignment. There are two fly wheels, 20 feet diameter and weighing 50,000 pounds each.

The pumps deliver only on the down stroke, but the plungers are balanced to one-half the head, so that the work in the steam cylinders is uniform on both the up and down strokes, and the only load passing through the crank shaft is that which is given to and taken from the fly wheels, at the beginning and end of each stroke.

The pumps are three in number, one located beneath each engine. The plungers (32-inches diameter) are of the single acting outside packed plunger type, each plunger being driven from a cross head. The valve chambers are cylindrical, and extend above the discharge valves, forming air chambers, on which rest one end of the engine bed plates, this latter arrangement saving foundations, and at the same time rendering the pumps easily accessible. The pump valves are rubber, of small diameter ($3\frac{1}{2}$ inches), and are mounted in groups of 28 on "cages." There are seven of these cages (196 valves) in the suction and discharge of each pump, with an area about equal to that of the plunger.

The engine is fitted with a surface condenser, the air, feed and circulating pumps being driven by an arm extended from the low pressure plunger. The air pump is 22 inches diameter by 60 inches stroke and is single acting. . .

Steam is supplied by a battery of five horizontal tubular externally fired boilers, with ordinary brick setting.

The 12,000,000 compound, put in in 1881, cost $65,000 with boilers, or $5400 per 1,000,000 gallons; the guaranteed duty being 97,000,000 foot pounds. In 1890 the triple expansion engine was put in for $76,000, including boilers, or $4400 per 1,000,000 gallons, or exclusive of the boilers, $66,000, equal to $3666 per 1,000,000 gallons capacity.

Thus the 18,000,000 engine of 1893 cost practically the same as the 12,000,000 of 1881, with 29 per cent. better guaranteed duty; and the compound 16,000,000 engine of 1873 cost more than twice as much, with one-half the guaranteed duty of the 18,000,000 triple expansion of 1893. These figures are the more interesting from the fact that all three of these engines are by the same builders.

Cost of Pumping 1,000,000 *Gallons for the Year* 1892.

	100 ft. high.	1 ft. high.
Cost, including fuel, labor, repairs, interest and depreciation.....	$7.34	4 58-100 cts.
Cost as above, but exclusive of interest and depreciation	5.40	3 37-100 cts.
Cost per 1,000,000 gallons, for coal only....	3.15	1 96-100 cts.

The figures are for all coal burned, for all purposes, during the year, including starting and banking fires, heating the building, furnishing steam to a small engine which is in constant operation during the day driving the water works machine shop, and at night driving a dynamo, lighting the building.

The preparations for and method of test were as nearly as practicable in accordance with the plan indorsed by a committee of the American Society of Mechanical Engineers, and as follows:

Indicator diagrams were taken every fifteen minutes. Temperatures of feed water, discharge jacket water, external air, engine room, and flue gases were taken. The total consumption of water is obtained by measurement of the feed water supplied the boilers. This was taken from the hot well of another engine, and the condensed steam from the engine under test was, during the trial, discharged from the overflow and wasted. The steam used to supply the jacket was measured by receiving the overflow from the jacket traps into weighing tank No. 3, and was returned to the boilers as a portion of the feed water.

During the test two observers, one of whom was supplied by the builders of the engine, the other by the party from Cornell University, kept independent logs of the water supplied to the boilers.

The following table gives some of the results of the test:

Fuel.

Total coal consumed, pounds.....	18,234
Moisture in coal, per cent.....	5.25
Dry coal consumed.	17,277
Total ash, dry, pounds...	255
Total ash, dry, per cent. of dry coal...	1.47
Moisture and ash, per cent. of wet coal	6.65
Total combustible, pounds.....	17,022

Feed Water.

Total weight of water used, pounds...	162,864
Excess of water in boiler at end of run, pounds.....	151
Total evaporated dry steam, pounds.	161,023.2
Factor of evaporation (equivalent value of 1 pound wet steam to 1 pound dry steam from and at 212° F.)	1.154
Total equivalent evaporation from and at 212° F., pounds.....	187,794

Evaporation per Pound of Coal, Pounds.

*Apparent: feed water, 97°; steam, 121.4.....	8.906
†Actual, to dry steam	8.81
Equivalent from and at 212°.....	10.27

* Uncorrected for calorimeter.
† Corrected for calorimeter.

Frederick A. Scheffler of New York described a

Curve Delineator,

by means of which arcs or circles 50 feet radius to 1000 feet or more could

Hosted by Google

be drawn. In a few seconds the adjustment of the instrument can be set at such an angle that it would describe an arc of a circle anywhere from 3 feet radius to infinity, and a straight line may be drawn with it. The design of the instrument consists of simply two straight edges, joined at a common center, with a simple device for changing the angle of the straight edges in relation to each other; the device also carrying an attachment for adjusting and fixing a pen or pencil to bear upon the drawing paper at the point of juncture of the two straight edges. The use of the instrument is based upon the fact that the versed sine of any particular chord is always constant if the radius is constant. To use the instrument, two pins are required to be placed at the extremities of the chord selected, for the points through which the arc is to pass. A table is given with the paper, giving the requisite angles to set the instrument at, with the fixed chord of 24 inches and for any radii between 2 feet and 300 feet.

The report of the

Committee on Gauges

stated that they had carefully considered the matter referred to them and "they recommend that the thickness and diameter of pieces to be measured shall be expressed in decimals, which would imply the use of the micrometer screw gauge. The committee is divided in its opinion as to whether the decimal should be thousandths of an inch or hundredths of a millimeter." The committee are of opinion that all the engineering and scientific societies of this country will join this society if they adopt a decimal gauge. The committee was continued with power to act and will confer with European societies in the endeavor to obtain an international system.

Secretary Herbert on Tuesday awarded the contract for building the three new gunboats authorized by the last Congress to the Newport News Dry Dock & Shipbuilding Company, at their bid of $280,000 for each vessel. Two of these gunboats will be of an entirely new type. They are designed for navigation of shallow streams, particularly on the China station, and are required to develop a speed of 14 knots an hour. The third vessel will be of heavier draft, and is intended for service in the tropics, 13 knots being the required speed. The contract calls for their completion within two years. The bid of the Newport News Company was nearly one-third less than that of the other competing firms.

At the opening of the bids on Tuesday at the War Department for the supply of 10,000 pounds of smokeless powder for the use of the army four tenders were recorded—namely, from the Pneumatic Torpedo & Construction Company of New York, for a powder containing 60 per cent. of nitro-glycerine, 70 cents per pound; no nitro-glycerine, 80 cents per pound; Herman Waltoreck of Newark, N. J., $2.20 per pound, and for 10,000 pounds additional $2 per pound; Bernard Peyton, Santa Cruz, Cal., $1.25 per pound; Leonard Smokeless Powder Company, New York, 75 cents per pound, in lots (the price to be graded by initial velocity, 50 cents per pound for a velocity of 1960 feet, to be increased 1 cent per pound for each additional 10 feet of velocity per second).

Washington News.

(From our Special Correspondent.)

WASHINGTON, D. C., December 5, 1893.

The special plea made in behalf of the tariff revision bill by the President in his annual message to Congress places that measure before the majority in both the House and Senate as distinctively under the patronage and support of the Administration. In that character, even if there should be any doubts in the minds of any member of either House as to its expediency, it will be expected that every member of the majority will give it his vote.

The general tenor of this part of the message, however, has not been of a tone calculated to stiffen that class of Representatives and Senators who are greatly perplexed as to which shall hold the prior and paramount claim, the interests of their constituents, which they are supposed to protect, or the demands of their party on a general line of public policy.

In the comments of the President's friends, who are inclined to read the measure between the lines, they think that they discover in it a degree of timidity and hesitancy which has not heretofore been characteristic of its author. They say that the appalling magnitude of the partisan majorities in the great States of New York, Massachusetts, New Jersey, Pennsylvania and Ohio, not to speak of the lining up of the less important States of Nebraska and Montana, hitherto supposed to have drifted from their party moorings, whether caused by local issues or public uneasiness, must have raised an ill disguised doubt.

In the first flush of the late elections, when the managers of the tariff revision were in a very panicky condition, the President renewed their courage by declaring that no step backward must be taken; but subsequent developments in the general disturbance of business and industry, and the enforced idleness of masses of wage workers all over the country, have made a deeper impression than the ballots of last November.

The moderate tone of the Presidential message on the subject does not, however, modify his personal interest in the prompt passage of the bill in the exact form in which it was made public by the Chairman of the Committee on Ways and Means.

It was very soon evident that the Administration would do its share in strengthening it among the men who would have in their hands the part of its adoption at the Capitol. The word was passed around and every member of the Cabinet took every opportunity to give the bill a good word when Senators and Representatives called at the Departments on other business.

A few days ago Senator Faulkner called at the Post Office Department. The big bodied good natured chief impatiently disposed of the Senator's business and then put the question flatly: "Senator, what do you think of the new tariff bill?" "I would like it better if it made coal 45 cents a ton instead of 75 cents, as now, or free, as proposed to be."

"You are now aiming at Nova Scotia coal. Now, let me tell you that that coal is of a very inferior quality, and I do not think would be a factor against our American coal. For all purposes American coal is infinitely superior to Nova Scotia."

The Senator replied: "If that be so I can support the whole bill."

The Kentuckians are complaining that the bill will sadly affect three of the staple industries of their State—flax, coal and iron ore. In Michigan iron ore, salt and lumber. In Virginia coal, iron ore and iron. Not to mention the injury to the diversified and enormous industrial interests of States like New York, Pennsylvania, New Jersey and Ohio.

A consensus of opinion, however, among the majority in both Houses indicates that the bill will pass by a full party vote. As yet none have declared a determination to vote against the bill, and a very large number have signified their purpose to vote for it.

As yet no formal canvass has been made, but it is accepted by the President, Secretary Carlisle and Chairman Wilson that the bill will pass.

It is now possible that the bill will not more than get under way by the time of the Christmas holiday, on account of the delay in determining the sources of taxation from which the loss of $43,000,000 from articles placed on the free list and the existing deficiencies of $50,000,000 in the Treasury shall be made up.

Allowing the ten days to be accorded the minority for the preparation of their report, the bill could not, at the closest calculation, get into the House before the 15th. The Republican leaders were in conference to-day and decided upon their course.

It was conceded among them that the bill would pass when it reached a vote. That in the House, under the parliamentary methods of that body, it could be carried through in a very brief space of time.

Therefore it became a question whether it would not be the better policy for them to pursue to simply make a few speeches in support of the minority report, thus placing themselves as a party on record for campaign purposes, and then let the vote be taken, thus avoiding a protraction of the present industrial prostration and uncertainty.

In the Senate the bill has been talked over by the minority of that body in the same line. The members of the majority who were expected to eliminate some of the worst features of the bill have been ominously quiet. The conclusion reached is that not a single one of them will be found voting against the measure on its passage.

The Senators of the minority would have it in their power to indefinitely protract the discussion of this measure in their body. They have agreed, however, with their friends in the House that the interests of business and industry demand that the question should be settled promptly so that the industries affected may know what to expect and can make their plans accordingly. From an industrial point of view they also propose to act on suggestions from the manufacturers that if the bill is certain to pass in the shape in which reported then the quicker the better, so that they can make their arrangements to meet the production required for next year's demand, taking into account the competition of the foreign importations in the same line.

Therefore in the Senate the minority simply propose to speak a reasonable time against the bill and its underlying policy and then let the vote be taken.

There are some who think that the tariff bill as it now stands before the country will become a law before February 1.

MANUFACTURING.

Iron and Steel.

The stock in the Andrews Brothers Company, operating the Haselton Rolling Mills, at Haselton, Ohio, owned by the late James Neilson, has been purchased by John A. Logan, Jr. The annual meeting of the stockholders of the Andrews Brothers Company will be held in Haselton in January next.

In the United States Circuit Court in Pittsburgh last week, arguments were heard on a motion for an injunction by H. W. Oliver, receiver for the Oliver Iron & Steel Company, against Anderson, Du Puy & Co., steel manufacturers, of that city. The allegations are that certain stock of a natural gas line held in common by both companies was attached as collateral for a note given by the Oliver Company to Anderson, Du Puy & Co. When the note matured the holders sold the collateral at an inadequate price. Mr. Oliver claims an unfair advantage was taken of his company, and he now seeks to restrain the defendants from shutting off the gas supply to the Oliver mills.

Wallace, Banfield & Co., operating the Irondale Rolling Mills, at Irondale, Ohio, have placed an order with the Ellwood Iron Works of Ellwood, Ind., for two additional tinning pots and also two additional cleaning machines. When the erection of these has been completed the tinning department of the above plant will consist of six Morewood, two Thomas & White and two Ellwood tinning machines. The addition of these two tinning machines will increase the tinning capacity of the plant about 25 per cent., and it is the intention of the firm in the future to tin their entire output of black sheets.

The Alabama Rolling Mill Company of Birmingham, Ala., will resume in all departments double turn on Monday, December 11. Improvements have just been completed which will give the mill an output of from 2000 to 2200 tons of finished iron per month.

The closing of navigation has caused a demand for bar iron sufficient to justify the Duluth Mfg. Company of Duluth, Minn., in starting a portion of their rolling mill. The plant has not started in full, but one mill will run at a time, alternate days.

The Reeves Iron Company, Canal Dover, Ohio, are running their large plant to its full capacity, having a fair demand for their bar iron and galvanized sheets.

Shipments of armor plate for the new gunboats "Monadnock," "Terror" and "Oregon" are now being made by the Homestead Steel Works, at Homestead, Pa. Shipments of armor plate from the above plant during October amounted to about 275 tons. Wages of laborers employed at the Homestead Steel Works have been reduced from $1.40 to $1.20 per day of ten hours.

About 1200 employees of the Cambria Iron Company, at Johnstown, Pa., in the mechanical department have agreed to accept a reduction of 10 per cent. in wages, with the expectation that the firm will be able to secure sufficient orders to keep in full operation, or nearly so, during the winter months.

Macungie Furnace, at Macungie, Pa., operated under lease by the Crane Iron Company, was banked down last week on account of the strike of the employees of the Lehigh Valley Railroad.

The Carrie Furnace Company of Pittsburgh, operating the Carrie Furnaces, at Rankin, Pa., have placed an order with the Crane Elevator Company of Chicago for a large furnace hoist, which will be built at the above furnaces. The hoist will have a lifting capacity of 6000 to 9000 pounds.

The blast furnace of the Raney & Berger Iron Company, at New Castle, Pa., which has been idle for some time, has again resumed operations.

Furnace D of the Edgar Thomson plant, at Bessemer, Pa., was badly wrecked by an explosion last week. A mass of iron and cinder containing many tons, which had been hanging in the furnace for some time, fell, causing the explosion. The furnace is now undergoing necessary repairs.

At the Sligo Rolling Mills of Philips, Nimick & Co., Pittsburgh, the puddling department is occasionally operated three turns per day of eight hours each. It will be remembered that the refusal of the Amalgamated Association to allow this to be done at the Elba Iron Works Department of the Oil Well Supply Company in Pittsburgh was the cause of the strike at that plant last year.

The New Philadelphia Iron & Steel Company, New Philadelphia, Ohio, have been running three sheet mills for a few weeks past and will at once put others into operation.

On December 15 next application will be made for a charter of incorporation by the H. W. Minnemeyer Mfg. Company of Pittsburgh. The incorporators are Christian E. Wolff, Paul C. Wolff, Henry W. Minnemeyer, Henry W. Minnemeyer, Jr., and Charles E. Minnemeyer. The new concern propose to engage in the manufacture of iron and steel.

The plant of the Coleman-Shields Company of Niles, Ohio, is in operation to nearly full capacity, giving employment to about 250 men.

At Cleveland last week an appeal was made to the courts for the adjustment of the claims and suits of the partners who formerly composed the firm of Cleveland, Brown & Co. Captain Frank Wilson commenced suit against Peter M. Hitchcock, A. M. Wilcox and Richard Brown. In his petition he avers that the four persons mentioned were associated in business on July 1, 1885, with a capital stock of $406,180. The real estate and certain other propetty of the concern was, he says, inventoried at $106,000. He alleges that in the following year the books were made to place the same property at a value of $60,000, and that a loss of $39,508 was announced, whereas a profit of $16,491 29 was made. The petition contains various other statements and allegations concerning the business of the firm prior to the dissolution of the partnership on February 1, 1891. Captain Wilson is not satisfied with the conduct of affairs, and claims that he has not received his due portion of the assets and profits. He therefore asks for an accounting at the hands of the court.

The following departments of the plant of the Brown-Bonnell Iron Company, at Youngstown, Ohio, resumed operations this week: The two 10-inch mills, hoop mill, 12-inch mill, 8-inch mill, sheet mill and Nos. 1, 3 and 4 bar mill and the Williams bar mill.

Nearly all departments of the plant of the Andrews Brothers Company, at Haselton, Ohio, are now in full operation. At the plant of the Mahoning Valley Iron Company, also at Youngstown, nearly every department is on in full.

It is reported that the sheet mills of the Britton Iron & Steel Company, known as the Lake Shore Mills, at Cleveland, Ohio, will be put in operation at once. It is intended to run the mills non-union.

A recent issue of the *Inland Ocean*, published at Superior, Wis., says: "There is but little doubt that the plant of the West Superior Iron & Steel Company will pass into the hands of the Rockefellers, although it may not be put in operation much before spring. John D. Rockefeller has for the past two weeks been dealing directly with Warner Van Norden, president of the land company, for the purchase of the plant. For several months past the Rockefellers have been increasing their holdings in the American Steel Barge Works, and will probably conduct the steel plant in connection with the barge works. It is also reported that they have opened negotiations with a view to securing the York charcoal iron furnaces, on which construction was stopped some time ago owing to the sudden collapse in health of President Gale of Minneapolis. The details of the deal are understood to be: The bondholders of the steel company, chiefly the Rockefellers, will take hold of the plant if the land company will assume the indebtedness, which, aside from the amount owing the land company, is less than $200,000. On the other hand, the Rockefellers agree to take the plant, operate it and put at least $2,000,000 in improvements, making the plant second to none in the country. Should the deal go through, and there now seems but little doubt that it will, work will be commenced this winter on the proposed improvements."

The sudden rise in the Ohio River last week will prove to be a blessing to the cut nail manufacturers in the Wheeling district. As is well known, a large part of the demand for cut nails comes from the South, and shipments to Southern points are nearly always made by river. Owing to the low stage of water in the Ohio River for a number of months very few shipments have been made. Now that a navigable stage of water has come, it is expected that large shipments of cut nails will be made by the various concerns located in Wheeling and other points in the Ohio Valley.

The cut nail factory and plate mill of the La Belle Iron Works, at Wheeling, W. Va., were in full operation last week.

A number of additional sheet mills of the Ætna-Standard Iron & Steel Company, Bridgeport, Ohio, were started up last week.

The galvanizing department of the plant of the Whitaker Iron Company, at Wheeling, W. Va., which was not destroyed by the recent fire, is in full operation. As soon as the insurance on the destroyed buildings of this firm has been adjusted they will be rebuilt on a larger scale than before.

We are advised that the report that a boiler of the Climax type, in the plant of the Riverside Iron Works, at Wheeling, W. Va., exploded recently, is without foundation. There have been no boiler explosions at any of the works of the above firm for some years.

Some excellent records for production have recently been made at the Bessemer steel plant of the Shenango Valley Steel Company, at New Castle, Pa. On Tuesday of week before last the night turn made 350 tons of billets, while the output for the entire 24 hours was 641 tons.

The sheet mill department of the works of the Moorhead-McCleane Company, at Pittsburgh, which has been idle for some time, will resume operations within a few days, as a result of the agreement reached between the sheet manufacturers and the Amalgamated Association.

The Mahoning Valley Iron Company, Youngstown, Ohio, have started up their bar and guide mills, their blast furnace, plate mill and spike factory remaining idle. On account of the unsatisfactory outlook for any improvement in business before spring it is possible that the idle departments of this plant will not be started up for some time.

The mills of the Akron Iron Company, at Akron, Ohio, are running only one or two days per week to fill accumulated orders. This firm have not puddled any pig iron since June 24 last, and the prospects for the starting up of their boiling department in the near future are not encouraging.

Nearly every department of the Homestead Steel Works, Homestead, Pa., is in operation this week. The 119-inch plate mill was put on triple turn last week for the first time in some months. With the exception of the 32-inch mill and the converting mill all other departments of this plant are on double turn.

In one day recently there were turned out in the wire nail department of the HP Nail Company, at Cleveland, Ohio, 5652 kegs of wire nails. This is claimed to be the largest day's record ever made in wire nail production in one establishment.

The sheet rollers and other tonnage men of the Newport Iron & Steel Company's works, at Newport, Ky., went out on strike last week for the alleged reason that they claimed that the general reduction of 10 per cent. in sheet mill wages did not apply to them. About 24 men went out and 300 were compelled to follow. The matter has since been satisfactorily adjusted.

All non-union sheet mills have followed the action of other mills by reducing tonnage wages 10 per cent. W. Dewees Wood Company of McKeesport are among the number.

A press report states that the National Tube Works Company, McKeesport, Pa., have asked their puddlers to work for $4 per ton, on the understanding that no more steel is to be used. There must be a serious mistake in this report, as it is hardly probable that the above named company can afford to allow their Bessemer steel plant to remain idle for such a consideration. This plant was recently completed and described in *The Iron Age*, November 16.

Van Alen & Co.'s rolling mill and nail factory, at Northumberland, Pa., are now running on double time, employing 300 men.

Phœnix Furnace, owned by the Brown-Bonnell Iron Company, Youngstown, Ohio, will resume operations in about a week. The stack is now banked.

Emma Furnace, Union Rolling Mill Company, Cleveland, is now in blast.

Hosted by Google

Spearman Furnace, at Sharpsville, Pa., has resumed blast.

Rosena Furnace, at New Castle, Pa., which started November 12, is now running satisfactorily, having made 275 tons of No. 1 iron in one day recently. E. D. Reis, superintendent, has resigned his position as manager at Edith Furnace, Allegheny, Pa., in order to devote all his time to Rosena.

Middletown, Ind., is to have a rolling mill, but it will not be the Irondale Mill of Anderson, to which the former city had been holding out inducements ever since the mill was burned. It is stated that a contract has been signed with a new company, which provided that work shall begin on the building on or before January 10 next, and that the plant shall be in operation, employing 400 men, July 1, 1894. The subsidy is $40,000 in cash.

A bill has been filed in the federal court of Chattanooga, Tenn., seeking to set aside the recent action of the United States Circuit Court at Louisville, Ky., in placing the Malleable Iron Works of Chattanooga in the hands of receivers. The complainants seek the relief on the grounds that the representations made were fraudulent and collusive, and that the stockholders had no notice of such intended action.

At Duluth, Minn., the West Duluth Mfg. Company and the Duluth Mfg. Company have resumed operations. The York Iron Company, at Black River Falls, Wis., have also started up.

The employees of the rolling mill and tube works of the Reading Iron Company, Reading, Pa., have accepted a reduction of 10 per cent. in wages.

There is a probability that the Bristol Furnace, at Bristol, Va., will be leased. A proposition is said to have been made to the owners, which, if accepted, will insure the starting of the furnace by January 1.

It is stated that the Low Moor Iron Company of Virginia are preparing to start their furnace at Low Moor.

The furnace of the Cherry Valley Iron Company, at Leetonia, Ohio, which has been rebuilding for some time, has been completed and blown in after an idleness of four months.

At the Albany Iron Works, Troy, N. Y., last week the hammers at the water mill were in operation.

At the Burden Iron Works, Troy, N. Y., the winter schedule has gone into effect, and the puddling furnaces now light up Sunday nights instead of Monday.

The Bethlehem Iron Company, Bethlehem, Pa., shipped last week 132 tons of Harveyized armor for the battle ship "Maine."

It is announced that Belmont Furnace, at Wheeling, W. Va., has been prepared for an early resumption

The Lehigh Iron Company of Allentown, Pa., have announced a reduction in wages of 10 per cent.

The Blandon Rolling Mill Company, Reading, Pa., have reduced the wages of their puddlers from $3.25 to $3 per ton.

The Elk Rapids Iron Company of Antrim, Mich., have steadily operated their blast furnace, saw mill, grist mill, &c., despite dull times and reduced demand.

The rolling mill at Laramie, Wyoming, is now in operation. The mill has recently been greatly improved. A puddling department has been added for the purpose of making a higher grade of bar iron. The prospects are reported good for a full winter's run.

The Ironton Structural Steel Company of Duluth, Minn., are reported by Duluth papers to have started up their works the past week. It is understood that the company have secured the contract for furnishing building plates, beams, &c., for the new building to replace the Fargusson Block and that sufficient work will probably be secured from other sources to keep the new works busy during the winter.

The rolling mill at the Duluth Car Works was put in operation on the 27th ult.

The unsecured creditors of the Pennsylvania Steel Company held a meeting at Philadelphia last week and authorized the appointment of a committee of seven gentlemen to confer with N. Parker Shortridge, J. L. Erringer, Henry N Paul, Edmund Lewis and Joseph M. Shoemaker, a committee of the stockholders, in regard to the reorganization of the company. C. Stuart Patterson, chairman of the meeting, will appoint the committee, of which three are to be chosen at large and one each is to represent Boston, New York, Philadelphia and Baltimore.

The Detroit Bridge & Iron Works, at Detroit, Mich., are increasing their capital stock to $300,000.

It is stated that a radical change will soon be made in the method of making rails at the Edgar Thomson Steel Works, Bessemer, Pa. It is understood that the direct process in operation at this plant for some time is to be discarded, and the same method in vogue during the time when Capt W. R. Jones was superintendent of the plant will again be adopted. If carried out this will necessitate the erection of new heating furnaces, giving employment to a large number of men, whose services were dispensed with about a year ago.

Additional departments of the plant of the Cleveland Rolling Mill Company, at Cleveland, Ohio, which have been idle since last July, will be put in operation during this week, giving employment to about 300 men.

We are advised that there is "not a shadow of truth" in the statement that A. French and John M. Patterson of the A. French Spring Company, at Pittsburgh, would establish a large iron plant at Raleigh, N. C. The report stated that the new plant would manufacture car springs for the Pullman Palace Car Company.

The plant of the Falcon Iron & Nail Company, at Niles, Ohio, has been in operation only about half time for some months past. Unless there is a large increase in orders in the near future, the firm do not expect to be able to operate to even half capacity.

The blast furnace of the Bellaire Nail Works, at Bellaire, Ohio, went in operation on November 23, after an idleness of about three months. The Bessemer steel plant of this concern has been in operation from one-half to two-thirds time since last August. Their sheet bar mill has also been in operation part of the time, running only when sufficient orders were received to justify putting it in operation. For the balance of this year the firm expect to operate their different departments as they have been doing for the past three or four months. It is the intention to keep their blast furnace in continuous operation.

The Tudor Iron Works, East St. Louis, Ill., have closed down in part on account of a decrease in the number of orders received.

The Pottsville Iron & Steel Company, Pottsville, Pa., have started up their fishback mill after an idleness of a week and a partial idleness of three days a week for the past four months.

Machinery.

The Richmond Locomotive & Machine Works, Richmond, Va., have secured an order for the building of 20 new engines for the Atchison, Topeka & Santa Fé Railroad, and are rebuilding ten engines for the Peoria & Eastern Railroad.

Another decision has been handed down in the United States Circuit Court in New York City sustaining the patents of the Westinghouse Air Brake Company of Pittsburgh. This last decision denies the motion of the defendants, the New York Air Brake Company, for leave to sell, subject to a royalty, 3000 sets of infringing air brakes, which they claim to have on hand, and making the injunction in favor of the Westinghouse Air Brake Company absolute. Officials of the New York Air Brake Company say they will take an appeal, and if they succeed in reversing the judgment their works at Watertown, N. Y., which have been closed by the injunction, may be started up again.

The Spicer Mfg. Company, New Philadelphia, Ohio, have recently equipped the new plant of the New Castle Steel & Tin Plate Company, New Castle, Pa., with their sheet metal trucks.

The Michigan Peninsular Car Company, who paid a dividend on the common stock last spring, have recently passed the dividend on the preferred stock.

The new plant of the Woonsocket, R. I., Electric Machinery & Power Company is about completed and will be in operation shortly. Water is the motive power for driving the dynamos, two pairs of 36-inch turbines, developing 600 horse-power, being used. Three generators, each of 150 horse-power, will be installed.

Thirty-five employees of the Warren Foundry & Machine Works, Phillipsburg, N. J., have struck because of a system adopted by the company which the men claim greatly increases their hours of labor per day without increasing their pay. By the new order the men are compelled, to do about 12½ hours' work in ten hours' time. A hundred men are out of work by reason of the strike. The company claim that the new arrangement was made necessary in order to compete with the cheap labor of the South.

The Donaldson Iron Company, pipe manufacturers at Emaus, Pa., announce a reduction of 10 per cent. in wages, affecting all men except laborers, who get 90 cents a day.

Notwithstanding the general depression in the foundry trade the Danville Foundry & Machine Company of Danville, Ill., find themselves obliged to enlarge their plant. They are just finishing a large addition to their foundry, and are equipping it with the Ridgway steam-hydraulic cranes, and one of the Ridgway steam-hydraulic elevators is used for taking the stock up to the cupola platform. Before deciding upon the crane for the new works, the Danville works about a year ago ordered a small Ridgway crane for their old works.

W. A. Blakeslee, proprietor of the Blakeslee Foundry, in Allentown, Pa., who recently failed has issued a statement, in which his liabilities are given at $27,340, and the assets at $37,036, of which amount $35,000 is alleged to be real estate, buildings, machinery, patterns, tools, &c.

The King Press Drill Company are erecting a foundry at Hebron, Iowa, to manufacture drills.

The Tyler Foundry & Machine Company have been chartered at Fort Worth, Texas; stock, $30,000. Incorporators, A. L. Clark, J. F. Christian, John A. Bonner, J. P. Patterson and I. Cahen, all of Tyler.

The Winkler Machine Mfg. Company have been organized at Kansas City, Mo., with a capital of $40,000.

A new boiler works is to be built at Escanaba, Mich.

The Wilmot & Hobbs Mfg. Company, Bridgeport, Conn., are running their hot rolling mill, plating, grinding, buffing, soldering and tool making departments full time, and the cold rolling mill 48 hours per week, with a prospect of the latter department also being run full time.

The Chas. Berghoefer & Lupinski Company, millwrights and machinists, at Milwaukee, Wis., have made a voluntary assignment. The assets of the company are in the neighborhood of $58,000, while the liabilities, it is said, will not amount to more than $33,000. The cause of the failure was the inability of the firm to get ready money with which to meet the claims of pressing creditors.

It is reported that a stock company, composed of Oshkosh, Wis., capitalists, will be formed to operate the Northwestern Car & Machine Company's plant, for which a receiver was recently appointed.

The new plant of Reeves Brothers, boiler manufacturers, at Alliance, Ohio, has not been fully completed, but has been put in partial operation. The erection of the second building, which will be equal in size to the main building, has been postponed until spring.

The American Road Machine Works of Kennett Square, Pa., which have been idle for some time, have started up with a full force.

The New Iberia Foundry, recently burned at New Iberia, La., will be rebuilt on a more extensive scale.

The wages of the employees of the Portsmouth Machine Company, Portsmouth, N. H., have been reduced 10 per cent.

The Piqua Boiler Works, Piqua, Ohio, have gone into the hands of a receiver upon the application of the Third National Bank, which is the largest creditor.

Some weeks ago we published an item stating that the large new foundry being built by the J. I. Case Mfg. Company, at Racine, Wis., would be equipped with electric cranes. We have since learned that electricity will not be used at all for the cranes. The cranes that have been adopted are the Ridgway steam-hydraulic. Quite a large number of them will be used, and the order for same has been placed. For the lighter work direct acting air hoists will be used of 1-ton capacity. These latter, as well as the steam-hydraulic cranes, will be furnished by Ridgway & Son of Coatsville, Pa.

The Fischer Foundry & Machine Company of South Side, Pittsburgh, have re-

Hosted by Google

cently done a large amount of repair work at the Wheeling Steel Works of the Wheeling Steel & Iron Company, at Wheeling, W. Va.

The Montague Iron Works, at Grand Rapids, Mich., have resumed with a full force of men

The Columbiana Pump & Machine Works, Columbiana, Ohio, have started up after a shut down of one month.

The machine shops of the Pennsylvania Railroad located at Altoona, Pa., which for the past three months have been working only five days a week and nine hours per day, have gone on full time and in the future will work ten hours per day and six days per week.

Plans for the new works to be erected by the Westinghouse Electric & Mfg. Company, at Brinton, Pa., on the line of the Pennsylvania Railroad, about 12 miles from Pittsburgh, were on exhibition in the Westinghouse Building, Pittsburgh, last week. As already stated in these columns, it is the intention of the company to concentrate the various Westinghouse interests at Brinton when these buildings have been completed. Bids for a machine shop 754 x 231 feet and a warehouse 754 feet long and 76 wide are asked for. The contracts for these two buildings will be closed December 16. The other buildings, which will be built later, are a foundry, 700 x 150 feet; a punch department, 250 x 76; a carpenter shop, 300 x 75; a paint shop, 100 x 50, and a power house, 76 feet wide and 300 feet long. All of these buildings will be two stories high. A three story office building, 200 x 50 feet, is also to be built, but the plans for it have not yet been completed. Railroad tracks will extend along the side of the warehouse, and an elevated track will also extend the entire length of the building, from which material can be loaded or unloaded into the second story. Five bridges will connect the second story of the machine shop and warehouse. A dozen traveling electric cranes will be used in handling the heavy castings. The plans were designed by Thomas Rodd and drawn by W. A. Hawley. The estimated cost of the machine shop and warehouse buildings is over $500,000.

Among the recent sales of the National heater, manufactured by the National Pipe Bending Company of New Haven, Conn., are one of 2000 horse-power to the American Linen Company, Fall River, Mass.; 800 horse-power to Harris Woolen Mills, Woonsocket, R. I.; 1000 horse-power to Union Street Railway Company, New Bedfore, Mass., and 2000 horse power to the Electric Light & Power Company, Syracuse, N. Y.; 500 horse-power to Boston Rubber Shoe Company; 300 horse-power to Edison Electric Company, Tamaqua, Pa.; 300 horse-power to Meriden Street Railway Company; 500 horse-power to Portland, Ore.; 200 horse-power to Valdosta, Ga.; 1000 horse-power to Jersey City & Bergen Street Railway Company; 600 horse-power to Halifax Electric Company, Halifax, Nova Scotia; 500 horse power to Brooklyn Heights Railroad Company, Brooklyn, N. Y., and many others of smaller sizes.

The Huyett & Smith Mfg. Company, makers of heating and ventilating apparatus, Detroit, Mich., report a material improvement in their business. For the last three weeks their works have been running on full time in every department and the company are even behind with their orders. The prospects for a good winter trade are very promising.

The Winkler Machine Mfg. Company, capitalized at $50,000, have filed articles of incorporation at Kansas City, Mo. The company have been formed for the purpose of manufacturing the Winkler ice machines, the Winkler hose coupler, the multiple piston engines and other machinery in Kansas City. The incorporators are Ehergott T. Winkler, Theodore Stegner and Frank W. McMillan, all of Kansas City.

At the Pullman repair shops at Wilmington, Del., 300 men have resumed work in addition to a like number already employed. A cut of 20 per cent. was announced, but after the first of the new year the men will work on piece work, so that the reduction is only temporary.

The New York Locomotive Machine Works of Rome, N. Y., have been destroyed by fire. The property was valued at $500,000, and was insured for about $300,000. The fire is thought to have been of incendiary origin.

Hardware.

The Southington Cutlery Company, Southington, Conn., are now running eight and one-half hours a day.

The Winchester Repeating Arms Company, New Haven, Conn., are running on full time and in some departments are working overtime. This is owing to the manufacture of arms for use in the troubles in Africa and Brazil, and the plant will have all the work it can handle for some time to come.

The Bridgeport Crucible Company, Bridgeport, Conn., whose factory was recently destroyed by fire, are erecting a temporary structure in which they will carry on the business for the present.

The John Russell Cutlery Company, Turner's Falls, Mass., are running eight hours a day.

The Stanley Rule & Level Company, New Britain, Conn., will shut down December 21 for inventory. All contracts between employers and employees will be void after that date. The employees are fearful that the directors may conclude to let the factory remain closed until the tariff question has been definitely settled.

A company has been established at Faribault, Minn., for the manufacture of the Doran automatic band cutter and self feeder, with officers as follows: W. E. Blodgett, president; F. A. Berry, treasurer: W. E. Blodgett, F. A. Berry, D. W. Grant and Stephen Jewett, directors.

The nail mill of the Carnegie Steel Company, at Beaver Falls, Pa., has been shut down for an indefinite period. About 300 men are thus out of employment. This action on the part of the company was a great surprise, as the nail mill has been running full force for some time. The company have assigned no cause for the action, except that the present price at which nails are sold would not justify them in continuing to run their works.

The Hammond Buckle Company, Rockville, Conn., have purchased the plant of the Chapman & Armstrong Mfg. Company, at Waterbury, and will remove their business to that point.

The Blair Lamp Adjuster Company of Omaha, Neb., have filed articles of incorporation. The company have an authorized capital of $50,000. The directors are W. J. C. Putnam Cramer, H. F. Robertson and William Whitmore.

The new bolt shop of the Peck, Stow & Wilcox Company, Southington, Conn., will be ready in about a week.

D. M. Osborne & Co., manufacturers of implements, Auburn, N. Y., state that they propose to continue the manufacture of their entire output in that city as long as present conditions of labor and freight continue, although handsome inducements have been made to them for the transfer of all or part of their business to points in the West.

The Eaton, Cole & Burnham Company, Bridgeport, Conn., are running full force on half time.

Keystone Lock Works, Lancaster, Pa., for whom Surpless, Dunn & Alder, 97 Chambers street, are agents, have largely increased their facilities for making special padlocks, and now believe themselves to be among the largest producers of this class of goods. With their new foundry now in operation they are now making all their own castings.

The plain wire and barb wire departments of the plant of the Baackes Wire Nail Company, at Cleveland, Ohio, will probably be started up during this week, giving employment to about 100 men The affairs of this concern have been in the hands of J. Q. Riddle, receiver, for some months past.

The Union Metallic Cartridge Company, Bridgeport, Conn., are running full time and full force.

The Torrance Iron Company of Troy, N. Y., have been reorganized. G. L. French has been elected president, C. A. McLeod vice-president, and N. H. Squires secretary and treasurer. The company make a specialty of malleable iron castings for stove trimmings and tinners' hardware.

The nail mill of the Atlantic Iron Works, Sharon, Pa., has resumed operations.

An accident to the engine in the chisel works of Charles Buck, Millbury, Mass., has caused a shut down of about a week.

The T. C. Richards Hardware Company, West Winsted, Conn., are working 50 hours a week.

The Kinsey Implement Company and the Henry Lee Implement Company of Denver, Col., have been consolidated under the style of the Lee-Kinsey Implement Company. The new company are incorporated, with a capital of $250,000. The directors are Henry Lee, Charles Reed, Joseph Kinsey and Eugene Conant.

As already noted in these columns, S. P. Husselman of Wooster, Ohio, has purchased the entire interest of J. H. Logan, Geo. B. Logan and Edward P. Logan of Pittsburgh in the Logan & Strobridge Iron Company, New Brighton, Pa., and the interest of J. H. Logan in the old New Brighton Cutlery Building Association, the building of the latter now being occupied by the Robingson Mfg. Company. The consideration of the purchase is said to be about $50,000. The plant of the Logan & Strobridge Iron Company consists of six lots, occupying the square between First, Second, Butler and Locust streets in the center of New Brighton, upon which are located the brick foundries, machine shops, planing mill, warehouse, office, &c., of the company. In these buildings are manufactured a varied line of coffee, corn and spice mills, builders' and house furnishing hardware, light gray iron castings, &c., the firm having been manufacturing these goods for the past 20 years. In addition to this line, with the advent of Mr. Husselman, will be manufactured railroad, farm and yard fencing under the Husselman patents. The company at present employ about 100 men, which force will be increased when the fence trade opens up in the spring. The plant of the Robingson Mfg. Company, who recently purchased all the effects of the Cutlery Building Association, and are included in the deal, is located on the bank of the Beaver River, at the foot of Mill street, New Brighton, and occupies an entire square, on which is located a large two-story frame building, which contains power, machinery, furnaces, &c., necessary for the manufacture of brass castings, Babbitt metal and solder. In addition to this is an electroplating plant. There will be no change in the management of the Logan & Strobridge Iron Company, excepting that Mr. Husselman takes the place of J. H. Logan as a director. Every effort will be put forth by the management to increase the business of both concerns. The Logan & Strobridge Iron Company is a close corporation, the stockholders being Turner Strobridge, L. Roggen Strobridge, C. C. Robingson and S. B. Husselman.

Joseph Dixon Crucible Company, 63 Reade street, New York, manufacturers of pencils, crucibles and graphite products, note signs of improvement lately in their business, although not to so great an extent as could be wished. They have instituted some improvements and betterments at their works, and are prepared to promptly execute orders.

The new plant of the United Indurated Fiber Company, Lockport, N. Y., has commenced operations. The plant will soon be running full force and will employ 300 men.

Stoughton Rubber Company, Boston, Mass., are manufacturers of rubber clothing, and in connection with their own product handle druggists' sundries and mechanical goods. They are also agents for the New York Belting & Packing Company.

The American Wire Nail Company, at Anderson, Ind., are enlarging their galvanizing department. Reports are in circulation that the company are about to secure control of the nail plant of the Hazen Company.

The *Times* of Alexandria, Ind., states that arrangements have been completed for the location of the Kelly Axe Company's factory at that point. Those interested are confident that the works will be in operation by March.

The plant of the spoke and handle factory of Gurley is to be removed to Huntsville, Ala., and the capacity is to be greatly increased.

The E. Warren Axe & Tool Works, Warren, Pa., have been succeeded by the Warren Axe & Tool Company, incorporated with a capital of $25,000, and with a capacity of 50 dozen axes a day. They have improved machinery and call special attention to the quality of their goods.

Ellwood Shafting & Tube Company, Ellwood City, Pa., are now in a position to execute orders for seamless cold drawn tubes, made from genuine Swedish steel. At present the range of sizes is from ¼ inch to 1¾ inches, inclusive, 18 feet lengths. Reference

Hosted by Google

is made to the tubes being perfectly smooth inside and out, while it is said the variation between inner and outer walls is within 1-1000 part of an inch. The buildings of the plant are two in number, each 250 x 160 feet in dimensions.

Yale & Towne Mfg. Company, 84-86 Chambers street, New York, on the afternoon of December 2 commenced the removal of 4000 old lock boxes in the New York Post Office, which have done duty since 1870. By working continously they finished replacing them by the afternoon of the next day with 3100 new boxes fitted with Paracentric locks and keys, which are made of this particular kind for the United States Government only. The new boxes have a bronze front, beveled glass windows and perforated bottoms to prevent the accumulation of dust.

The Colebrookdale Iron Company, Pottstown, Pa., whose New York office is at 103 Reade street, in charge of Duncan K. Major, advise us that while they have not run full handed on their other work, such as japanned castings, rolling mill castings, &c., they have done so on their sad irons since the beginning of the year, which they refer to as an exceptional experience. They state that they have no stock of any account at the present time, but they expect to have a fair stock of irons by the first of January for next season's orders.

Miscellaneous.

The Manhattan Rubber Mfg. Company have been incorporated under the laws of New Jersey, with a capital stock of $150,000. The incorporators are Peter Reid of Reid & Barry Company, Passaic, N.J.; Samuel Watson of the Watson Machine Company, Paterson, N. J.; Frank Cazenove Jones, recently of the New York Belting & Packing Company, Limited, New York; W. W. Dashiell of W. W. Dashiell & Co., New York; A. F. Townsend, New York, and George Woffenden, Passaic, N. J. The company will manufacture all kinds of mechanical rubber goods including belting, packing, hose, emery wheels and bicycle tires, and will make a specialty of molded goods. Offices and warerooms have been opened at 64 Cortlandt street, New York City, and the company have leased the entire premises for five years. The plant is at Passaic, N. J. The officers of the Manhattan Rubber Mfg. Company are: Frank Cazenove Jones, president and general manager, and A. F. Townsend, secretary and treasurer. George Woffenden will have entire charge of the factories and Julius Kahn will be selling agent for the new company.

The State Street Horse Railway Company, at New Haven, Conn., have placed the contract for the roof on their new power house with the Berlin Iron Bridge Company of East Berlin, Conn. The building will be 84 feet wide and 250 feet long, the roof trusses being of iron, covered with slate.

The citizens of New London, Conn., have not yet relinquished their effort to get the Bath Iron Works of Bath, Maine, removed to that city. It has been suggested that a public subscription be started with this end in view.

The Ducktown Sulphur, Copper & Iron Company, Limited, have resumed operations at their works at Ducktown, Tenn.

The entire night force of the Elmira Bridge Works, Elmira, N. Y., has been laid off. The cause is believed to be but temporary. The trouble is said to be mainly caused by the specifications in the contracts which call for work to be commenced at certain dates. For instance, the date of the beginning of the works on the $1,250,000 New York Central viaduct contract is next March.

The Consolidated Car Heating Company's plant, Van Tile & Co.'s boiler shop and James McKinley & Sons' architectural iron works, at Albany, N. Y., are now running overtime.

The Committee on Manufactures of the Albany, N. Y., Business Men's Association has secured another industry for that city in the shape of the Oneida, N. Y., Spring Bed Mfg. Company.

It is reported that the Shuler Spring Works of Amsterdam, N. Y., which have been running a few days each week, will shut down again.

The Aluminum Smelting & Refining Company will shortly put in operation their smelting works, at Turner, in Kansas, a few miles west of Kansas City. It is stated that they will manufacture aluminum from native clay.

TRADE REPORT

As expected, the whole Iron and Steel trades are in a very comatose condition, nor is much improvement expected until the future is revealed, so far as the tariff is concerned. Reports are very conflicting, but on the whole tend in the direction that the Wilson bill will be forced through without serious amendment. Still, this circumstance deserves consideration on the other side, that the Washington correspondents proved pretty poor prophets lately when they foreshadowed the provisions of the Wilson bill and may be found erring again this time.

Welcome as an improved tendency would be, it is useless to deny that the incipient bull movement fathered by one of the Birmingham companies arouses little enthusiasm with other sellers and is not frightening buyers to any considerable extent. While it is to be sincerely hoped that it not a false start, the general situation does not encourage sanguine views very much. It is true that there have been speculative purchases, say 18,000 tons in all, 5000 tons of warrants having been transferred to England from New York and the rest having been bought in Philadelphia, also for English parties. Then the large Pipe contracts lately placed have led to covering, so that the sales have been heavy. But they have not filled up many sellers, who continue to offer Iron at the old rates. It is a fact, however, that further liberal Cast Iron Pipe contracts are in the market, say about 25,000 tons in all. On the other hand, the general foundry trade is very dull, and, for instance, in Chicago there have been requests for delaying deliveries of Iron.

Our Philadelphia correspondent puts finally at rest all doubts concerning the Steel Rail arrangement by showing from the court records that the Maryland and Pennsylvania have received bonds to the aggregate amount of $380,000 as a forfeit on orders for 400,000 tons. Some people may be able to guess who the buyers are. When the history of the last six weeks of the Rail trade is written it will be acknowledged to be among the most checkered recorded in the Iron industry.

In Soft Steel the markets have been quiet, there being relatively little new business coming up. In Finished Material the struggle for work continues, with its attendant extremely low range of prices. An interesting event during the week has been the first appearance as a bidder on bridge work of the Illinois Steel Company, the occasion being the 3500-ton contract for the Milwaukee viaduct.

Heavy pressure has been put on the Plate market lately by a Pittsburgh firm whose order book had been swept clear for present delivery of a number of large contracts by postponement.

There is more activity in Girder Rails. It is estimated that there are in sight new orders for about 20,000 tons of Rails, and that about 10,000 tons of deferred work is on the eve of being taken. The latest order for about 2200 tons, for Indianapolis, went at a low figure.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St., PHILADELPHIA, Pa., December 5, 1893.

The situation in the Iron and Steel trade shows no improvement, and in view of the tariff agitation and the near approach of the holidays no improvement ought to be expected. It is a long, dreary road to travel, and while the immediate outlook is the reverse of encouraging, there can be no doubt that the turn will come some of these days. Meanwhile with such changes as are proposed in the new tariff there is no possibility of any new business beyond what is indispensable for immediate requirements. Low as prices are, they will have to be still lower if foreign competition has to be met, and as that appears to be the object of legislation, there is no alternative but to wait and see what will be done. Is it any wonder, therefore, that the last month of one of the worst years that the Iron trade has ever known is the worst in the entire series? Business is duller, prices are lower, and the outlook appears to be gloomier than at any time during the whole year, and yet for aught that any one knows to the contrary, it may be just the time when things may take a turn; the very reverse of what everybody expects. If it is the unexpected that happens it could hardly come at a better time than right now.

Pig Iron.—There is no perceptible change in this department. The reported 50¢ advance by one of the Southern companies falls very flat, and does little more than provoke a smile. Anybody can ask an advance, and it is entirely proper to do so at such prices as have been ruling during the past two or three months, but whether any one will pay it or not is another thing entirely. In this market the supply, while perceptibly smaller, is nevertheless as large in proportion as at any time during the whole year. There is very little Iron wanted, and what is wanted can be easily secured at the old prices, and in some cases at a little less than that. Consumption is very light, and will be still lighter during the next 30 days, so that there is no incentive for placing orders ahead, and especially so while the tariff is unsettled. To-day's asking prices are about as follows, with sales chiefly in small lots:

No. 1 Foundry	$13.75 @ $14.25
No. 2 Foundry	13.00 @ 13.25
Standard Gray Forge	12.00 @ 12.50
Ordinary Gray Forge	11.50 @ 11.75

Steel Billets.—No business of any account has been done during the past week or ten days. Small lots have been taken at $19.50 @ $19.75, delivered, but good buyers would have no difficulty in placing 1000-ton orders at $19.25, perhaps less than that on the right kind of an offer.

Steel Rails.—There is some inquiry for fair sized lots, and intimations that orders would be placed if special rates were named. The price is $24, however, and there will be no deviation from that figure on standard sections. From the court records it appears that the Maryland Steel Company have accepted an offer for 300,000 tons Rails and the Pennsylvania Steel Company 100,000 tons at $25 per ton. The buyers give bonds for the payment of $300,000 to the Maryland Steel Company in case that they fail to take delivery during 1894, and for $80,000 to the Pennsylvania Steel Company if they fail to take theirs, but the companies are also bound to accept no orders for

Hosted by Google

this class of Rails until the lots as above named have been taken. The companies will therefore either get the business or the forfeit of $300,000 and $80,000 respectively.

Finished Material.—There is little or no change to note, business being slow and for small lots, at the lowest of the low figures heretofore ruling. There are no large orders in the market, and even those for shipbuilding that seemed likely to go through last week are either postponed or withdrawn. In point of fact, there is nothing but small orders around, and those that look for anything else meet with nothing but disappointment. Mills that look after the smaller trade are doing fairly, but at the same wretchedly low prices as before, which are nominally as follows, but on good sized lots there is no difficulty in securing liberal concessions:

Grooved Skelp, delivered.	1.45¢	@	1.50¢
Best Refined Bars	1.45¢	@	1.55¢
At interior points	1.35¢	@	1.40¢
Tank Steel	1.45¢	@	1.55¢
Heavy Plates	1.50¢	@	1.60¢
Shell	1.60¢	@	1.75¢
Flange	1.90¢	@	2.00¢
Angles	1.60¢	@	1.70¢
Beams and Channels	1.75¢	@	1.90¢

Old Material. — Market extremely dull, and prices less firm than they were a week ago. Asking prices are about as follows, but under pressure to realize, lower figures have to be accepted:

No. 1 Wrought Scrap, delivered	$11.50	@	$12.50
Machinery Cast, delivered	10.00	@	11.00
Heavy Steel Scrap, delivered	11.50	@	12.50
Old Iron Rails, delivered.	14.00	@	14.50
Old Street Rails, delivered	15.50	@	16.00
Wrought Turnings, delivered	10.00	@	11.00
Cast Borings, delivered	6.50	@	7.00
No. 2 Light Scrap	6.50	@	7.50

St. Louis.

(By Telegraph.)

Office of *The Iron Age*, Bank of Commerce Building, St. Louis, December 6, 1893.

Pig Iron. — There is not much demand and prices are unchanged. There is practically no cheap Iron in the market at present and consumers cannot be induced to stock up on to-day's prices. For the past six months certain users of Iron, generally carload buyers, have been making their purchases only when cut prices were the inducement. Now that these prices have been withdrawn, they are not in the market. A hand to mouth trade is the report from all furnace agents. Quotations are unchanged, as follows, which are for cash, f.o.b. cars St. Louis:

Southern Coke, No. 1 Foundry	$13.25	@	$13.50
Southern Coke, No. 2 Foundry	11.50	@	11.75
Southern Coke, No. 3 Foundry	10.75	@	11.00
Southern Gray Forge	10.25	@	11.50
Southern Car Wheel	17.25	@	18.25
Lake Superior Car Wheel	16.50	@	17.00
Ohio Softeners	16.00	@	16.50

Bar Iron —Local jobbers state that trade is exceedingly dull, and prices range between 1.70¢ and 1.75¢, according to quantity. Mills are only running about half time, and are making some very low prices. Nominal quotations from mill are 1.40¢ @ 1.45¢, but these prices are shaded.

Barb Wire.—The demand for Barb Wire is moderately active. Mills quote $2 for carload lots of Painted to jobbers, and Galvanized at $2.40. Locally jobbers quote Painted at $2.10 @ $2.15, and Galvanized at the usual advance of 40¢ ℔ hundredweight.

Wire Nails.—There is a lively trade reported by the mills, but prices are unsatisfactory. Sales are reported as low as $1.35 for lots of from 3000 to 5000 kegs. Mills quote $1.40 @ $1.45 for carload lots to jobbers. Store price is $1.50 @ $1.55.

Rails and Track Supplies.—Track Supplies are dull and prices inclined to weakness. We quote as follows: Splice Bars, 1.65¢ @ 1.70¢; Spikes, 2¢ @ 2.05¢; Bolts, Square Nuts, 2.40¢ @ 2.45¢; with Hexagon Nuts, 2 50¢ @ 2.55¢; Links and Pins, 1.90¢. Old Rails are dull at $13.50. Steel Rails are unchanged at $27 @ $27.50.

Pig Lead. —The offerings of this metal have been quite free, and 3.17½¢ @ 3.20¢ has been made during the past week. Considerable uneasiness exists regarding the effect of the proposed tariff, which, it is pretty generally conceded, will have the effect of causing a decided slump in prices.

Spelter.—The demand for Spelter has been fairly good since our last report, and prices have improved somewhat. Sales have been made at 3.45¢ @ 3.50¢, the closing transactions to-day being made at the latter figure. Choice brands commanded 3.60¢.

Chicago.

(By Telegraph.)

Office of *The Iron Age*, 59 Dearborn street, Chicago, December 6, 1893.

The market continues quiet, notwithstanding the efforts to force business by sellers in various lines. The attempt by Southern Pig Iron manufacturers to advance prices is persisted in, but it does not frighten consumers into buying.

Pig Iron.—While there is some movement in small lots of local and Southern Coke Iron, it is confined entirely to the absolute necessities of consumers. Inquiries for good sized lots of Southern Iron have led to no business, on account of the high prices asked by nearly all the Southern companies. Buyers seem to consider the upward movement only a bluff and will wait to see whether it can be maintained or is only a temporary incident. A discouraging feature of the situation at present is the decrease in shipments to consumers, who are to a considerable extent asking for postponement of deliveries on contracts. This shows a falling off in the foundry business, which for the past month or six weeeks had materially improved. Some sales of Charcoal Iron are reported at prices a shade under our quotations. Quotations are now as follows for cash:

Lake Superior Charcoal	$15.50	@	$16.00
Local Coke Foundry, No. 1	13.50	@	14.00
Local Coke Foundry, No. 2	12.75	@	13.00
Local Coke Foundry, No. 3	12.25	@	12.75
Local Scotch	14.00	@	14.50
Ohio Strong Softeners No. 1	15.50	@	16.00
Southern Silvery, No. 1		@	13.75
Southern Silvery, No. 2		@	13.25
Southern Coke, No. 2	12.15	@	12.40
Southern Coke, No. 3	11.65	@	11.90
Southern, No. 1, Soft	12.40	@	12.65
Southern, No. 2, Soft	11.65	@	11.90
Tennessee Charcoal, No. 1	16.00	@	16.50
Southern Gray Forge	10.60	@	10.85
Alabama Car Wheel	18.25	@	18.50
Jackson County Silvery	16.00	@	16.50
Other Ohio Silvery	15.00	@	15.50

Bars.—Manufacturers report a fair week's trade, but the most of it has been secured by sacrificing prices. Sales are confined to moderate quantities only and consumers are buying for quick delivery. The mills which were favored with season contracts are now in not much better shape than those without such contracts, as specifications are coming in slowly, involving a chase for new business. The only redeeming feature of the market is the fact that jobbers and consumers generally are short of stock and are obliged to purchase frequently. Quotations on mill shipments range from 1.35¢ to 1.40¢ Chicago, half extras, on Bar Iron, and 1.40¢ to 1.45¢ on Soft Steel Bars. Bar Iron quotations, however, are subject to shading on favorable specifications. Jobbers continue to report a good demand from stock, but prices are weak, although nominal rates are continued at 1.60¢ @ 1.70¢ for Bar Iron and 1.65¢ @ 1.75¢ for Soft Steel Bars.

Structural Material.—The Milwaukee viaduct, which will require some 3500 tons of material, has not yet been placed. Bids were received from 16 companies, among them being the Illinois Steel Company, whose advent as bridge builders is a new departure for them. The lowest bid was $182,000, but the matter will have to be approved by the City Council. Very little other business is either reported or in sight, although expectations are entertained of a considerable amount of elevated railroad work to come up at an early day. Quotations are as follows, Chicago delivery: Beams, 1.65¢ @ 1.75¢; Tees, 1.90¢ @ 2¢; Angles and Universal Plates, 1.60¢ @ 1.65¢. Small lots are sold from stock at an advance of 10¢ @ 15¢ ℔ 100 above these prices.

Plates.—Business in this line is very quiet; dealers are now doing very little from stock. Boiler and other consumers are seldom getting new work. Mill shipments, Chicago delivery, are quoted as follows: Tank Steel, 1.60¢ @ 1.70¢; Shell Steel, 1.80¢ @ 1.90¢; Flange Steel, 2¢ @ 2.10¢; Fire Box, 2.75¢ @ 5¢. Store prices now prevail as follows: Iron or Steel Sheets, Nos. 10 to 14, 2¢ @ 2.10¢; Tank Steel, 1.90¢ @ 2¢; Shell Steel, 2 20¢ @ 2.40¢; Flange Steel, 2.50¢ @ 2.65¢; Boiler Tubes, 70 and 5 % off.

Sheets.—A few sales of Black Sheets have transpired; the largest of them was for 50 tons. Mill shipments of No, 27 Common are selling at 2.65¢ @ 2.70¢, Chicago, while Steel commands an advance of $1 @ $2 ℔ ton. Small lots of Iron from stock are selling at 2.90¢ @ 3¢. stock. Galvanized Iron is moving in very small quantities at about 75 % off for Juniata on mill shipments and 70 and 5 % for small lots from stock. The low price of Galvanized Iron is causing it to be substituted quite considerably for Black Sheets in roofing, as well as in other lines of large consumption. Copper Sheets are advancing on account of the higher prices of Ingot Copper. They are now quoted at 25 and 5 % off @ 30 %, according to quantity.

Merchant Steel.—Specifications are not being received by mill representatives in as large quantities as a couple of weeks since, but are still coming forward fairly well. A few consumers have placed season contracts within the past week, but it is now believed that about all the large concerns have covered their requirements. Those who came in lately for the purchase of Steel specialties have profited by their long delay, as they were able to contract at much lower prices than ruled early in the season. Quite a good business has recently obtained in small lots for quick delivery. Mill shipments, Chicago delivery, are quoted

Hosted by Google

as follows: Smooth Finished Machinery, Tire and Open Hearth Spring Steel, 1.90¢ @ 2¢; Ordinary Bessemer Machinery, 1.60¢ @ 1.65¢; Ordinary Bessemer Tire, 1.55¢ @ 1.60¢; Ordinary Tool Steel, 6¢ @ 7¢; Specials, 12¢ and upward.

Billets.—Nothing new has occurred under this head, and quotations are unchanged at $19.25 @ $19.50, Joliet.

Rails and Track Supplies.—Inquiries are improving for small quantities of Steel Rails, which the local manufacturers are not always able to meet, as they have but a limited stock on hand. There are indications that some of the large buyers may soon come into the market, but thus far nothing has occurred on which to base an estimate of next year's probable business. Quotations range from $25 to $26 75, according to the size of the order. Fastenings are unchanged at 1.50¢ @ 1.60¢ for Splice Bars; 2.55¢ @ 2.60¢ for Track Bolts with Hexagon Nuts, and 1.90¢ @ 1.95¢ for Spikes.

Old Rails and Car Wheels.—Old Iron Rails are weaker, as the railroads are more anxious to sell. The near by mills are now being supplied at $14, delivered, and are not obliged to buy in large quantities to get this price. Old Steel Rails are quoted at $7.25 @ $10, according to length, on the basis offered by Pittsburgh dealers. Old Car Wheels are wholly neglected.

Scrap.—There is demand for all kinds of Scrap, but dealers are not looking for heavy business at this time, with the end of the year approaching. Our quotations fairly represent the condition of the market, sales being made occasionally at lower and sometimes higher prices than those given. Quotations are maintained at old figures: No. 1 Forge, $10; No. 1 Mill, $8; Sheet Iron, $4.50; Pipes and Flues, $8; Axles, $16; Horseshoes, $11; Fish Plates, $12; Spikes and Bolts, $10; Cast Borings, $4.50; Wrought Turnings, $6.50; Axle Turnings, $8; Heavy Cast, $9.50; Stove Plate, $7.75; Malleable Cast, $8; Mixed Steel, $7, gross ton; Leaf Steel, $14 50.

Metals.—Lake Copper is now quoted at 11¢ for carload lots and 11¼¢ for less than carloads. The advance is caused wholly by the export demand, as the domestic movement continues light. Casting Copper is also advancing, carload lots now being quoted at 10¢. Inquiries from consumers of this grade are considerably larger than they were. Spelter is quiet, but quoted at 3.50¢ @ 3.55¢, according to brand. Lead is weak. Refiners are quoting 3.20¢, but are selling very little at that price, as consumers are holding off for still lower figures.

A. H. Dunham & Co., Pig Iron merchants, have removed from the Monadnock Block to room 44 in the Illinois National Bank Building, 115 Dearborn street, Chicago.

The blooming train in the plant of the Wheeling Steel Works, owned and operated by the Wheeling Steel & Iron Company, at Wheeling, W. Va., has recently been increased from 60 feet to 180 feet in length. Tests of the new train were made last week and were highly satisfactory. It is probable that this plant will resume operations about the first of the year.

Pittsburgh.

(By Mail.)

Office of *The Iron Age*, Hamilton Building, PITTSBURGH, December 5, 1893.

The indorsement of the Wilson tariff bill by the President in his message to Congress will no doubt have considerable influence on that measure and largely increase the chances of it going through without material revision. That this will add to the demoralization now existing in the Iron and Steel trades is generally admitted, as everybody, whether a large or small buyer, will purchase just as little as he can until it is actually known what will be done with the measure. Since our issue of last week the trade have had opportunity to thoroughly digest the bill, and now that the radical changes proposed are fully comprehended the opposition to its being made a law becomes stronger. The Tinned Plate Manufacturers' Association is in session in this city to-day, and it is probable that a committee will be appointed to go to Washington and endeavor to have the present duty of 2 2/10¢ ℔ lb on Tin Plate retained, or at best only slightly reduced. Makers of other materials seriously affected will also doubtless have representatives in Washington to guard their interests as much as possible. The Iron and Steel trades remain in the same condition as noted last week. Demand is very limited, and prices show no improvement whatever; on the contrary, have shown a weaker tendency in certain directions. Foundry Coke has been cut 20¢ ℔ ton, and there are some who predict Furnace Coke will be affected to some extent, but in view of the already low price at which Furnace Coke is selling this is not thought probable.

Pig Iron.—The market is practically in the same condition as noted in our report of last week. The amount of metal changing hands is small and prices are showing signs of weakness, especially on Bessemer. The trouble with the market just now is that not enough Iron is being consumed and too much is being made. Of course we take into account the fact that production has been cut in half and all that, but at the same time consumption has been reduced just as much and perhaps more. Where one consumer of Pig Iron can be found who is running his plant full time, ten can be found who are running to half capacity or less. Then, again, the stocks of Pig Iron on hand are very heavy, and as long as these conditions confront the market any betterment in price is out of the question. We quote as follows:

Neutral Gray Forge	$10.50 @	cash
All-Ore Mill	10.50 @ $10.75	"
Bessemer	11.00 @ 11.25	"
No. 1 Foundry	12.50 @ 13.00	"
No. 2 Foundry	11.50 @ 12.00	"

We note a sale of 1000 tons of Bessemer for December and January delivery at $11, Pittsburgh. Also 1500 tons of Bessemer, same delivery, at $11.10, Pittsburgh. Reports are going of sales of Bessemer at somewhat below our lower quotation.

Ferromanganese—We note a sale of 50 tons of domestic at $52.50, delivered at buyer's mill. We quote the market at $52 @ $52 50, delivered.

Billets.—No material changes in the Steel market have occurred within the last week. All the Steel plants in the Pittsburgh district are in operation and all have more or less business. In the Wheeling district the mills are also in operation, with the exception of the Wheeling Steel Works of the Wheeling Steel & Iron Company, and it will probably start about the first of the year. We quote the market at $17 @ $17.25 at maker's mill.

Plates.—Tank Steel is in good demand, but prices are as low as ever. We quote as follows: Tank Steel at 1.35¢ @ 1.40¢; Flange Steel, 1.65¢ @ 1.75¢; Shell, 1.55¢ @ 1.60¢; Fire Box, medium quality, 2½¢ @ 3¢, best quality, 3½¢ @ 4¢.

Structural Material.—Pittsburgh has taken the contract for Beams for a new court house to be erected in a far Western State and a fairly large tonnage is involved. The price is said to have been somewhat below our lower quotation. We repeat quotations of last week, as follows: Beams up to 15 inches, 1.50¢ @ 1.60¢. For desirable orders our lower quotation would be shaded. Angles and Universal Plates, 1.50¢ @ 1.60¢; Tees, 1.70¢ @ 1.75¢.

Muck Bars.—The demand is very light and prices are unchanged at $20.50 @ $21 for best grades, delivered at buyer's mill.

Steel Rails.—The local mill went on again yesterday morning on Rails. The report that it has secured an order for 40,000 tons from the Lake Shore road has been officially denied. Very little new business has been placed, but several contracts are expected to be let after the first of the year.

Bars.—Some mills report that orders are holding up pretty well, while others say a dropping off has occurred. As we are now so near the close of the year it is not improbable that a good many buyers will hold off placing their orders until after the first of the year. The report that the puddlers of the National Rolling Mills of the National Tube Works Company, at McKeesport, Pa., had agreed to accept $4 ℔ ton for boiling is untrue. No request for such a low rate has been made by the firm. The Valley mills are running to a greater or less extent, but none of them to full capacity, as has been stated. Bars are held at 1.30¢, half extras, by the Valley mills, and a determined effort is being made to maintain that price. Steel Bars are held at 1.30¢ @ 1.40¢, with Bar Iron extras, the price depending altogether on the nature of the order.

Wire Rods.—The market is active, and Rods are held at $24.50 @ $25, at maker's mill. Very few Rods for this month are to be had, and for this delivery our higher quotation is obtained. It is the impression that higher prices for Rods will soon prevail.

Barb Wire.—Inquiries for Wire for delivery next spring are now coming in, and some business has already been placed. The Barb Wire department of the plant of the Baackes Wire Nail Company, at Cleveland, started up on the 4th inst. on double turn. We quote Four-Point Galvanized at $2.20 in carload lots, and $2.30 @ $2.35 in less quantities. For round lots our lower quotation would probably be slightly shaded. We quote Plain Wire at $1 45 for Nos. 6 to 9 in carload lots. This price would be shaded for desirable business.

Wire Nails.—On Monday, the 4th inst., freight rates on Wire Nails from Pittsburgh territory to Texas common points were advanced from 42¢ to 84¢ ℔ 100 lb. In one day recently the HP Nail Company of Cleveland turned out 5652 kegs of Wire Nails. This is

Hosted by Google

claimed to be the largest record for production in any one day ever made by one concern. There is a good demand, and inquiries for delivery into the first quarter of next year are plentiful. However, makers generally are refusing to take such contracts at present prices. We quote Wire Nails at $1.20 in carload lots and $1.15 in round lots, for close delivery. The rise in the river has allowed large shipments of Cut Nails to be made to Southern points by the Wheeling mills. We quote Cut Nails at $1 in carload lots and 95¢ for larger sized orders with desirable specifications.

Pipe and Tubes.—It is said that the demand for Pipes and Tubes is equal only to about 45 % of the capacity of the mills for production. Prices are no better, and on some lines are somewhat lower.

Skelp Iron.—The market is without change, and we continue to quote Grooved Skelp at 1.37½¢ @ 1.50¢ and Sheared at 1.45¢ @ 1.60¢, according to order.

Coke.—Under date of December 1, the H. C. Frick Coke Company announced a reduction of 20¢ ℔ ton in Foundry Coke, and this cut has been promply met by other makers. It is expected that additional contracts for Furnace Coke will be closed before the first of the year. For the week ending Saturday, November 25, there were 7480 active and 10,039 idle ovens, with a total estimated production of 68,145 tons. We quote as follows: Furnace Coke, $1.10; Foundry Coke, $1.30 to dealers and 1.45 to consumers. Crushed Coke, $1.75 to consumers, all in tons of 2000 lb, on board cars in Connellsville region.

Cincinnati.

(By Telegraph.)

Office of *The Iron Age*, Fifth and Main Sts., CINCINNATI, December 6, 1893.

There has been a cessation of Pig Iron buying during the week and no large contracts have been made for either long future or early delivery, but there have been liberal shipments on contracts recently made. The proposed new tariff, as published, seems to have restricted buying of Pig Iron, and while this may be greatly modified and seems almost sure to be before it can become a law, there is a disposition to hold off for the present at least. No business of importance is anticipated during the remainder of the month, and it is not improbable that the dullness may be greatly prolonged. There is, therefore, more willingness to sell at the prices recently accepted for delivery until next April, or even longer, but it is useless to make the tender when there are no buyers, while, in fact, the recent sales have made the furnaces comparatively independent and there is no such urgency to sell as would cause lower prices to be accepted. There have been few sales in this district beyond carload lots, but there have been some orders from the East of 500 to 1000 tons. There is little movement in Charcoal Iron, but it is not pressed for sale. Quotations are as follows:

Foundry.

Southern Coke, No. 1	$12.25 @ $12.50
Southern Coke, No. 2	11.00 @ 11.25
Southern Coke, No. 3	10.50 @ 10.75
Ohio Soft Stone Coal, No. 1	15.50 @ 16.00
Ohio Soft Stone Coal, No. 2	14.50 @ 14.75
Lake Superior Coke, No. 1	15.00 @ 15.25
Lake Superior Coke, No. 2	14.00 @ 14.25
Hanging Rock Charcoal, No. 1	18.50 @ 19.00
Hanging Rock Charcoal, No. 2	17.50 @ 18.00
Tennessee Charcoal, No. 1	14.00 @ 14.25
Tennessee Charcoal, No. 2	13.00 @ 13.25

Car Wheel and Malleable Irons.

Standard Southern Car Wheel	17.75 @ 18.00
Lake Superior Car Wheel and Malleable	17.00 @ 17.25

Forge.

Gray Forge	10.00 @ 10.50
Mottled Coke	9.75 @ 10.00

Financial.

It would not be easy to point out any particular direction in which the financial situation displays either improvement or the reverse, as compared with the situation of a week ago. The business world in general is again waiting for Congressional legislation to relieve uncertainty, just as it did in the early fall while the fate of the silver purchase repeal billwas hanging in the balance. The present session of Congress has an unusually important task before it in the decision of the tariff, internal revenue and other equally pressing questions intimately affecting the financial and commercial interests of the country. On the outcome of legislation in these matters will depend largely the course of business in the immediate future. Merchants, manufacturers, and bankers will naturally await the result with anxiety, and until the course of legislation is assured the establishment of confidence and any material expansion of trade cannot reasonably be expected.

The overstocked money market at present existing is strong evidence that obligations are being curtailed instead of increased. It shows a great shrinkage in the volume of trade and an absence of enterprise and speculation almost unparalleled. Nearly $198,000,000 idle cash lies in the banks of New York alone, being $76,000,000 more than legal requirements, by far the largest surplus on record; and this condition is repeated in all the important money centers of the country. Meanwhile the volume of money in general circulation was increased last month by $8,500,000, bringing the total circulation of the country, on December 1, up to $1,726,094,290. The increase has been $45,500,000 in the past three months; and the present circulation is about $112,000,000 greater than it was a year ago. At the same time the volume of business, as shown by Clearing House exchanges, during the last two weeks of November is 23.3 per cent. smaller than a year ago. There is, moreover, no indication of an early cessation in this accumulation of idle capital, and the situation only serves to prove how extensive has been the business upheaval of this year. One more favorable feature of Saturday's bank statement was an increase in loans of $4,288,400; but this expansion is explained as being largely due to advances on grain and cotton, which will be canceled shortly on the exportation of the commodities. Part of it also represents renewals of purely speculative accommodations; and but little indicates permanent extension of credit. The glut of unemployed money is having its natural effect in lowering rates of interest and to a certain extent stimulating speculative buying, but the latter is far below the average in extent. So great has been the congestion in bank reserves that bankers are willing to loan money on almost any terms, and the spectacle of borrowers begging for loans, which was seen in August, is now entirely reversed. Borrowers are few and lenders many.

So pronounced has become the ease of the loan market that the banks and trust companies are considering the reduction of interest on permanent deposits, which have usually commanded by large depositors from 2 % to 2½ % easily. With the immense reserve funds at present held, however, these deposits are being largely carried at a loss, and some steps will have to be taken to relieve the pressure. As it is, very few banks or trust companies will open new deposits subject to any interest whatever. The call loan market is abundantly supplied with funds, 1 % being the usual basis and 1½ % the outside figure asked. Time loans are offered far in excess of demand, rates being 2 % for 30 days, 2½ % for 60 days, 3 % for 90 days to four months and 3½ % @ 4 % for five and six months. Even these rates are shaded for choice securities. Commercial paper is in active demand at 3½ % @ 4 % for best indorsed receivables and 4½ % @ 5 % for single names, the supply being light.

The annual report of the Controller of Currency, just issued, shows 3976 national banks to have been in operation at the close of the report year, with a capital stock of $695,558,120, represented by 7,450,000 shares held by 300,000 shareholders. During the year 119 banks were organized and 158 suspended. Of this number 86, with a capital stock of $18,205,000, resumed, and 65 passed into the hands of receivers, with a capital stock of $10,885,000. At the close of the year seven remained in the charge of examiners pending resuumption. A comparison of the history of the banks for the year 1893 with that of 1892 shows the following changes: Banks organized decreased 44, receiverships increased 48, voluntary liquidations decreased 7, corporate extensions decreased 47, expirations of corporate extensions decreased 7. The total gain of active banks was 8, and the increase in capital stock was $1,689,455. The Banking and Currency Committee of the House are to meet this week for the purpose of framing a bill for repealing the State bank tax.

The stock market was encouraged toward the close of last week by a better feeling in London in respect of American securities. Some large purchases of railroad shares for foreign account were made on Friday and Saturday. This circumstance tended, together with some favorable returns of Western earnings, to tone the market for railroad stocks in general. Several denominations, notably St. Paul, Atchison, Union Pacific and Louisville, scored material advances accordingly. The last named stock rose on the news of the company having succeeded in paying off the loan which they secured in London some time ago. The unsatisfactory feeling in regard to the Wilson bill, which operated to depress most of the "industrials" last week, served, however, to give a tone of hesitancy to the general stock market, which closed somewhat weak and irregular on Saturday, and opened depressed on Monday. Some foreign selling of "Americans" and decreased railroad earnings reported by Eastern trunk lines, together with one or two other discouraging features, caused a general weakening, both of railroad and industrial securities, which, notwithstanding a rally late in the afternoon, closed all round generally lower, Western Union and a few specialties suffering particularly. Tuesday's market was dull, Atchison bonds and stocks declining sharply on rumors from London of the failure of the company in an attempt to borrow $2,000,000 in that city in order to make up their January interest. An emphatic denial was, however, given to the re-

Hosted by Google

port by the president of the company, but the general stock market failed to rally to any extent, closing moderately firm, but generally lower, especially in the "industrial" lines or securities. A plausible explanation as helping the decline in prices is given in the disappointment of Wall street in finding no definite and comprehensive financial policy announced in the Presidential message made public on Monday afternoon. The extreme fluctuations in the principal stocks since December 1 are shown in the following table, together with the closing prices on December 6:

	Highest.	Lowest.	Closing. Dec. 6.
Am. Sugar Ref.	84	80	83
Atchison, T. & S. Fé	22	18¼	18⅛
Balt. & Ohio	74½	72	72¼
Chicago Gas	69⅛	67¼	67⅞
Chic., B. & Q.	81½	79½	79½
Chic., Mil. & St. Paul	66⅞	64¼	64⅝
Chic., Rock Isl. & Pac.	71¼	69½	69⅝
Del. & Hudson	136½	134	134½
Del., Lack & Western	168¼	167	167
Gen. Electric	37⅞	32½	33¾
Lake Shore	129	126⅛	127½
Louisville & Nashville	53⅛	51⅛	51⅝
Manhattan	129	127	127
Missouri Pacific	27⅞	24⅜	24½
National Lead, Common.	23¾	21	21¼
New Jersey Central	118	117¾	118
New York Central	103½	102½	102¼
N. Y., L. E. & Western.	16	14⅞	15
Northern Pacific, Pfd.	24½	22½	22½
Philadelphia & Reading.	21⅞	20⅞	21¼
Richmond & West Pt., Terml	3⅜	2⅞	3¼
St. Paul & Omaha	40½	37¾	37¾
Union Pacific	23½	20⅞	21½
Western Union	92¼	88⅝	88¾

Railway and miscellaneous bonds have been active during the greater part of the week. The investment demand for first-class bonds has been so large that they have become nearly exhausted, and purchasers are now turning their attention to the lower grades, many of which have advanced in price of late. The general bond market has, however, subsided into dullness this week, in sympathy with the decline in stocks. Government bonds are steady. A sale call of $500 4s coupon at 114¼ is noted. Closing prices were quoted as follows:

	Bid.	Asked.
2s, 1891, registered	95	.....
4s, registered	113	114
4s, coupon	114	115

Sterling exchange has been strong and higher, owing to an active demand from remitters and comparative scarcity of bills. Actual business was done on Wednesday at $4.84¼ @ $4.84½ for sixty days; $4.86¾ for demand; $4.87 @ $4.87¼ for cables and $4.83½ for commercial.

Domestic exchange on New York is quoted as follows: New Orleans, commercial 200 discount, bank par; Charleston, buying par, selling ⅛ premium; San Francisco, sight 5, telegraph 20 premium; Savannah, buying ⅛ discount, selling par @ ⅛ premium; Chicago, par; St. Louis, 75 premium.

Bar silver has declined in price. Latest quotations in London were 32 1/16 pence and in New York 70¼¢ ℔ ounce. Large shipments continue to be made to Europe.

The plant of the Coleman-Shields Company, Niles, Ohio, manufacturers of pipe, casing and tube iron, is in operation, though not to full capacity. Unless a material increase in orders takes place, this firm do not expect to increase their running time to any extent.

The Harrisburg Boiler & Mfg. Company, Harrisburg, Pa., are in the hands of the sheriff, an execution for $25,000 being issued against the firm last week.

Metal Market.

Copper.—Sales have been made recently of several million pounds of Lake Superior Ingot for future delivery, at 10½¢. The estimates range all the way from 3,000,000 to 5,000,000 ℔, exclusive of what may have been done *sub rosa*, as not uncommon, by the Calumet & Hecla Company, whose agents seem to prefer "mystery" to a plain statement of facts. If the truth were known, it would probably be found that the estimate given is below the actual amount of metal involved. In any event there is strong circumstantial evidence that the smaller producers have not been the only sellers and that consumers have not been the only buyers. In other words, there is some indication of speculative movement and reason for supposition that Boston operators in mining shares have made the most of every advantage in their favor. On the Metal Exchange there has been a feeble effort in the direction of counteracting the effect of outside influences and a few "sales" were recorded there at considerably under the "street" prices. Waiving all the speculative doings, it seems very clear that 10½¢ is extremely inside price and that 10¾¢ @ 11¢ fairly reflects market value from sellers' point of view. Not as much as a rumor of large dealings in other Copper comes to notice, but the line of valuation has been raised to 10¢ upward for Electrolytic, and 9½¢ @ 9¾¢ for ordinary casting brands. It is denied that there is any speculative combination in the market, but circumstantial evidence to the contrary is very strong. In fact, it looks as though special effort is being made to carry prices upward on the enhanced cost of transportation consequent upon the closing of navigation, and to make the most of every condition calculated to work up sentimental or more substantial firmness to the market.

Pig Tin.—Hardly anything has been done in the speculative branch of the market, and prices have remained almost stationary throughout the week. The uncertainties connected with the proposed revision of the tariff seem to be greatly responsible for the lack of animation. General trade conditions, however, are not without influence, since they suggest very conservative action. As near as can be calculated, the consumption here is well up to the average for this season, and it is calculated that spot stocks have been cut down to about 2500 tons, or less than the average amount. Purchases by jobbers and consumers have been on a moderate scale, however, and the demand at this writing is of very ordinary character. Late dealings were at 20.60¢ @ 20.65¢, which prices seemed to have fairly reflected market value at the close of the week.

Pig Lead.—The market has remained almost stationary. New tariff proposals exerted a certain amount of sentimental influence, the bearing of which was in the direction of lower prices, but sellers have thus far made hardly any revision in their prices, and consumers are extremely indifferent. There is no difficulty in buying carload or larger lots at 3.40¢, delivery here this month or next. Bids above 3.30¢, the bullion quotation, are few and far between. In short, the market is looking rather weak and is positively dull at the present time.

Spelter.—There is hardly the snap to the demand that prevailed a week ago, and the market is, if anything, a shade easier. A few carloads of special brands were placed here at about 4¢, and reports from primal markets had it that Western consumers have purchased there recently at full figures, or the basis of 3.80¢ @ 3.85¢, Eastern delivery, for ordinary Western brands. There is no evidence of any particular pressure to sell, but the relation of supply and demand is slightly abnormal, and the prices above quoted would seem to fairly reflect present market value for ordinary brands.

Antimony.—There has been fair jobbing movement at about former prices, otherwise the market remains flat, and prices are barely steady at 9⅝¢ @ 9¾¢ quoted for Hallett's and 10½¢ @ 10¼¢ for Cookson's.

Tin Plate.—The demand for spot goods has been small, and no difficulty was experienced in placing orders at former prices. For that matter, concessions were granted in several instances. Except for special sizes few contracts have been made for future deliveries and interest in all directions is momentarily very tame. Spot quotations are as follows: Coke Tins—Penlan grade, IC, 14 x 20, $5.30; J. B. grade, do., $5.35; Bessemer full weight, $5.35; light weights, $4.90 for 100 ℔, $4.80 for 95 ℔, $4.62½ for 90 ℔. Siemens Steel scarce. Stamping Plates—Bessemer Steel, Coke finish, IC basis, $5.60; Siemens Steel, IC basis, $5.65; IX basis, $6.75 @ $6.80. Charcoals—Melyn grade, IC, $6.35; Crosses, $8; Allaway grade, IC, $5.60; Crosses, $6.75; Grange grade, IC, $5.75; Crosses, $6.85. Charcoal Ternes—Worcester, 14 x 20, scarce; do., 20 x 28, $11.35; M. F., 14 x 20, $7.35 @ $7.37½; do., 20 x 28, $14.75; Dean grade, 14 x 20, $5.35; do., 20 x 28, $10.50 @ $10.60; D. R. D. grade, 14 x 20, $5.15; do., 20 x 28, $10.10; Alyn, 14 x 20, $5.35; do., 20 x 28, $10.50; Wasters—S. T. P. grade, 14 x 20, $4.75; do., 20 x 28, $9; Abercarne grade, 14 x 20, $4.60; do., 20 x 28, $8.87½.

New York.

Office of *The Iron Age*, 96-102 Reade street,
New York, December 6, 1893.

Pig Iron.—Merchants and agents generally note a somewhat improved inquiry and a greater interest in the market, particularly as to the prices which may be fixed for next year's delivery. As yet, however, no advance is being asked by the majority of sellers, and a good deal of cheap Iron is being offered. Contracts for Cast Iron Pipe of some magnitude have been lately let at Washington and at Jersey City, and other work of a similar character involving somewhat large quantities is now or will be soon in the market. We quote: Northern brands, $14 @ $15 for No. 1; $13 @ $14.25 for No. 2; $12.25 @ 12.50 for Gray Forge, at tidewater. Southern Iron, same delivery, $13 @ $14 for No. 1; $12 @ $13 for No. 2; $11.50 @ $12.25 for No. 3; $11.75 @ $12.25 for No. 2 Soft, and $12.25 @ $12.50 for No. 1 Soft. Gray Forge is $11.25 @ $12.

Spiegeleisen and Ferromanganese.—Importers are protesting against the change in the duty on Ferromanganese from $6.72 to 22½% ad valorem on the ground that it represents an increase. On a valuation of £9/10, English works, the proposed duty would figure out about $10.50, against the present rate of $6.72. No business has been done

Hosted by Google

in foreign material, which we quote: Foreign Spiegeleisen. 10 % @ 12 %, $21.50 @ $22, and 20 %, $25 50 @ $26, on cars, Jersey City, and Ferromanganese, $55 @ $55.50.

Billets and Rods.—There is no business doing of any consequence. We quote nominally: Domestic Billets, $20 @ $22, and foreign Billets $28 @ $28 50, tidewater; domestic Wire Rods, $27 25 @ $28, and foreign Rods, $39 @ $39.50, tidewater.

Steel Rails.—The market for standard sections is exceedingly dull, nor is there any expectation that anything of consequence will be done in the Eastern market for some time to come. The price is $24.80 at tidewater.

Track Material.—We quote as follows for small lots: Spikes, 1.75¢ @ 1.90¢; Fish Plates, 1.30¢ @ 1.50¢; Track Bolts, Square Nuts, 2.10¢ @ 2.40¢, and Hexagon Nuts, 2.30¢ @ 2.50¢, delivered. Concessions would be made for round lots.

Manufactured Iron and Steel.—Very little new business is coming up, and interest centers chiefly in guessing at what figures Western mills captured the last contracts. Very low offerings of Plates are being made to procure immediate specifications for Western mills who had large contracts deferred. We quote nominally: Beams up to 15 inch, 1.65¢ @ 2¢, 20-inch, 2¢ @ 2.25¢, for round lots; Angles, 1.60¢ @ 1.80¢; Universal Mill Plates, 1.60¢ @ 1.75¢; Tees, 2¢ @ 2.15¢; Channels, 1.65¢ @ 2¢, on dock. Steel Plates are 1.45¢ @ 1.60¢ for Tank; 1.65¢ @ 1.90¢ for Shell; $1.90 @ 2.15¢ for Flange, and 2.30¢ @ 2.80¢ for Fire Box, on dock; Refined Bars are 1.45¢ @ 1.9¢, on dock, and Common 1.35¢ @ 1.50¢; Soft Steel Bars are 1.45¢ @ 1.70¢; Scrap Axles are quotable at 1.65¢ @ 2¢, delivered; Steel Axles, 1.65¢ @ 1.90¢, and Links and Pins, 1.65¢ @ 1.80¢; Steel Hoops, 1.70¢ @ 1.90¢, delivered; Cotton Ties, 70¢ @ 72½¢ ℔ 45 lb bundle, at mill.

F. B. Hawkins & Co. of 29 Broadway, and 70 Kilby street, Boston, announce that their F. B. Hawkins has withdrawn from the firm of Warren, Wood & Co., and that they shall conduct a business in Pig Iron, Coke, Cast Iron Water and Gas Pipe at the above address. Their leading specialty in Pig Iron will be the Alleghany, made by the Alleghany Iron Company of Iron Gate, Va., for whom they are exclusive selling agents north of Richmond, Va. The furnace, which was banked last May, is again in operation.

The Eclipse Bicycle Company of Beaver Falls, Pa., have recently increased their force of employees to some extent, and expect in the near future to give employment to about 400 men. This firm are bringing out a number of new wheels for the season of 1894 and expect their trade next year to be much larger than for this season.

Three topedo boat "catchers" have been ordered by the British Admiralty from a firm of shipbuilders at Cowes, Isle of Wight. They are each to be 210 feet long, and capable of attaining a speed of 26 knots.

Fred. A. Beelen, Consul-General of Chili, announces the receipt of a cable advising him that the Chilian Mineral Exposition has been postponed until September, 1894.

British Iron and Metal Markets.

[*Special Cable Dispatch to The Iron Age.*]

LONDON, WEDNESDAY, December 6, 1893.

Pig Tin prices have averaged somewhat higher and the market has shown firm, although irregular tone. There was some depression early in the week under the influence of free selling, but later reaction took place, chiefly from livelier speculative interest and expected renewal of American demand. Between this and some improvement in consumptive demand, prices moved up about 20/ from the extreme lowest point. Better advices from the East also helped to stiffen the market. Sales were made at as high as £77. 5/ for prompts. Subsequent realizations caused a reaction and the market closed quiet at £76 10/ for prompt and £77. 10/ for three months' futures.

On prices of Merchant Bar Copper there has been an advance of about 15/, chiefly on speculative buying for American account, but helped to a certain extent by quite good purchases by home consumers. Latterly the market became irregular, being influenced by speculative realizations by speculators and freer selling by some dealers. Against this, however, was quite liberal buying of one and two months' futures, prompted by more favorable advices from New York and improved statistical position in Europe. Liberal deliveries of G. M. B. tend to check any great advance. Chili charters last half of November were about 600 tons. Sales of furnace material have been limited, and prices remain comparatively low. At the close, Merchant Bars were quoted at £43. 7/6 for prompts and £43. 17/6 for three months' futures. Best selected English quoted at £47.

In Tin Plate there has been hardly any business and the market remains flat. Prices are unchanged. Although makers appreciate the proposed reduction in the duty in the United States, they do not relish the ad valorem rate. Work has been suspended at the Waterloo works, Machen. Liverpool quotations for Plates were as follows:

IC Charcoal, Alloway grade	12/3 @ 12/9
IC Bessemer Steel, Coke finish	11/3 @ 11/6
IC Siemens " "	11/6 @ 11/9
IC Coke, B. V. grade, 14 x 20	11/3 @ 11/6
Charcoal Terne, Dean grade	10/9 @ 11/

Pig Lead has been quiet, but the market is steady at £9. 10/ for soft Spanish.

Spelter has met with moderate sale and prices are steady at £17. 2/6 for ordinary Silesian.

There is more activity in some branches of the Iron and Steel market, but prices have not changed, except for warrants. Last dealings in warrants were at 43/8 @ 43/9 for Scotch, 35/7½ @ 35/9 for Cleveland, and 45/ for Hematite.

San Francisco News.

The items as to what the character of the proposed tariff may be do not, as they come along by telegraph, seem to excite any very great interest among the trade or the manufacturers, although the interests of the latter would be affected very materially. There is a general disgust among manufacturers generally at the tariff for revenue proposition, and perhaps it is because they deem a change to be inevitable that there is so much apathy on the subject among business men. Some time ago the manufacturers in iron and steel signed a petition asking Congress to take away the duty on coal, scrap, pig iron and ingot steel, and this is the general sense of the manufacturers in these lines over the coast. There are, to be sure, a few who for consistency sake are for the McKinley tariff or something like it, but these are in the minority. The proposition to leave a small duty on pig iron and take away so much of the duty on bar iron does not find favor among the manufacturers. The one to reduce tin plate to a duty of 1 cent per pound does. Fiscal considerations doubtless counsel leaving a cent a pound on tin plate. As it is not protective, our people think that it would be better to remove the duty altogether. Putting tin again on the free list is decidedly popular here. As to the general duties proposed on hardware, &c., they do not affect us specially, as we are not manufacturers. We do not produce iron ore to any extent, although we have mountains of it, so that putting it on the free list does not trouble us. The general sentiment would, however, be in favor of having it admitted free, to see if we could not import and work up ore from Mexico.

Trade keeps very quiet in every direction, and in hardware and metals as well as all else. The country trade did not get a good start this fall, and the leading houses will have, as a rule, to wait over till next year for the realization of hopes which did not bear fruit in this. The farmers feel poor; they have neither been paying up the storekeepers well, nor have they been buying largely of new goods. Collections are and have been very slow, and this after a dull year is especially discouraging. A gentleman well known to me, not, however, in the hardware trade, took out $1300 in bills on last collection day, and as the result of his work returned with $31. This may be looked upon as an extreme case, but it is not infrequent. Eastern bills, being in the shape of notes, have to be met in some way, and as coast bills are invariably on long time our coast merchants suffer. There have been very light arrivals of late by sea or rail. There are a great many clippers out, many due with large consignments of hardware, iron and nails, &c., and as they have been ordered they must perforce be delivered, whether trade is dull or not, but shipments by the Isthmus and by rail are becoming few and far between.

John Reis is now manager at Edith Furnace, Allegheny, Pa., E. D. Reis having resigned that position in order to devote all his time to Rosena Furnace, at New Castle.

W. T. Wells, of Hackensack, N. J., president of the Wells Rustless Iron Company, has purchased Crown Island, one of the most beautiful of those located in Lake George.

HARDWARE.

Condition of Trade.

THE volume of November business was certainly as large as could reasonably have been expected, and indicated a decided improvement in the general condition of trade. There continues to be a fair activity, though business still feels to a considerable degree the depression which has existed and is also restricted by the advance of the season, this being a time of the year when trade is usually quiet. Seasonable goods are moving freely. the demand being stimulated by the advent of cold weather, especially as many merchants deferred their purchases to a later date than usual. Holiday goods are also in request, but the demand is not as large as in more prosperous years. There is a good deal of inquiry by the large houses in regard to next season's orders and the disposition is shown to defer purchases. A good many orders are, however, being placed for shipment early in the year, and in some lines this class of business is referred to as nearly up to the normal volume. Up to the time when the Wilson tariff bill was announced there were evidences of a marked improvement in business and a much more confident tone than has characterized the market for some time, but the proposed reduction of duties has the effect of inducing an unsettled feeling, repressing trade, and leaving manufacturers and merchants in a state of not a little uncertainty. The prospect of a reduction in the tariff naturally makes the trade at large reluctant to purchase goods which they may be able to buy at lower figures in the near future, and there is a good deal of doubt as to the lines which will be thus affected and the extent to which lower prices will result. Manufacturers are also perplexed in the matter and in not a few lines are entirely at sea as to the effect which the proposed bill will have upon their interests, especially as it is not unlikely that some kinds of foreign Hardware which have not recently been sold to any extent in this country will be admitted in competition with American goods. The fact is that in not a few lines our manufacturers are not informed as to the European costs so as to figure definitely on the influence which the proposed bill would have upon their business. In many other lines, however, the manufacturers are aware of the disaster which the enactment of the proposed law would bring upon their business, and are naturally disposed to do little until they know the disposition which will be made of the bill. Opinions differ widely as to the prospect of its being enacted in the form submitted, many holding to the view that important modifications must be made in view of the injury which it would inflict on established industries. There is, however, general agreement that it will be for the good of the country to have the matter settled in one form or another at as early a date as possible, that the existing uncertainty may be removed and manufacturers and merchants be permitted to adjust themselves to the new conditions.

Chicago.

(*By Telegraph.*)

Trade shows some improvement as compared with last month, but it is still far below what it should be. It is estimated that sales are now from 30 to 40 per cent. below the customary volume of business at this season. The main demand is for seasonable and holiday goods, but general Hardware is steadily called for in small lots. The smallness of stocks in retailers' hands compels them to buy frequently, which is much to the annoyance of jobbers, who are obliged to break packages to meet the wants of such trade. Lead goods are lower, in sympathy with the decline in crude lead. Shot has been marked down to $1.40 for small sizes, and $1.65 for large sizes. Heavy Hardware jobbers have had an unusually heavy run of orders for sleigh stock, more than for several years past, caused by the abundance of snow throughout the Northwest and the prospect of a long sleigh season. In other respects Heavy Hardware has been less active.

St. Louis.

(*By Telegraph.*)

The demand continues to show a falling off in comparison with last year. In some lines an increased trade is noted. In the matter of repairs for Stoves and Stove Pipe Elbows an increased trade is noted. Shelf goo ds are moving rather slowly, while on the other hand holiday goods are having an unusually heavy run. Barb Wire is dull and Wire Nails are selling fairly well, but prices are low. Tin Plates are dull and manufacturers are not pushing their plants very strong, and stocks are therefore not very heavy. Collections are excellent.

Boston.

BIGELOW & DOWSE.—The improvement noted in our last report still continues. Salesmen are sending in well assorted orders, and with a good volume of mail orders the jobbers are quite busy. Retailers in the country are keeping up their sales better than those in the cities. Stocks are light, and need frequent replenishing.

The low price now ruling for both Cut and Wire Nails is influencing many to place orders. Evidently some of the trade believe with the manufacturer who, after quoting a price he thinks is very low, says he does it "hoping it will not take many moons to bridge over the present peculiar condition of things." Our first ice has made a lively sale for Skates, and the late fall of snow has made great inroads on the stock of Sleds and Snow Shovels.

New Orleans.

A. BALDWIN & CO.—Business is still fairly active in this section of the country, although it shows a slight falling off in the past two weeks. People are evidently awaiting developments in the new year. Staples are being sold at such low prices that merchants are taking advantage of the present situation, thinking perhaps that the extreme bottom has been reached.

The movement in Barb Wire is somewhat sluggish, and the output shows considerable falling off the last season.

Orders for Shelf Hardware are coming in freely, which indicates some activity in the building trade.

Baltimore.

CARLIN & FULTON.—Considering the season, that it is too late for fall and too early for spring, the orders keep up remarkably well, indicating that stocks in the hands of the retail trade are very light throughout the entire country. We think a comparison with last year will show generally in this market for the month just ended an equal volume of business, and collections are as good as can be expected and no doubt up to the average. There are cases where indulgence has to be granted, but such has always been the case, no matter how prosperous the times.

For a long while the retailer has been in close touch with the consumer, and his orders have been mainly for goods needed for immediate consumption. This policy will undoubtedly continue for some time to come, which will give the country an opportunity to adjust itself to the new conditions arising

Hosted by Google

from the passage of any proposed tariff bill, without causing any great loss from depreciation of values of stocks on hand. This hand to mouth buying seems small, but as the requirements of this nation are immense, the aggregate of such business foots up by the end of a year large amounts, and the indebtedness of the buyer is kept at a minimum. From all reports we look for a fair, healthy trade during the coming year.

Portland, Ore.

CORBETT, FAILING & ROBERTSON.—We have nothing to report of an encouraging nature, either as to the present or future. In some sections of this territory it would seem that it would be better that the dealer should close his doors for the next eight months, after insuring stock, and not try to do any business. He certainly would be ahead on his expenses, and he cannot be in continuing his business. The only relief we can hope for is that the tide of immigration shall set in strong the coming spring. We have the country and climate; now we want farmers. There are enough mechanics and clerks—towns and cities are well abreast of the country. Large ranches are being thrown on the market, owing to the money stringency, and as they are subdivided there are now fine opportunities to secure homes.

The jobbing trade have large stocks of goods on their hands. Having expected a better season, they shipped freely via Cape Horn. Now, wishing to realize on same, they naturally are selling on a very close margin of profit, where the opportunity is open and the buyer good.

St. Paul.

FARWELL, OZMUN, KIRK & CO.—We have now entered upon our winter operations in this latitude, and the season has opened with steady, severe cold and with considerable snow, and the indications are now for one of our old fashioned winters. The November business closed about as expected, both as to trade and collections. Toward the latter part of the month there probably was a larger falling off in cash receipts than anticipated, but there will still be considerable realized from collections on the proceeds of the crops. It is not expected that trade will be active for several months. Of course there will be some lines of holiday goods furnished by most jobbers that will be in demand to some extent, but the demand for them will be less than usual this year. The principal aim of jobbers just now is to get their outstanding claims into the best shape possible, and thus be able to enter on the new year's business in shape to handle it satisfactorily. The uncertain and very unsatisfactory situation of the tariff legislation at present is influencing trade unfavorably to some extent and is specially unfavorable to the wool interests, which are quite important on considerable of the territory tributary to St. Paul. There are several other causes, such as short crops in some sections and low prices generally, that contribute largely to the general feeling that trade will not be quite so active as usual during the early part of the coming year; still there will be a demand for considerable quantities of goods in all lines, and there will also be found more funds distributed throughout the country to pay for them than is generally supposed.

Omaha.

LEE-CLARKE-ANDREESEN HARDWARE COMPANY.—The past four weeks have witnessed little change affecting the distribution of Hardware in a jobbing way. It may be said, however, that such changes as have occurred have been, if anything, on the side of improvement. The reports of returning confidence in the East have had a beneficial effect on the situation here, and while any great activity in business is not expected this year, at least, still these signs of returning confidence can reasonably be interpreted to convey an assurance that busines is gradually resuming its normal condition.

It is certain that for some time to come business will be conducted on conservative lines, until all traces of the late severe experience of the summer months have been effaced and forgotten. There is no indication in the trade, either on the part of jobbers or retailers, toward anticipating wants. Orders generally are for small lots of goods, but the frequency of these orders makes up in a large degree for the loss in size. The demand seems to be based entirely on the consuming disposition of the country.

Collections in the country tributary to this market continue to drag, and there is considerable room for improvement. A free movement of the corn crops would have a tendency to make money much more plentiful in the country, which would improve both trade and collections. In explanation of the situation it is asserted that farmers will not market their corn crops, as the price is too low and unsatisfactory; while it is also claimed that the denizens of the country are too busy just now with farm work, particularly corn husking, to devote any time to marketing their products. If these are the true reasons for slow collections just now, it is gratifying to know that they are not caused by unfavorable conditions prevailing.

Louisville.

W. B. BELKNAP & CO.—It is cheerful to note a general improvement in business. The November result shows an approximation to last year in many jobbing lines, according to the most reliable testimony of those houses which have survived and are in a position to take care of business offering. This does not mean that the aggregate volume is as large as last year, because many firms have gone out of business, consequently it is concentrated in fewer hands.

Prices are firm at present figures. There are some indications of scarcity of stock, more especially in raw material, and it would not be surprising if January should mark advances in the great staples. Of course anything like a heavy advance would immediately start many now idle machines to work, and the market might be quickly overstocked again, but there is a healthy demand based on the actual needs of consumers which is not to be put aside by new tariff bills or any other devices.

The financial situation has eased materially. First-class bonds are in good demand, are bringing full prices and are hard to get. Buyers are still extremely shy of anything except gilt edged securities and even of what used to be considered desirable stocks, while new enterprises find no favor at all. There is, of course, a great deal of settling up to be done between now and January, and many concerns will take advantage of the state of affairs in the condition of the public mind to assign and settle at a reduction; but the general state of affairs is on the mend, undoubtedly. We look for a good business in the spring of 1894.

Cleveland.

THE W. BINGHAM COMPANY.—When the exceeding depression in trade for the past few months is taken into consideration, November has done remarkably well, and in comparison might be called good. Certain it is the percentage of decrease as compared with 1892 is very much less than any month since July last, and if the uncertainty of tariff legislation were removed we feel sure that trade would soon be back in its wonted channels. The cold and blizzard like weather of the past few days has brought many orders for winter goods, and Skates, Sleigh Bells, Foot Warmers, &c., have been in brisk demand, and have carried with them some orders for Shelf Hardware. The prices on general goods remain stationary, but lack of firmness in the staples of Wire and Nails has reflected somewhat upon other lines and caused some lack of confidence in the stability of prices. Orders for Wire Cloth, Poultry Netting, &c., are, however, being freely placed, the scarcity of those articles last season being an incentive to early purchase, which is, no doubt, a wise precaution, as the outlook indicates a still greater scarcity the coming year.

Philadelphia.

SUPPLEE HARDWARE COMPANY.—Trade during the last two weeks in November exceeded in volume the last two weeks of the preceding month. If we could rely upon a continuation of the same for each succeeding month we would naturally all be happy. We, however, think the outlook favorable for the balance of the year, as customers are now buying both seasonable and holiday goods freely. The recent cold weather has made seasonable goods temporarily active.

Skates have been in active demand, a larger number having been sold than customary for some years past. There has been a heavy demand for Sleds, especially one particular make manufactured in this locality, which has become very popular. Sleigh Bells have not been so freely called for for some years past as they have this season, and the Axe trade has been especially active.

Outside of Barb Wire and Wire Nails, prices remain without any change. The present price on the above named articles has evidently been reached by a reduction in wages, although at this price it is not likely to draw in very large orders for 1894 shipments at present, as it is a little in advance of immediate wants.

Collections remain without any material change.

Notes on Prices.

Wire Nails.—It is evident that the low prices ruling on Wire Nails have the effect of stimulating orders, and this influence, in connection with the general improvement in the tone of business, causes many merchants to purchase Wire Nails with more freedom than for some time past. Merchants are not, however, purchasing much beyond their early requirements, but the fact that stocks generally are depleted and broken increases somewhat the size of orders

Hosted by Google

which are being given. Many buyers, however, are still holding off, as they do not care to purchase at all freely at the present dull season and with the uncertainty which attends the future course of trade. Prices remain as at our last review, at $1.15 to $1.20 for carload lots at mill, and manufacturers are refusing to make concessions from the lower of these figures except in very special cases. Buyers are watching the market closely, and are preparing to place their orders in case there should be reason to anticipate an early turn in the market toward higher prices.

Chicago, by Telegraph. — All Wire Nail manufacturers report very large shipments for November. The Salem Wire Nail Company that month shipped 92,626 kegs from their Salem and Findlay mills, which is the heaviest month's product they ever turned out. December is expected to be a month of heavy shipments also. There are plenty of contracts to be filled, but there are also some sections of the country in which stocks were never so light at the beginning of the year, and from which orders are therefore anticipated in good quantities. Quotations for factory lots are continued at $1.30, Chicago. Small lots are selling at $1.35 from stock.

Cut Nails —We are unable to report any improvement in the Cut Nail market in the matter of prices, which remain as for several weeks past, at about 95 cents for carload lots at mill; this figure, however, being shaded to close buyers on good orders. There has been a fair activity considering the season and the condition of business in general, and the aggregate of sales during the past week or two has been fair. Small lots from store in New York are quoted regularly at $1.20.

Chicago, by Telegraph.—The Cut Steel Nail trade is not so active as it has been, but manufacturers report a tolerably fair run of small orders, enabling them to keep in operation. Prices range from $1.15 to $1.20, according to the character of the order. Small lots from stock are quoted at $1.25.

Barb Wire—Low prices continue to rule in the market for Barb Wire, but there has been no further decline during the past week. Quotations are on a basis of $2.15 to $2.20 for carload lots of Four-Point Galvanized at mill. The demand is only moderate. The low prices ruling, while not inducing liberal purchases from the trade at large, enable the manufacturers, however, to dispose of a larger quantity of Wire abroad than has heretofore been the case, inasmuch as they are now enabled to enter some markets which have been supplied from German mills.

Chicago, by Telegraph.—The year has now advanced to a point where orders for spring shipment of Barb Wire are beginning to make their appearance. Manufacturers of special brands are booking more or less business, and inquiries are reported for standard qualities. Manufacturers appear to be standing firmly at $2.35 to $2.40, Chicago, for Galvanized, and offers of heavy tonnage are stated to have been refused at a shade under the minimum quoted. Jobbers name $2.55 for small lots from stock, but are receiving very little business, as most of it is being handled by manufacturers.

Plain Wire.—Plain Fence and Market Wires, which have for some time been declining in price, have now touched a point considerably below anything in the experience of the manufacturers. For example, round lots of No. 9 Black Fence Wire can be bought at $1.40, with the usual advance of $\frac{4}{10}$¢ ℔ pound for galvanizing, f.o.b. vessel, New York, which of course means a correspondingly low figure at mill. A good deal of complaint is made by the manufacturers of the unsatisfactory volume of business even at the prices which are ruling. There is, however, an increase in the amount of Wire exported, as at ruling prices they are able to compete with German manufacturers. While the aggregate of this business is not as yet large, the opportunity to dispose of goods in markets which have been out of their reach is referred to by some of the manufacturers as an encouraging sign.

Cordage —The Cordage market is in substantially the same condition as for the past week or two, and the low prices recently referred to are still ruling. Reports in regard to the reorganization of the concerns connected with the National Cordage Company are current, but are not regarded by the trade as having any important or direct bearing on market values, even though coupled, as they are in some cases, with an intimation that an understanding as to price has been or will be reached by these and other manufacturers of Cordage. The present indications are that no serious attempt will soon be made by the manufacturers to agree as to production and prices with a view to controlling the market, as in the present condition of things this is not likely to be accomplished. Ruling prices are unquestionably low and leave but a meager margin of profit, and when an active demand sets in higher prices are likely to result.

Sad Irons.—The following net prices on the Sad Irons of Colebrookdale Iron Company, Pottstown, Pa, who are represented by Duncan K. Major, 103 Reade street, New York, are announced, terms 60 days or 2 per cent. discount for cash in ten days:

Crown Sad Irons:
No. 230. Plain Polished, $8.40 per dozen sets.
No. 235. Nickel Plated, $9 per dozen sets.
Extra Handles, $1.25 per dozen.
Extra Stands, 35 cents per dozen.
Common Diamond Sad Irons, 2¾ cents per pound.
The XX Tailor Irons—wide face, 4 cents per pound.
The XX Tailor Irons—narrow face, 4 cents per pound.
The XX German Tailor Irons, 4 cents per pound.
New England Pressing Irons, 4 cents per pound.
Chinese Laundry Irons, 6 cents per pound.
Chinese Common Sad Irons, 4 cents per pound.

Shot —As a result of the decline in the prices of Lead, the following revised quotations on Shot are announced by the manufacturers under date December 4; terms, net 30 days, 2 per cent. discount for cash in 10 days:

Drop Shot up to B, 25-pound bag	$1 40
" " 5-pound "	35
Drop Shot B and larger, 25-pound bag	1.65
" " 5-pound "	40
Buck and Chilled, 25-pound bag	1.65
" " 5-pound "	40
Dust Shot, 25-pound bag	2.00
" 5-pound "	45

In lots of 2000 pounds and upward, taken at one time, a discount of 5 cents per bag (25 pounds) will be allowed. A special discount of 2½ per cent. will be given on lots of 1 ton and upward bought, invoiced and paid for at one time.

Ideal Fasteners.—The Ideal Storm Sash and Window Screen Fasteners, manufactured by C. H. Congdon, 643 St. Anthony avenue, St. Paul, Minn., and illustrated in *The Iron Age* November 23, 1893, are sold at $2 per gross subject to a discount of 60 per cent.

Columbian Sash Lock.—The Columbian Sash Lock, manufactured by the Columbian Sash and Door Lock Company, Wauseon, Ohio, is sold at a discount of from 60 and 10 and 5 per cent. to 60 and 10 and 10 per cent. from the following lists:

No.	Per doz.
500, Ornamental Malleable Iron Bronzed	$1.90
501, Ornamental Malleable Iron Copered	2.25
502, Ornamental Malleable Iron bronzed. No. 14 Finish Lever and Catch	3.00
503, Ornamental Malleable Iron Polished Electro Bronze Plated, No. 14 Finish	5.00
504, Ornamental Malleable Iron Polished Nickel Plated	6.50
600, Ornamental Real Bronze Metal, No. 1 Finish	7.50
601, Ornamental Real Bronze Metal, No. 4 Finish	7.50
602, Ornamental Real Bronze Metal, No. 3 Finish	7.50

The foregoing list relates to the style of finish shown in Fig. 2 of the illustrated description in *The Iron Age*, November 23, 1893. The following list, which is subject to same discount as above, relates to the style of finish in Fig. 1 of the same description:

No.	P
450, Plain Iron Bronzed	$1.40
451, " " Black Japan, Nickel Plated Lever and Catch	2.50
452, Plain Iron Bronzed, Nickel Plated Lever and Catch	2.75
453, Plain Iron Coppered	1.75
550, " Malleable Iron Bronzed	1.90
551, " " " Japanned, Nickel Plated Lever and Catch	3.00
552, Plain Malleable Iron Bronzed. Bronze Metal Lever and Catch	3.00
553, Plain Malleable Iron Polished Electro Bronze Plated	5.50
554, Plain Malleable Iron Polished Nickel Plated	6.50
555, Plain Malleable Iron Polished Electro Copper Plated Antique	6.00
556, Plain Malleable Iron Bower-Barffed Finish	4.00
557, Plain Malleable Iron Polished Bower-Barffed Finish	5.50
650, Plain Real Bronze Metal, Polished Nos. 1 or 2 Finish	7.50

23. 8-inch, Old Copper, Antique Brass and Dark Bronze.....	30.00
24. 10-inch Old Copper, Antique Brass and Dark Bronze.....	36.00

Glass.—The impression prevails that whatever tariff legislation may be enacted will not go into effect before June, 1894, and if such should be the case the price of Window Glass, or the wages of workmen according to the scale signed, would not be directly effected by the tariff. It is not improbable, however, that the prospect of a reduction of tariff will somewhat depress prices on Glass. Authorities state that the reductions proposed by the Wilson tariff schedule vary from 28 to 37 per cent. on Window Glass, while others estimated it at 50 per cent. Glass factories continue starting up; at the present time there is reported the equivalent of 1044 pots in operation. Prices on American Window Glass continue low, and there seems to be a disposition to make private prices rather than open quotations. Plate Glass is quoted by local jobbers at from 60 and 10 and 5 to 70 per cent. discount, according to size of Glass. It is understood that the regular quotations on French Window Glass of 75 and 10 and 5 per cent. to 80 and 5 per cent. discount are shaded in some cases. There is a limited demand for all kinds of Glass.

The Parsee merchant, Mowranji Norasji Patuck, who is now in this country, contemplates forming an association on his return to India, with a view to establishing direct trade relations with the United States. He has found that many articles can be exported from this country to India in competition with English and German goods. Among these are Axes, Lawn Mowers, Refrigerators, small sized Ice Machines that can be operated by hand power, Iron Screens and Railings, Agricultural Implements, Shears, Typewriters, &c.

The W. Bingham Company's Catalogue.

THE W. BINGHAM COMPANY, Cleveland, Ohio, have just issued an 1894 catalogue, which is unique, especially in the matter of size, as it indicates a reaction from the extremely large proportions of representative jobbers' catalogues. It has been the aim of the company in the preparation of this volume to produce a book of moderate size which will be convenient for use and at the same time sufficiently large to illustrate their complete line of goods distinctly and comprehensively. The company are to be congratulated on the success of their effort, as the book, which is just being issued, is very convenient to handle and use, while it presents the very large variety of goods shown in it in a clear and satisfactory manner. The plan of the book was formulated by H. S. Blossom, the secretary of the company, but the compiling and the entire arranging of the work were under the supervision of Frank N. Cleland, a young man who has been in the employ of the firm for a number of years, and to whom credit is due for the successful manner in which the work has been accomplished. The catalogue is about 6½ x 9 inches in size, handsomely bound in cloth and leather, containing 1476 pages and weighing 5 pounds 10 ounces. The line of goods represented includes Hardware, Railway, Miners', Engineers', Architects', Machinists' and Tinners' Tools and Supplies, Table and Pocket Cutlery. A comprehensive and well arranged alphabetical index is given a place near the front of the book. The page preceding the index pages is devoted to facts about the city of Cleveland, touching upon its pre-eminent position, distinctive features, progress, shipping interests, its importance as a market and industrial center, &c. The quantity of matter, including cuts, descriptions and prices, condensed on each page, but admirably arranged, is noteworthy and will be appreciated by the trade. Distinctness has not been sacrificed, nor do the pages present a crowded appearance, but sufficient space has been allowed to give all cuts in suitable size, with complete list prices of the goods. Goods which can thus be shown to better advantage, such as Decorated Ware, labels of Axes, Adzes, Hatchets, &c., are printed in colors. The company are to be complimented upon the results of their enterprise and skill in producing so complete, convenient and acceptable a book. The catalogue is destined to find favor with their customers, each of whom, it is stated, is entitled to one copy free of charge. The company's two-page advertisement in this issue contains a full size illustration of the book, and some of our readers who desire a handy and comprehensive catalogue will be interested in the announcement that a few extra copies are obtainable at $10 each.

A Well Organized Business.

BY VIATOR.

ON A THANKSGIVING DAY, several years ago, E. C. Simmons entered a car on the New York, New Haven & Hartford Railroad and shared my seat with me. Our destination was New York, so I had the pleasure of his company for an hour and a half. We talked of home, Hardware and religion. The topic of home appeared to be his favorite. He talked of his children, and appeared to be specially delighted with their progress in music, &c. After the social topic he produced a statement, received that morning, prepared by one of his trusted lieutenants, showing the condition of his business on November 22, three days prior to the receipt thereof. The statement contained the following information:

Total sales on November 21.
Total sales on November 21 of preceding year.
Gain of business,
Estimated profits on sales of November 21.
Estimated stock on hand, November 21.
Estimated purchases on November 21.
Amount of insurance in force.
Total expenses for that day.
Amount of money received.
Amounts of money paid out.
Balance in banks.
Number of men on pay roll, wholesale department.
Number of men on pay roll, retail department.
Number of men on pay roll at large, hustling department.

So a sheet of paper about 6 x 8 inches gave the general in command:

1. Strength of his army in active service.
2. The value of stores.
3. The condition of the treasury.
4. The captive dollars, captured on that day.

From this concise information he could direct the policy to be pursued, in a telegram of from 10 to 20 words, from a distance however remote.

Such a statement, I was informed, is placed on his desk every day when at home, or sent to him daily when abroad.

One day I received an urgent telegram calling me home. My train was to start at 10 a.m. As I had some business to transact with the Simmons Hardware Company I proceeded to their establishment, reaching there at 8.20 a.m., and found the buyer with whom I was to transact my business at his post. While conversing with this gentleman I heard a familiar voice bidding me good morning. Upon turning about I found that the greeting emanated from a voice under a straw hat. It was in the winter, at 8.30 a.m. It was E. C. Simmons. When I ventured the remark that it was rather early for him to be about, he said something about birds and worms. After these few words the stenographer at his side was busy exercising his abbreviating methods. In the meantime the buyer had the stock taken of the goods I had offered them, my order was made out, and I left the establishment at 9 o'clock, with ample time for my train.

Mr. Pilcher, the vice-president of the company, who has been connected with the concern in the capacity ranging from an office boy to the present position, delights to speak of his chief

Hosted by Google

as an organizer and judge of men. He said that Mr. Simmons would not hesitate to ask for his resignation should he find that his department was not conducted in accordance with the rules and policies of the establishment. In speaking of the organization of the Simmons Hardware Company in relation to their employees, Mr. Pilcher stated that every man was expected to attend strictly and exclusively to business and that there was no time for play. To illustrate this point Mr. Pilcher suggested that I accompany him to a department on the second floor, where we could observe some 30 men without being seen by them, and if I could detect a single employee not at his post and at work he would pay for a dinner. Based upon my observations in many business houses, visions of pheasants and that part of the snipe which is served on toast appeared. I was sure of that dinner, but—well, I did not get it.

On one visit I met Colonel Eshleman of Stauffer, Eshleman & Co., New Orleans, in St. Louis. The Colonel had heard of Simmons even in regions where rice grows in abundance, where black birds are the delight of the small boy, and where the cooking of okra soup is reduced to a science, so he wanted to see his concern. I introduced the Colonel to Mr. Morton, the able treasurer of the company, who gave us a very cordial reception, after which Mr. Morton summoned one of his head men and instructed him to take us from cellar to garret, and authorized him to answer any question as to the manner and system the machine was operated. The Colonel, who is the head of a colossus down in Louisiana, lubricated with considerably over $1,000,000, was very forcibly impressed and left the establishment with a series of resolutions to be offered, moved and seconded upon his return to New Orleans.

Semi-Centennial.

THE firm of W. H. & G. W. Allen, Hardware merchants, located at 113 and 115 Market street, and 104 Church street, Philadelphia, celebrated the fiftieth anniversary of the founding of their house by a dinner given to their employees at the Art Club on the 23d ult.

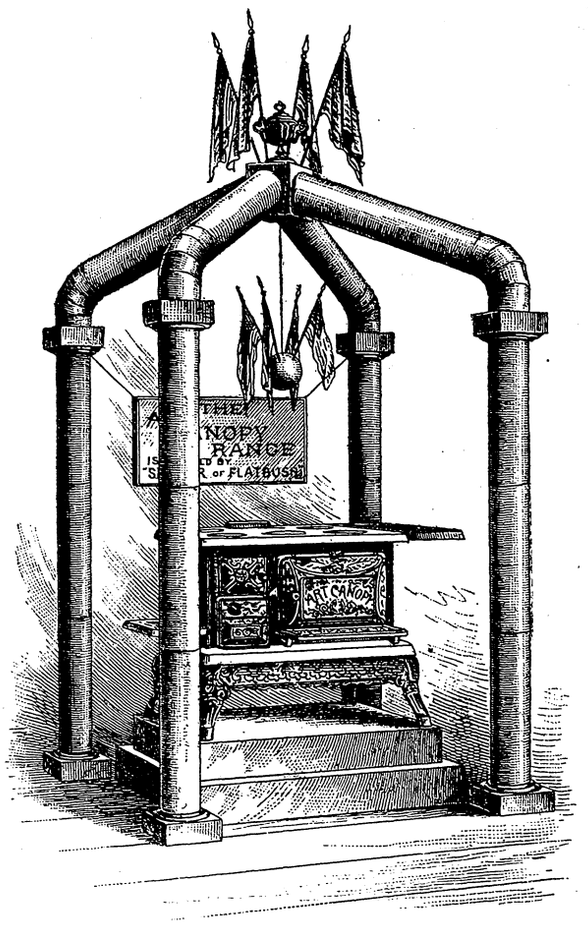
The occasion was one that gave great pleasure to the firm as well as to their guests, for the well deserved reputation of the cuisine of the Art Club was fully maintained by the well prepared and promptly served viands making up the eight-course dinner.

The history of the house has been rather unique in several particulars. It was founded by W. H. Allen in 1843, before he attained his majority, and during the half century they have never moved from their original location, only growing in width on their Market street front, also in depth, now reaching to Church street in the rear.

In 1849 G. W. Allen was received as a member of the firm, and in 1875 and 1877 respectively, H. F. Chorley and J. D. Barr, both having learned their trade with the house, were taken into partnership, these four constituting the present firm.

One peculiarity is that, except for a period of four months, they have never employed traveling salesmen, and yet their record is that during the year 1892 they handled more goods than in any previous year; 1891 and 1890 following next in quantity, and from the present data, 1893, in spite of the universal depression in trade, will surpass all former ones.

One other peculiarity is that during the 50 years they have never lost a partner from any cause whatever, a record rarely equaled. Passing through all the panics and financial disasters occurring, they have never defaulted in payment or needed extension.



From the facts that they have remained so long in one place, and the non-use of the modern means of selling goods, many might conclude that the firm was a fossil and the members old fogies, but other houses who come in competition with them for business have a wholesale respect for their ability to secure and to hold the trade competed for.

Donations to Fairs.

OUR READERS are familiar with the annoyance to which merchants are subjected in connection with requests for donations for fairs given in aid of charitable societies. We give herewith an account of the method adopted by an enterprising house, which is referred to as rendering substantial assistance to the fair, while at the same time they derived considerable benefit from it through the advertising which was secured.

J. J. Snyder & Son of Flatbush, L. I., were recently requested to contribute toward a fair held by one of the local churches, and set to work to devise some method by which the donation could be turned to their profit. As it was the beginning of the stove season and a proper time to bring such goods to the notice of the public, they presented an Art Canopy Range, one of the best they had in stock, and secured the privilege of mounting it to the best possible advantage. This was done as shown in the accompanying illustration by placing it on a platform in a conspicuous part of the hall in which the fair was to be held, the platform being covered with bright red and canary colored cheese cloth. Above and around the Range a pavilion was constructed of Russia iron stove pipe and elbows, with bases and capitals of galvanized iron, the latter being ornamented with brass plated stove pipe collars. The four pipes were held together in the center by inserting the ends in a galvanized iron box with wooden top and bottom. This, in turn, was surmounted by a large stove ornament encircled by American flags placed in holes in the wooden top of the box. From the lower side of the box a wooden ball was suspended, in which were small American flags. The pavilion was also draped with bunting, but not so shown in the cut. Hung from and between the two rear columns was a sign, neatly framed, on which was lettering announcing that the Range in question is sold by "Snyder of Flatbush," their usual firm designation in their advertisements.

One of the conditions of the donation was that the Range should be drawn for at 10 cents a chance. The firm furnished cards as follows, with testimonials printed on the back:

An Exhibit at a Fair.

CHANCES, NOS ....
IN THE DRAWING FOR THE
"ART CANOPY" RANGE
AT THE FAIR OF THE
Holy Cross Cath. Church,
IN THE TOWN HALL,
SEPTEMBER 4th to 16th, 1893.

The trifling cost induced almost every person who visited the fair to invest at least 10 cents, and thus several hundred testimonials of the Range given by residents were carefully carried to every section of the town. Although there were many articles on exhibition of tenfold greater value, nothing attracted more attention, and from the comments which the firm afterward heard they consider it the best advertising hit they ever made.

Bicycle Prices for 1894.

THE QUESTION as to what the list prices of the standard makes of Bicycles during the next season will be is one of much interest to the trade. The makers as a general rule are reticent on the subject, and are apparently deferring announcements until they find what policy will be pursued by their competitors. The effect of this uncertainty is being felt to a certain extent on trade in this line. We are, however, authorized by the Overman Wheel Company, Chicopee Falls, Mass., to state that the Victor Wheels, 1894 pattern, manufactured by them, will be listed at $125.

We are also advised by E. C. Stearns & Co., Syracuse, N. Y., that the price of their Stearns Wheel for 1894 will be $150. Referring to this announcement they say:

With but a few exceptions there has been a delay on the part of the manufacturers generally to formally set aside the rumors that the next month or two would see a reduction in the former prices of the standard machines. Buyers of Bicycles are left in the dark, while orders wait a hint. It seems to us that the time has now arrived for the manufacturer to take the public into his confidence and remove the feeling of uncertainty as to what next year's figures will be by coming out and definitely announcing his list prices. Not only would it restore confidence in the directions in which the maintenance of certain prices cuts a large figure, but it would give the dealers an opportunity to plan further ahead and thus be beneficial to maker and dealer alike.

In common with our competitors we are aware to the last cent the cost of building and marketing our wheels. It has never been our aim since we first embarked in the industry to see how cheaply we could build a Bicycle. On the contrary, our goal has been to produce a wheel embodying in its workmanship, its style, its capacity and its intrinsic value the full worth of the money at which it is sold. We are far from unmindful of the competition which we encounter in the open market; but we recognize that the maintenance of our reputation in the Bicycle business rests primarily on the excellence of our wheels. Therefore, we cannot with justice to ourselves, or without sacrifice to the quality which we wish to continue, offer the Stearns at a less list than $150.

The $150 list is founded on the ascertained cost, and as "self preservation is the first law of nature," it seems to us that any reduction in the list would naturally be at a sacrifice of quality that the wheelmen would not ask. The general adoption of a lower list by the manufacturers, while at first it might be considered a blessing, would in the end prove exactly the opposite. We want to feel that our price is such that we can afford to use in our wheels everything that is best, everything that will tend to increase the excellence of the Bicycle.

All things considered, therefore, there is every reason why we should announce and advocate the $150 list for high grade wheels.

THE TWO-PAGE ADVERTISEMENT of the Covert Mfg. Company, West Troy, N. Y., calls attention, it will be observed, to their Soldering Irons and their Pants Stretcher. They allude especially to their improved facilities for manufacturing their Adjustable Soldering Copper Irons, and call attention to the advantages which they possess over other goods. The particular features of their Pants Stretcher are also described.

Trade Items.

THE large establishment of the Paddock-Hawley Iron Company, 806 to 816 North Main street, St. Louis, was destroyed by fire early on the morning of the 23d ult. The fire raged for over three hours. Most of the engines in the city were called out. Smoke at first prevented the location of the fire and this gave it much headway. The origin of the fire is unknown, but it is supposed to have started in the engine room. Almost the entire structure was burned to the ground. The efforts of the firemen, however, prevented the fire from spreading to adjoining property. The damage is estimated at from $150,000 to $200,000.

BLAIR MFG. COMPANY, Springfield, Mass., have purchased of Farnsworth & Co., San Francisco, Cal., their California Lawn Sprinkler, which they will hereafter manufacture in connection with their Lawn Mowers and other lawn specialties.

J. FRANK GREENE & CO., manufacturer of Leather Specialties, 278 Water street, New York, have for years made a study of working up leather into a multitude of forms, so as to leave but a minimum of waste, at the same time using from each skin only what is best adapted for the special purpose for which it is required. This permits, they advise us, of supplying minor leather parts to manufacturers at a much reduced cost. Manufacturing as they do a very diversified line from this class of materials, they have in years accumulated much original and special machinery for the manipulation of leather, not possible with those having a limited use for it. Among other things, they make Knapsacks, Toilet Sets, Strops of many kinds, including Reaping Machine Strops, Dog Collars, Links for Belts, Washers for any purpose, &c. A feature of the Washers they make is that being cut with knives instead of dies the edges, inside and out, are parallel, instead of beveled, as when compressed by being cut under dies.

R. CHRISTENSEN, 90 Chambers street, New York, dealer in Cabinet and General Hardware, has made it a custom for years at this season to handle a moderate line of holiday goods, suitable for this class of trade. At present he has in stock an assortment of Aluminum Goods, embracing Match Safes and numberless small wares, fancy Clocks, Cigar Boxes, Cigar Holders, Mantel Ornaments, Austrian Vases, Smokers' Sets, &c,

CHARLES ASHLEY has disposed of his Hardware business at Ogdensburg, N. Y., to the Ashley Hardware & Iron Company, who have been duly organized under the laws of the State. Henry H. Bosworth is the manager of the company and Egbert N. Burt secretary and treasurer. Mr. Ashley's business career, which has been a very successful one, extends over a period of 43 years. He commenced business in 1850 in a small store in Ogdensburg. The store was 36 feet long and 20 feet wide and was about as large as the average town store at that time. In 1855 Mr. Ashley removed to new quarters, which he occupied for six years, when the requirements of his business having outgrown his facilities he removed again to a still more commodious store. Mr. Ashley occupied this store until 1870, when in consequence of changes which were necessary he purchased the site of his present business block on Ford street. It was at that time comparatively outside the business limits of the town, but it was Mr. Ashley's judgment that men and not location made business. He built his present store in 1870 and 1871. The business occupies the entire building, which is 30 x 80 feet, with four floors. There are also four warehouses and an oil storage house. Henry H. Bosworth, the manager of the new company, has been connected with Mr. Ashley for 33 years, and Mr. Burt, the secretary and treasurer, for 21 years. The officers of the company are thus qualified by long experience to conduct the business energetically and successfully. Mr. Ashley will still be identified with the house and will extend to it all the support and assistance in his power; but desiring to be released from the burden of the business, he will not be so actively connected with it as heretofore. He is to be congratulated on the success which he has achieved and the high esteem in which he is held.

THE MUSSEY STONE COMPANY, Cuyahoga Building, Cleveland, Ohio, announce that they have just completed the erection of a Scythe Stone factory, and are now prepared to furnish promptly all the well known patterns of Western Scythe Stones, in addition to their full line of Grindstones of all sizes and Grits, mounted Grindstones, &c., at the lowest market quotations.

THE TRADE will observe the advertisement of George A. Waller, Seneca Falls, N. Y., in which he illustrates the Arctic Ice Dogs, which are designed to secure safe footing in walking on ice. Illustrations are given showing the construction and use of the Ice Dogs, which are made in two sizes, for ladies and gentlemen respectively. It is stated that the method of adjustment adapts them equally well to both shoes and rubbers.

Lee Clarke-Andreesen Hardware Company's Catalogue.

LEE-CLARKE-ANDREESEN HARDWARE COMPANY, Omaha, Neb., have just issued a handsome catalogue of 1012 pages, substantially bound in cloth and leather. It is printed on paper of excellent quality, fully illustrated, with descriptions and list prices. Each page is encircled with blue lines, adding much to the appearance of the book; and such goods as Axes, Hatchets, &c., have the labels reproduced in colors. For convenience the goods are arranged in departments, as follows:

Mechanics' and Edge Tools..... 1 to 148
Builders' Hardware.....149 to 422
Farming Tools, Harness and Miscellaneous Hardware.....423 to 700
Pocket and Table Cutlery, Razors, Shears and Silver Plated Ware.701 to 804
Bicycles, Tricycles, Velocipedes, Boys' Wagons, Sleds and Childrens' Carriages.....805 to 823
Granite Iron Ware, Pearl Agate Ware, Pieced, Stamped, Galvanized and Japanned Tinware, Tinned Trimmings and Stock.823 to 888
Tinners' Tools and Machines... ..889 to 904
Arms and Ammunition, General Sporting Goods.....905 to 1012

A well arranged index is placed immediately after the list of departments at the front of the book. Addressing the trade, the company remark that the increasing magnitude of their business, the large and varied stock they carry and their facilities for rapidly handling orders enable them to give to their customers the lowest market prices and quick shipment.

Price-Lists, Circulars, &c.

READING HARDWARE COMPANY, Reading, Pa., and 81 Reade street, New York: Supplement No. 4 to their 1891 catalogue. This is a book of 54 pages containing full size illustrations of a variety of new goods in genuine bronze and also a new line of fine Locks with flat and rabbeted fronts, for French windows, closets and doors having narrow stiles. The new patterns in solid bronze metal include complete lines of trimmings for Vassar and bit key Locks in scroll and circular fluted patterns. Eulalia designs and circular fluted door and window trimmings in wrought bronze are also shown. In addition to the supplement they publish an attractive 12-page pamphlet of iron goods in Columbian design. These goods are antique copper plated, which, the company state, is an entrely new method of finishing iron goods, requiring special patterns to obtain the desired results. This new finish is claimed to be very durable, and is referred to as presenting an appearance which closely resembles genuine bronze. The line of Columbian iron goods is limited to interior trimmings only. It comprises several Lock sets for inside doors, including sliding door Locks and Escutcheons, Door and Shutter Butts and a variety of small goods.

THE METALLIC WINDOW SCREEN MFG. COMPANY, 465 Washington street, Boston, Mass.: Fine Window Screens and Screen Doors. The Screens are made entirely of metal, the frame being of steel $\frac{3}{16}$ inch thick and $\frac{1}{2}$ to $\frac{5}{8}$ inch wide, according to size. The wires are soldered directly to the frames, so that when finished every part is soldered, brazed or welded. The Window Screen slides in guides, and for doors the Screens are set in a wood frame in suitable sized panels.

COLLINSVILLE BELL COMPANY, Collinsville, Ill.: Stock Bells and O. B. Wilson's Hill's Pattern Hog Rings and Ringers. List prices are given of O. B. Wilson's Stock Bells and Blum's Kentucky Durham Bells. Chime Bells No. 1, set of four for sheep, and No. 2, set of four for cattle, are also listed. This line of goods is thus facetiously referred to:

> It has been discovered that wild animals will not disturb stock that are provided with chime bells, and that cattle cannot be stampeded that wear them. To meet this new demand for our goods, we take Nos. 1, 3, 5 and 8 of the musical octave and put them in perfect accord so that any two, three or all four will harmonize. Travelers in Switzerland are enchanted by the beautiful effect of these bells worn by stock in the mountains there. Our own pastural districts may be made just as enchanting by the tinkling of the bells.

COLEBROOKDALE IRON COMPANY, Pottstown, Pa., with New York office 103 Reade street, in charge of Duncan K. Major: Colebrookdale Tailor and Sad Irons. An illustrated catalogue for 1894 shows Crown Sad Irons, common Sad Irons, Tailor Irons, wide and narrow faces; German Tailor Iron, New England Pressing Iron, Chinese Laundry Iron and Chinese common Sad Iron.

THE NORTHERN REFRIGERATOR COMPANY, Grand Rapids, Mich.: Hardwood Glacier Refrigerators. An illustrated catalogue and price-list shows Glacier Cold Dry Refrigerators, Grocers', Sideboard and Apartment Refrigerators, Ice Chests, &c., in different styles and sizes. Samples of wool felt and charcoal sheathing, as used in the Refrigerators, are inserted as pages in the catalogue. Attention is directed to their new metallic ice rack, air tight lock, and the new style of carvings in the Empire or Laurel Wreath design; also the addition of a line of Refrigerators with porcelain ice tanks.

PORTLAND TINWARE COMPANY, 100 Cross street, Portland, Maine: Pieced Tinware. A price-list is issued by the company of Pieced Tinware, which they state is made from bright charcoal plates of full weight. A separate sheet illustrates the Maine Creamery Can, in which a faucet is set 1 inch from the bottom, so as not to disturb the sediment when drawing off the milk and cream. In addition to manufacturing the foregoing goods, the company job Stamped and Japanned Ware, Ironware, Wire goods, Agate Ware, 5 and 10-cent goods, Wooden Ware, Trimmings, &c.

EDWARD MILLER & Co., 10–12 College place, New York; 63 Pearl street, Boston, and Meriden, Conn.: The Miller Lamp. An illustrated catalogue and price-list shows the Miller Lamp in piano, banquet and parlor styles; Rochester Study Lamp, hanging, library, hall, desk and pulpit Lamps, Chandeliers and Bracket Lamps and Miller Oil Heaters.

SIMMONS HARDWARE COMPANY, St. Louis, Mo.: Guns, Pistols, Sporting Goods, also leading foreign Guns. A catalogue of some 130 pages illustrates and describes, with prices, Guns, Rifles, Revolvers, Ammunition, Gun Implements, Calls, Hunting Clothing, Boots and Shoes, Traps and Pigeons, Boxing Gloves, Footballs, &c. Attention is called to 1894 models of Bicycles, catalogue and prices of which will be sent to dealers upon application.

THE ADAMS & WESTLAKE COMPANY, Chicago: Brass Bedsteads. The company issue a supplement to their No. 5 catalogue showing a large line of Brass Bedsteads, with prices and descriptions. A smaller pamphlet calls attention to a medal awarded by the World's Columbian Exposition for superiority of construction and excellence of finish and calls attention to some advantages and the care of Brass Beds.

SIDNEY SHEPARD & Co., Buffalo, N. Y.: The Buffalo Damper Clip. The company send a small pamphlet illustrating and describing the Clip, with prices for the Clip with wood and metal handles, from 4 to 7 inches, Two full page humorous illustrations add attractiveness to the pamphlet.

NOVELTY WOOD WORKS, F. E. Levanseler, proprietor, Sturgis, Mich.: Improved Step Ladder Chairs, and furniture specialties. An illustrated price-list shows Step Ladder Chairs in a variety of patterns and upholstery. The goods are made of elm finished in antique to closely resemble oak, also of sycamore finished to resemble cherry or mahogany. Every chair, it is remarked, has four steel wire locks to prevent the sides from pulling away from the steps. Unless otherwise ordered they are shipped tied in pairs at the consignee's risk of damage.

It Is Reported—

That Herman & Son, Hardware dealers, were burned out in a fire at Albia, Iowa, November 17.

That in a large fire at Hamilton, Ont., on the 22d ult., the Hardware stock of Peter Bertram was almost totally destroyed. Loss, about $20,000; insurance, $8000.

That W. L. Snow, plumber and dealer in Stoves, West Somerville, Mass., will add a line of Hardware to to his business.

That S. B. Spencer's Hardware store, at Maiden Rock, Wis., was entered by burglars on the 18th ult. Thirty Pocket Knives, two Revolvers and a lot of Table Cutlery were carried off.

That the Hardware store of J. E. Phillips, Porterville, N. Y., was burned out recently.

That the Hardware store of A. Scheff, 462 St. Clair street, Cleveland, Ohio, was entered by thieves on the 18th ult. The cash drawers were stripped of their contents and a large quantity of Hardware taken.

That Laughlin & Brown's Hardware store, at McComb, Ohio, was robbed on the 22d ult.

That the foundations for Charles E. Faeth's new wholesale Hardware store, at Sioux, City, Iowa, have been completed, and a large force of men have commenced work on the building proper.

That G. E. Piper has bought the Hardware stock of A. M. Smith, Silver Springs, N. Y.

That H. D. Blanchard of Boston, Mass., will on January 1 open a Hardware store at Vergennes, Vt.

That the Hardware store of W. C. Fluke, Clayton, Mich., was recently robbed. This is the second burglary within a year.

That W. R. Batley's Hardware store, at Hearne, Texas, was burned out on the 23d ult.

That the Hardware firm of Atchison & Knowlton, Newton, Kan., have been dissolved. T. B. Atchison will continue the business.

That McClure & Co., in the Hardware business at Buffalo, N. Y., have sold out.

That the Hardware and Tin firm of Schick & Bridanstein, Mansfield, Ohio, have dissolved partnership.

That O. P. Olson has opened a Hardware store at Ulen, Minn.

That P. Martinson & Son, Hardware merchants, Lake Park, Minn., have dissolved partnership.

That Heins, Rich & Co., in the Hardware business at Renville, Minn., have been succeeded by Heins & Co.

That M. I. Crosby's Hardware store, at Baldwin, Kan., was burned out on the 19th ult. Loss, $1500; insurance, $500.

That J. F. Johnston has sold out his business interests in the Hardware firm of Johnston & Farrar, London, Ohio, to his partner, Colburn W. Farrar. Mr. Johnston is the Mayor of London.

That G. A. Taylor has disposed of his Hardware business at Portland, Ore., on account of ill health.

That Wm. Haberman has bought the Hardware stock of I. M. Lyman, Concord, Neb.

That M. Quinlan and H. S. Latham have opened a Hardware and Tin store at Gray's Lake, Ill.

That the store of the Fort Collins Hardware Company, Fort Collins, Col., was entered by burglars on the 20th ult.

That the Hardware store of A. L. Mills, Hartford, Conn., was entered by burglars on the 24th ult. About $100 worth of goods were stolen.

That in a fire at Covington, Pa., the Hardware store of J. L. Kiff was destroyed.

That burglars entered L. H. Kurtz's Hardware store, Des Moines, Iowa, on the 19th ult. and blew open the safe. They secured $55 in money and some valuable papers, some of them negotiable.

That Warren M. King has sold his interest in the Hardware firm of Carruth & Co., Orange, Mass. Fred. P.

Hosted by Google

Carruth will continue the business alone.

That the Hardware store of James Clifford, at Lenox, Mass was burglarized on the 27th ult.

Paints and Colors.

It should be understood that the prices quoted in this column are strictly those current in the wholesale market, and that higher prices are paid for retail lots. The quality of goods frequently necessitates a considerable range of prices.

The market is in a somewhat nervous condition, and business all along the line is of extremely conservative type. In some departments affairs are considerably disturbed by the uncertainties connected with the new tariff bill, and it is next to impossible to secure orders for the lines of goods thus affected with a saving duty clause wholly in the buyers' favor. Next in significance is the erratic condition of White Lead, due partly to prospective tariff legislation and in a measure to growing aggressive attitude of producers not connected with the National Lead Company. Besides these influences is the upward turn latterly in price of Linseed Oil that has more or less effect upon goods into the composition of which the Oil enters prominently as an ingredient. The most severe contention, however, is dullness of regular trade nearly all along the line and irritating slowness of collections. Hope of better things later on is not abandoned, but all signs indicate that the conservative policy among buyers is extremely popular.

White Lead.—Officials of the National Lead Company state that no changes have been made in their list prices and assert that they are making no direct or indirect concessions in this market. It is an open secret, however, that jobbers are selling small quantities at a liberal shading from those figures. Outside corroders seem to be gradually becoming more aggressive and have made some bold moves since the publication of the proposed new tariff. They have confined their movements chiefly to Dry Lead, which is offered at 5¢ here and ¼¢ cheaper at Western points, where the contest with the combined corroders is keenest. The outcome is problematical and shrouded in so much uncertainty that buyers take only such stock as they may be in immediate need of. This leaves the market in a dull and rather debilitated condition.

Red Lead and Litharge.—There is little doing in either pigment of foreign manufacture, since near future wants of the large consumers have been well provided for, while tariff uncertainties check further forward contracts. However, hardly any concession from late lowest prices is made, and the tone of the market is about the same as it was a week ago. Domestic sorts are without change in price and meet with very slow sale at the moment.

Orange Mineral.—French has been selling to a remarkably fair extent, but the dealings were chiefly in small lots for early delivery. The movement, however, served to keep prices quite steady. Interest in future shipments is subdued by the tariff uncertainties. Domestic brands are almost neglected and prices remain quite nominal.

Zincs. — Comparatively little new business in American Oxide has been effected, and the market at present shows rather slack tone. The ordinary canvass for orders would indicate that some producers are not as well off as could be desired in the matter of contracts booked, and, while the recently revised list covers the popular quotations, concessions are not infrequent when really desirable orders come up for competition.

Colors, &c.—There is not a new feature in the market. Sales are slow, and only modest orders of the most pronounced type are being put through for future delivery. Prices are slightly uneven, as usual, on a slow market, but show no radical change. In ready mixed Paints, metallic Paints, &c., nothing new has transpired.

Oils and Turpentine.

With few exceptions the market remains in a very spiritless condition and the surroundings afford little hope for an early change for the better. In the departments in which export movement frequently cuts a prominent figure there is hardly any interest manifested by foreign buyers at the present time. In no line does there appear to be speculative tendency. As for the regular home trade movement, the best that can be said is that it is very moderate and hardly up to average value for the season. Movements in prices have been few and generally within very narrow range.

Linseed Oil.—The advance in prices of local brands made last week has been closely adhered to and the out of town crushers, as far as can be learned, make no concession from their prior advance. The market would thus appear to be quite firm at 42¢ for city and 40¢ for out of town brands of raw Oil made from American seed. Dealings have been moderate since the advance and, while looking quite firm, the market is by no means spirited. The strength of the market is due in a good measure to the late advance in cost of raw material.

Cotton Seed Oils.—Under the influence of quite heavy receipts and only moderate demand prices have ruled rather weak, and the market is at present in rather poor shape, since the lower range of values has stimulated business to a moderate extent only. Late sales were at 28¢ @ 29¢ for prime quality Crude, 35¢ for prime Summer Yellow, and corresponding prices for other varieties.

Lard Oil.—For strictly prime city-made Oil the common quotation is 75¢ and ordinary jobbing lots can doubtless be secured at that price. In any event the demand is no freer than the offering, while purchases of other than small lots have been strictly the exception during the past week or ten days. The tendency of the market for raw material is suggestive of lower prices for Oil, rather than any considerable advance in the immediate future.

Fish Oils.—Somewhat more interest has been manifested in crude Menhaden Oil, but buyers have purchased sparingly, and thus far there is no change in prices. Crude Sperm and crude Whale Oils have remained quiet and unchanged. The pressed and bleached products have met with fair sale in a jobbing way, chiefly at old prices. Cod Oil is a shade easier, with 40¢ now apparently a stiff price for wholesale quantities.

Spirits Turpentine.—The demand at this point has been moderate, and Southern advices have almost invariably reported slow trade there. Supplies have not increased greatly at first hands, but had sufficient weight to weaken prices off to 29½¢ for regular and 30¢ for machine barrels.

Miller Oil Heater.

Edward Miller & Co., 10-12 College place, New York, and Meriden, Conn., are putting on the market a series of oil heaters, one of which is shown in Fig. 1. The Miller lamp, which is used, has two flame spreaders, one particularly adapted for heating purposes and one for lighting, although either can be used for the stove. The lamp is provided with an aluminum indicator, which will not corrode, for showing when the lamp is full. The lamp has a simple wicking and adjusting device, and no chimney is used with the heater, resulting in greater radiating power. The lamp rests on a heavy nickeled cast

Fig. 1.—Miller Oil Heater.

base, and is provided with a brass nickeled top. Top or bottom wick adjuster is provided, as desired. The heater cylinder is of Russia iron, with mica at the bottom, all resting on the body of the lamp. The point is emphasized that the cylinder is supported on and locked to the main body of the lamp instead of on the chimney gallery. After the cylinder rest is in place it is

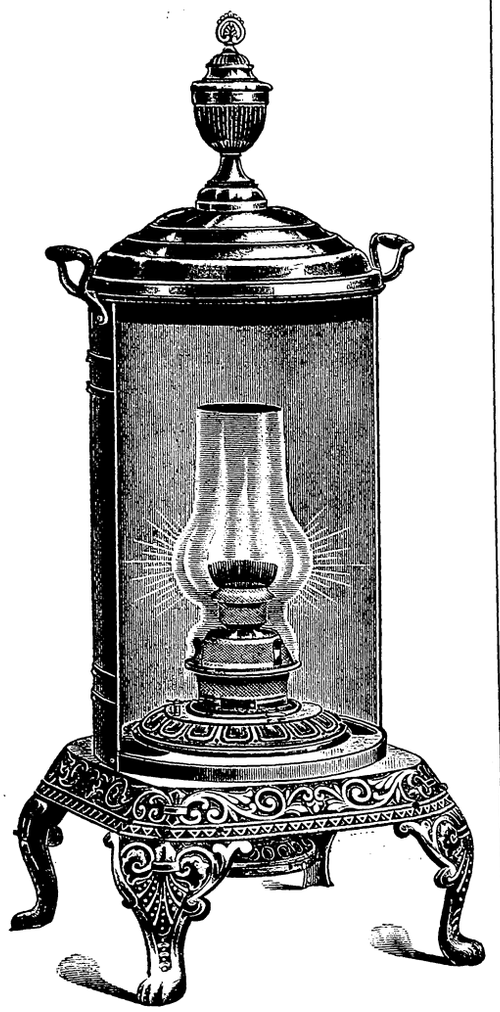

Fig. 2.—Mode of Lighting the Heater.

fastened on the lamp by an eccentric looking device. The heaters are made in five sizes and styles, designed to heat rooms from 8 to 14 feet square. By removing the cylinder and substituting a chimney, the lamp may be used for lighting purposes. Fig. 2 illustrates how the lamp is lighted with or without the chimney.

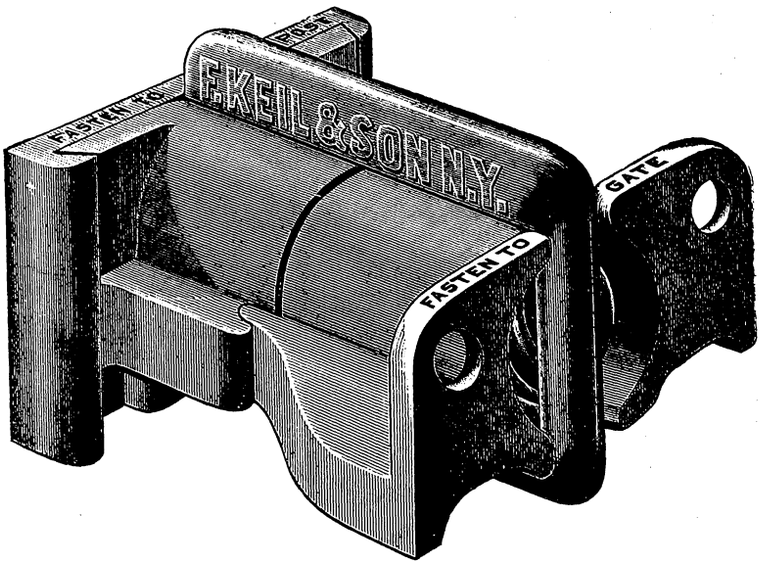
Browne's Lamp Heating Stove.

The Breitting Metal Ware Mfg. Company, Huron and Sedgwick streets, Chicago, are manufacturing a recently patented oil lamp heater which is herewith illustrated. It is intended to be used for cooking and heating, as well as for light. The hight of this heater is 40 inches over all, while the diameter is 12 inches. The lamp is partly encircled by a highly polished tin reflector which fits into an opening in the base. Cold air is admitted from the floor, heated, and discharged at the top, causing a circulation of heated air in the room. The B. & H. lamp is used, which not

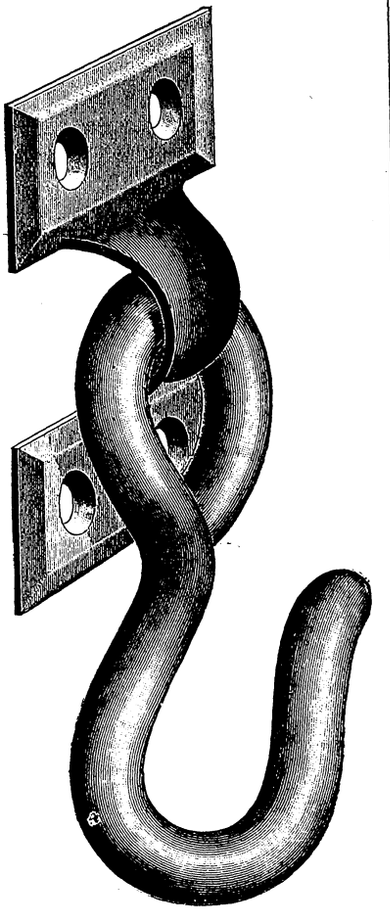


Browne's Lamp Heating Stove.

only perfectly consumes oil without odor or smoke, but also provides a very brilliant light. The urn and top are nickeled, and in every respect the heater is handsomely finished.

The Superior Hinge.

Francis Keil & Son, 163d street, west of Third avenue, New York, are introducing the Superior hinge, as shown herewith. The hinges are made of malleable iron to prevent breaking, and every hinge is warranted by the makers. The hinge is described as swinging both ways, as not raising the gate as ordinary hinges do, but as opening level. The manufacturers claim that the hinge is self shutting, always stopping at the center; that it has no parts to get loose or out of place; that it is easily applied and cannot get out of order. The point is made that any catch can be used with the hinges, but that none is necessary. The hinge is designed for use on house gates, and has, we are advised, been adopted for



The Superior Hinge.

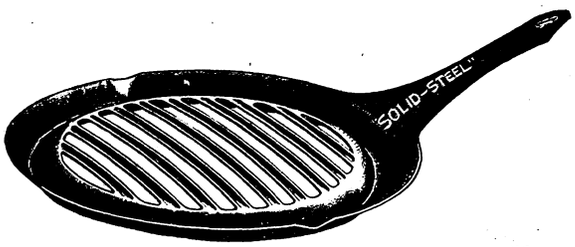
office gates. The goods are furnished in japan, copper plated, polished bronze metal, nickel plated.

Stearns' No. 200 Hammock Hook.

E. C. Stearns & Co , Syracuse, N. Y., are putting the hammock hook here-

Stearns' No. 200 Hammock Hook.

with illustrated, on the market. The plate is made of a special quality annealed sheet steel, and the hook is formed up from ⅛ inch wrought iron. The company state that the article is the result of a great deal of experimenting on their part to produce a hook which would be lighter than those now on the market, and at the same time possess equal strength; that although the hook is very light it is at the same time capable of sustaining great weight, and that they have no hesitation in pronouncing it as strong as any of the regular size hammock hooks on the market. The hooks are tin finish, and are packed 1 dozen in a box.



The Ideal Implements.

Ideal Mfg. Company, New Haven, Conn., have issued a circular addressed particularly to their foreign trade, which states that those who have used the Ideal implements for American arms and shells have frequently requested the company to make implements for the various other kinds of arms and shells they have in use, also to prepare a list that would inform the users as to which were alike in the English and American manufacture, and to specify the tool that is adapted to them. In compliance with this request the company have prepared a list for the convenience of the foreign trade using Ideal implements, showing which cartridges are alike of English and American manufacture and the tool that is adapted to them. In this list the name of the cartridge as given in Eley Brothers' catalogue is first presented, and on the same line, under the head of American, is given the name of the same cartridge made by the Union Metallic and Winchester Cartridge companies, U. S. A.; followed by the name of the particular Ideal tool required to load them. This list is designed to be used in connection with the Ideal catalogue, which illustrates the implements and gives list prices. The circular further states that at the request of P. Webley & Sons of Birmingham, England, the Ideal Company have recently perfected a model tool for the Webley's 0.450 and 0.455 revolvers, as supplied to the English department of war. The shells as made by Eley Brothers of London, or by the Union Metallic Cartridge Company of Bridgeport, Conn., U. S. A., we are advised, may be used. The company have also made tools for casting bullets and reloading the Lee-Metford (Eley's 0.303) and are now prepared to furnish the same on order.

Hosted by Google

Steel Broiler.

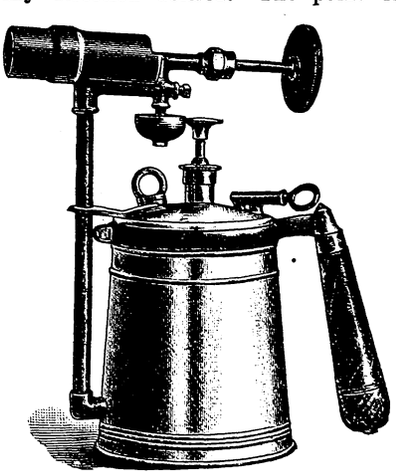
The accompanying cut represents a steel broiler being introduced by the Cleveland Stamping & Tool Company, Cleveland, Ohio. The broiler is made of a single piece of heavy, cold rolled steel, all in one piece, which the manufacturers claim is peculiar only to this broiler. The point is made that it has no seams or rivets to catch grease, that it will not warp, that it cannot be broken and that it catches all of the juice of the meat.

Steel Broiler.

The California Extension Hack Saw Frame.

The extension hack saw frame herewith shown is put on the market by Knapp & Cowles Mfg. Company, Bridgeport, Conn. The frame is made of steel, and is so constructed that it can be easily extended from 8 to 12 inches. This is accomplished by the parts slipping past each other, and being held at the desired point by a rivet attached to a spring, dropping into a hole. The frame is as firm as a solid one when the saw is inserted in position. A thumb screw allows the saw to be tightened after it is in place, and the handle and the piece to which the thumb piece is attached are arranged so that the saw may be set at different angles to the frame as desired. The handle is of enameled wood, and the metal part of the frame is nicely furnished and polished. The frame is also made with solid back for 8-inch saws

The California Extension Hack Saw Frame.



How to Buy a Bicycle.

A Scottish newspaper publishes the following unique hints on "how to buy a bicycle:"

Always see that the bicycle offered you for sale has got two wheels, and that they are attached by some solid substance. Otherwise, the one may go and leave the other behind. The next point to observe is that the cycle is supplied with a saddle, as it will be found to be very irksome to ride long distances perched on the point of a saddle pillar. It should be possessed of two pedals fixed on as many cranks. If the pedals describe a circle without fetching the cranks along with them that is a clear and sure sign of early bronchial affection of the tubes, and that the machine should be unhesitatingly discarded. Looking around for a moment to suit your taste, bear in mind that a wheel without rims is like a footless sock without the leg, and should not be had at any price. It is very desirable that the wheels should be fitted with spokes, as otherwise the rims are easily bent. With these tips in view, any one should be able to choose a mount for himself without the expense of engaging a special commissioner to do the job for him. Handle bars, mud guards and gear cases are mere details, and may be regarded as the luxurious cravings of a pampered age.

The Quick Meal Adjustable Paint Burner.

The Quick Meal Stove Company, St. Louis, Mo., are putting on the market an adjustable paint burner, as shown herewith. The handle is adjustable, turning loosely on the brass band which encircles the tank, to enable the operator to throw the flame in any direction without exertion. The tank, pump, &c., are of brass, and the flame is referred to as being blue and very powerful, from 6 to 8 inches long. It is explained that for corners or places in wood work out of ordinary reach the burner will be found serviceable, as the flame can be thrown in any direction desired. The point is made that when the burner needs repairing it is not necessary to make a brazed or soldered joint, and that it is easily taken apart for cleaning and repairing. The burner is designed for the use of plumbers, painters, wood workers, &c.

The Quick Meal Adjustable Paint Burner.

The Safety Cistern and Well Cover.

The Safety cistern and well cover shown in the accompanying cuts is offered by Menefee & De Vilbiss, Fort Wayne, Ind. The cover is made of cast iron, japanned to prevent rusting, having an outer rim (Fig. 1, Letter A), which is to be firmly cemented to the wall of the cistern or well, to obviate any possibility of bugs or worms getting into it. It is provided with an adjustable lid (Fig. 1, Letter B), to be used in connection with a pump, to fasten it in position, as in Fig. 2. For a pump placed in the house a solid lid is provided (Fig. 1, Letter C), instead of the split lid, this being fastened by a lock bolt, to obviate danger to children. The cover is provided with an air box, to allow foul air to escape, to keep the water in a pure and healthy condition. It is explained that the construction is such that no surface or waste water can possibly return into the cistern or well, and that either lid can be removed without disturbing the outer rim by the use of a common wrench. The manufacturers remark

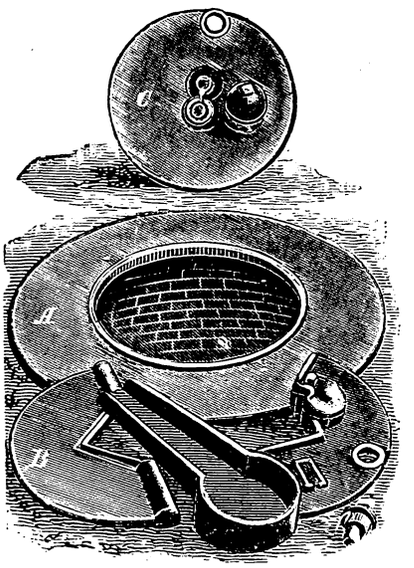


Fig. 1.—The Safety Cistern and Well Cover.

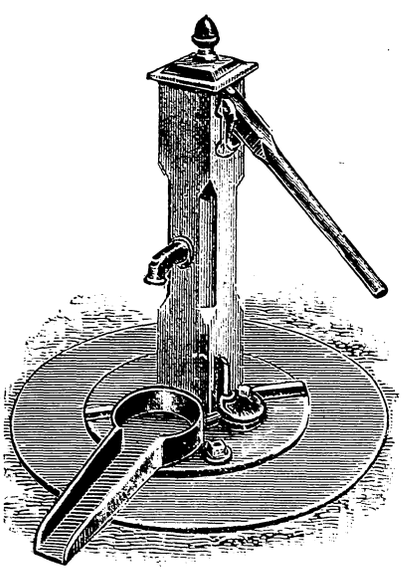

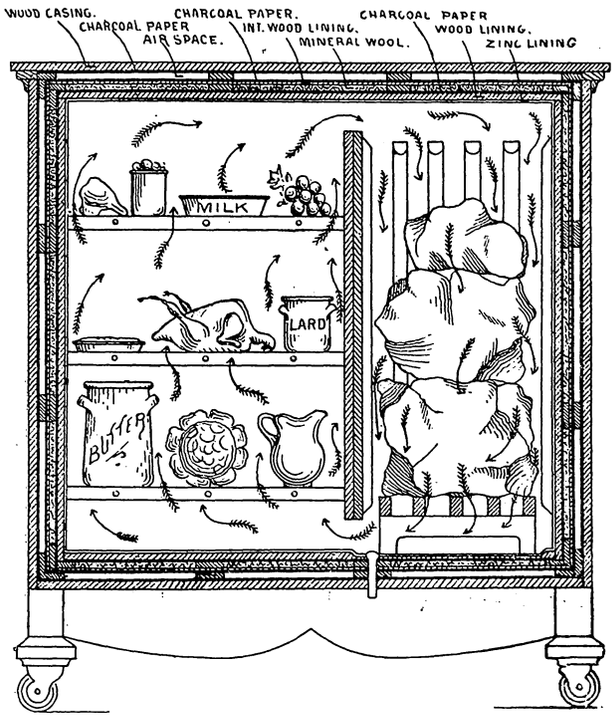

Fig. 2.—The Cover in Connection with Pump.

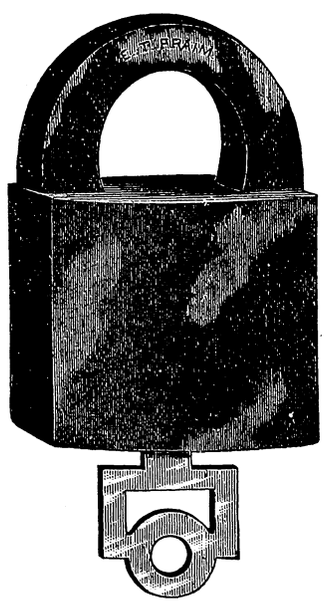
Hosted by Google

that the device, besides being as cheap as others, is free from dirt and insects. and that it is not open to the objections of wood covers, the underside of which become damp, causing decay, a growth of vegetation, and become inhabited with vermin, small snakes, &c.; also that, unlike wood covers, it will not become rotten and unsafe.

The Automatic Refrigerator.

The Illinois Refrigerator Company, 909 Masonic Temple, Chicago, are manufacturing a new line of refrigerators. The illustration given herewith shows the distinctive features of the construction which has been adopted. It will be seen that the ice chamber is placed at the side of the provision chamber. The illustration also shows the manner in which the circulation of air is secured. The air in the ice chamber being colder and heavier than elsewhere, falls to the bottom and flows out under the partition into the provision chamber. The warmer air in the provision chamber flows over the partition into the ice chamber to take the place of the cold air passing out below. As it is cooled it falls. Thus a circulation is secured. The manufacturers state that as the vapors and odor from the food come in contact with the ice they are condensed and drawn off with the waste water from the ice. All the food being above the drip basin, it will be seen that no damage can result should the waste pipe become clogged.



Interior of Automatic Refrigerator.

East Mfg. Company, Buffalo, N. Y., are offering two household preparations recently brought out. One is the Instant Crockery Mender, for cementing leather, wood, glassware, iron, &c. It is in liquid form, requires no heating and sets quickly. The other, Glistening Cream, is for polishing wood, furniture, pianos, &c. Both are put up in illuminated cardboard display boxes with hinged cover and contain 12 bottles each. Geo. F. Eberhard Company, 64 William street, New York, have been made agents for New England, New York, New Jersey, Pennsylvania and Pacific Coast, as well as all export trade.

A New Padlock.

The accompanying cut represents a padlock being introduced by the Keystone Lock Works, Lancaster, Pa., for whom Surpless, Dunn & Alder, 79 Chambers street, New York, are agents. The lock, which the cut shows full size, is heavy, with oval case both front and back, having all inside work of brass. It is self locking, with spring shackle, and each lock is supplied with two flat steel keys. The locks are furnished in solid steel, Bower-Barff finish on case, polished shackle; solid steel case, Bower-Barff finished, bronze metal shackle; antique copper finish, case and shackle, on steel; plain solid real bronze metal and antique copper finish on solid real bronze.

A New Padlock.

Razorine Mfg. Company, 2 West Fourteenth street, New York, are putting on the market a preparation for sharpening razors called Razorine. It is a small, hard cake 1¾ x 1 x ½ inch in size, of a reddish color. It may be rubbed on any strop, whether of leather, canvas or stone side. The finish is made by stropping on leather without the Razorine. The preparation is said not to harm the finest razor.

Current Hardware Prices.

DECEMBER 6, 1893.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers at the figures named.

The character @ is used to indicate a range of price; thus discount 50&10@50&10&5 % signifies that the goods in question are sold at prices ranging from discount 50 and 10 % to discount 50 and 10 and 5 %.

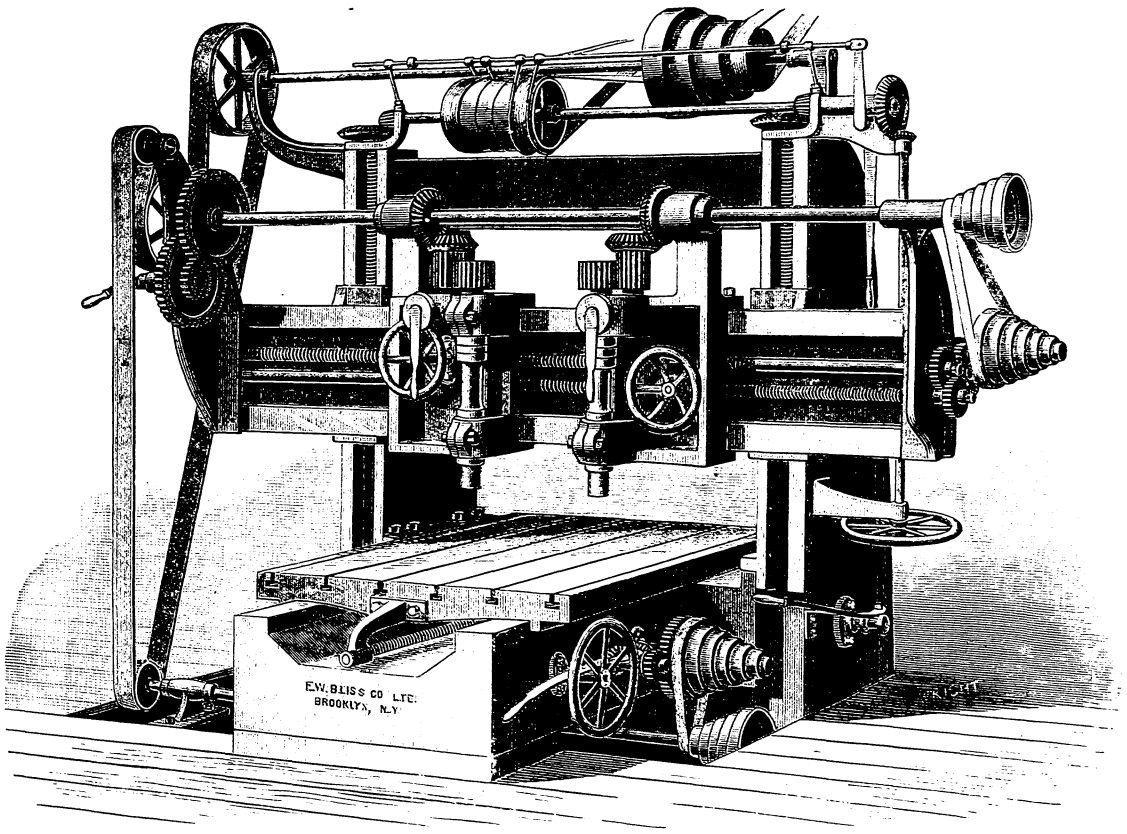
THE IRON AGE

THURSDAY, DECEMBER 14, 1893.

The Bliss Double Spindle Milling Machine.

The engraving on this page represents a modification of the standard double spindle milling machine built by the E. W. Bliss Company of Brooklyn, N. Y., for the J. L. Mott Iron Works of New York. The work which the machine was particularly intended to do was the facing of each surface of the several sections forming the steam heater built by the Mott Company. Their heaters consist of rectangular sections, placed one above the other and bolted together. It is of the utmost importance to have the meeting surfaces true, as the apparatus is intended to be run under pressure.



The general arrangement of the machine is like that of a planer, but in place of the ordinary planer heads it carries two vertical spindles for butt milling.

The longitudinal travel of the table is effected by means of a screw, which may be operated by hand or power in either direction. This table feed has six changes of speed (for each cutter speed), besides a power "rapid transit" motion to run the table in either direction. The quick motion is especially intended for running the table back after the cut is finished. It is entirely independent of the regular feed, and either can be operated without stopping the other.

The cross head is raised and lowered by power, in addition to which each spindle has an independent vertical adjustment of 2 inches.

Each spindle is carried in a separate saddle with independent lateral motion, actuated by either hand or power feed. The power feed has six changes of speed. The hand feed is manipulated by means of the wheels shown on the saddles. It is independent of the power feed, so that the saddles can be moved in any desirable way while the power feed is in operation. The cross head is made of sufficient length to permit of running the saddles out far enough to bring the milling cutters outside of the housings.

The milling cutters can be run at eight different speeds in the machine illustrated.

THE BLISS DOUBLE SPINDLE MILLING MACHINE.

The principal dimensions of the machine are: Length of table, 48 inches; width of table, 30 inches; width between housings, 54 inches; smallest obtainable distance between spindle centers, 8 inches; vertical adjustment of cross head, 24 inches; floor space over all, 9 x 12 feet; hight over all, 9 feet; weight, 15,000 pounds.

Novel Annealing Furnace for Tin Mills.—A radical departure from old established methods is made in the design of an annealing furnace recently invented for the purpose of annealing small sheets of steel used in making tin plates. The old practice of charging and drawing boxes through doors at the side of the furnace is abandoned, the furnace being built vertically and charged in that manner. By a simple arrangement annealing boxes, together with their bottom plates and contenst, are easily handled by two men, manual labor is largely dispensed with, and there is consequent saving in labor cost. It is claimed that the furnace is economical in construction and maintenance. The design is adaptable for using various kinds of fuel, such as coal, natural gas, crude oil or fuel gas. A. Beard, Cambridge, Ohio, is the inventor.

Two important omissions have been noticed in the estimates from the State and Agricultural Departments, as presented to Congress. These are the $30 000 usually appropriated for the Bureau of American Republics, and the sum of $720,000, which has been allotted yearly since 1888, for the maintenance of 48 agricultural experimental stations, one for each State and territory of the Union. It is inferred that these institutions are to be abolished, or at least that they are to cease being maintained by the country.

The World's Columbian Exposition has been sued for $25,000 damages in the United States Circuit Court, at Chicago, by the Yale & Towne Mfg. Company, William Sellers & Co., the Morgan Engineering Company and the Edgemoor Bridge Works. The plaintiffs together entered into a contract with the World's Fair to construct three big electric cranes which were among the sights in Machinery Hall. They allege that the World's Fair failed to furnish sufficient power for one of the cranes and that the electric machinery was damaged by rain and snow which came through the roof of the building.

Management of Men and Workshops.

THIRD PAPER.

General and Detail Duties in Conducting Manufacture.

BY THOS. D. WEST.

In conducting manufacture with concerns requiring a general manager with superintendents or assistants under him it often becomes a question with the former where his labors will end and the latters' commence. The division of official duties in any manufacturing concern is a very important element to properly adjust. The duties of each should be so clearly defined that should anything go wrong with work as it progressed, or the finished product be found at fault the hand of the general manager could at once be laid upon the assistant responsible.

To insure perfection in any line of manufacture this point must be rigidly enforced. The line must be drawn so fine that no possible doubt as to the one responsible should exist, for if for a moment an opening is left for one head of a department to wedge in upon another and by interference and conflict of authority cause confusion, just so soon may ill results be expected.

It is the general manager's duty to plan and set off in sections or departments the manufacture of the firm's product so that as it progresses it will be under the charge of men who are fully qualified to watch and govern every detail in the process of its manufacture.

The detail work for any line of manufacture is more or less a factor that must be closely watched to accomplich success. The superintendent or assistant can in most cases be an incessant worker, and then, with all his efforts, he may often find that things go wrong and mistakes are made. It is not necessary, in order to exhibit interest and press forward work to the most successful end, that he should run around browbeating and asserting his authority at every opportunity. Some of the most successful superintendents and assistants to be found are men who, when seen at their posts of duty, are often judged of by observers as "figure heads," men having "a soft snap;" paid a big salary for doing nothing. Little conception such critics have of the hard, tedious, exacting labor such men are often performing. They seem to think their labors should be exhibited by an herculean effort of the arms and legs, interspersed with occasional opening of a volcano trap to belch forth terrifying sounds. The quiet, unostentatious superintendent, or "figure head," as some would call him, well knows that to achieve success in the performance of his duty it is brains and not bluster that must be used, and the main secret is in giving strict attention to details. He may be required to use his legs some, but at the end of the day's labors his brains will require by far the most rest. The detail work a superintendent or assistant may do is not all conceivable to any mind other than his own. It is only the workman's physical efforts that are tangible to conception by all, and each are as distinct in their function of exhibiting labor as it is possible for mental and physical efforts to be.

The daily details demanding attention may consist in deep thinking, designing, in directing, in inspecting and in educating or disciplining men. Altogether there may be hundreds of little things requiring study and concentration of the mind to insure desired results. They are a load which will not permit of rest in study or watchfulness. Its weight cannot be shaken off, sitting or standing. The mind must be impregnated with them so firmly that not a single item can escape having attention or be forgotten. The superintendent or assistant must know to the minute when his attention will be necessary to catch and correct errors in the manipulation of work which, from forethought, he conceives likely to occur. He will foresee and prevent accidents. The expected and the unexpected he will ever be on the alert for. Every person under his supervision is as easily controlled as the fingers of his hands. At any moment he knows what any individual should be doing. You cannot ask him a question that would betray ignorance of the doings of any man under his charge, or what is going on in his department. Surely such accomplishments are entitled to be credited as being no "soft snap." To be a good man for watching details is a very valuable quality to possess. It is equal to having power to design, to instruct, to dispatch work and get the best results out of men.

A man having all the above qualities combined is a very valuable superintendent or assistant. Too often are some of these qualities found very weak or entirely lacking. It greatly lessens a man's value if by keen thought and watchfulness he discovers details going wrong but lacks the force of character to properly oversee, reprimand and compel the wrongs to be righted.

The close watching of details in every manufacturing establishment by superintendent and assistants is akin in many respects to the duty of a general manager or president, the difference being that what he would lack in numbers would be more than made up by their importance and weight. Should one be neglected there is a chance of it bringing disaster or ruin to the establishment. With him lies the responsibility of the financial success of the firm. He must plan and study to obtain work, and then do the same to have it pass through the hands of his assistants in a manner to insure perfection in manufacture. He must be in touch with the outer world and know all that is going on, especially in his own line. If other competitors are able to undersell his firm, he must endeavor to make changes in his mode of manufacture that will admit of competition with a profit. All superintendents and assistants look to him for instruction and advice in all important transactions of their respective departments, and in all that is great and masterly concerning the establishment. He is the first to decree what shall be done, and is responsible for its enactment. Be he assistant, superintendent or general manager, he will find it is the little details of his duties that give him the most labor, and to insure success they must be as closely watched and attended to as the large and important ones.

The regular monthly meeting of the Western Foundrymen's Association will be held on Wednesday, December 20, at 7.30 p.m., in rooms 702 and 703 Temple Court Building, corner of Dearborn and Quincy streets, Chicago. Hon. E. A. Wheeler of Sharon, Pa., will read an interesting paper on "Furnace *vs.* Foundry Practice." An amendment to the by-laws governing propositions for membership will be acted on. Secretary B. M. Gardner, 1437 Monadnock Block, Chicago, earnestly invites all foundrymen to be present, whether members or not, and to take part in the discussion.

The Industrial Society of Copenhagen, Denmark, will hold a special exhibition in January next, of such new inventions as may be considered likely to be useful in the kingdoms of Denmark, Norway and Sweden, and espeecially such as may be of service to the handicrafts and industries of those countries. The object of the exhibition, says a European exchange, which will be held in the premises of the Industrial Society, is said to be partly to give native and foreign inventors and holders of patents an opportunity to make their inventions known in the three countries above mentioned, and partly to give mechanics, artisans, owners and managers of industrial establishments and others a convenient opportunity to convince themselves of the nature of the inventions exhibited, as well as the latest advances in their special branches. Applications for space, for which no charge will be made, may be made to the Industrial Society, Copenhagen, V., or to the Copenhagen Patent Office (Kjobenhavn's Patent Bureau), 48 Vimmelskaftet, Copenhagen.

Dr. Coleman Sellers of the Niagara, N. Y., Power Company; Secretary W. B. Rankine of the Construction Company, and William Sellers, Jr., recently witnessed cable manufacture at Philadelphia, which may result in a new industry for Niagara Falls. The cable making is known as Tatham's patent process of manufacturing electric cables and incasing them in a lead covering. It is designed for the transmission of electrical energy and for placing in conduits and subways. James Tatham, the owner of the cable making patents, is a member of the firm of Tatham & Bros. of Philadelphia, the oldest lead pipe and shot makers in the United States. Mr. Tatham has expressed his intention, in case this style of cable is adopted by the Cataract Construction Company, to erect a big plant at Niagara Falls for its manufacture, to supply that city and the Western market. P. C. De Sangue, representing them, has been in Niagara Falls looking for a suitable site. It is very probable that the plant will soon be established.

On Tuesday, the 5th inst., the semi-annual meeting of the Tinned Plate Manufacturers' Association of the United States was held in its headquarters in the *Times* Building, Pittsburgh. The proposed reduction in the tariff on tin plate from $2\frac{2}{10}$ cents per pound to 40 per cent. ad valorem was thoroughly discussed by the manufacturers present, and it was the sense of the meeting that if such reduction was put in force it would materially injure the tinned plate manufacturers all over the country. It is probable that in the near future a committee of prominent tin plate manufacturers, in conjunction with Secretary John Jarrett, will go to Washington for the purpose of endeavoring to have the present duty on tin plate retained.

An iron valve weighing 6500 pounds has been made at Troy, N. Y., for a Havana sugar mill, which is claimed to be the largest valve ever constructed.

New Boiler Makers' Tools.

The Manistee Iron Works Company of Manistee, Mich., have placed two new tools on the market for the use of boiler makers, which are herewith illustrated. The power flanging clamps, Fig. 1, are stated to be a new departure in boiler makers' tools. The machine is a great saver of time and expense in flanging sheets. It is also useful for taking the twist out of sheets and straightening them after flanging. Both ends of the machine raise and lower alike, so that the jaws are parallel, no matter where the work is placed. The beams are 10 feet long in the clear and 30 inches deep. The upper one can be raised or lowered 18 inches at a speed of 2 feet per minute, driven by two 4-inch belts, one crossed and the other straight. These beams are so constructed that a pair of dies for flanging the inside or outside corners of fire box rings or other irregular shapes can be bolted on at right angles and projecting far enough to enable the strikers to turn the flange comfortably. The ends of the beams are recessed 4½ inches to allow for returning a flange. The weight without dies is 11,000 pounds.

The other machine shown, Fig. 2, is a beveling shears for chipping boiler plate. The upper blade is on the extreme end of the lever, so that there is nothing to obstruct a perfect view of the work, and it also enables the operator to chip as close as a 2½ inch flange on connections as small as 10 inches diameter by 24 inches circle. An extra convex lower shear blade is furnished for this purpose. The machine is powerful and very compact, occupying a space of only 4 x 6½ feet. It is 3 feet 3 inches high from floor to lower blade. Two sizes are made. No. 1, weight 4500 pounds, is suitable for ⅝ inch plate; No. 2, weight 5800 pounds, for 1-inch plate. Thanks are due the *Boiler Maker* for the use of cuts.

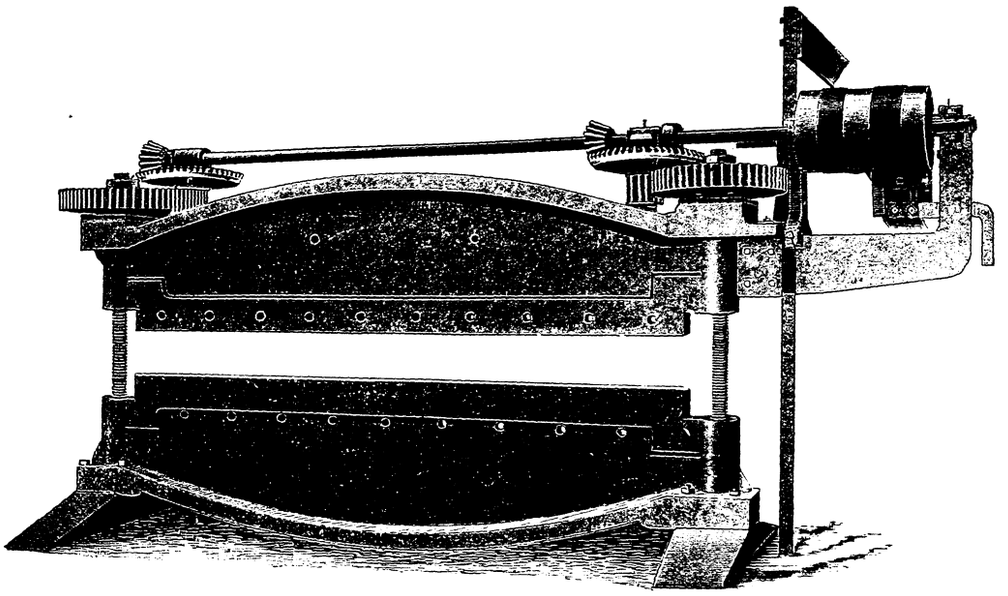

Fig. 1.—Power Flanging Clamps.

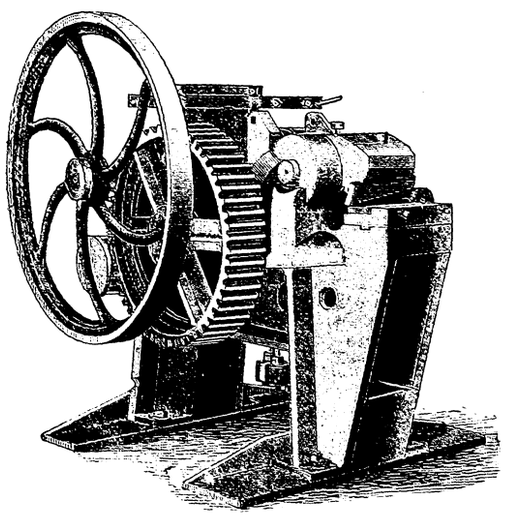

Fig. 2.—Beveling Shears.

NEW BOILER MAKERS' TOOLS.

The Westphaelische Union Company (Hamm, Germany), who employ several thousand hands, have recently made arrangements with Daniel Edwards, Swansea, Wales, through the latter's representative, E. G. Edwards, to replace all their tinning processes by that of the Edwards method. The above firm, one of the most progressive on the European Continent, arrived at this decision after careful study and protracted practical tests of different systems.

The Fair Buildings Will Stand.

The World's Fair buildings at Chicago will not be torn down and removed as summarily as has been expected. The exposition authorities have made an agreement with the Park Commissioners, controlling Jackson Park, in which the fair was located, by which the latter release the former from all obligation to restore the park to its original condition. The exposition directory will pay the Park Commissioners $200,000 for the release and relinquish possession of the park on January 1. State buildings are, of course, not included in the transfer of property to the Park Commissioners, but all the great and small structures erected by the Exposition Company are transferred, including the Administration Building, Machinery Hall, Mines and Mining Building, the Terminal Depot, the Electricity, Liberal Arts, and Agriculture buildings; the peristyle and its annexes of the Casino and Music Hall, forming the great court of honor, which in architectural effect has never been equaled; the Transportation, Horticulture, Fisheries and Anthropological buildings; the Art Gallery, the Convent of La Rabida, the Shoe and Leather Building, Stock Pavilion, barns, band stands and pagodas. If any salvage is realized from the sale of material in these buildings in the course of time it will now inure to the benefit of the Park Commissioners. They can take plenty of time for this work and can await a more propitious period in which to offer the several structures for sale. When the fair buildings were in process of erection the exposition management intimated that a good round sum would be realized from salvage, but that hope was abandoned long since, and it was deemed inevitable that heavy loss would be incurred if the buildings were torn down during the coming year and

Hosted by Google

the park restored to its old condition. In the contract just made there is a stipulation that the city of Chicago may be permitted to remove the Manufactures and Liberal Arts Building, if arrangements are made for its re-erection elsewhere.

Recent Progress in the Manufacture of Steel Castings.*

BY H. L. GANTT, ELIZABETH, N. J.

When I spoke of the condition of the art a few years ago, probably but few realized how very few years were really meant. The first soft steel castings, such as are used for gun carriages, that were made in this country, and which were subjected to a ballistic test, were made in 1886 and 1887, by the Midvale Steel Company, who were the pioneers in this work. The ballistic test was considered severe at that time; but to-day the ordinary soft castings made by almost any one of a dozen of the best steel casting companies would pass it successfully.

Though it was about 1886 or 1887 before any large increase took place in the use of steel castings, they had been successfully made in this country at least as early as 1867.† In July of that year, the Wm. Butcher Steel Works, now the Midvale Steel Works, cast some crossing frogs for the Philadelphia & Reading Railroad, of crucible steel. The molds were made of ground fire brick, black lead crucible pots ground fine, and fire clay, and washed with a black lead wash. The surface of these castings was very smooth, and the metal, which was practically tool steel, was so well adapted for the purpose that some of the castings made in those early days are said to be still in use.

This was before the use of silicon for solidifying steel was known, and the castings were very much honeycombed in all parts except the wearing surface of the frogs, which was "cast down." The possibility of getting one face of a casting approximately solid admitted of the use of steel also for hammer dies, although their general sponginess was a great obstacle to their extensive adoption.

On April 28, 1876, two small hammer dies were made of open hearth steel at the same place, and on May 29 a hammer head weighing 2535 pounds was made. As long as castings were small, the molding mixture of ground brick, ground pots and fire clay was satisfactory, but on large castings made with that facing the surface was very imperfect, and the sand adhered to it with great tenacity. But little improvement in the method of molding was made for some time, and while the quality of the steel was gradually improved, the appearance of the castings was decidedly against them, and but little progress was made in their introduction.

The next step taken by the Midvale Steel Company was to leave the ground pots out of the molding mixture, and to wash the mold with finely ground clay fire brick. This was a great step in advance, especially in heavy castings, and a marked improvement took place in their general appearance, but the mixture still clung so strongly to the casting that only comparatively simple shapes could be made with certainty. A mold made of such a mixture became almost as hard as fire brick when dried, and offered so much resistance to the proper shrinking of castings that, when at all complicated in shape, they had so great a tendency to crack that their successful manufacture was almost impossible. The next step was to use a mixture of silica sand and flour. In small castings this gave pretty good results, as such a facing cleaned off the casting very readily, leaving a smooth surface much superior in appearance to that left by the ground brick. The great difficulty in the way of the extended use of such a facing was the tendency of the flour to burn in drying, leaving the sand without a proper bond, and often the burnt mold was so friable as to be entirely useless. In the case of large castings it was almost impossible to dry thoroughly the whole mold without burning that portion nearest the fire, and for such work flour was necessarily abandoned.

By this time the use of silicon for solidifying castings was becoming general, and the only obstacle in the way of making good steel castings was the want of a suitable molding sand. This was ultimately found in a mixture the principal constituents of which were silica sand and molasses thoroughly ground together.

The improvement in the appearance of castings caused by the use of a sand that left a clean, smooth skin was the cause of their rapid adoption; and the year 1887, when the Midvale Steel Company made the first gun carriage castings of steel, is approximately the date at which their rapid extension began.

At this time the necessity for hot metal did not seem to be understood, and castings frequently contained blow holes, when it seemed that all the conditions for making them perfect had been complied with. It was noted before a great while that small castings contained more holes than large ones, and that those poured last on a heat were worse than those poured first. The conclusions that hot metal was needed to make solid castings, and that smaller castings needed hotter metal than large ones, were soon deduced and amply verified. Apart from these considerations, the superior appearance of castings made from hot metal was sufficient to cause all steel casting makers to work in that direction. The difficulties in the way of getting uniformly hot metal are hard to overcome in an open hearth furnace. The delay caused by a slow or difficult tap of the furnace, which is always liable to occur, is fatal to the production of the best castings. Besides what has already been mentioned, cold metal in the ladle is to-day the cause of more complaints by purchasers and expense to the manufacturer than anything else in connection with the manufacture of steel castings. I will enumerate a few of the troubles that may be traced directly to this cause. What is known as a "bad shut off," or a leaky stopper, is usually caused by a small amount of metal chilling in the nozzle and preventing the stopper from going to its place. In cases where the dribble is slight the worst effect is that a small amount of metal runs into the mold while the ladle is being gotten over the runner. This metal is apt to chill, and make a bad looking spot on the casting, or, in the case of small castings, block up the runner entirely, and cause the loss of the mold. When the leak is very bad it not infrequently happens, especially when the heat is a large one, composed principally of small castings, that the flasks are covered by the molten steel and so strongly fastened together that it is almost impossible to separate them from the steel without considerable loss by breakage. Again, by a careful study of the subject, I feel that I have been able to lay to the door of cold metal one of the most fertile sources of complaint which steel founders have met with—namely, lack of homogeneity, which includes both hard spots and loose places. I use the term "loose" rather than spongy, for the reason that I do not so much mean a cluster of holes as a spot where the metal simply seems less dense. Such places, without any visible continuous hole, or even without anything that would indicate the existence of such a hole, allow leaks in hydraulic cylinders, and cause the failure of a test bar.

When we consider more in detail the process of making open hearth steel castings, we see why these defects are more apt to occur in cold than hot metal. While the metal is being tapped from the furnace, the silico-spiegel necessary to prevent blow holes is generally thrown into the ladle, usually in the solid, though heated, state. If the metal is very hot, and consequently thoroughly fluid, the silico-spiegel is dissolved at once and uniformly disseminated through the mass. If, however, the metal should not be so hot, it is easily seen that the silico-spiegel may not become at all thoroughly diffused, and the slightly viscous metal in the ladle may be the reverse of homogeneous, in which case the resulting castings may be very far from what is hoped for. It is now the practice in the best foundries to melt the silico-spiegel, and these defects in their worse form are thus practically eliminated.

Why hard spots should appear in cold metal is readily seen, for lumps of partially melted silico-spiegel would certainly form the nuclei for such spots; but why the loose places should occur is not quite so apparent. It may be noted that the loose places appear to a more marked extent in large masses than in small ones, and the most reasonable explanation seems to be that the silico-spiegel, which is but imperfectly melted when the metal is poured, finally melts thoroughly after the metal is in the mold, which can only occur in very heavy castings, forming a spot higher in carbon, manganese and silicon than the metal surrounding it. Such a spot would have a lower melting temperature than the adjacent metal and would remain partially fluid after the other metal was set. The result of such a condition would be to drain away a portion of the fluid metal to feed the shrinkage in the metal solidifying about it, leaving a more or less spongy spot.

That shrinkage holes and cracks do still occur in steel castings is well known, but the success that founders have had in casting complicated shapes within the past year or two has been surprising. The fact that a steel casting must cool at the bottom first, and then gradually upward in the mold, is being learned by designers; and shrinkage holes are becoming less frequent, for the founder at once fixes on the heaviest portion for his sink head, which is usually about 20 per cent. of the total weight of the casting, and which must remain fluid until the whole of the casting proper is solid.

By a strict observance of the rule that

*Presented at the New York meeting (December, 1893) of the American Society of Mechanical Engineers.

† This historical note was furnished some time ago to Edwin H. Cramp to go into a paper he purposed to write on the subject of steel castings, but it has seemed to me to be of sufficient interest to publish it here also. If any member has any additional information on the subject, I should be glad if he would add it in the discussion.

Hosted by Google

a steel casting should, as far as possible, be of uniform thickness throughout, it has been posssible to make within the past few years castings 20 feet long by 10 feet wide, which would have been considered impossible a few years ago. To one unfamiliar with the details of the process of making steel castings, the statement that to-day we can get large steel castings that are perfectly satisfactory, while it is almost impossible to get good small ones, would seem very strange. It is, however, a fact, and the explanation is simple. Most steel castings are made by the open hearth process, and the furnace usually melts from 5 to 20 tons. To pour even 5 tons of steel into castings averaging 100 pounds in weight would, as a rule, take so long that those poured last would be of inferior quality on account of the cooling of the metal. As a rule, a large portion of the heat is poured into a comparatively few large castings, and the remainder put into the smaller ones. If the metal is very hot to start with this may give fair results, but in all cases the least desirable metal is put into the small castings.

This difficulty seems almost insurmountable by the open hearth process, but is readily overcome by a small Bessemer converter, from which we can get 2 or 3 tons of metal as hot as we may wish it. Add to this the fact that we can get from the converter that quantity of metal of any composition we may desire every half hour throughout the day, and we realize the advantage of the Bessemer process for making small and medium weight castings. The manufacturers of electric motors who have been buying their castings from open hearth foundries have apparently not realized what the Bessemer foundry has in store for them. It seems hard to believe that perfectly solid steel castings can be made of the following composition with regularity: Carbon, 0.12 per cent.; manganese, 0.30 per cent.; silicon, 0.30 per cent., but it is a fact. It may be noted, however, that this steel, while very well adapted to electrical purposes, is of but little value for any miscellaneous castings, except very small ones, on account of the tendency it shows to crack during the process of solidifying, when cast in shapes at all complicated.

The fact that we can make a number of different kinds of steel each day if we use a converter, and but two or three heats at the most in 24 hours if we use an open hearth furnace, gives a great advantage to the founder using the converter, especially if he is making all kinds of steel castings, enabling him, as a rule, to make far more prompt deliveries than is possible for the open hearth founder doing the same variety of work.

Among the other advances made in casting steel may be mentioned one for making a casting having one or more faces of a steel much harder than the body of the casting. The process consists in lining such faces of the mold as will be adjacent to the parts of the casting it is desired to harden with a metallic alloy in a crushed or powdered state, capable of being melted and absorbed by the molten steel in contact with it, and of such a nature as to impart to the steel a hard face, or a face of such a composition as may be readily hardened. If it is desired that the casting shall have a permanently hard face and be used for stamp shoes, crusher jaws, hammer dies, &c, ferromanganese gives the best results. If it is desired to do machine work on the face, and make it extremely hard afterward, ferro chrome is most suitable. The fact that it is possible to produce a soft steel casting having a face that can be hardened without causing the remainder of the casting to become brittle will undoubtedly make it possible to use steel castings in place of chilled iron in many places with great advantage.

Discussion.

H. A. Royce, general manager of the Thomson Electric Welding Company, described some experiments which they had made to remedy the evil effects produced by blow holes. The object aimed at was, when a blow hole was discovered, to fill it with steel in such a way as to make a perfect union between the plug filling the blow hole and the mass of steel itself. They had been able to do this successfully both from a commercial and practical point of view, and their process had proved to be not only perfectly efficient but economical as regards cost and time and resulted in the saving of many castings which would otherwise have been considered useless. He stated that this method was more or less in use in Russia and had been introduced quite extensively and on a commercial scale in England.

Their first experiments consisted in the employment of the electric arc, the mass of steel forming one pole and a carbon, held at the blow hole to be filled, forming the other pole. The formation of the arc by the current passing between these two poles furnished heat sufficient to melt small steel scrap or filings introduced into the hole. But this method was not successful, because of the chilling action of the walls of the hole on the plug of steel introduced into the hole, and the union between the two was therefore not perfect. Success of the most perfect description was obtained by heating the mass of steel in an oil or gas furnace and then utilizing the electric arc for the melting of the steel filings introduced into the hole. In this way they had succeeded in a few minutes in making so perfect a union between the plug introduced into the hole and the walls of the casting that no line of demarcation was apparent when the piece was planed down.

In answer to a question as to whether the Krupp steel locomotive frame exhibited by the Krupp concern at Chicago could be reproduced in this country in a commercial way in competition with the ordinary forged frame, Mr. Gantt answered that while the first frame produced would probably not pay, an order for a hundred would be remunerative. He saw no reason why three or four firms at least could not make a frame of this character of a quality equal to that exhibited by the Krupps.

Thomas Fitzgerald, one of the superintendents of the Baltimore & Ohio Railroad, and Eben T. White, master mechanic of the same road, are said to have recently patented a device for the construction of locomotive furnaces by means of which air may be supplied in such quantities and at such temperature as to effect thorough combustion of smoke and gases generated in the use of bituminous coal and similar fuel. If so desired, the air may be supplied in three volumes. One of these enters the fire box through the grate bars, generates the gases from the coal and partially consumes them. The other, being previously heated, enters through an air duct into the burning fuel and partially consumes the generated gases, while the remaining volume of air, having also been first heated, enters the fire box at a point remote from the boiler flues and completes combustion with intense heat.

The Brown Automatic Fire Alarm System.

While the importance of a reliable automatic fire alarm system has been recognized for years, the subject has lately received more than usual attention from all interested, from the fact that the losses from fires have greatly increased, and in many sections the insurance rates have also increased. It is conceded by many of the best authorities that a reliable system of this class gives better and cheaper protection against fire than a watchman.

The following have been laid down as axioms to be considered in an automatic fire alarm system:

1. Any system, to be entirely successful, must be of such a nature that any accident to the battery or wiring that will render the system inoperative will at once notify the attendant at the receiving station without sounding a fire alarm. In short, a system must watch itself, and notify whenever it needs attention.

2. It must be prompt and sure to act and entirely unaffected by dust, insects, moisture, foul gases or jarring of the building, &c., and require no readjustments.

In the interests of economy, such a system should require but very little current for its operation and be easily and cheaply installed. Any system which does not embody all these features cannot be entirely satisfactory in practice.

The first axiom not only makes it necessary that the system shall be closed circuit, but that the entire current required to give the alarm shall flow all the time; otherwise the extra batteries and lines intended to be brought into action by the thermostat may not be operative. All closed circuit systems which depend upon breaking the circuit to sound the alarm are subject to the fatal fault of sounding false alarms whenever the line is broken or short circuited by accident. To obviate this, it is necessary that the thermostat in acting shall make some change in the line which is never made by accident, and that the receiving instruments be so arranged as to indicate what change has taken place.

In the system in question, by very simple mechanism, the thermostat in acting reverses the current, instead of simply stopping it. Reversing the current is a change which never occurs by accident; hence the receiving instrument will never indicate fire unless a thermostat has acted. The receiving mechanism consists of a simple electro-mechanical gong, controlled by a polarized armature of the rotary type, to which is attached a pointer moving over a suitable dial arranged to show just what change has occurred in the line. This dial, Fig. 1, is marked "O. K." on its right hand end, below which are the words "Battery Run Down," in the middle "Line Broken," and on the left hand end "Fire."

The magnet and armature are of new design, giving a long movement of the latter, with a very small current. This enables the system to be maintained at a small expense, the common gravity battery being used. The polarity of the armature of this magnet can never be reversed by any of the accidents to which the system is subject, nor will it stick to the poles of the magnet or require readjusting. This armature is

Hosted by Google

brought to center by small weights, which, in practice, are more reliable than springs. An important feature of this apparatus is the fact that the battery current can rise much above or fall much below the normal without affecting the working of the system. This system can be arranged with two bells, one of about 8 inches in the engine house to ring for fire only, the other of small size to call attention to trouble with the line. A large striker is also provided to strike a factory or other large bell one blow to indicate trouble with the line and continuous ringing to indicate fire. This is important in places where firemen are not on duty at all times.

One of the most important features of an automatic fire alarm is the thermostat, upon which to a large degree the efficiency of the system depends. The one illustrated in Fig. 2 is constructed and operates as follows:

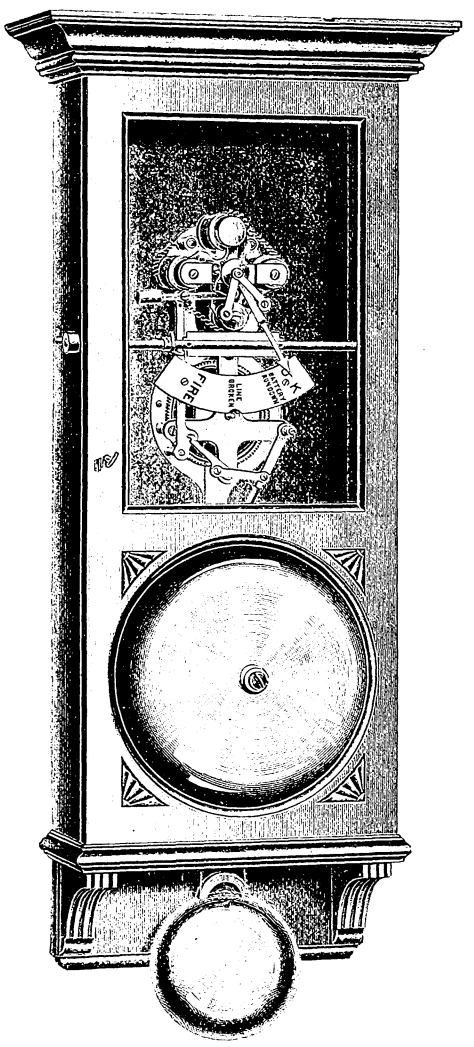

Fig. 1.—Apparatus Complete.

Upon the lower side of a porcelain base are clamped two flat bronze springs, which are held under tension by a fusible solder, the melting point of which can be changed to suit different positions. To the upper side of this base is clamped a plate of vulcanized fiber, through which screws pass into the ceiling to fasten the thermostat in position. In the center of the porcelain base and covered by the fiber plate is molded a cavity which contains electroplated contact points brought into action by releasing the springs. These contact points are punched from sheet brass and riveted to the bronze springs, extending through the porcelain into the cavity referred to, and so arranged as to press against suitable electroplated copper strips connected in such a way as to reverse the current when the springs are released by melting the solder. The working parts of this thermostat are entirely protected from dust and insects. The part sensitive to heat is entirely uncovered and in the best possible position to be affected by direct rays as well as the heated air from a fire, and being thin acts promptly and will never change its adjustment. The contacts being made on clean metal and with considerable pressure are sure to be good, and the electric contacts with the line wire are such as will not become loose or cut the wire. It is unaffected by jarring of the building or the warping of the wood to which it is fastened, nor is it affected by being wiped or brushed.

The action of the system is as follows; In case the battery should be allowed to run down the armature is drawn toward its central position by the weight until the hand points to "battery run down," when the striking mechanism is unlocked and the bell strikes. The attendant, on looking at the dial, sees that the bell is striking because the battery is run down, and to silence the bell turns over the small handle on the left-hand side of the case, which, besides stopping the striker, turns up a card over the dial marked "disconnected," which shows that the system is inoperative. Even under these conditions the system will sound an alarm in case a fire should occur, unless allowed to stand too long. In case of a broken line or short circuit (which in this case is equivalent to a broken line), the same thing takes place, excepting that the pointer indicates "line broken." In this case when the line is repaired the bell again strikes to notify the attendant that the line has been repaired, and the hand points again to "O. K.," the bell being silenced by turning the lever and card back to the original position. In case of fire the bell rings and the pointer is carried to the word "fire," and locked in that position, where it remains until released by the attendant.

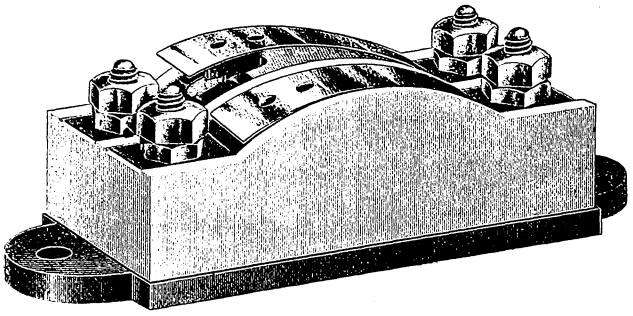

Fig. 2.—Thermostat.

It will be seen that this system is free from relays and local circuits, which in practice have been found to be unreliable. In the arrangement of the annunciator and public alarm bell, with which this system is provided, no element is introduced that can interfere with the action of the engine house gong, bearing in mind that the action of this bell is by far the most important function of the system. With this in view, care has been taken that its action should not depend upon anything delicate or uncertain or be in any way interfered with by the failure of the other instruments. This system was designed by Gilman W. Brown of West Newbury, Mass.

THE BROWN AUTOMATIC FIRE ALARM SYSTEM.

The Foundrymen's Association.

The regular monthly meeting of the Foundrymen's Association was held at the Manufacturers' Club, in Philadelphia, on Wednesday, the 6th inst., with a large attendance of members. In the absence of the president the chair was occupied by the vice-president, Thomas Devlin of Thomas Devlin & Co., Philadelphia. The minutes of the last meeting were read and approved. The Executive Committee reported that a meeting of that body had been held on the 5th inst. at which the affairs of the association, past and present, were discussed. It was their intention to pursue the same methods as hitherto used to collect information of interest, and to bring about a friendly feeling in the foundry trades. The pleasing address made by the president at the last meeting covered the ground, the committee thought, very nicely. The thoughts therein expressed for the future welfare of the association would be carried out as nearly as possible. A number of subjects had been presented to the association for discussion from time to time during the past, the one unfinished being "Chemical Analyses." The secretary was getting information from different chemists in regard to charges, in order to get the cost of determinations on a sliding scale according to the number of determinations made. The number of determinations likely to be required would then be ascertained, and in this way it was hoped an arrangement could be effected which would allow of members getting determinations at a minimum of cost.

The subject "Molding Machines, and How Far They Can Be Used Successfully," would be taken up at the December meeting of the association, and manufacturers of these machines would be invited to attend the meeting to present their respective claims and answer questions. The committee hoped that the present depression in the foundry trade had reached its limits and that the demand for castings would improve. The passage of the repeal bill by the Senate, although coming late, would help to restore confidence in the financial world, and the voice of the American people in favor of protection, as decided by the late election, was very significant. It would probably do more than any one thing to prove that protection was wanted in this country. The committee believed that when the next Congress met it would look at the large majorities in New York, Ohio, Massachusetts, Iowa, Pennsylvania and

Hosted by Google

New Jersey as a reminder that the tariff issues as set forth in the present Mc Kinley bill were satisfactory and would come to the decision that it would be best to "let well enough alone." The report was, on motion, received and ordered to be entered upon the minutes.

Secretary Evans announced that he had secured information as to prices on a sliding scale at which analytical determinations could be obtained, and read a number of offers from chemists in New York and Philadelphia.

Mr. McKenna of the laboratory of Dr. Gideon Moore, New York, was present and in the course of a few remarks said that he would encourage the members in the idea of some day using research, and they could be assured that it would prove a benefit to them. The results of daily tests could be compared and used to the benefit of the association just as well as if the work done was research work. The results of research work were, he said, far reaching. There were technical concerns in Germany keeping a force of 20 chemists on purely research work, and in the case of competitors taking their trade away those chemists would rapidly place them in the possession of facts which would bring back the lost trade. In days to come the association would not regret the employment of chemical talent.

W. C. Henderson, chemist for Thos. Devlin & Co., in regard to an arrival at the number of determinations likely to be required by the association, said that it would be utterly impossible for any member to state exactly how many determinations he would require. The number would depend on the kind of trouble he got into. If his castings were going wrong he would probably require an analysis of them.

Mr. Whitney of A. Whitney & Sons, Philadelphia, manufacturers of car wheels, said that his firm obtained about 2000 determinations last year.

Mr. Henderson said the determinations made for his firm would amount to from 1500 to 2000 in one year, and then he considered they were not having as many as they should have. After discussion the matter was, on motion, referred to the Executive Committee.

The Condition of Trade.

The report of the Price Committee being next in order, Stanley G. Flagg, Jr., of Stanley G. Flagg & Co., Philadelphia, for the small gray and malleable iron castings section, reported that business continued in the same condition as when last reported. He had nothing of interest to present to the meeting. L. B. Whitney of A. Whitney & Sons, Philadelphia, for the car wheel section, and Geo. P. Smyser of E. G. Smyser's Sons, York, Pa., for the structural iron work section, had nothing to report.

P. D. Wanner of the Mellert Foundry & Machine Company, Reading, Pa., representing the cast iron pipe section of the committee, reported that business was getting worse. Prices on cast iron pipe were simply out of sight and were really panic prices. If anybody had told him five years ago, or even six months ago that such prices would prevail he would not have believed it. He did not think for one moment that pipe could be made at the prices it was being offered at. He said there had been a letting at Washington and another in Philadelphia. Something like 26,000 tons were given out in Philadelphia, and contracts were taken at a very low price, 1 cent per pound, delivered on the street, being the figure for some of the pipes. Since that letting contracts for 70,000 feet of pipe had been given out at Washington, 40,000 feet of 12-inch and 30,000 feet of 6-inch. Most of the pipe manufacturers from all over the country were on hand and those who bid made very low bids; one bid was $20.70 per gross ton, delivered at Washington. This price he thought was a record breaker. How could anyone suppose cast iron pipe could be made at that price unless the pig iron men furnished the iron for nothing? He presumed those that had pipe on hand were anxious to get get rid of it and were giving it away. Two thousand tons of the Philadelphia pipe, he said, was taken by the Alabama people. Facts like these, he thought, were hard to account for. A great State like Pennsylvania, with all its coal and its iron, being passed on iron pipe! There was something entirely abnormal about it. The trade will get back again one of these days; it cannot help doing so; but some will have to suffer in the meantime. Those present could figure for themselves as to what the pipe was being put in at and as to what the loss was. He noticed in the Executive Committee's report a reference to the tariff question. He did not want to branch out on that question, but thought it was a matter of greater importance to them at this time, as foundrymen and citizens, than any other question, and it occurred to him that if the members of the association wished to assert themselves as citizens and patriots during the next three months they should take up the question and discuss it. He was a protectionist, and, as such, was no politician. He was of the opinion that the tariff question should always be left out of politics. Any question that strikes at the interest and welfare of all citizens cannot well be a political question, although such it is made. He thought the association should take up the question for discussion and urge the speedy determination of the matter. The Wilson bill, or new tariff bill, now before Congress, must, he said, be passed or dealt with without delay, or be abandoned. He had stated at previous meetings of the association that manufacturers were reduced to a point at which they could stand no further reduction, and that the next cutting to be done would be on labor. The point had been reached where such a step would be forced on them. If, as manufacturers and employers, they did what they should do, they would drive the issue to a point and drive it speedily. For this reason he thought they all should come together to talk the matter over in order to arrive at a conclusion in regard to an endeavor to force the issue.

Asked by Mr. Flagg where the balance of the pipe order, part of which went South, was placed, Mr. Wanner replied, "It went to New Jersey. New Jersey has not a great deal of iron, but has a considerable amount of sand."

R. A. Register of Register & Sons, Baltimore, Md., for the cast iron soil pipe section of the committee, reported progress. He thought the reason why pipe comes through the State of Pennsylvania might be that the freight on manufactures of iron from the South was less than on pig iron. That he knew to be a fact. Pipe from Alabama could be freighted at 40 cents a ton less than pig iron.

Secretary Evans then, under the head of new business, announced that the association would take up the subject of "Molding Machines." He said he had a number of letters from people who were making molding machines, and Harris Tabor, representing the Tabor Molding Machine Company of Elizabeth, N. J., had been asked to read a paper on the subject before the meeting.

Mr. Tabor then read the following paper:

Molding Machines.

Although molding machines are not new in their application, they are comparatively little understood except in a few branches where there is great duplication of castings. It is probable that no mechanical subject of such vital importance to the metal trades has been discussed as little. This is due largely to the fact that the mechanical departments in foundries, as a rule, are more thoroughly under the dominion of one man than any other branch of the iron industry; and this man is usually one who has been trained in his method of molding and does not care to try others. There is a certain mystery about the art which he thoroughly understands, and in this knowledge lies much of his capital. His shop education has been that of apprentice and journeyman, generally varied by experience in different foundries, until he is selected as foreman. His work has always been that of judgment rather than measurement. He knows where molds should be rammed hard to prevent "strains" and where soft to avoid "blows," and his touch will indicate when these densities are right; but he has no instrument or tool which determines these conditions for him. It is a question of judgment purely, a judgment which must indicate the location and force of his rammer's blows. In a good molder this judgment is almost infallible; in a bad molder—well, we all know what it means by a reference to the scrap heap.

This peculiar judgment or skill, which all molders possess to a certain degree, and some to an extent which seems like inspiration, tends to make the average foreman skeptical, one might say superstitious, when it comes to considering other methods. His training has been away from machinery rather than with it, and when the proposed innovation takes the form of a machine his objection is intensified. In such a case if the manager takes his cue from the foundry, the chances are that machine molding will not be thoroughly discussed, and nothing short of seeing machines in operation will remove doubt.

Since metal has been wrought the foundry and machine shop have existed side by side, generally under one management. Of the two the foundry is the older; in fact, metal was cast in molds before machines were built. The foundry has always been the feeder to the machine shop, and as long as cast iron enters into construction it will continue to hold the spoon. It should come first, with the machine shop a second; but does it? In the early days of these kindred industries the molder rammed his molds much the same as he does now; he drew his pattern with the same old spike, and he used similar slicks and trowels to mend broken molds; the swab pot and brush possibly then helped to make his kit. It is true his patterns are now better fitted and in many foundries carefully matched and gated, but beyond these improvements, if we except cranes and cupolas, there has been but little change. The machine shop, in its primitive days, was equipped with hammer, chisel and file, and these tools

Hosted by Google

are still the reliance of an occasional old time vise hand, but they are used on jobs which cannot be machined. The drill press, lathe and planer revolutionized the machine shop years ago; in more modern times the milling machine, turret lathe and jig system have made a still greater transformation, and the end is not yet. Nearly all machine shops of fair size have their tool rooms in charge of men who have a genius for reducing labor cost, whose sole duties are to design and make labor saving tools and appliances. No reduction in cost is considered too small after the fact is established that a saving may be made. If a job go into the machine shop on which a drilling jig will save three or four hours, that jig will be made. But if an order for twenty-five castings go to the average foundry and the use of a follow board would save ten hours' labor, the chances are that the follow board will not be made, and the molder may spend what might have been profit on the job in building up a difficult joint.

In each of these departments there has been a marked progress made in the production per man: greatest in the machine shop. But how has it been made? In the machine shop there has always been an eagerness to accept anything which would displace hand labor and skill and lessen cost. Special machines and tools have taken the place of old methods, thereby making the product better and cheaper, and at the same time making the lot of the workman easier. Improvements have been encouraged and nursed from the management down.

How has the increased production come to the average foundry? Not so much by the introduction of machinery or improved methods, but rather by a system of piece work which makes the individual workman a sort of proprietor and induces him to do his best. In many foundries this has been followed up by teaching a laborer to mold a single pattern, thus further reducing cost. The labor in molding has not been much reduced, but the amount of work done per man has been increased.

The proprietor of a malleable iron foundry making steam fittings in the West once said to the writer that he could not see his way clear to getting another mold per man for a day's work, nor could he reduce the cost per mold, yet his competition was so close that profits were much too low. Under such conditions the manager of a machine shop would consider any plan which promised to reduce labor cost 10 per cent., and he would even take some chance if there were any doubt in his mind.

During the present year we furnished several duplex molding machines to a foundry which is run in connection with a machine shop. The foreman of this foundry said, in a conversation on the subject of machine molding, that his superintendent had just spent about $3000 for a special machine which would save a part of the cost of tapping, and he supplemented this statement by adding that he had said to the superintendent if he could have another molding machine at a cost of about $1000 he would save more in the foundry than the entire cost of tapping, of which the special machine would save only a fraction. He finished with: "But this is the foundry and must wait."

If we go into design we find there the same discrimination against the foundry and in favor of the machine shop. I doubt if there be a founder present who does not occasionally get patterns which were made with a view to saving labor in the machine shop without a thought of the foundry. This is often carried to the extent of making patterns from which it is almost impossible to get good castings, when a little thought given to the foundry end would save much trouble and cost. While the conditions thus far considered may be said to have no direct bearing on the subject of molding machines, they have had, and do now exert, an influence which tends to create a prejudice against the adoption of such machines in some quarters.

As your association is interested in what may be termed the commercial merits of this subject, the question will be discussed from that standpoint as nearly as possible. There are certain conditions which are necessary to the production of economical work from molding machines.

1. There should be a reasonable number of castings made from one pattern, or set of patterns, and this number will depend on the class of castings and cost of molding same by hand. If the patterns to be molded are 1-inch elbows, of which a smart bench molder will put from 600 to 1000 per day, depending on the foundry he is working in, and at a cost of from $\frac{3}{10}$ to $\frac{4}{10}$ cent per elbow, this number must be much greater than if larger elbows, which cost 10 cents each for molding, are considered, and the saving over hand work will be less in the case of the smaller elbows. This duplication should be estimated from the cost of molding, not from the number of castings to be made.

2. The kind of castings to be made must be reckoned with work which requires a three-part flask, and patterns with too many drawback or pick out pieces are better left to the hand rammer. The first case is impracticable on a molding machine, and the saving in the second case might not justify the cost, unless the castings are expensive to mold. Economy in machine molding is reduced when core setting comprises a large part of the time needed to make the mold, although in such a case the core setting may be done by help independent of the machine.

3. Molding machines should not be introduced unless they can be given the same care that is given machinery elsewhere. They do not require much, but this little is indispensable if one would get good work from them; they should be oiled occasionally and never be allowed to get under the sand, as we occasionally see them. Nor should one be considered unless the management is prepared to give it a fair chance in the way of seeing that the sand is properly tempered, and the operator otherwise encouraged. To the green laborer on a machine cold sand will convey the impression of dampness to the touch, and warm sand the reverse, and until experience has taught him to discriminate between good and bad temper others should advise him.

What class of castings are adapted to machine molding? The answer to this question depends much on the ingenuity and persistence of the pattern maker and the force of the management back of him. In one foundry indifference may limit the profitable range by one-half, and in another enthusiasm may carry one too far. It is safe to assume that nearly all castings molded in a two-part flask are good work for machine molding. Irregular joints are as well made on a machine as by hand; the only question to settle is will the number of castings to be made warrant the cost of patterns? Naturally you will want to know the cost of patterns and stripping plate. It is a hard question to answer, for the reason that cost varies with patterns. When much duplication is called for it is better to have iron patterns. You know pretty well what these cost. We know that the stripping plates cost less than patterns. In considering the cost of patterns we should keep in mind the fact that one pattern or set of patterns fitted to a machine will give an amount of work equal to the product of from two to ten molders, and that these machine patterns call for little or no expense in the way of repairs. It is probable that a cost account kept from year to year would show in favor of machine patterns.

What is the profit from machine molding and how is it made? This is the vital question, in which you are all interested. An answer to the first part would show as great difference in foundries throughout the country as their respective cost accounts now indicate. A few months ago your association appointed committees to investigate competing prices for castings by obtaining bids from different parties for similar work. The resultant quotations seemed to indicate that some foundries were getting rich and others approaching bankruptcy at a rapid pace, yet there might have been enough difference in the cost of these castings to warrant a wide range in prices. The foundry which has spent years in developing a specialty is prepared to make cheap castings. Its patterns are well made, flasks designed to hold a minimum amount of sand and the workmen skilled in this branch of molding; piece work has been followed until the lowest price for molding has been reached; all energies have been devoted to reducing cost on these particular castings. Such a foundry may quote prices which carry a fair profit, but would mean ruin to a foundry less favorably equipped. These conditions have an influence on the economy of machine molding. It is evident that the saving in cost would be less in a foundry where 1000 1-inch elbows are molded per man than where 700 are a day's work. On castings of this kind where minimum cost of hand molding prevails the reduction should be one-half. As castings are larger and molding is more expensive the economy from machine molding is increased. We have cases where the cost has been reduced from 10 to 2.

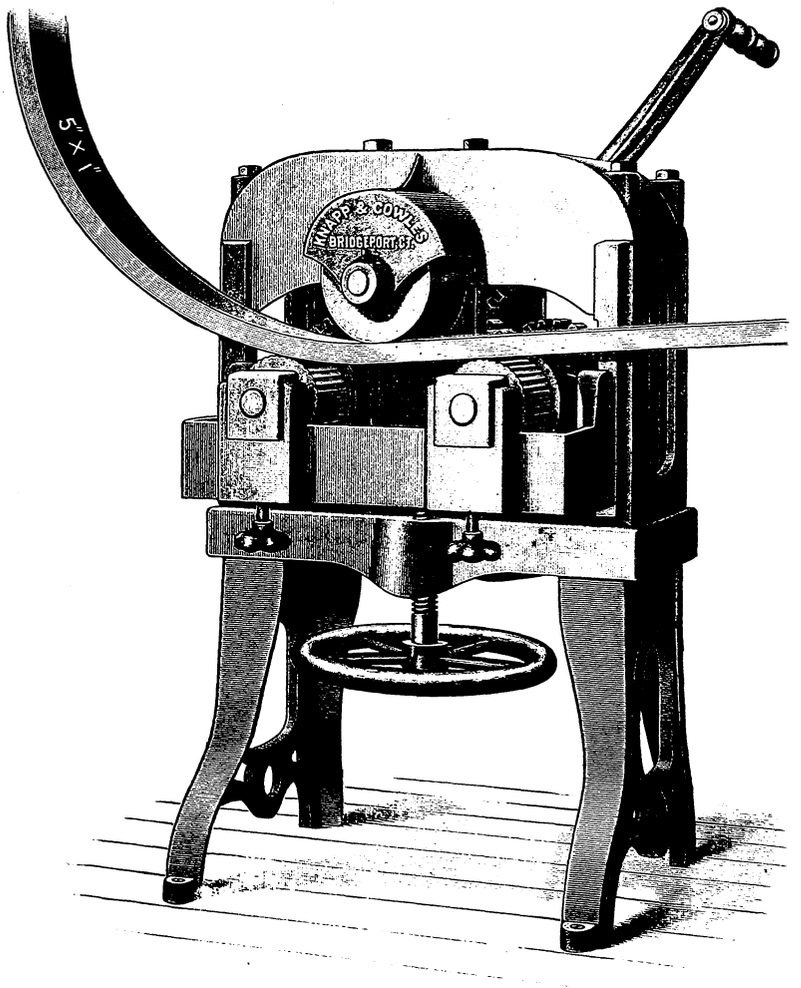
The gains from machine molding are not confined to an increased product per man. Labor with less skill is used. In the sense that the machine operator need have no knowledge of molding, skill is not required, but in the broader sense the expert machine man is skilled to the extent of being apt in his movements, reasonably careful and knowing just when and how to do it. These qualities are so easily obtained that it makes the labor question comparatively easy.

Machine molding adapts the foundry to trade conditions. In busy times additional help may be given the machines to increase their product, and in dull times this may be reversed. Take, for instance, a 16-inch duplex machine, with flasks 12 x 15 inches, with six 2-inch elbows in a flask. The best product per man would probably come when the machine is operated by one or two men, but this number may be increased to four men with but very slight decrease in the number of molds per man. This particular machine is running on steam fittings. It was shipped, with

Hosted by Google

another like it, in the early part of the year. We do not know the number of molds it is turning out now, but we do know that the owners wrote us, shortly after it was started, saying that they were then paying 1¼ cents per mold for molding, core setting, carrying off molds, closing and pouring. The machine was operated by two men. These people also wrote that these men were then putting up over 250 molds per day, and they could see no reason why they should not mold 350 when they became more used to the work. The sand was all handled with shovels by the operators. In this foundry the blast goes on at two o'clock, which reduces the molding time to six hours. If the molds made by these men were poured for them, and they were given a little help occasionally to handle the sand, they would turn out twice the number.

We have considered machine molding as it is applied to the average foundry without surrounding advantages. The best and most profitable work from this system calls for a rearrangement of foundry and greater division of labor. Continuous pouring should take the place of two-hour heats when practicable, and when not, two heats per day may be substituted. Either of these plans will reduce the number of flasks required by one-half. The machine should be run ten hours per day and the molds should be poured by other help. There should also be a force to take out castings and handle the sand. This will reduce the skill and judgment needed in each workman to a minimum and will make them proportionately more efficient. This problem calls for change in gray iron foundries, but in malleable iron and brass foundries, where frequent melts are made daily, the conditions for an ideal system are favorable.



Mr. Taylor then proceeded to describe the machine shown in his drawing, both as regards construction and operation, and greatly interested all present. A discussion followed, after which the secretary introduced John Fleming, a molder in the employ of the Abram Cox Stove Company, Philadelphia, who exhibited a model of a machine for molding plumbers' soil pipe.

"This model," said Mr. Fleming, "represents a machine which has never been tried in actual use, not one having yet been built. As will be seen, it consists of a stationary follow board with a sliding jacket worked by two connecting rods operated by a lever. The machine is covered with an inclosed flask. In operation the jacket is raised above the pardon line of the follow board, is filled with sand, and the flask put on and locked. The levers are then pulled down, the flask taken off, and the process repeated for the other flask. It is intended also for use on soil pipe fittings or any work that a two-part flask will make. The sand in the machine," he said, "can be regulated to a nicety."

On motion a vote of thanks was tendered to Mr. Tabor for his interesting paper, and to Mr. Fleming for his model and description.

L. B. Whitney tendered his resignation as a member of the Executive Committee, such resignation, he said, being necessary on account of the severance of his connection with the firm of A. Whitney & Sons and his consequent retirement from the foundry business. He desired to thank the members of the association for the honor they had conferred on him by electing him as a member of the committee and regretted that his new business compelled his resignation. On motion the resignation was accepted, with regret, by the association.

Mr. Wanner then made a motion that at the next regular meeting of the association a general discussion on the Wilson tariff bill be entered into. While we may all differ, he said, on that question, the matter may be taken up with the view of educating each other, and not with the view of creating animosity. While some might favor high tariff, others low tariff, and yet others free trade, he thought that on one point all agree, and that point was the important point in connection with the whole thing, that the matter be taken up and put through Congress without delay. The motion was readily seconded and carried.

THE CALIFORNIA TIRE BENDER.

California Tire Bender.

The Knapp & Cowles Mfg. Company, Bridgeport, Conn., are introducing the tire binder herewith illustrated. The machine is described as having steel fluted rolls so set in bearings that they are easily adjusted to the top one by the hand screws in front, and by the hand wheel underneath being raised or lowered to form a radius of any size, from one foot upward. For fifth wheels and that class of work that is required to be bent edgewise, a groove is provided in the rolls. The wheel is slackened underneath to remove the work.

The gearing is so designed that when used for light work more speed is attained by operating the crank on the lower shaft, and for heavy work on the upper shaft.

The manufacturers claim that the machine is simple in construction, of the best material and workmanship, that it is effective in executing work, and is powerful for all classes of work. It is remarked that it can do double work on light tire, and, as an example of heavy work, it is stated that one man bent a 5 x 1 inch tire, as represented in the cut.

The New Phœnix Horseshoe Works.

The Phœnix Horseshoe Company of Poughkeepsie, N. Y., are the first of the large horseshoe makers to start a manufacturing branch in the West. They have just completed a fine plant at Joliet, Ill., which has the same capacity as the works at Poughkeepsie. The old works will continue to run and to supply such trade as can be handled from Poughkeepsie most conveniently, while the new plant will take care of Western trade. A most eligible site was selected at Joliet, in the northern part of the city, on the banks of the Des Plaines River. Here 20 acres were secured, and a very considerable portion of the tract is now covered with most substantial buildings, composed almost exclusively of steel. The Elgin, Joliet & Eastern Railroad has built a branch track into the company's yard, and thus provides facilities for shipping over all roads leading from Chicago, as it intersects them all. The Santa Fé Railroad, however, is expected to shortly make an independent connection.

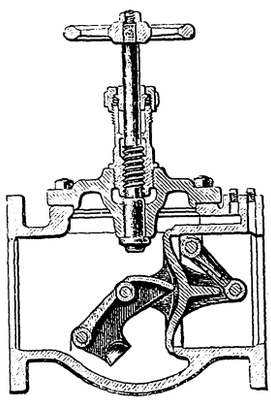
Seven buildings have been erected for

Hosted by Google

manufacturing purposes, together with a very handsome office building. The manufacturing buildings comprise a puddle mill, bar mill, horseshoe department, comprising three buildings, engine and boiler house and machine shop. The puddle mill is a steel fire proof building. The main structure is 156 x 76 feet, with a lean-to 76 x 40 feet. The lean-to contains the puddling furnaces and a 20 inch three-high train, suitable for rolling either iron or steel, and a squeezer. The bar mill occupies a building 144 x 121 feet, erected with a clear span and no obstructing columns, standing 22 feet to the eaves and over 50 feet to the deck lights in the center. Three trains have been installed in this building, arranged in a straight line, with room for a fourth train. Each train is run by a Porter-Allen engine, 14½ x 24 inches. The trains are so laid down that two engines stand together and can thus be attended by one engineer. Three heating furnaces stand near the trains, each having an overhead boiler. All pipes are underground in a conduit built expressly for the purpose, permitting ready access to any part of the pipe system. A separate cooling bed is arranged for each train, with shears at the foot of each bed.

Next comes the building in which the billets are heated and the shoes formed, 200 by 70 feet. It contains ten furnaces, with room for four more. A set of horseshoe machinery stands in front of each furnace. Here the straight billets of suitable length are bent and pressed into proper shape. Connected directly with this building and opening into it at one end is a stone structure, 140 by 56 feet, the roof being entirely of steel, in which the shoes are punched, finished and assorted, ready to be kegged. The floors of both these buildings are paved with vitrified brick and iron plates. Power is supplied from an engine house standing between the bar mill and the shaping room. The size of this building is 70 by 40 feet, and it contains two Porter-Allen engines, one being 14½ by 24 inches and the other 10 by 12 inches. The pumps, blowers and dynamo are located in this building. An electric light plant will shortly be installed in this house. Three Worthington pumps are in use, one for pumping from a pond to a 50,000-gallon tank built on a staging outside, and the others for boiler feeders, elevators, &c. Two Babcock & Wilcox boilers are in an adjoining room, each rated at 250 horse-power.

A stone storehouse, 200 x 80 feet, with roof entirely of steel, adjoins the finishing room. A hydraulic elevator in the latter room is used for hoisting shoes up to the level of a platform in the storehouse. The platform has various passageways running from it and passing over bins in which the different kinds of shoes are separately stored. Railroad tracks run along one side of this building, the roof of which overhangs the shipping platform. The latter is on a level with the car floors. Seven cars can be loaded at one time, the doors being an exact car length apart.



The machine shop, 70 x 33 feet, built of stone, is well equipped with planers, drills, lathes, pipe cutters, &c., enabling the company not only to handle repairs and avoid delays, but also to build new machinery.

All these buildings have been arranged according to a most carefully conceived plan. They are not only conveniently located for present conditions, but they are so placed that they can easily be extended when required, so as to increase the capacity of the plant at any time without disturbing its harmony of arrangement or interfering with its operation.

The office building is constructed of stone, with an ornamental tile roof. The inside finish is of Georgia pine. It contains a large counting room, private office, drafting room and storeroom, and is heated by steam from the mill. The same thoroughness and careful regard to appearances as well as usefulness are shown in every part of the plans, the office as well as mill buildings demonstrating the attention given to every detail. The plant will be in full operation either toward the close of this month or in the beginning of next month.

The Schutte Balanced Horizontal Check Valve.

The Schutte check valve is intended for use principally between engines, pumps and vacuum pans and a condenser, though it is as well adapted for

The Schutte Balanced Horizontal Check Valve.

use in such places where a check valve is required.

The valve, when applied in the exhaust connection from an engine to the condenser, is intended to prevent a back flow of water from the condenser to the cylinder. The desirability of a safety appliance of this kind is well understood.

The inclined suspension bar to the left in the engraving has a tendency to open the valve, while the inclined supporting bar to the right has an equal tendency to close it. The small counterweight on the supporting bar, as shown, compensates for a possible deviation from the level position of the valve, and also adds a permanent slight excess of force to close. On the right hand a boss is provided for the convenient attachment of a vacuum breaker or air admission valve. The two passages appearing in this boss correspond to passages in the vacuum breaker. When a vacuum breaker is needed it may be attached to the check valve by means of a gasket and two tap bolts, for which threaded holes are provided. The passages in the boss on the valve are also threaded and closed by screwed plugs. Where no vacuum breaker is needed, the threaded passages may, on removal of the plugs, be used for the attachment of a vacuum gauge. The valve is made in sizes ranging from 1¼ inches to 20 inches by L. Schutte & Co. of Philadelphia.

The Golding Fire Proof Floor.

A series of experiments have been made lately at the Howard Iron Foundries, South Boston, with the Golding fire proof floor. At the suggestion of Capt. John S. Damrell, inspector of buildings, a section of the flooring in question was constructed in the foundry yard. It consisted of a section of single floor arch, with a span of 16 feet, making a surface of 62 square feet, resting upon iron girders, which were supported by four heavy timber blocks imbedded in the ground and rising above the surface about 4½ feet.

In making this arch, after the forming under boards were in place, the expanded metal, which is composed of meshes of steel, was stretched across and the cement concrete poured in and leveled up to the required hight, the metal being thus thoroughly imbedded in the concrete. On this was placed a single layer of boards. This was left to set and harden for about three weeks, though it is well known that it takes at least as many months for such concrete to even approach a maximum hardness and tenacity.

Tuesday evening pig iron was piled upon this floor arch to an amount equal to 750 pounds per square foot, or 46,500 pounds. Later an additional weight of pig iron was placed upon the arch of 9300 pounds, bringing up the total weight to 900 pounds per square foot. Up to 1 o'clock, even with this great load on, no perceptible deflection was noticed. When the time set for the exhibition arrived an additional weight of about 72¼ pounds per square foot was put on, which brought the total load of the section of floor arch up to 60,310 pounds, or about 972¼ pounds per square foot of surface.

Under this great weight the arch began to give, but the movement was at first slow, and even when it went down it was a gradual and easy descent—not a sudden disruption and a crash. When its central part reached the ground it still held together, and its ends did not leave the supporting iron cross beams.

Employees of the Pennsylvania Railroad are being instructed in the use of a new Westinghouse automatic emergency air brake with which the cars of that road are to be equipped. A box freight car has been fitted up with the brake at the Altoona shops and sent over the lines of the company in charge of a corps of instructors. The car is fitted with 24 air brake cylinders, such as would be the equipment of an engine and train. These are arranged in a series within the car so that their working may be readily seen and explained. The emergency device is an attachment to the ordinary air brake, and by its use the brakes are applied quicker than the eye can follow the movements of the pistons in the series of cylinders.

Engineers who have inspected the levee now being built along the Gila River report that the Colorado River can be made navigable from its mouth to the Grand Cañon, a distance of 700 miles.

The ready sale last week of $1,225,000 of 3 per cent. stocks and bonds of New York City at 100.38 is regarded as a sign of returning confidence in commercial circles. This is the first time since the depression began that the city's securities have sold at a premium.

American Society of Mechanical Engineers.

A valuable paper on

The Expansion Bearings for Bridge Superstructures

was read by George S. Morison of Chicago:

Among the special details of bridge construction one of the most important is the provision for changes of length due to temperature; and while this is a provision which is nearly always made, it is, unfortunately, one of the details on which least care is bestowed. For many years I have observed the defects of the expansion bearings of bridges as generally constructed, and it has seemed to me that the time has come when the attention of engineers should be called to these defects and to the arrangements which, I believe, will obviate the worst existing difficulties.

When a structure which changes its length rests on supports the distance between which is practically unchangeable, provision must be made for that change of length. When metallic structures rest on masonry piers some attempt at such provision is universally made. The refinement of modern theory would say that like provision should be made for wooden structures resting on masonry, as timber changes its length under strains more than iron does. In practice no such provistion is made in wooden bridges, and it is best that none should be made. In practice this provision, though always made in metallic bridges, seldom operates as it should.

The older devices for this purpose were of three classes—sliding plates, rockers and rollers.

The sliding plate was the simplest of all. It consists simply of a smooth planed surface of metal on the masonry, and a like surface at the bottom of the end post, one sliding on the other. So long as the plates could be kept lubricated this worked pretty well; the difficulty in lubricating, however, was often fatal, and though there are instances of important bridges, of spans of considerable length (like the deck spans of the Louisville bridge) which have done good service with sliding plate bearings, the practice has not met with favor. Sliding plates, however, are generally used under riveted structures of moderate length.

Rockers are an attractive design, and have some advantages over other plans. The rocker is, in fact, nothing but a section of a wheel, the weight being carried on the axle and the wheel rolling on its circumference. There are two objections to a rocker bearing—the great weight that must be carried on the axle and the friction on this axle. The friction causes more or less sliding motion; the result of this sliding motion is to work the bearing gradually toward one edge of the section, so that at length the rocker falls over. Rockers were used considerably 25 years ago. They are now almost entirely abandoned.

Rollers have always been the favorite device. It is the one arrangement in which friction can virtually be eliminated. There are no sliding surfaces; the top bearing rolls on the rollers, and the rollers roll on the lower bearing. If perfectly constructed the arrangement must always be perfect. Such has not proved to be the fact, and in many instances the motion on the rollers is less than on the sliding plates.

The old roller bearings differed from the old sliding plates, simply in that a nest of rollers was placed between the two plates. The lower bearing was a flat cast iron plate on masonry; the upper bearing was the planed surface of an end post, usually of cast iron; the nest of rollers was between. There was no provision except accuracy of workmanship to insure parallelism of the two plates, and even the slight deflection of the truss due to the passage of a train would disturb this parallelism; the necessary result was that some of the rollers were greatly overburdened. This practice, however, was abandoned many years ago, and all the better designed bridges now transfer their weight to the rollers through bolsters, which, supporting the trusses through the end pins, are free to rock; one of the serious defects of the older roller bearings has been thus removed.

Mr. Morison then described the bearings of several bridges of his own design, and said of the bridge across the Mississippi at Memphis:

The central span of this bridge is 621 feet long, and as a cantilever arm projects from each end of this span the weight carried at each end corresponds to nearly double the weight of the half span. Making no allowances for changes of length due to strains, the provision for temperature alone required a possible movement of about 8 inches, while the actual dead weight carried on each bearing was 2,454,000 pounds, and the total dead and live load 4,036,000 pounds. In other words, I had to prepare an expansion bearing with a possible movement of nearly 10 inches which should roll freely under a weight of 2000 tons. This is probably the largest expansion bearing ever built.

As the piers were tall and slender it seemed necessary to reduce the friction on this bearing as much as possible, and I decided to use large segmental rollers. The rollers were made of forged steel, 15 inches in diameter, and placed 6 inches between centers, the sides being planed out hollow so that the rollers would shut into each other, after the European practice. The under bearing consisted of a wall plate casting made in four sections, the whole being 10 feet square. On this wall plate are the rail plates, one on each side of the center line, each rail plate being formed of 15 rails riveted to a heavy plate below. A solid steel plate 4 inches thick is bolted between the wall plate castings and extends above the top of the rail plates, thus forming a central guide for the rollers. There are 30 rollers in all, 15 on each side of the central plate. The sides of the rollers are planed and the cylindrical rolling surfaces are polished. Each roller has two holes bored completely through it, through which pass bolts made of cold rolled shafting, these bolts uniting the rollers on the two sides so that they will roll together. The lower tier of bolts pass through side plates with square ends and the upper tier of bolts through side plates with hook ends; before the rollers can turn over the hooks of the upper plates strike the square ends of the lower plates and the motion is stopped. Graduated scales with sliding verniers were fitted on the lower plates, and brass pins were inserted in the hook plates, this being a special refinement put on for the purpose of reading the actual expansion, and from this reading some interesting results have already been obtained.

Above the rollers is the bolster, which it was originally proposed to make of two large steel castings with a guide plate between, like those between the castings of the wall plate; so much difficulty was experienced, however, in getting sound steel castings that the plan was changed and the bolster was built up of steel plates and I-beams, a central plate being so inserted as to make a guide rib between the rollers. On this was placed a large steel casting, which carries the 14-inch pin on which the entire weight of the superstructure is thrown.

As an extra precaution a steel lock plate was placed between the two sets of rollers; before any great strain can be put on the bolts which fasten the side plates to the rollers the bolster will strike one end or the other of this lock plate, and all further movement will cease; it is not likely that this will ever occur, but it was thought best to provide for it, so that in case of some special strain tending to move the pier, the pier will bend before there is any danger of the expansion bearing being thrown down.

The result of this arrangement has been satisfactory. The bearing is sensitive to all changes of length, it forms an accurate metallic thermometer 620 feet long, and the movements due to the passage of trains and the changes of chord lengths under strains are accurately measured.

Observations on these bearings showed that some further changes could be adopted to advantage. The cast iron wall plates and the rail plates were all that could be desired; the large segmental rollers with the hook side plates were good, but could be improved; the pin connection between the bolster and the truss was good as far as it went, but was defective in that it provided for rocking in one direction only, whereas irregularities of workmanship or other disturbances might destroy the parallelism between the pin and the rollers, and thus make very unequal bearings.

To remedy this last defect I decided to make the rocking of the bearing entirely independent of any of the pin connections in the truss, and to put below the chord line of the truss what I have termed a rocker plate, which is a polished steel plate with two cylindrical surfaces on top and bottom at right angles to each other. The plate bearing on the rollers is a steel casting, with a turned socket in the center, in which the rocker plate fits, and above the rocker plate is another steel casting with a turned socket below. The upper casting is, therefore, free to rock in any direction without disturbing the lower casting.

A Device for Drill Jigs

was described by B. Cruikshank of Brooklyn.

The following simple plan is submitted as leading to good results in the making of drill jigs. This is a well-known device in some shops, but not being universally used, a brief description of it would perhaps be of interest.

Where two holes are to be placed in the jig in the same flat surface, at a given distance from center to center, they can be quickly and accurately located by the use of hardened steel bushings ground to a known size on the outside, and lapped out to very accurately fit the drills and reamers which are standard for the tits of counterbores in use in the shop. By using the same tit size for several sizes of counterbore the number of bushings necessary for all round work could be considerably kept down.

Hosted by Google

These bushings should be made with a flange or other projection, so that with clamps they may be temporarily fastened to the jig, the distance from the outside of the one to the outside of the other measured with micrometer or vernier caliper, and the holes for the counterbores drilled and reamed.

This is not new nor even my own device, but is so handy that it should be more commonly used in shops where sufficient jig making is done to warrant the expense of a few bushings with counterbores to fit.

In a paper by Fred. W. Taylor of Philadelphia on

Notes on Belting

many conclusions were drawn as to the use of belting so as to obtain the greatest economy and the most satisfactory results.

The number of square feet of double belt passing around a pulley per minute required to transmit 1 horse-power is 80 square feet of oak tanned and fulled leather belts, or the number of lineal feet of double belting 1 inch wide passing around a pulley per minute required to transmit 1 horse-power is 950 feet of the same belt. The belt speed for maximum economy should be from 4000 to 4500 feet per minute. The best distance from center to center of shafts is from 20 to 25 feet. The faces of pulleys should be about 25 per cent. wider than their belts. Belts are more durable and work more satisfactorily made narrow and thick rather than wide and thin. It is advisable to use double belts on pulleys 12 inches diameter, or larger. It is advisable to use triple belts on pulleys 20 inches diameter, or larger. It is advisable to use quadruple belts on pulleys 30 inches diameter, or larger.

When practicable, belts should be tightened by moving one pulley away from the other. Countershafts should be mounted on frames and raised in tightening vertical and diagonal belts.

Belt clamps having spring balances between the two pairs of clamps should be used for weighing the tension of the belt accurately each time it is tightened.

When it is impracticable to accurately weigh the tension of a belt in tightening it, it is safe to shorten a double belt $\frac{1}{2}$ inch for every 10 feet of length, if it requires tightening, when working, according to the ordinary rules, under a total load of 111 pounds per inch of width and giving an effective pull of 65 pounds per inch of width. If it works under a total load of 54 pounds and an effective pull of 26 pounds, it is safe to shorten the belt 1 inch for every 10 feet of length, when it requires tightening.

The most economical average total load for double belting is 65 to 73 pounds per inch of width—*i.e.*, 200 to 225 pounds per square inch section. This corresponds to an effective pulling power of 30 pounds per inch of width, and with rules No. 1, given above.

Double leather belts, when treated with great care and run night and day at moderate speed, should last for seven years, when under average total load of 111 pounds per inch width, or 358 pounds per square inch section.

They should last for 18 years when under average total load of 54 pounds per inch width, 174 pounds per square inch section.

A double belt will stretch $\frac{47}{100}$ of 1 per cent. of its length before requiring to be tightened, when subject, according to ordinary rules, to a total load of 111 pounds per inch of width, and giving an effective pull of 65 pounds per inch of width. A double belt, with total load of 54 pounds, effective pull of 26 pounds, stretches $\frac{81}{100}$ of 1 per cent. before requiring tightening. In a carefully conducted experiment between different types of leather belts, made in a machine shop, lasting nine years, between 40 and 50 belts being used, the oak tanned and fulled belts showed themselves to be superior in all respects except the coefficient of friction to either the oak tanned not fulled, the semi-rawhide, or rawhide with tanned face.

Belts of any width can be successfully shifted backward and forward on tight and loose pulleys. Belts running between 5000 and 6000 feet per minute, and driving 300 horse-power, are now being daily shifted on tight and loose pulleys, to throw lines of shafting in and out of use.

Shifting belts are much to be preferred to cut off couplings or friction clutch pulleys for throwing heavy lines of shafting in and out of use.

The best form of belt shifter for wide belts is a pair of rollers twice the width of belt, either of which can be pressed on to the flat surface of the belt on its slack side close to the driven pulley, the axis of the roller making an angle of 75° with the center line of the belt.

The writer gave his reasons for these rules (only a few of which we quote) and said they were the result of a long series of experiments and observation.

Discussion.

W. S. Rogers presented a written discussion, from which we take the following:

I have started several new shops, and I think I have had the privilege in roving over this country of seeing the inside of 10,000, and I found out more in other people's shops than I found in my own. There are lots of machines being built that are going to start right off if the man running it remembers that it is a new infant being put right into active practical work. In regard to the time lost, I admit that the object of time in all factories is an important one of all things, but the time lost in shop practice is not simply in belts, but because the superintendents, managers and other officials are devoting a little too much time to what we might expect from college graduates, instead of seeing that the work is kept up and leading men on to better victories and better results.

The author says: "I have found in my experience, taking the running conditions of the two kinds of belts in daily service, without comparisons as to length, as mentioned in article 65, that horizontal running shifting belts in machine shop work usually last about five times longer than the vertical cone belts, while in wood working plants, where the service is harder and more furious, they last nearly three times longer than the vertical belts." The chief reason why the shifting belts last so much longer than those used on cones is that cone belts have about three times more work to do and receive about ten times more abuse while doing it than their brethren who drive them. I know of nothing more destructive to belting in service than cone steps and the methods used for shifting belts on them. There is one point in regard to the life of belts that we seem never to take into consideration when discussing their extended or abbreviated lives, and that is the temperatures through which they have to pass in performing their functions. I have found that a belting running through varied changes of temperature will cause considerably more trouble and obstruction to manufacture and have a much shorter life than one running under more favorable conditions.

In speaking of the exact point of tension at which belts were just able to do their work, the author says: "This point was fixed by each belt for itself by giving indications that it was about to slip seriously." Now, I would like to ask what the sign or indication is? The only evidence I have been able to gain from a belt as to its intentions to slip was after the slip took place. In this same paragraph we read that "the shifting belts rarely if ever slip," and bearing this in mind I read on in the next paragraph in regard to the shifting belts that "they were taken up because they had stretched so much that they began to flop and jump about to

Raynal.

PACKING FOR HYDRAULIC MACHINERY.

Hosted by Google

such an extent as to be in danger of damaging themselves." Now, I have always found that a belt was slipping considerably when its actions were as here described and the tension was to zero, and not only is it damaging itself, but it is also injuring the smaller belt it is driving to a serious extent.

On page 23, the author states, in paragraphs 80, 81, 82, 83 and 84, the rules he has adopted and used for several years, and when I come to 83 I make a few figures to see how I would have come out in equipping my plant this autumn, provided I had followed these rules.

My three line shafts have a rotative speed of 200 per minute, which is a little above the average in machine shop practice. To have obtained the economical belt speed called for in paragraph 83 I would have been compelled to use pulleys 7 feet in diameter and hangers having 45-inch drop, at least. As the ceiling is 16 feet from the floor (which is a foot or two more than usual practice in the great manufacturing plants) the lower side of the belt would have been only 9 feet 9 inches from the floor. If I had belted to a heavy boring mill whose countershaft pulleys are only 28 inches diameter and are figured to run at 125 revolutions per minute by the builders, I find that I would have required tight and loose pulleys over 11 feet in diameter, and the tool builders would have had to also furnish me with hangers for the counter having 6-foot drop. This would have brought the lower side of the counter belt to within 5 feet of the floor, and should I have carried this plan out all through the plant I should have had to rent space elsewhere to work in. To have run a triple cylinder molding and flooring machine to carry a belt speed of 4000 to 4500 feet to the countershaft whose builders call for a pulley speed of 1000 revolutions per minute I would have required 16-inch pulleys on the counter instead of 10-inch ones furnished. My shafting and hangers would also have had to be much stronger to carry this excess weight, and the first cost would have given the stockholders paralysis.

Friction clutches given the same care and attention that is or rather should be expended on loose pulleys and belts will give more satisfactory results on the belting and throughout the shop generally. I would much rather have the wear and burn from slow starting come on the wooden shoes of the clutches than on the belting. The wooden shoes are cheap and easily replaced when the life is worn out of them from friction slipping, while I know of no way of putting it back into the belt. Friction clutches are superior things in case of accidents, as has been proved thousands of times for the benefit of employer and employee and machinery as well.

What is the best mode for packing the rods and plungers of hydraulic machinery, particularly under high pressure?

In the discussion of this question Mr. Coxe described very fully and illustrated by means of sketches on the blackboard, which we reproduce, the method which has been most successfully followed at his works for packing piston rods intended for pressures up to as high as 400 pounds. These worked so well that they had been placing them on all their pumping machinery as rapidly as possible. The construction here followed will be understood from Figs. 1 and 2, in which *a* is the piston rod, surrounding which is a sleeve having six small annular grooves, the end ones *b* of which contain ordinary piston rings, which are sprung in, the others being left empty, as indicated in the drawing. The groove *c d*, shown in section in Fig. 2, is formed in this sleeve, its upper portion being provided with an opening closed by the screw plug *e* and its lower portion being connected with the pipe *f*. The lower portion of this groove is wider than the upper. Connected with the pipe *f* is the cylinder *g*, the piston of which is operated by pressure admitted to the cylinder *h*. The piston *g* is removed from its cylinder and the latter filled with tallow cut into small pieces, when the piston is returned to its place and the pressure admitted on the upper side of the piston of the cylinder *h*. This forces the tallow through the pipe *f* and into the groove *c d*, surrounding the pump piston rod. During the operation of the piston rod the tallow finds its way into the empty grooves and serves not only as a perfect lubricant, but also assists and effectually packs the piston rod. The extreme simplicity of the device and its efficiency were dwelt on to some length by Mr. Coxe.

Alfred H. Raynal illustrated by means of the drawings, Figs. 3 and 4, the necessity for correctly forming the recesses to contain cupped leather packing intended for packing rods working under high pressures. When the recess is made with a right angle as shown at *a*, Fig. 3, the pressure upon the inside of the U-shaped leather will cause the latter to buckle in this corner and destroy it quickly. This joint should be made as indicated at *b*, Fig. 4, as sharp as possible and should be curved in order that there should be no tendency of the leather to buckling and that when properly constructed in this way he had found packing of this description to work well.

The high pressures produced by stopping the flow of water through a pipe, even when the velocity is small, were shown in "Some Experiments on the Effect of Water Hammer," described by Prof. R. C. Carpenter of Cornell University. A paper by the same author was presented on "Constants for Correcting Indicator Springs that Have Been Calibrated Cold."

Use of the Indicator for Continuous Records in Dynamometric Testing.

By Wm. S. Aldrich, Morgantown, W. Va. In introduing this subject, the writer said:

For variety of purposes the steam engine indicator is probably one of the most serviceable spring pressure recording instruments at the command of the engineer. It has reached a high degree of mechanical perfection for its particular use in steam engine testing. Notwithstanding its well known defects when applied to this purpose, it seems only possible to perfect further its mechanical construction, so long as its typical piston mechanism is adhered to. Still, this is not an inherent objection to the use of the indicator in some other lines of recording work, and the purpose of this paper is to show how it has been so applied in power testing with a dynamometer. It is sometimes better to make use of an instrument which has been brought to a high state of perfection in one field of work than to undertake the development of new and untried forms of apparatus for limited and usually special tests. Taking the indicator, therefore, as we find it, and not delaying work in which it may be used to advantage till it (or a similar instrument) becomes what it ought to be, the steam engine indicator will be found extremely serviceable in obtaining short continuous records in power tests.

Almost all tests of this character may be reduced to the measurement of a more or less variable pressure, depending on the amount of energy being absorbed by the dynamometer. This pressure is usually measured as a pressure on a platform scale, or by the maintenance of a weighted lever in a position of equilibrium, or by the simple pull on a spring balance. But this pressure may be transferred or transmitted to any other instrument designed for recording variable pressures, as the indicator, for instance. In some cases simple mechanical connection may be used, while in others hydraulic connection will be found desirable.

Mechanically transmitting the pressure from the arm of the dynamometer, by a linked connection, to the indicator piston, enables us to turn the indicator into a recording spring balance. In this method its piston mechanism is not in the least objectionable, serving merely as a guiding mechanism.

In the transfer of the pressure from the dynamometer arm to a diaphragm, which in turn presses upon water, oil or mercury, in a closed vessel, and thence, by pipe or tubing, to the cylinder of the indicator, we make use of it as a recording pressure gauge. Small variations in pressure, slowly increasing or decreasing, yet of comparatively short duration, are not faithfully recorded on account of the retarding effect of friction of the indicator piston; but the leakage past the piston will be the least. Rapid and extreme variations in pressure, as well as extreme pressures, maintained for any length of time, are sure to result in more extended leakage, even when mercury is used under the indicator piston, as arranged for the form of the "U" manometer. When the greatest sensitiveness of the indicator is most desired (with small pressure variations) it is least obtained. It would, therefore, be much better to use some form of diaphragm, or closed tube pressure recording gauge. It should be capable of enduring much more rapid and extreme fluctuations than any on the market at present.

The author then described the method he had followed in using the indicator in this way and gave some of the results.

A New Form of Prony Brake,

designed by Prof. R C. Carpenter of Cornell University, was then described:

The brake consists in each case of a tube of copper, with an elliptical section, which nearly encircles the brake wheel. Outside the copper tube is an adjustable band or belt of sheet steel, which prevents the copper tube from expanding. Water pressure is applied to the copper tube by means of hose connections made near the center of the wheel to water pipes, the amount of pressure being regulated by throttling the admission and discharge valves. As the external diameter of the copper tube cannot change, the internal pressure causes the inner surface to rub against the wheel, producing the friction which is used to absorb the work. To prevent the wearing of the inner surface of the copper tube a thin sheet of steel or Russia iron is inserted between the tube and the brake wheel and connected to the brake so as not to revolve.

Hosted by Google

This brake has proved very satisfactory; the work is readily absorbed by varying the opening of the supply and discharge valves, and no trouble has been experienced on long runs from heat or irregular friction of the brake.

In the figures which follow, the principal parts and dimensions are as follows:

Fig. 5.—Elevation of wheel with attached brake. Wheel, 4 feet diameter, 12 inch face; A, supply pipe; B, discharge pipe; C, brake; D, sheet iron liner; F, external strap sheet iron; G, adjusting bolts in external strap; H, arms of brake riveted to external strap; J, support for brake arms, to be carried on platform of weighing scale.

Fig. 6.—Section of brake and rim of wheel. C, brake, elliptical section; larger diameter, 12 inches; shorter diameter, ¾ inch; F, external strap; D, sheet iron liner.

Another merit, which in some cases may be of little moment, but which was of considerable importance at the time of its erection, was the fact that the first cost was small, the brakes not costing over $50 each.

Prof. C. W. Scribner designed a self-regulating device which I consider of great merit, but which, because of pressure of other work, has not yet been applied to the brakes just described. There is, however, no doubt of the effectiveness of the design, and its description is therefore here given.

So far as the writer knows, every previous device for automatic regulation of the work absorbed by a brake requires the rotation of the wheel to be such as to tend to move the free end of the brake arm in an upward direction. This is oftentimes objectionable, and sometimes an element of danger. In this case Professor Scribner permits a downward motion of the brake arm, and yet succeeds in securing motion sufficient to adjust the tension on the brake.

The general method of securing the adjustment is shown in the diagramatic form, Fig. 7, in which A C and B C are the brake arms. These rest on the end of a horizontal lever, K C. This lever is supported at D by a knife edge on the fixed support D E. A movement weight, F, is placed on the arm of the lever at any point needed to give the required brake load. If the brake load is too great, the pressure at C is greater than at F, and the point K of the lever rises. On the other hand, if the brake load is too small, the pressure at F is greater than at C, and the end K of the brake arm falls.

The motion at this point can readily be utilized to decrease or increase the tension on the brake, as required. In this case this motion will be utilized to regulate the opening of the supply valves and to vary the pressure on the brake. The weight F can also be utilized to weigh the load. The detailed drawings for this purpose are shown in Fig. 8.

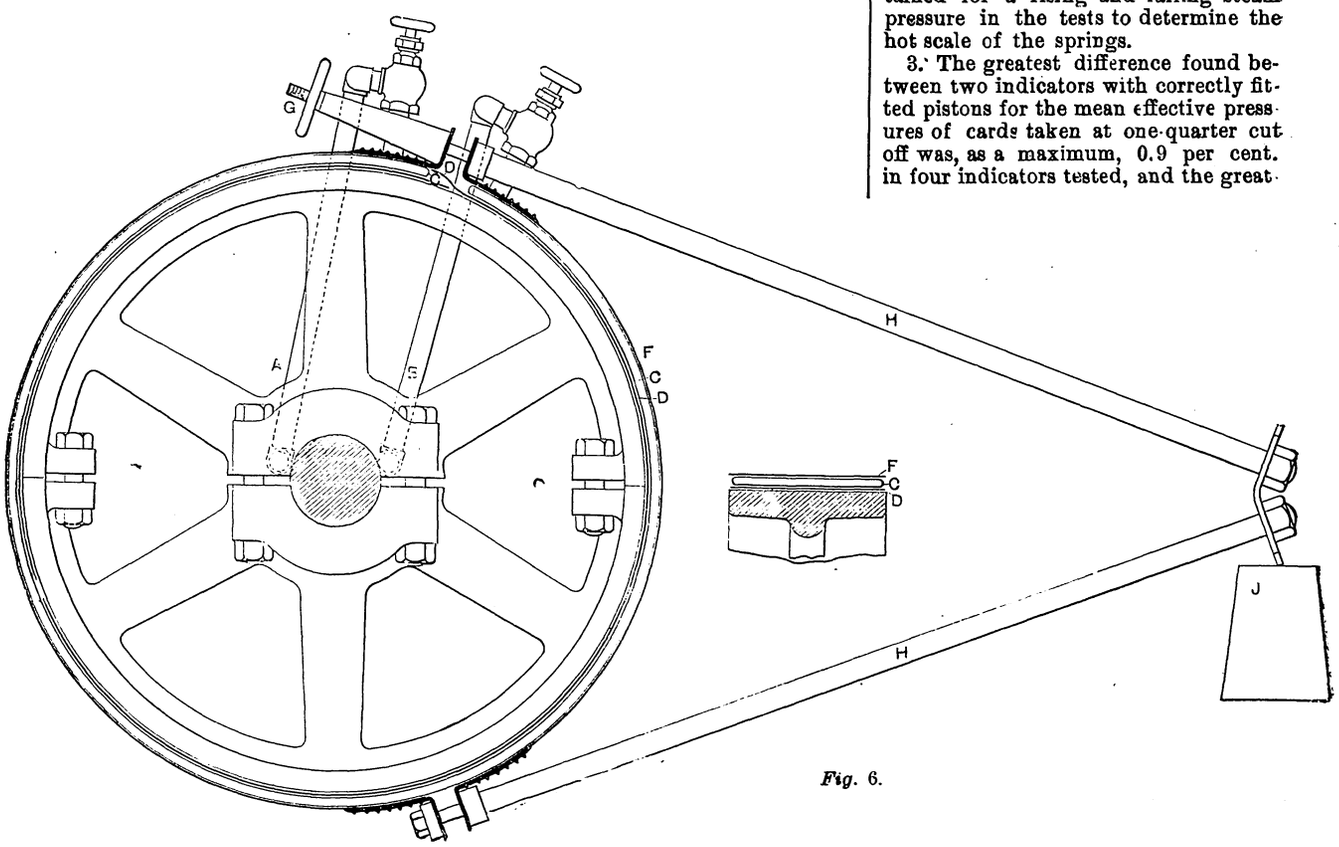

Fig. 6.

Fig. 5.

THE CARPENTER PRONY BRAKE.

The principal parts are as follows:

A, supply pipe; B, discharge pipe; C, brake; F, external sheet steel strap; G, adjusting bolts in external strap; H, arms of brake fastened to external strap; M, weighing lever; W, weight; O, knife edge between lever and stationary support; N, knife edge between brake arm and lever; P, hand wheel to adjust load on brake.

At this stage of the proceedings papers were presented by William A. Pike of Minneapolis on "Steam Piping and Efficiency of Steam Plants," and by Prof. D. S. Jacobus of Stevens Institute on

A Comparison of the Mean Effective Pressures of Simultaneous Cards Taken by Different Indicators.

From the latter paper we take the following conclusions derived from the tests made by the author:

1. With correctly fitted pistons in the indicators there need be no greater error involved in their use than that which occurs in measuring the hot scales of their springs.

2. A leaky piston is much more reliable than one that is too tight a fit. A piston that will fall through the cylinder by its own weight may be too tight and produce errors due to undue friction. The friction of an indicator piston should be so small that there will not be over the thickness of a very fine pencil line between the lines obtained for a rising and falling steam pressure in the tests to determine the hot scale of the springs.

3. The greatest difference found between two indicators with correctly fitted pistons for the mean effective pressures of cards taken at one-quarter cut off was, as a maximum, 0.9 per cent. in four indicators tested, and the greatest difference in the measurement of the mean hight of the diagrams for any two indicators was 0.005 inch. This was for comparative tests in which the average of either 12 or 24 cards was taken. The greatest difference between any single pair of indicator cards taken simultaneously was 2 5 per cent. of the mean effective pressure and the corresponding difference in reading the mean hight 0 017 inch.

4. The greatest difference found between any two indicators with correctly fitted pistons for the mean effective pressures of cards having one-fortieth cut off, so that a loop was formed below the atmosphere line, was 0.6 pound per square inch, and the greatest difference in the measurement of the mean hight was 0.010 inch; or, adding opposite signs, 0.017 inch. The presence of a loop causes the effect of friction and lost motion to be a maximum, and the above differences are therefore greater than were found in cards having no loop.

Hosted by Google

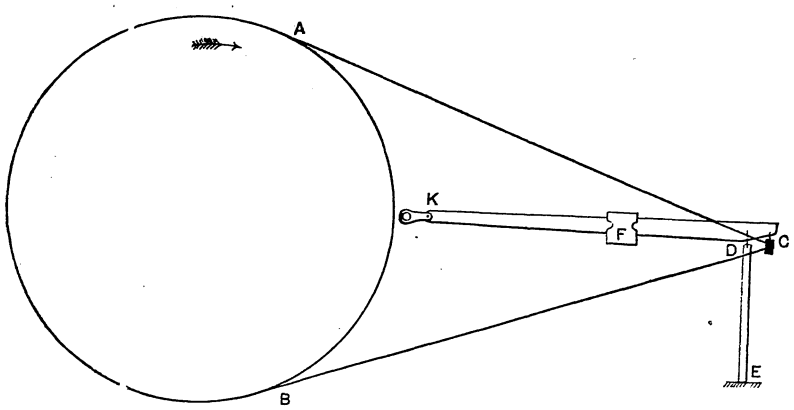
5. The variation of the weight of the moving parts within the limits now employed by the makers of the standard instruments does not affect the accuracy of the results obtained by the indicators.

A paper by Charles H. Manning of Manchester, N. H., described the method he had followed several years ago in making a 20-inch steam pipe. It was made of mild steel, riveted, with die forged flanges of the same material, the flanges being riveted and calked.

"A Method of Calculating the Strength of Rim Joints in Fly Band Wheels" was the title of a paper by J. B. Stanwood of Cincinnati.

F. A. Scheffler of New York took for his subject the test of a boiler using grates with small percentage of openings. The openings in the grates in question should have been $\frac{3}{16}$ inch, but they were not more than $\frac{1}{8}$ inch, due to rapping the pattern in the mold and to rough edges naturally resulting from the endeavor to make such small openings. These grates had a total area for passage of air of only 15 per cent. The usual size opening for grates burning the kind of coal used is between $\frac{5}{8}$ and $\frac{1}{2}$ inch, giving an area of from 35 per cent. to 45 per cent. The draft gauge showed 0.46 inch of water, which, while being a very fair draft, was nothing to brag about, considering the grate openings. The writer felt that it would not be politic to make a test of the boiler under the circumstances, but as everything was prepared at that time to complete the test, it was finally decided to make same, if for no other reason than to demonstrate what the boiler could do with only 15 per cent. openings in the grates.

The results showed that, with only 15 per cent. grate area and with an overload of 60 per cent. above the rated capacity, when burning 24.8 pounds per square foot of grate surface per hour, the efficiency obtained was 71 per cent.



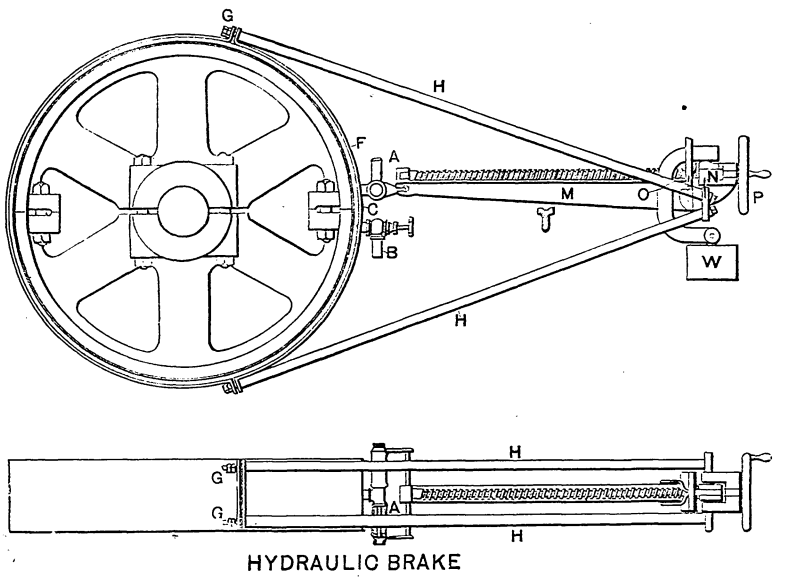


Fig. 7.

HYDRAULIC BRAKE

Fig. 8.

THE CARPENTER PRONY BRAKE.

A Crucible Furnace for Burning Petroleum

was described by W. E. Crane of Waterbury, Conn.

The furnace is built round as high as the top of the crucible, and 4 or 5 inches larger in diameter. From there up it is built square, and the corners used as described further on.

The pot stands on a support about 6 inches high. If it is a furnace running continually, it is immaterial of what substance it is made, or how solid, provided it will withstand the high temperature.

If a furnace runs 10 or 12 hours only per day it should be made with as little substance as will withstand the temperature and weight. If made solid, the first heat will take longer, as this support must be thoroughly heated through before the bottom of the pot will heat. After the first heat any support will be all right. Fig. 9 shows an elevation of the furnace, which has been rebuilt from one using grates for coal. A brick bottom is put over the grates to preserve them, but one grate should be taken out and a hole left through the bottom, so that the metal can run through if the pot breaks.

Fig. 10 shows a plan of furnace at the top of the pot. Four pieces should be provided of the shape shown in one of these corners, which will rest on top of the pot and in the corner of the furnace, shutting in the products of combustion around the pot below the top. By this means fully 15 per cent. of the fuel will be saved, a much hotter fire secured, and faster work done. A small flue should lead off from the top of this chamber, not over $2\frac{1}{2}$ inches square, either to the chimney or to heater for heating air, or to other system of economizing the heat from waste gases.

When the waste heat is utilized, this construction is essential in melting alloys, especially where spelter or zinc is used, as the fumes would coat over or fill up any economizer. By closing the space at the top of the pot the fumes from the alloys can be carried off through a separate flue. This flue should have from 30 to 40 inches area.

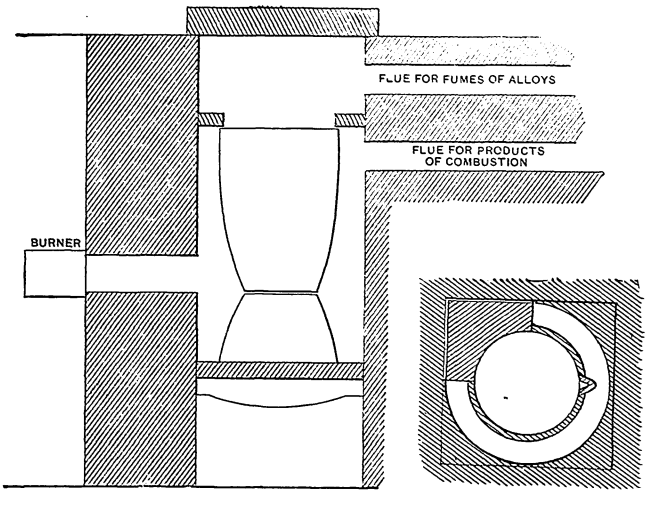

Fig. 9. *Fig. 10.*

CRUCIBLE FURNACE BURNING PETROLEUM.

The burner would preferably be an air burner, with as low a pressure as possible. Some burners work nicely

Hosted by Google

with as low as 6 ounces pressure. All of the air for combustion should be supplied by the blower. With an air burner at high temperatures there is usually a deposit of carbon. This can be prevented by introducing a small jet of steam, preferably superheated. As a general thing this will be found to cause more annoyance than that of removing the deposited carbon. This steam will have a tendency to lengthen the flame, and as a consequence the heat will be less intense, more of the heat passing off into the flame.

There should be a good draft to take off the fumes when using alloys which smoke a good deal, but the draft for the products of combustion should be light.

For the support for the crucible in furnaces running ten hours per day I have found an old pot cut off at the right length and turned bottom up to be as good as anything tried.

The pieces to shut off at the top of the pot should be made of crucible stock and well seasoned.

During the convention other papers were read by David Guelbaum of Syracuse on "Theory of Direct Acting Steam Pumps and Its Results;" by W. H. Francis of Philadelphia on "A Modern Disinfecting Plant;" by W. A. Rogers of Waterville, Maine, on "Cumulative Errors of a Graduated Scale," and by Professor Carpenter on "Experimental Determination of the Effect of Water in Steam on the Economy of the Steam Engine."

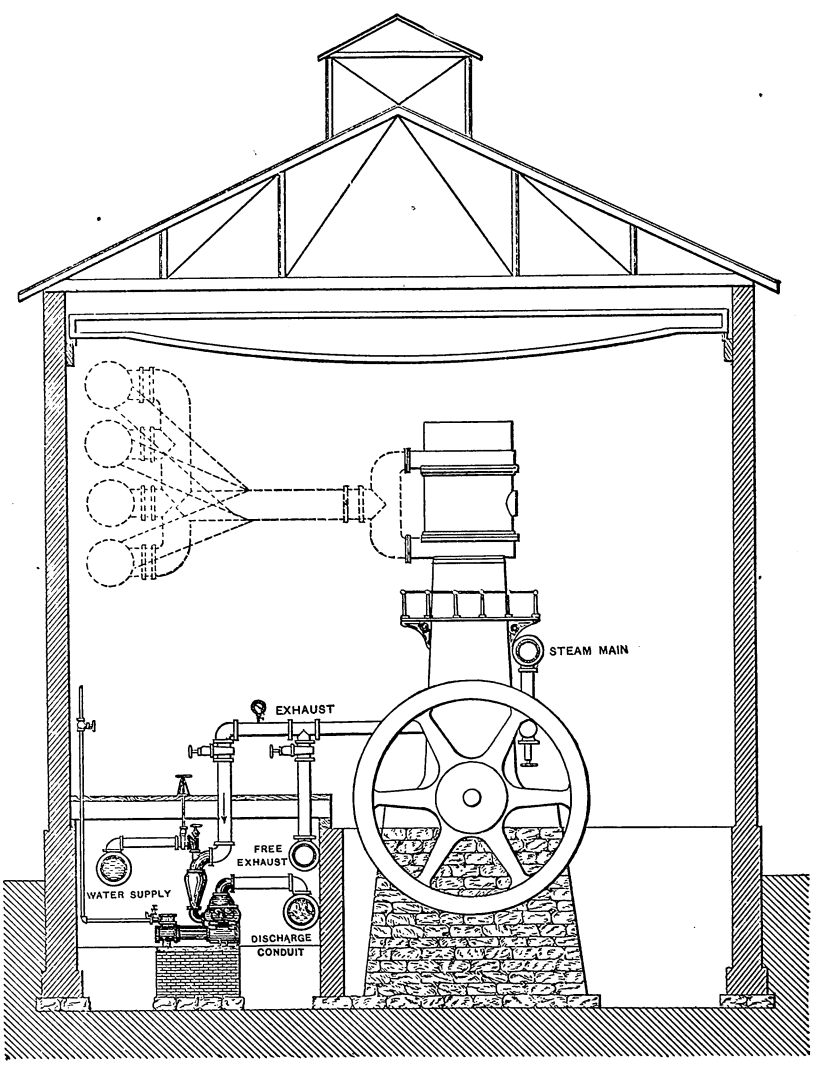
The Worthington Condenser.

The drawing here presented represents a plant of ten blast furnace blowing engines at the Illinois Steel Company, South Chicago, provided with ten condensers built by Henry R. Worthington, New York. The valves of the steam end are each moved positively by the steam applied to the piston of the opposite cylinder and such obstructions as dirt, scale, rust or gummy oils, which sometimes prevent steam moved valves from operating, are powerless to prevent the regular and positive action of these plain slide valves. Neither is there any liability of leakage by reason of the wearing of the valve and its seat, as is often found in piston valves or steam moved valves.

It is unnecessary to say to those who are familiar with the management of blast furnaces that reliability in the blowing engine and its attachments is of the first consideration, and with a view of making them as simple as possible they are often used as non condensing engines, greatly to the loss of economy, but the invention of a separate and entirely independent apparatus for producing a vacuum by the condensation of the exhaust steam has made it possible to utilize the value of the vacuum on a blowing engine without any of the risks that pertain to attached air pumps on the main engine.

The spray pipe within the condenser cone is so arranged that it can readily be freed from any obstructions that might collect in it and interfere with the passage of the injection water, and this, too, without stopping the working of the apparatus.

The piston rods of the water end, in addition to having the usual packing, have a small pipe connecting the stuffing box with the delivery chamber of the pump, so that if at any time the packing becomes worn the water within this pipe will be drawn into the stuffing box, thus sealing the same and preventing the admission of air, which otherwise would impair the vacuum, until the pump can be repacked.



The cut is intended to show the method of piping a Worthington condenser to one or more vertical blowing engines. Each of these engines, when exhausting into its condenser, develops about 700 horse-power, making a total of 7000 horse-power in the plant.

As will be observed, the injection water is drawn to the condenser through a conduit located in the basement, and is discharged into a pipe that is in communication with the discharge pipes of each of the ten condensers. A simple arrangement of valves and piping enables the engines to be run non-condensing if desired, the exhaust being in that case through a common exhaust pipe to the atmosphere. This, however, is merely a matter of precaution, and it is quite common practice where the water supply for injection is thoroughly assured to provide an exhaust into the condenser only.

The value of a vacuum is well known to steam engineers, and especially when used in connection with blowing engines, which, as a rule, are designed and proportioned to operate with a low steam pressure, in order to be able to maintain the speed and the consequent air pressure at the time when the furnace gases are depleted and the steam pressure is low. It is at such times that the value of the vacuum is most appreciated. It is found that during this period a blowing engine supplied with a Worthington condenser will maintain its speed with 15 to 20 pounds less steam pressure than is absolutely necessary when exhausting against the atmosphere without a condenser.

It should be remembered that Worthington condensers of any size can be constructed for this work.

As an instance of the application of the Worthington condenser to steel works engines it may be mentioned that a machine using 7000 gallons of injection water per minute, or something over 10,000,000 gallons per day, is now condensing the steam and maintaining a vacuum upon a pair of double reversing rail mill engines under the most trying conditions of stopping, starting and reversing under full load, and when carrying steam very nearly full stroke. The quantity of steam condensed is about equivalent to that which would be exhaused by a 4500 horse-power engine with a water rate of 25 pounds per horse-power per hour.

THE WORTHINGTON CONDENSER.

A press dispatch from Grand Junction, Col., states that on the 8th inst. an immense volume of natural gas was struck in the experimental well of the Western Colorado Development Company at a depth of 500 feet. The force was so strong as to blow out the pipes. The pressure is estimated at 200 pounds to the square inch.

THE WEEK.

The mule is to be superseded by electric propulsion on the Chesapeake and Ohio Canal as a consequence of the recent successful experiments with the trolley on the Erie Canal.

The Department of Immigration reports that during the last fiscal year there arrived at our ports 440,793 immigrants. Of these, 1063 were not permitted to land under the limitations of the law, and 577 were returned to countries from whence they came by reason of their having become public charges. The total arrivals were 141,034 less than the previous year.

The North German Lloyd Steamship Company have established a new line of steamers to ply between Baltimore and Bremen.

Florida's orange crop this season is estimated at 5,000,000 boxes.

November's coinage by the United States mints was the greatest executed in any one month for many years past. The number of pieces coined aggregated 7,523 602, of the value of $11 031,440.35. Of this amount the gold coined aggregated 1,265 400 pieces, of the value of $10,784,800; the silver only 976,202 pieces, of the value of $142,340 35. Of the minor coin, 4,120,000 1-cent pieces were coined, to meet the demands of the Christmas trade.

With the object of acquiring an unobstructed outlet to the lakes, the Pennsylvania Railroad Company have secured a controlling influence in the Toledo, Peoria & Western Railroad. This will largely facilitate the business of the Pennsylvania Company in Northern Indiana and Illinois.

Extensive fortifications are being constructed by the British Government as a defense for the port of Esquimalt, B. C. Some heavy guns have been received from England for the new batteries within the last week or two.

While boring a well on the property of a Cold Storage Company in the city of Montreal, a few days ago, natural gas was struck at a depth of 1020 feet. This discovery, it is believed, may lead to important results.

The British Board of Trade returns for November show a reduction in foreign trade from that of October. The imports for November amounted to $171 844,109, and the exports to $84,736,043. A considerable decrease in the receipts of American wheat was one of the unfavorable features of the month. American cotton showed, however, a slight increase over October.

Among the decisions handed down by the Missouri Court of Appeals at St. Louis recently was one declaring that a debt contracted in an option deal cannot be collected by law, as such speculation is gambling and illegal.

The town of Danbury, Conn., has appropriated $50,000 to provide employment and otherwise relieve the destitute of that community.

The Ordnance Department opened on Tuesday the bids for a preliminary supply of smokeless powder suitable for the new Krag Jorgensen magazine rifle, now being manufactured for the army at the Springfield arsenal.

Richard Raddatz of Oshkosh, Wis., is reported to have succeeded, after ten years' study and experiment, in producing a submarine boat which can operate at great depth and be run by one man. The boat has been engaged by a Detroit wrecking firm to make a survey of western Lake Huron next spring.

Philadelphia is to dispose of her garbage by cremation. A proposed ordinance provides for the construction of a number of furnaces at $40,000 each.

The coal shipments on the Reading road for the month of November exceeded those of any previous month in the history of the company by 9000 cars.

President Gompers of the American Federation of Labor places the present number of unemployed workmen in the United States at 3,000,000. Mr. Gompers, in his annual address in Chicago on Monday last, attributes the dearth of employment to the extraordinary industrial depression of the past few months, superinduced by overproduction and the general adoption of labor saving machinery. The only method, he believes, by which a practical, just and safe equilibrium can be preserved in the industrial world for the fast and ever increasing introduction of machinery is a commensurate reduction of the hours of labor. He expressed himself as very sure that if employers were to substitute a division of the work required among all their workers instead of the discharge of a number, the country would much sooner emerge from its present industrial and commercial stagnation. This is a part of the truth, doubtless, if not the whole of it.
